The important point is that this type of malicious mud slinging is harmful to the Nation. As recently as last Friday in White Sulphur Springs, Secretary of Commerce Charles Sawyer paid high tribute to private business. "To contemplate the collapse or even the weakening of this great institution," he declared, "is frightening." But, he warned, "If we magnify our differences and if each group guards jealously its prerogatives and withholds from others its good will and its assistance—America may go down in ruins."

Majority members of the joint committee may well reconsider the implications of their unfair attack lest they unwittingly become the architects of destruction.

Resolution of American Protestant Hospital Association

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

AMERICAN PROTESTANT
HOSPITAL ASSOCIATION,
Evansville, Ind., March 31, 1950.

Hon. ANTHONY F. TAURIELLO,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN TAURIELLO: May I bring to your attention the enclosed resolution adopted at the recent national meeting of the American Protestant Hospital Association? You will note it is the expression of an organization in which the several Protestant Church denominations of our country have combined their common interest in the field of service to the sick and injured men, women, and children of the United States.

As the studied expression of such a representative body, the resolution will, I hope, be of interest to you.

Respectfully yours,

ALBERT G. HAHN,
Executive Director.

Whereas the American Protestant Hospital Association has just completed its twenty-ninth annual convention; and

Whereas for the first time in the history of protestantism in America the several Protestant Church denominations of our country have combined their common interests in the field of Christian eleemosynary service to the aged, the orphaned, and the sick in full realization of the brotherhood of man and the fatherhood of God: Therefore be it

Resolved, That the convention convey its thanks to the representatives of the Protestant denominations that have assisted in making this initial effort an enjoyable and profitable conference; and be it further

Resolved, That the American Protestant Hospital Association by rising vote expresses its appreciation to Dr. L. B. Benson for the fine leadership that he has given us during his term of office; to Dr. and Mrs. Albert Hahn for their faithful and untiring efforts in the planning and promotion of the convention program; and to our officers and committees and those participating in the program for their part in contributing to the enrichment of our experience and the enlargement of our knowledge. To Dr. M. T. MacEachern, president-elect, we desire to pledge our affection and loyalty and to assure him of our sincere desire to cooperate with him in his plans for the next association year; and

Whereas the American Protestant Hospital Association has over the past years maintained friendly, cooperative, and cordial relationship with those other organizations so closely allied in interest to our own, to wit: The American Hospital Association, the Catholic Hospital Association, the American College of Surgeons, the American Medical Association, and the American College of Hospital Administrators, and other allied organizations: Therefore be it

Resolved, That the American Protestant Hospital Association convey to each of these organizations its appreciation of these friendly relationships and expresses the hope that we may continue working together for the common good.

Whereas the American Protestant Hospital Association is deeply interested in providing adequate health services for all the men, women, and children of our Nation; and

Whereas most of our great hospitals and other charitable institutions have been brought into being through the voluntary support of philanthropically minded men and women; and

Whereas the large majority of American families have the resources to pay for adequate medical and hospital care; and

Whereas local government and local hospitals and the medical profession have always recognized their responsibility to those unable to care for themselves; and

Whereas it has been demonstrated by experience that government plans for individual health care in other countries have produced uncontrollable demands upon hospitals, doctors, and other health resources without the possibility of reasonable check and with resulting excessive cost to their people through taxation; and

Whereas medical-hospital related individual-health services in this country are now the best in the world, a system which has developed according to the best tradition of the American character: Therefore be it

Resolved, That the American Protestant Hospital Association reemphasize its approval of the action of its officers and representatives in their efforts to develop and extend the voluntary prepayment plans such as the Blue Cross and Blue Shield plan for providing health care and authorize them to continue in their cooperation with other organizations and governmental departments providing care for indigents;

Resolved further, That the American Protestant Hospital Association restate its opposition to any system of compulsory health insurance which deprives the individual of free choice or free exercise of his own personal initiative in providing for his health care; be it further

Resolved, That a copy of this resolution be sent to each Member of the Senate of the United States, and to each Member of the House of Representatives; be it further

Resolved, That a commission be appointed by the president of the American Protestant Hospital Association and concurred by the trustees, to draft an expanded statement of the position of the American Protestant Hospital Association for publication and distribution.

Blow to Reorganization

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Blow to Reorganization," which appeared in the Washington Star of Saturday last, which states that about 22,000 postmasters are appointed in Washington.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLOW TO REORGANIZATION

The quiet death sentence which the Senate Committee on Post Office and Civil Service apparently has ordered for the bill designed to take postmasterships out of politics should not be allowed to stand. There is every indication, however, that the bill will remain dead unless there is enough public demand to force its resurrection. Here is a challenge made to order for the Citizens' Committee for the Hoover Report and for all other advocates of governmental efficiency.

The bill in question would carry out the Hoover Commission's proposal that all postmasterships be placed on a career civil-service basis. It was inevitable that this sensible plan would run into strong political opposition, for it would end the patronage system which in the past has proved a means of rewarding the faithful in congressional districts. When it is considered that there are about 22,000 politically appointed postal employees, the interest shown by politicians in defeating any curtailment of these patronage opportunities is understandable.

But the Hoover Commission found that politics produces inefficiency and militates against the incentives of promotion. It blamed part of the postal deficit on the fact that the Post Office Department is laboring under the patronage handicap. The proposed legislation would eliminate the re-

quirement for Senate confirmation of postmaster appointments and would place these jobs on a regular merit basis, like other civil-service positions. The plan has the indorsement of President Truman, Postmaster General Donaldson, and numerous postal organizations. No serious opposition to the bill has been openly expressed. Yet, without explanation, the Senate committee has decided to defer action on the bill indefinitely. This is a high-handed procedure which will deny the Senate the right it has of passing on this important reorganization measure during the current session. The Senate will be dealing the postal-reform movement a crushing blow if it allows the postmastership bill to expire in a committee pigeonhole.

A Bill To Veto

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. HESELTON. Mr. Speaker, under the unanimous consent granted to me to extend my remarks, I want to insert an editorial from the Boston Globe of March 31, which offers excellent advice to the President. It clearly demonstrates that this influential newspaper recognizes the inevitable consequences of enacting this bill into law. We in New England, as well as in the Northeast, will be receiving natural gas in the not too distant future. I would like to emphasize one sentence which cannot be disputed:

The economic future of this region, already afflicted because of recessive trends in industrial activity, is directly involved.

A BILL TO VETO

A severe blow at New England's hopes for cheaper fuel and power supplies has been dealt by passage in the Senate of the Kerr bill, exempting so-called independent producers of natural gas from regulation by the Federal Power Commission. Only one New England Senator, STYLES BRIDGES, of New Hampshire, joined the supporters of this highly dubious piece of legislation.

This bill, and a similar one already passed in the House, now go to conference, and thence to the President for his approval or veto. It is to be hoped that Mr. Truman will disapprove of the legislation. Unless he does, nothing will stand between the interests of the consumers, not only in New England, but in other large areas in the Nation, and soaring costs for natural gas. Under the provisions of this bill, the so-called independents will be free to charge all the traffic will bear. Thirty-five of these companies, it was brought out in the Senate debate, are already paying between 20 and 47 percent of their stock. The estimated bill to the consuming public, according to Senator DOUGLAS, of Illinois, will soar by between $300,000,000 and $500,000,000 a year. The only curb on price rises would be the sense of self-restraint felt by the producers—a safeguard hitherto found wanting wherever tried.

New England should see to it that the President is thoroughly informed as to the seriousness with which such a prospect is viewed hereabouts. The economic future of this region, already afflicted because of recessive trends in industrial activity, is directly involved. With it are involved the pocketbooks of millions of homemakers.

The Views of the First Iowa District, February 13 to March 31, 1950

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. MARTIN of Iowa. Mr. Speaker, with the approach of the 1950 campaign, I believe it is most important to all men in public life to know the views of the people regarding leading issues now before Congress. In order to secure first-hand and accurate information I planned a comprehensive survey of my district soon after this session of Congress started.

When President Truman presented his state of the Union address, his economic report, and his tax message to Congress, I drew up a list of 27 questions to submit to the people of my district and this questionnaire was mailed by me on February 11. I wrote no letter to accompany the questionnaire except the statement printed on the questionnaire itself. The following describes the list of names to whom the questionnaire was mailed.

Throughout my entire service in Congress I have periodically mailed out farmers' bulletin lists to all box holders on rural routes and star routes and in those post offices not having city delivery. We have kept a file of all requests for farm bulletins, and we used this list of the past 3 years together with all requests for agricultural yearbooks for the past 3 years. In other words, every such box holder had the same opportunity to request bulletins, and in doing so his name automatically was placed on our list. To this list was added an equal number of city and town residents because the population of the First Congressional District is almost equally divided between city and rural. We used the city directories of all cities that had recently published directories, and we used the telephone directories in those cities that did not have recently published directories. We took the name of every fifth householder or telephone subscriber.

Throughout my service in Congress we have followed the practice of sending baby books to the parents of all babies whose births are announced in the newspapers of the First District. We added the names of these parents to whom infant-care books had been sent over the past 3 years.

Altogether these lists totaled approximately 25,000 names. No other names were added and none of these names were deleted. After delivery of the questionnaires in the district, we received special requests for approximately 200 questionnaires and we mailed out these additional questionnaires when requested.

The post offices returned approximately 1,000 questionnaires that could not be delivered to the addressees. In response to the 24,000 questionnaires delivered, we received a total of 4,221 replies, or a return of approximately 17½ percent. This return was exceptionally gratifying, in view of Dr. George Gallup's estimate of half that number of replies. We received more than 1,000 letters with the questionnaires that were filled out and returned to us, and the discussions in these letters were very interesting and informative.

The replies were rather evenly spread throughout the last 2 weeks of February and the month of March and in my opinion they reflect rather accurately the thinking of the people of the First Congressional District for the period February 15 to March 31.

My office force made subtotals of the returns periodically over the period that the replies were coming in. The first subtotal was made after the count of the first 175 replies. The next one came at about 900 replies and thereafter subtotals were taken at about 1,500, 1,800, 2,300, 3,000, 3,600, 3,900, 4,100, and the final tabulation at 4,221. The amazing thing to me is that the percentage of "yes" and "no" replies on each of the 27 questions never varied much from the very first tabulation to the last and the percentages on the final tally sheet are very close to the percentages on each of the tally sheets from the very beginning. From this I believe the opinions throughout my district on these questions during the period covered by the poll are very consistent and dependable.

I am enclosing a tabulation of the replies which I believe will be of interest:

Questionnaire

	Yes	No
1. Do you favor the repeal of the Taft-Hartley Act?	881	2,959
2. Do you favor socialized medicine?	575	3,409
3. Do you favor Federal aid to education?	2,466	1,444
4. Do you favor extending social security to people not now covered?	2,436	1,384
5. Do you favor increasing the social-security benefits?	1,985	1,858
6. Do you favor higher social-security taxes if they are necessary to make social-security insurance a sound insurance program?	2,518	1,210
7. Do you favor continuation of rent control?	1,621	2,249
8. Do you favor extending the system of drafting men for military service in peacetime?	1,743	2,210
9. Do you favor enacting a draft law to be held available only for use in emergency?	2,647	1,060
10. Should Marshall plan aid be continued?	2,135	1,401
11. Should Marshall plan aid be reduced?	2,992	549
12. Should arms aid to foreign countries be continued?	1,432	2,159
13. Should excise taxes be reduced?	2,959	943
14. Do you favor increasing corporate-income taxes?	1,727	1,979
15. Do you favor increasing personal-income taxes?	307	3,432
16. Are you in favor of the Brannan plan for agriculture?	809	2,755
17. Should the civil rights program be adopted?	1,889	1,166
18. Do you favor cutting down Federal spending?	4,015	72
If so, on which of the following items:		
(a) Veterans' benefits?	1,575	564
(b) National defense?	646	934
(c) Foreign aid to civilians?	2,658	204
(d) Foreign arms aid?	2,657	287
(e) Farm subsidies?	2,930	182
(f) Social welfare, health and social security?	1,337	635
(g) Federal housing?	2,025	442
(h) Dams, airports, roads, Federal buildings and other public works?	1,617	822
(i) General expense of government?	3,697	88

Displaced Persons

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "I Have Found Freedom," published in the Holyoke (Mass.) Transcript-Telegram of November 26, 1949, an article entitled "German Refugees Are Glad They Are Far From Munich," published in the Fall River (Mass.) Herald-News, of June 10, 1949, and an editorial entitled "Displaced Persons," published in the North Adams (Mass.) Transcript, of May 25, 1949.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the Holyoke, (Mass.) Transcript-Telegram of November 26, 1949]

"I HAVE FOUND FREEDOM," A DISPLACED PERSON HERE SAYS

Edward Swiecicki, a native of Poland, came to America 3 months ago. He came from 4 years in a Displaced Persons camp, and from 6 years of slave labor in Nazi Germany.

Today, after almost a decade of hardship and misery he is a free man working for his living in a Holyoke grocery market, and residing in Easthampton. "I like America. It is a beautiful country," he says, gesturing with his arms, "The Polish people like their freedom and you know how conditions are in Poland today. There is no freedom. I have found freedom here. I am satisfied."

Eddie, as he is called by his friends, has a job with Stanley Wielgosz who operates a grocery and meat market on Lyman St. He calls himself an "all-around helper" at the store, stocking shelves, selling a little and doing various jobs. Mr. Wielgosz says he is a good worker.

Swiecicki was in the Polish army in Warsaw when the German blitzkrieg hit his country in September, 1939. He fought in the siege of Warsaw from September 6 to September 28. He remembers the dates exactly.

The Nazis threw him into a slave-labor camp near Hamburg, Germany. There he worked rebuilding railroads destroyed by Allied bombings. He shoveled coal, loaded freight, laid track and hauled cement and stone. Swiecicki got up from his chair and demonstrated how the prisoners drove the spikes into the rails, raising the heavy sledge hammer way above the head and bringing it down on the spike.

Swiecicki is 40 years old, blue-eyed, tall and muscular. He has a workman's hands, broad-palmed and calloused. He says of the slave labor: "It was so hard that I don't like to remember. I consider it hell. It would take a long time to tell what we suffered."

After the railroad labor he did such tasks as mason work, and setting up telegraph poles in wartime Germany. The camp at Hamburg was bombed by the British and the prisoners had to completely rebuild it.

Food at the German prison camps consisted of two meals a day. Tea and two slices of bread for breakfast would be followed by a supper meal of potato or turnip soup.

Swiecicki's prison camp was liberated by British troops. Four years he lived in DP camps in Germany. For 8 months he worked for UNNRA. He was with Polish and French DP's at this period. Later, in a DP camp in Bavaria he worked in a hotel for American occupation troops. He was a kind of treasurer, keeping accounts for the hotel laundry, barber and tailor shops.

He has a cousin living in Easthampton—Anna Szczygiel, of 109 Parsons Street.

He had never seen his cousin but had exchanged letters with her. Polish Catholic Action paid for his passage over to this country. DP's cannot come to the United States unless somebody here can give assurance that the DP will have a home and a job waiting for him.

"It was beautiful to meet for the first time the person who had given me assurance," declared Eddie.

He arrived in New York and called his cousin. She was unable to come down to the city to get him, so he took a train to Springfield, where he met her.

A displaced person coming to the United States is asked to rest for at least 8 days before starting work. Swiecicki waited 2 days, and then went to work on a tobacco farm in Amherst. He says he didn't want to be dependent on his cousin.

Swiecicki was born in the town of Cieszyn in Poland and went to Vienna at the age of 4. His father was a major in the Polish Army and was killed in the Battle of Warsaw in 1939. He wanted his son to be educated in Vienna, and Eddie went to school there until the age of 20, when he returned and went to a commercial school in Warsaw.

Because of his schooling in Vienna, and subsequent years in German prisons, Swiecicki has a strong German accent. He is taking a night-school course 2 nights a week at Holyoke's Lawrence School and enjoys it very much. Once a week he takes private lessons in English from a Smith College student in Northampton. He reads all the books and newspapers he can in order to better himself. He understands the written English fairly well, but still finds difficulty in speaking and understanding spoken English.

His mother still lives in Poland, and he sends her CARE packages regularly.

Ed has his first citizenship papers and hopes to become a citizen in 2 years. He likes life here in the United States and considers himself lucky to be here. He wishes more of his countrymen in the DP camps of Europe might have the same chance that was his.

[From the Fall River (Mass.) Herald News of June 10, 1949]

GERMAN REFUGEES ARE GLAD THEY ARE FAR FROM MUNICH

It's a long way from Munich, Germany, and there are two Germans in this city who are glad of it.

One is a Jewish master goldsmith who could have come to America sooner, but chose to wait until his non-Jewish wife could come too.

It is easier to come to America when you are a victim of fascism, he explained.

He waited because she loved him very much. Erich Ruben knew this, even before his wife, Charlotte, chose the terror of a Nazi concentration camp rather than divorce him, as she was ordered to.

But when the time came to make her choice, she, an Aryan, elected to stay married to a Jew in Nazi Germany and pledged anew her love.

Erich Ruben is a first cousin of Rolph, a local optometrist. They hadn't seen each other for many years, since they were kinder, children of 7 or 8 years of age, until yesterday at Commonwealth Pier, Boston.

But Rolph arranged to have the couple brought to America. How they managed to stay alive during the Nazi inquisition even they do not fully understand.

"We had gentile neighbors, good neighbors," Rolph Ruben translated. "When the Gestapo raided Jewish homes, they warned us. We jumped out of a window. We hid in their homes. The Nazis did not find us."

That is, at first they did not find them. But in January 1943 early in the morning all Jews were placed under arrest, and that included Erich and Charlotte Ruben.

"I am a veteran of the German Army in the First World War," Erich Ruben said in German. There was no pride in his voice.

"The Gestapo showed me favor because of this. But if the war lasted 15 days more I would have died, like my sister and her husband, my brother and his wife, another brother and their families died in the gas chamber."

Mrs. Ruben was ordered to work for a German construction company, breaking rocks on a road gang. Ruben too, was in a work gang but under Gestapo supervision.

The Rubens have a son. He is in England where he was sent at 13 years of age in 1938 by his parents when the political complexion of the New Germany began to show in earnest.

During the war, he worked with the United States Army in England. It was only a few months ago, just on the eve of a big Jewish holiday, when he walked into his parents' new home in Munich. It was the first time this adult son had seen his parents since they sent him away.

Ruben gives assurance he can do a day's work.

"I am a master goldsmith," he said, exhibiting samples of his work executed since his liberation. "I have my special tools. I can still work."

His cousin said the couple will do nothing their first few days in this city while their cousin plays host. Ruben's services have already been spoken for by a Providence manufacturing concern that can use his special skill.

As a kind of memento, the couple brought to America a cigaret lighter that belonged to a big-shot Nazi, and was used as a place of concealment for an ampule of suicide poison.

Another event which will be notable today in their adventure-filled lives is a birthday party.

It will be a party commemorating the birthday anniversaries of Erich, the refugee, and little Eric, the citizen, son of Rolph.

[From the North Adams (Mass.) Transcript of May 25, 1949]

DISPLACED PERSONS

Even though it appears possible that Congress will act at this session to liberalize the Displaced Persons Act, the success or failure of the DP program will still remain largely in the hands of individual Americans.

This is because, even under the liberalized legislation that has been proposed this year, it is still required that every DP be guaranteed both housing and a job before admission to the United States. Upon the number of Americans able and willing to provide such guaranties depends the number of war victims who can be brought to these shores to start life anew and contribute their abilities and productiveness to this country.

We are indebted to the weekly bulletin of the First Congregational Church of Williamstown for the following information on displaced persons, which should certainly be of interest to many people who might be in a position to sponsor DP's but who, through lack of knowledge of the resettlement program, are still hesitant. The material was prepared by Rev. George E. Beilby, Jr., pastor of the Williamstown church.

"DP's are democratic. They are freedom-loving people. The suffering they have endured under totalitarian rule has reinforced their devotion to democratic ideals. They are most thoroughly screened by Government authorities (30 operations) as to their abilities, loyalties, and physical condition before they are granted visas to come to our shores.

"DP's are people with strong family ties. Having lost almost all other ties in the course

of the greatest adversity, displaced persons have clung to their most cherished possession, their family life.

"DP's are religious. In their camps they have constructed places of worship and have maintained their own religious leaders and services.

"DP's are physically and mentally healthy.

"DP's are industrious. They come from places where they were accustomed to work hard on the land, in the factories, and in commercial and professional enterprises.

"DP's have become self-sufficient. The 45,000 who have already been resettled in our country have rapidly become independent. A survey by the New York Times found that less than 100 of these persons who are able to work are in need of assistance.

"Today, displaced persons are like normal people anywhere in all ways save one—they have no home.

"There are trained workers in every trade and profession waiting for sponsors. A DP can help you, as well as your help to him."

Complete information on DP's and their sponsorship may be obtained from Church World Service, Displaced Persons Bureau, 214 East Twenty-first Street, New York 10, N. Y.

National and individual self-interest require that Americans in a position to do so help make the promise inherent in the country's DP program an actuality.

Pennsylvania Still Oil State

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Pennsylvania Still Oil State," published in the Oil City Derrick of March 31. I call the attention of Senators from the 28 States interested in the production of oil to the fact that over 1,000,000,000 barrels of oil have been produced in Pennsylvania, and that more than that amount still remains in the ground.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PENNSYLVANIA STILL OIL STATE

William S. Lytle, a State geologist, says that 50 percent of the Pennsylvania petroleum is still in the ground. Pennsylvania oil is still rated as the best lubricating oil in the world.

Lytle says that oil operators, most of them in western Pennsylvania, are still depending on secondary recovery for the big part of their current output. This involves flooding the underground oil sands with water and using a simple law of physics. About 80 percent of the Pennsylvania oil production is currently being recovered by artificial water flooding.

The geologist says that more than 1,122,584,000 barrels of oil have been produced in Pennsylvania since the birth of the industry a century ago. Lytle says that the future of the Pennsylvania oil industry depends on the wider application of water, air, or gas injection, interdrilling, selective plugging, and the successful field application of laboratory research. The pioneer work being carried on in the secondary recovery of Pennsylvania crude oil is vital to the continuation of the industry in Pennsylvania and to the future oil economy of our Nation.

The Case of Owen Lattimore

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News:

THE CASE OF OWEN LATTIMORE

If the Senate committee investigating Senator MCCARTHY's charges against the State Department wants to find out how the United States was induced to abandon China to the Communists it will have an excellent opportunity to go into that subject when Owen Lattimore is on the stand tomorrow.

Professor Lattimore was one of the far eastern experts upon whom leftists in the State Department relied for advice and propaganda support when they were working to withdraw American support from Chiang Kai-shek.

He first came into the policy picture when President Roosevelt appointed him American adviser to Chiang in 1941. Then during the war he served as Deputy Director of the Office of War Information, in charge of Pacific operations, when the OWI followed a line well to the left of the State Department on China policy.

Mr. Lattimore accompanied Henry Wallace on his mission to China in 1944, when Mr. Wallace returned with the report that we were "backing the wrong horse" in China—meaning that we ought to get behind the Chinese Communists. The State Department's Office of Far Eastern Affairs has followed the Wallace- Lattimore line since that time on all matters relating to China.

Although he has enjoyed back-door privileges at the State Department the past 10 years, Mr. Lattimore, fortunately, hasn't been so successful in selling his ideas with respect to policy elsewhere in Asia or in Europe.

His books reveal that he regards the Truman doctrine in Greece and Turkey damaging to world peace.

The Marshall plan, he held, should have been channeled through the United Nations so that Russia and her satellites might have participated in the program.

In 1945, he urged the establishment of a government in Japan which would be "left of center and at least liberal enough to be friendly with Russia." In 1949 he foresaw "an inevitable demand" that Japan break away from America in order to come to terms with Communist China.

He apparently viewed this as a wholesome development. "By withholding raw iron ore and supplying Japan only with pig iron and other semiprocessed materials, China would have absolute power to cut off the revival of Japanese war industry," he remarked. He did not seem to be alarmed at the prospect that this might leave Japanese industry at the mercy of a satellite of the Soviet Union. Quite the contrary.

In China, he said "wherever the Communists have taken over they have increased food production, controlled distribution, and stabilized prices, successfully breaking the old cycle of recurring shortages and famines." That conclusion, published last year, is subject to modification now that 50,000,000 persons in Red China are confronted by one of the worst famines in the country's history.

Every Senator should read Mr. Lattimore's book the Situation in Asia, published in 1949. In it he found Asia turning to communism because the progress made by the Soviet republics of Asia has inspired awe and wonder. The same people, he inferred, were turning against the United States because they didn't want to be used as cannon fodder.

Uncle Joe couldn't have handled the subject better himself.

Confidential Files—J. Edgar Hoover's Statement

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal-Transcript of March 31, 1950, entitled "The Confidential Files," and an editorial from the Peoria Star of March 31, 1950, entitled "J. Edgar Hoover's Statement":

[From the Peoria (Ill.) Journal-Transcript of March 31, 1950]

THE CONFIDENTIAL FILES

The Senate and President Truman are locked in a tight struggle over the confidential files of the Loyalty Board, with the Senate Foreign Relations Subcommittee demanding a look at the secret documents and the President instructing the Loyalty Board to refuse their release.

Issuance of subpenas by the Senate may eventually bring the matter to a decision, although final disposition of the case may take years and come long after the need for a look at the files has ended.

The sanctity of files classified as confidential by the executive department is a matter that has never been settled although it has been a subject for dispute as far back as 1796. In that year President Washington flatly rejected, as an unconstitutional encroachment on presidential prerogatives, a House request for papers on treaty negotiations. Andrew Jackson also resisted requests for a look at confidential papers.

In 1944, Jonathan Daniels, one of the executive assistants of President Roosevelt, refused to testify before a congressional committee on the grounds that he stood in a close confidential relationship to the President. When contempt proceedings were threatened, however, Daniels was ordered by Roosevelt to testify, thereby avoiding the test of congressional power which may come out of the present controversy.

Another test appeared possible in March 1948 when President Truman ordered Federal officials to reject "any subpena or demand" by Congress for the loyalty files. The House passed a resolution subjecting to fine or imprisonment any official who refused to furnish information demanded of him by majority vote of a congressional committee. Court test of the legislation was prevented when the Senate failed to take action on the House resolution.

If President Truman stands firm in the present case and if the Senate follows through on its demand for the files and cites officials refusing to produce them for contempt, the strange spectacle of the Department of Justice, part of the executive branch, prosecuting executive department official may be seen.

Regardless of the outcome of the struggle over the files, Mr. Truman's refusal to let the Senate committee see them puts him once again in the position of defending individuals accused of disloyalty and treason. He has previously been in that same situation, much to his embarrassment, when he

defended Alger Hiss who later was proved guilty, and in his harassments of the House Un-American Affairs Committee.

If the involved officials of his Government are innocent, it would be to his, as well as to their, advantage that he permit the files to be examined.

[From the Peoria (Ill.) Star of March 31, 1950]

J. EDGAR HOOVER'S STATEMENT

We have read with great interest J. Edgar Hoover's statement explaining why FBI files could not be made available to a Senate subcommittee.

His reasons are divided into two main classes. The first may be entitled "security." The second is not so easy to classify.

Mr. Hoover's security reasons appear to be sound. To allow persons outside the FBI to examine FBI files would be to take the chance that such persons might reveal information on FBI methods, undercover personnel, and so on. Mr. Hoover assumes, as we understand it, that while the Department of Justice may be trusted to keep these secrets, members of a Senate subcommittee may not be so trusted.

Perhaps he is justified in this doubt. If so, the next question is, "Why can't the FBI process its material on the individuals in question, omitting data which refers to methods and undercover personnel, and giving nothing but a factual statement of the FBI's findings?"

The answer to that takes us into the second class of reasons why Mr. Hoover says the Senate subcommittee cannot obtain information from the FBI.

"I, for one," said Mr. Hoover, "would want no part of an investigative organization which had the power of discretion to decide what information would be reported and what would be omitted. An item of information which appears unimportant today may provide the solution of a case when considered with information received at a later date, or it may later establish the innocence of the accused."

To us this seems like muddled thinking unworthy of the Director of the Federal Bureau of Investigation. It seems to say that the time never arrives when the evidence may be weighed. It seems to say that Mr. Hoover considers himself incapable of fairly interpreting the reports turned in by his agents. It seems to say that if a Government official is believed to be spying for another government, evidence of that spying may not be used if it reveals how the FBI got it.

In short, Mr. Hoover seems to say that no information in possession of the FBI may be used to expose a disloyal Government employee unless a Cabinet member, department head, or the President wishes to proceed against the suspect.

This simply means that Communists may remain in the State Department, if they are there, because the reluctance of President Truman and Secretary Acheson to believe that employees of this Department are disloyal is well known. Information about Alger Hiss was kicked around by top Washington officials for years and no move was made to remove him. Yet he was convicted of lying when he denied under oath certain acts which linked him with a confessed Communist spy. It took a committee of Congress to start proceedings against Hiss. And a committee of Congress is the only body qualified to proceed against alleged Communists now in the State Department. President Truman and Secretary Acheson disqualified themselves in the Hiss case. But no committee of Congress, says Mr. Hoover, may have any information from the FBI on suspected Government employees.

This topsy-turvy situation might have been lifted from the pages of Through the Looking Glass. It doesn't make sense. Neither does Mr. Hoover's explanation of it.

It is difficult to escape the conclusion that President Truman wants to keep essential information from the Senate committee. If this were not true, certainly some commonsense way could be found to remove the barrier between information in possession of the FBI and the Senate committee, which is entitled to know the truth.

Mortgages for Cooperative Housing

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "FHA Says It Will Insure Mortgages for Cooperative Housing," published in the Wall Street Journal on March 30, 1950. It has reference to FHA's now insuring mortgages under the provisions of the laws as they now stand.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FHA SAYS IT WILL INSURE MORTGAGES FOR COOPERATIVE HOUSING—WILL GIVE GUARANTIES DESPITE CONGRESS DEFEAT OF BILL TO SET UP AGENCY FOR THAT PURPOSE

WASHINGTON.—The Federal Housing Administration made it clear that it intends to insure mortgages on cooperative housing ventures, despite Congress' refusal to provide special funds for such projects.

President Truman, in his middle-income housing bill, asked that the Treasury be allowed to put up $2,000,000,000 in funds for a Federal association that would back the sale of debentures for cooperative housing projects. This proposal was defeated in both the House and Senate.

FHA Commissioner Richards yesterday said he does not believe that Congress intended to disapprove cooperative ventures as such. He announced that his agency has agreed to insure a mortgage loan of $367,900, held by the National Life Insurance Co., on a project sponsored by the Mile High Housing Association which is composed primarily of faculty members of the Denver University.

This association plans to start building 32 homes involving a total outlay of more than $425,000. This would indicate that the cost per home will be something over $13,280.

FHA also notified the Ardmore Veterans Housing Corp., Ardmore, Okla., that it can get mortgage insurance on a project involving 126 homes built on a cooperative basis. The agency will insure up to $833,600, or about $6,611 per unit.

In still another move, the FHA revealed that it has agreed to insure a mortgage of $2,679,300 on 300 family units in the Bell Park Gardens, New York. This is a veterans' co-op, FHA said, which has completed 800 units, mortgaged by the Bowery Savings Bank of New York to the tune of $7,220,000. Besides insuring the initial construction, FHA has a commitment to cover $5,000,000 for 550 units in this project and the new commitment to insure $2,679,300 on 300 units. Thus the agency might eventually be guaranteeing mortgages totaling $14,901,500 for this one co-op alone.

Washington Post Continues To Oppose Legislation in Realm of Ideas

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD the text of an editorial from the Washington Post of Monday, April 3, 1950, in disapproval of the so-called Mundt-Nixon bill, which competently sums up the basis for the opposition to this misconceived legislation:

CLEAN MUNDT BILL

The new version of the Mundt Communist registration bill reported out by the Senate Judiciary Committee has been cleaned up in several particulars. Even after the lavish applications of soap it has had, however, it still entails sweeping and arbitrary invasions of American liberties unwarranted by the acknowledged threat of subversion. Furthermore, it is dangerous on another count. Although its announced purpose is to force the Communists to operate in the open, its probable effect would be quite the opposite.

Like its predecessor, the new Mundt bill would set up a three-man Subversive Activities Control Board with tremendous powers to decide, without any definite criteria, whether groups were Communist political organizations or Communist-front organizations. All such organizations would be required to register with the Attorney General and maintain accurate lists of their membership; in the case of Communist political organizations the names of members would be made public.

The bill would, of course, prohibit members of Communist organizations from holding any Government job. In addition, it would deny use of the mails or radio broadcasting facilities to any registered group unless the material were plainly marked as coming from a Communist source. It would make it illegal for any member of a Communist political organization to apply for or use a passport. Finally, it would make it a crime for anyone knowingly to conspire "or agree with any other person to perform any act which would substantially contribute to the establishment within the United States of a totalitarian dictatorship." Curiously enough, under a new provision of the bill, membership in a Communist organization is not to be construed as a violation of this provision.

Many of the objections to this procedure are obvious. A Government board would have well-nigh absolute powers to tell private American citizens what groups they could join without inerasable stigma. The criminal provisions are so vague as to open the door to great abuse. What, precisely, is any act which would substantially contribute to the establishment of dictatorship? Could it be, to use a farfetched example, the one-party system in the South? Moreover, as the Department of Justice has pointed out in a letter to Chairman Wood of the House Un-American Activities Committee:

"A world of difference exists, from the standpoint of sound policy and constitutional validity, between making, as the bill would, membership in an organization designated by the Attorney General a felony, and recognizing such membership, as does the employee loyalty program under Executive

Order 9835, as merely one piece of evidence pointing to possible disloyalty. The bill would brand the member of a listed organization a felon, no matter how innocent his membership; the loyalty program enables the member to respond to charges against him and to show, in a manner consistent with American concepts of justice and fairness, that his membership is innocent and does not reflect upon his loyalty."

Although the bill goes to great lengths to avoid the formal outlawing of the Communist Party, for practical purposes it would accomplish just that. It would make membership in Communist organizations without registration a crime. This is not the traditional American approach, which requires the commission of an overt act of subversion before a person can be adjudged guilty of subversion. It is reminiscent of the thought control which used to arouse such mirth among Americans when it was introduced in prewar Japan.

In another category the Mundt bill is of dubious constitutionality. If the conviction of the 11 Communists under the Smith Act, which makes it a crime to advocate the overthrow of the Goverment by force or violence, is upheld in the forthcoming court test, then membership in the Communist Party will per se be evidence of such advocacy. In that case registration under the Mundt bill would amount to compulsory self-incrimination.

If the Mundt bill actually would accomplish the purpose of forcing the Communists into the open and protecting the integrity of the Government, that would be one thing; but should anyone in this day and age be deluded that the really dangerous Communists are those who go by that name and hold party cards? Surely the Kremlin's master minds are persons who shun party meetings and even are known as anti-Communists. The restrictive features of the Mundt bill would only serve to push beneath the surface the visible portion of the Communist Party, which, like an iceberg, is six-sevenths submerged anyhow. In this it would make inordinately more difficult the work of the FBI.

Change in Method of Electing President and Vice President

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES

Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Blanchard Randall giving some observations and comments on the proposed amendment to the Constitution of the United States to change the method of electing the President and Vice President. I have submitted the article to the Government Printing Office for an estimate of the cost of printing it in the RECORD, and have received an estimate that the manuscript will make four pages of the RECORD, at a cost of $328.

The VICE PRESIDENT. Is there objection?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME OBSERVATIONS AND COMMENTS ON THE PROPOSED AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES TO CHANGE THE METHOD OF ELECTING A PRESIDENT AND A VICE PRESIDENT

(By Blanchard Randall)

On February 1, 1950, the United States Senate passed a joint resolution to amend the Constitution of the United States in respect of the election of a President and a Vice President. The resolution goes now to the House of Representatives, and if approved there, will be sent to the several States for ratification or disapproval. If approved by the legislatures of 36 States, three-quarters of the total, in the 7 years after House approval, the proposal will become an amendment to our Constitution.

The present system of choosing a President and a Vice President, as determined by the Constitution and by the twelfth amendment, which was ratified in 1804, and amplified by the twentieth amendment, ratified in 1933, differs from the proposed, new method chiefly in the following respects: (a) Presidential electors, as persons, and the electoral college, are done away with; although the electoral votes of each State are retained. That is each State will have one electoral vote for each Congressman and each Senator to which the State is entitled as in the past, but electors will never be named, and of course, will never meet. (b) Under the present system, the winning presidential candidate by popular vote in each State receives the entire electoral vote of that State no matter how large or how small may be his plurality over other opponents; under the proposed amendment, the electoral vote of each State would be prorated, or divided among all presidential candidates in proportion to the popular votes each received in that State. (c) Under the present law, a candidate to be elected must get a clear majority of all the electoral votes (at present, a winning candidate must get at least 266 of the 531 electoral votes). Under the proposed amendment, the candidate with the largest number of electoral votes would be the winner, so long as his total is at least 40 percent of the whole electoral vote. (d) Under the present law, if no candidate receives a majority of the electoral vote, the election is thrown into the House of Representatives, and from the persons, not exceeding three, having the highest numbers on the list of those voted for as President, the House of Representatives shall choose a President; in their voting the Congressmen from each State act as a unit with one vote; if a State's delegation is split, the majority determines for whom the one vote shall be cast. Under the proposed amendment, the election is thrown into the Congress if no candidate receives as many as 40 percent of the electoral votes, and from the two highest candidates the Congressmen and Senators voting as individuals choose a President. It is noteworthy, here in passing, that the proposed amendment is not precise or clear as to what would happen if two candidates should be tied in their electoral votes and both have more than 40 percent.

The declared purpose of this proposed amendment is to clarify and simplify the process of electing Chief Executives. The present system is not—it is said by proponents of the change—easily understood; and in particular it can result in the election of a man who is not the winner of the greatest number of actual votes, although he should receive a majority of electoral votes. There is danger of an election being thrown into the House of Representatives under the present system, and the proponents of change claim there is no essential virtue in having the election decided by Representatives voting as State units with one vote per State. The claim is made that when the entire electoral vote of a State is credited to the winner by popular vote in that State, no matter how large or small in his plurality, an injustice is done to voters which might result in thwarting the wish of the majority of voters taking the country as a whole; and it is also claimed that the present system is unfair to candidates.

There is much to agree with in many of the points raised by the proponents of this change. But there is also much to be said for the present, time-honored system. There is room for doubt that the proposed changes cure the evils against which they are directed, and there is room to question whether the proposed changes do not accentuate certain weaknesses of the present method and in fact create new and greater weaknesses than are contained in the present procedure.

To estimate properly how this new law would work in the future let us test it against the facts of previous elections and against some of the probabilities we may encounter in future elections. Let us also look back into our history to see whether the present method, with all its alleged draw-backs, has been unfair to candidates or damaging to the country.

At this point the writer wishes to state that the basic data used in analyzing each election was taken from the various issues of the World Almanac between 1898 and 1950, and that he has tried to exercise care and diligence in working up the results he submits. He has little doubt, however, that another mathematician or another historian might find other conclusions than some of his: in fact the proposed amendment itself says in one place that when a candidate would receive less than one one-thousandths part of one electoral vote in any State, this shall be disregarded. Unfortunately the proposed amendment does not say explicitly how one should treat the popular vote of the candidate whose infinitesimal electoral vote is to be so disregarded; nor does the law say to how many decimal points the division of electoral votes shall be carried; nor decree how the calculation is to be made or by whom audited. Perhaps the way is left open for the International Business Machines Corp., or some other company which deals in mechanical wizardy, to overcome man's shortcomings in being able to determine what it is man has tried to do. In any event, the present writer spent hours in calculating and checking the data he now gives you, imperfect though it may be.

Had the proposed amendment been in effect fifty-odd years ago, the place occupied by Mr. William Jennings Bryan in American history would have been very different. Mr. Bryan would have been elected President in 1896 by about 4¼ electoral votes over President McKinley and several minor candidates, although Bryan was given but 46.7 percent of the popular votes and McKinley received more than 51 percent of all votes cast. The minor candidates who in total got about 315,000 popular votes, and no electoral votes, historically, would have been credited under the amendment with over 10½ electoral votes. The 7,100,000 voters who favored McKinley would have been merely a disappointed majority.

Again, in 1900, history tells us President McKinley was reelected over William Jennings Bryan. McKinley received nearly seven and one-quarter million popular votes and 292 electoral votes against Bryan's six and one-third million popular and 155 electoral votes. However, had the proposed amendment been at work, the thrice-defeated Mr. Bryan would actually have been elected again, this time by about one-third of 1 electoral vote, despite the fact that Bryan carried only 17 of the then 45 States and despite the fact that about 8 voters out of every 15 said they wanted McKinley.

In 1908 William Howard Taft was elected President. His opponents were the ubiquitous Messrs. Bryan, Democrat; Debs, Socialist; and quite a few minor candidates. President Taft got over seven and five-eighths million votes, more than 51½ percent of all votes cast, while Bryan was given slightly over 43 percent, Debs slightly under 3 percent, and all other candidates combined about 2½ percent of the popular votes. History credits President Taft with 321 electoral votes, Bryan with 162. But under the proposed amendment Bryan would have come close, a third time, to accomplishing in theory what he never found possible in fact: He would have lost in 1908, but by only a nose in a photo finish. This writer's figures—under the proposed amendment—give Taft 229.476 electoral votes; Bryan 228.288; Debs 12.464; all other candidates 12.772.

In 1920 the country went Republican by a landslide; President Harding was elected with over 16,000,000 popular and 404 electoral votes to Governor Cox's slightly over 9,000,000 popular and 127 electoral votes. There were also several other candidates, including Mr. Debs, who are credited with a total of about one and three-eighths million popular votes and no electoral votes. But had the new amendment been in effect, President Harding would have had 103⅓ of his electoral votes taken from him, leaving him a surplus of but 29⅔ votes in excess of the 266 necessary to win: Cox would have been donated 80¾ of Harding's electoral votes and a galaxy of minor candidates would have been given over 27½ of the Republican's electoral votes. Stated another way: Harding, who was the choice of about 61 voters out of every 100 throughout the country, would have been in doubt for some time, while calculators worked feverishly, as to whether he would have enough electoral votes; and would have had to be content with a little over 55 percent of the whole electoral vote although he got about 61 percent of the popular vote. In fact, from causes to be touched on in a moment, it is quite evident that under the new amendment, unless a great many States unexpectedly change their populations and voting habits, Republican candidates must expect to suffer great reduction in their electoral votes as compared to popular votes, and can look forward to winning only when at least minor political landslides favor them in the length and breadth of the land.

In 1924 President Calvin Coolidge was reelected. He received over 55 percent of all popular votes cast. Mr. Davis, Democrat, was given about 29 percent of the popular votes and Senator Robert La Follette, Sr., was given about 16 percent. President Coolidge had 382 electoral votes, Davis 136, and La Follette 13. So much for history. Under the proposed amendment however—and without any change in the popular vote or popular wish so definitely stated by the whole country's voters—President Coolidge would have had to be content with election by a mere 49¼ percent of the electoral votes, because more than 57 of his historical votes would have been given to Mr. Davis, whose 29 percent of popular vote becomes 36 percent of the electoral vote; and because likewise more than 63 of the Coolidge votes would have been given La Follette to swell his total up to over 76 electoral votes.

The only reason why this election in 1924, that of 1908, and that of 1896, would not have ended in the Congress under the new proposed amendment, since in each case no contender would have received 50 percent of the whole electoral vote, is that the authors of the proposed constitutional amendment at the last minute accepted an amendment to their joint resolution which reduced from less than 50 percent to less than 40 percent the point at which an election has to be referred to the Senate and House for solution.

One more case history. In 1929 President Hoover was elected by an overwhelming popular vote; he was given nearly twenty-one and one-half million while Governor Smith polled slightly over 15,000,000. Minor candidates were given a total of less than 1 percent of all votes, that is, only slightly more than one-third of 1,000,000. President Hoover carried 40 States for a total of 444 electoral votes; he lost only Alabama, Arkansas, Georgia, Louisiana, Massachusetts, Mississippi, Rhode Island and South Carolina to Governor Smith with a total of 37 electoral votes. Had the proposed amendment been in effect—eliminating this time the various minor candidates from our calculations—148.52 of Hoover's votes would have been diverted to Governor Smith, swelling the Governor's total to 235.52 and Hoover, like Harding in a similar landslide would have pulled through with less than 30 votes above the 50-percent mark. Hoover's 58¼ percent of popular vote would be represented by less than 55½ percent of electoral votes: Smith's 40¾ percent of popular vote would be represented by over 44½ percent of the electoral votes.

The question may readily be asked: Why are only Republican victories cited as case histories, with unpleasant or dire results to the Republican candidates if the proposed amendment had been in effect? Why are not cases of Democratic victory similarly cited? The answer is comparatively simple: The solid South; where with few exceptions there has really been single-party rule for the past three generations. In these States the Democratic Party wins, not only with regularity, but with overwhelming votes; the proportion of Democratic votes to all other votes generally being no lower than 3 to 2, and frequently being better than 10 to 1; that is 10 Democratic votes to 1 for all other candidates. Accordingly when the electoral vote is divided in proporation to the popular vote in each State, there are several States where the Democratic Party will receive from 60 percent to 95 percent of the electoral vote. In the remaining States of the Union, in average years, however, the opposing or Republican Party is the favorite in but few States by so large a percentage as 60 percent of the entire vote. As a result—if there is a general swing toward the Democratic Party these one-party Solid South States merely add to the pluralities of the Democrat and make them larger. When there is a Republican swing these one-party Solid South States detract from the Republican's victory in electoral vote even under the present system to a comparatively small extent: but under the new amendment, as indicated in previous paragraphs, this detraction can become a major factor in confusing the outcome or even for reversing a large majority of actual voters.

Two factors must be kept in mind for any mathematical analysis of the proposed amendment. One is that there is a great discrepancy between the number of people voting in the different States compared to the electoral votes of the States. For instance, South Carolina, Maryland, and Kansas have approximately similar-sized populations: each State has eight electoral votes; in an average election, however, South Carolina casts a total of around 96,000 votes or say 12,000 for each electoral vote; Maryland a total of around 600,000 or 75,000 for each electoral vote; and Kansas casts some 760,000 votes or 95,000 for each electoral vote.

The other factor relates to the smaller populated States which have but one or two Congressmen, but because of their two Senators, are entitled to 3 or 4 electoral votes respectively. Nevada, for instance, has a population of around 150,000 and 3 electoral votes, or 1 electoral vote for each 50,000 of population. Montana has a population of about 500,000 and 4 electoral votes, or 1 electoral vote for each 125,000 people. On the other hand a State like New York with 45 Congressmen and 2 Senators has 47 electoral votes for a population of around 14,500,000 or one electoral vote for each 310,000 population. Altogether the 48 States contain many wide differences in these fundamental factors of population, representatives, and voting strength.

Then there is the great difference between States in what might be called voting habits. For instance, in 1948, taking the country as a whole, the average popular vote for each electoral vote was about 91,500; but at one end of the list of States there were: South Carolina, Alabama, Nevada, Mississippi, Arkansas, Wyoming, Georgia, Virginia, Vermont, Louisiana, Tennessee, Delaware, New Mexico, Arizona, and Texas with less than 50,000 popular votes for 1 electoral vote. These 15 States had together 125 electoral votes and 4,623,000 total popular votes for an average of 37,000 popular votes for 1 electoral vote. Incidentally the votes of these States were much larger in 1948 than was usual because of the interest in the States' Rights Democratic ticket which obtained about 995,000 or 90 percent of its total vote in these States. But even with the States' Rights Democrat defection of nearly 1,000,000 voters the Democratic ticket polled more than 50 percent of the total votes cast in these States: That is, Democratic 50.4 percent, States' Rights Democrat 23 percent, Republican 26 percent, and all other candidates about one-half of 1 percent.

The next lowest group of States in votes per electoral vote in 1948 were Idaho, Maine, Montana, North Dakota, North Carolina, New Hampshire, South Dakota, Utah, Oklahoma, Florida, Kentucky, Maryland, Rhode Island, Nebraska, Oregon, and Colorado. In each of these 16 States, while there was a much heavier vote for the average elector than in the first group, there was no vote as high as the 91,500 average of the country. In these States 102 electoral votes were cast for a popular vote in 1948 of 7,017,500 votes, or 68,200 average; Democrat 52 percent, Republican 44 percent, States' Rights Democrat 2.4 percent, Wallace 1.2 percent.

The upper middle group of States includes: West Virginia, Kansas, Iowa, Wisconsin, Michigan, Missouri, Pennsylvania, Washington, Connecticut, and Minnesota. These 10 States have a total of 126 electoral votes and they voted from 93,000 to 109,000 per electoral vote in each State. The total votes were Democrat 7,158,200, Republican 6,672,200, States' Rights Democrats about 100 votes, and Wallace 215,000 votes; about 50.9 percent Democrat, 47.5 percent Republican, and 1½ percent Wallace.

The highest group of States when considering popular votes for each electoral vote in 1948 were: Ohio, New Jersey, Indiana, New York, Massachusetts, Illinois, and California with a total of 170 electoral votes. Nearly half of all the popular votes of the entire country cast in 1948 were cast by these 7 States, the total for them being 22,660,000 votes. In the average more than 133,000 votes were cast by States in this group for 1 electoral vote. Here the Democrats received 10,997,300, 48½ percent; Republicans 41 percent; Wallace 3½ percent; and States' Rights Democrats nothing.

One mathematical fallacy in the proposed amendment becomes apparent when these differences between States are considered.

This proposed procedure is rather like the old gag that if you take one-half of one rabbit and one-half of one horse, mix and cook, you can claim that the product is one-half horse and one-half rabbit stew.

If electoral votes are to be distributed in each State in proportion to the popular vote given each candidate, then the candidate's electoral vote becomes merely an arbitrary factor (the State's total electoral vote) multi-

plied by a percentage; and the addition of these percentage factors in all the 48 States cannot be a reliable guide to the true percentage of each candidate's vote in the whole country.

The addition of these percentage factors would give a true percentage of the whole only when the number of popular votes cast for each electoral vote is identical in each State. That is, if in every State some 91,500 popular votes were recorded for each electoral vote, then and then only would the division of electoral votes among the candidates in each State according to the popular vote each received, give percentage factors which could be added to the similarly obtained percentage factors of the other 47 States and result in sums which would mathematically represent each candidate's total vote.

It was stated earlier that unless the population of States were to alter radically or the voting habits of the different States alter radically, Republican candidates could carry the country only with the aid of minor landslides. Under normal condition, Republican candidates for President would need over 55 percent of the popular vote under the proposed amendment in order to obtain 50 percent of the electoral votes; otherwise a Democratic President would be inaugurated despite the fact that, in this example, from three to five million more voters would have voted for the Republican than voted for the acclaimed winner. Can anything be better calculated to disturb the average citizen's belief in the sanctity of his ballot than to have the popular choice fail of election not because the other got more votes—not because of fraud in any election precinct—or other chicanery, which we are eternally trying to cure and prevent—but by a mathematically imperfect law, presumably well considered and put forward with the backing of Congress?

But this is perhaps not its only fault and shortcoming. A close election today frequently calls for recounts of the vote in some States. Suppose to this difficulty were added the question of correct division of votes among candidates into minute fractional parts of electoral votes. Think of the pressures which would naturally be exerted here and there, to gain one one-hundredth part of an electoral vote or even one one-thousandth part. Think, especially, of the lack of public faith and the amount of recrimination and argument which will necessarily flow in any close election and the delay in finally determining the winner to the highest post in the Nation. Think even a little further. The more candidates there would be in any election the more chance to disperse among them the electoral votes of each State. The law works for this end, provided each candidate gets at least one one-thousandth part of one electoral vote, and in South Carolina, that means getting only 13 votes in the entire State, in an average election; in California you qualify for one one-thousandth part of an electoral vote if you get 162 popular votes in an average election in the entire State. Will not the really smart campaign manager for candidate A try his utmost to get as many candidates as possible filed in each State who would be friendly to his candidate, under cover, in the hope each of these splinters would detract something from his main opponent, candidate B? Is this not an invitation on the other hand to every little candidate with perhaps some local repute to file for President of the United States, whether he has any kind of capacity, or political backing, or none, merely to gain as much personal publicity as possible and with the real assurance he will get at least a minor fraction of one electoral vote, some Nation-wide publicity for notoriety) and a great tale to tell his grandchildren.

Is not this the best way to break down our chief bulwark as a Republic? Heretofore we have determined that so far as we are able, we would use a method as fair as possible to all States and localities, but especially to give us a Government by a clear-cut majority. Because of the division of electoral votes among all candidates, whereas now electoral votes go only to those candidates who can carry one or more States, is not this proposal one which will inevitably lead to so many parties being represented, that no one party has a majority, and as a result we must have coalition or compromise Government? The lesson of a great Republic—France over the past 80 years should be example enough of the dangers which are inherent in this splitting up and splintering of political parties.

Look back into our history for a brief moment. For 160 years the present system has been in effect. It is true that the original concept of having electors chosen in each State and then meeting, as an electoral college to personally choose a President, has been followed by all electors only in the original choice of George Washington. It is true that since the second election, and increasingly through the years, electors were chosen, pledged to a given candidate, and that latterly their instructions have become so clear that the voting by electors has become perfunctory. It is true that electors have never—but once—been completely free to follow their own dictates, but have voted for a certain man in accord with the instruction given them by the popular votes of their States. But have we not all become quite used to this procedure, and have we not actually legalized this procedure by the amendments heretofore added to the Constitution and fortified this procedure through our various State election laws?

Has this time honored procedure we have followed for more than a century and a half worked harm on our country or has it worked unfair handicap on any presidential candidate? Look back through the records: On one occasion one candidate, Mr. Tilden appears to have received about one-quarter million votes more than did his opponent—President Hayes. But while looking at that incident recall the condition of a large part of the country, where reconstruction had just ended, and where rights of franchise and election laws were quite chaotic; where feeling naturally ran high. Recall, also, that this election did not have to be thrown into the House of Representatives, but was settled by the verdict of a special commission. Recall also that the public accepted the outcome unquestioningly. In every other election but one, 1888, since we have had two dominant political parties, the time-honored system put the stamp of authority on the man who received the largest popular vote. Only in 1888 and when there was unusual third party strength—Greenback in 1892 and Bull Moose in 1912 did the winner, by our present system, fail to obtain a majority of all votes cast.

One other great advantage we have enjoyed is allied to the present time-honored system of giving to the winning candidate in each State the total electoral vote of the State. It is the almost unbroken rule that a newly elected president is of the same party as the one in control of Congress. The reason this occurs is due largely to the fact that the prestige and the campaign of a winning presidential candidate carries along with him the candidates for Congress and the Senate who belong to his party and aid their election in those States which favor the head of the ticket. If the President carries enough States with enough electoral votes to elect himself, under the present system, history has shown that his party also elects in those States enough Congressmen and Senators so that his party controls Congress. His new administration is thus enabled to get the legislation from Congress to put his policies into effect. Nothing is more futile than a President who does not have his party in control of Congress. The proposed amendment will tend to increase the number of cases when this dilemma will occur. As already stated, the new amendment greatly increases the danger of a minority of voters electing the President; here is an added danger—the administration and Congress belonging to different political parties and pursuing divergent policies. The inevitable result must be coalition and compromise; too often, futility.

We have discussed several past elections. What could be expected in a future election. Here is table A showing 17 States which have a strong natural tendency to go Democratic. The first 6 have always in modern history clung to that party, 4 have failed but once to vote Democrat; 2 but twice, and the last 5 have voted at least two-thirds of the past 12 presidential elections in the Democrat column. In 1944 these States voted as shown in table A and all 163 electoral votes were of course, won for the Democratic candidate. Under the proposed amendment the votes would have been split, and eliminating all but the two major parties from calculations, the result would have given the Democratic candidate about 117.4 votes, the Republican candidate 45.6 votes.

This looks like a clear gain for the GOP. But what would the Republican Party have had to give up in the balance of the country in return for these 45.6 votes, if the new rule were applied?

Let us assume, since this is an estimate of what might happen in a future election, that all the other 31 States went Republican; let us assume also that the division of votes between the two major parties favored the Republican side by the best showing that party has made in each State in the past 30 years; that there were no minor candidates, and that the total votes in each State was equal to 1944. Look now at table B showing these 31 States, their electoral votes, the approximate total vote cast in 1944, and the division of electoral votes in proportion to the best showing made by the Republican Party in each State since 1920. This would give the Republicans 223.80 electoral votes; the Democrats would get 144.20 electoral votes. Add these to the figures of divided electoral votes in table A, and the total for the country is Republican 269.4, Democrat 261.6 electoral votes. The Republicans win by 3.9 votes over 50 percent.

But now look at the last two columns of table B, which shows how the 1944 popular vote would have to be divided between these two major parties in order to bring about this eyelash victory for the GOP. Look at the figures: Compared to Republican showings in recent presidential elections, they seem fantastic. They represent the best results the GOP obtained in each of these 31 States in this generation. In total nearly 25,000,000 people had to vote Republican in these States, against slightly more than 16,000,000 voting Democrat, in order to equalize the Democratic lead obtained by less than 6,750,000 total votes shown for the 17 States in table A. This is the cost of the 45-plus electoral votes the GOP gained by the new amendment in those generally Democratic States.

These two tables, looked at together, give the reason why the Republicans will need a landslide, or at least a near landslide, to bring about the election of their candidates under the proposed amendment.

This narrow margin in practice would be altered by whatever votes went to the minor

candidates. It would be easy to foresee times when the Democratic candidate might squeeze through and win by electoral votes, although his Republican opponent might actually receive a plurality measured by several million votes.

Think of one more set of simple figures. South Carolina generally votes about 90,000 for the Democrat, and around 5,000 for the Republican. The Democrats carry the State by about 85,000 and under the new amendment would get about 7½ electoral votes while the GOP would get about one-half of 1 electoral vote. Now look at New York with nearly 6,500,000 votes, and suppose the Republicans carry New York by 85,000 votes, just as the Democrats carry South Carolina by 85,000 votes. The new amendment would give the Republicans about 23¾ electoral votes in New York to 23¼ electoral votes for the Democrats. In other words, in New York the GOP wins a net of one-half an electoral vote for 85,000 plurality while in South Carolina the Democrats win a net of seven electoral votes for the same plurality of popular votes. If the new amendment is in effect, that is the same as saying that 1 vote in South Carolina is worth 14 votes in New York. This may be very gratifying to the man in South Carolina or in any similarly situated State where the vote is small in comparison to the electoral vote, but how well does such a theory of discounting votes appeal to the man in New York or Pennsylvania or Ohio or California or Iowa or Kansas or Illinois, or any State where there is a large population and a large turn-out of voters on election day and where the vote is heavy for each electoral vote?

There is now pending another constitutional amendment to limit the length of time a man may serve as President. It is the twenty-second amendment and was started on its journey by Congress in 1947. Up to July 1949 it had been ratified by 21 of the needed 36 States. If for no other reason, the proposed amendment, which is the subject of this article, should be delayed until final action has been taken on the twenty-second amendment, so that the people of the country need not be confused by having two proposals before them at once, effecting both the tenure and the method of electing a President.

But there are other good reasons also for urging the House of Representatives to vote down the proposed amendment relating to the method of electing a President.

The proposal is not a simplification of the present process. In fact it appears to complicate rather than simplify.

The proposal will not eliminate the chance of electing as President some candidate who gets fewer votes than a competitor; it makes the danger greater.

The proposal is based on bad mathematics and will be difficult to administer and will not appear convincing to the public.

The proposal will complicate elections and offers easy cover for election maneuvering, for possible chicanery, and double dealings.

The proposal invites splinter parties and many candidates, thus confusing issues and tending to hamstring national policy.

The proposal will tend to break down our greatest strength of two-party government.

The proposal will tend to bring the ballot into disrepute, because of the great chance of nullifying the electorate's expressed wishes in popular ballots and naming as President and Vice President those who have but a minority of votes.

The proposal should be defeated in Congress, now; and the whole question of clarifying elections carefully studied in detail from all points of view, with lengthy public hearings and discussions, before we attempt to draft new rules on this important question to take the place of those rules which have served us well throughout the years.

TABLE A.—*Pro forma votes*

[April 1944, actual in usually Democratic States]

State	Electoral vote	Approximate vote cast in 1944 for 2 leading parties		Division of electoral vote, proportionately between 2 leading candidates (figured to nearest 1/10 of a vote) under proposed amendment	
		Democrat	Republican	Democrat	Republican
Alabama	11	198,900	44,500	9	2
Arkansas	9	149,000	63,600	6.3	2.7
Georgia	12	268,200	56,500	9.9	2.1
Louisiana	10	281,600	67,800	8.05	1.95
Mississippi	9	158,500	3,700	8.8	.2
South Carolina	8	90,600	4,500	7.6	.4
Florida	8	339,400	143,200	5.65	2.35
North Carolina	14	527,400	263,100	9.35	4.65
Texas	23	821,600	191,400	18.65	4.35
Virginia	11	242,300	145,200	6.9	4.1
Kentucky	11	472,600	392,400	6	5
Tennessee	12	308,700	200,300	7.3	4.7
Arizona	4	80,900	56,300	2.35	1.65
Montana	4	112,600	93,200	2.2	1.8
Nevada	3	29,600	24,600	1.65	1.35
New Mexico	4	81,400	70,700	2.15	1.85
Oklahoma	10	401,500	319,400	5.55	4.45
Total	163	4,564,800	2,140,400	117.4	45.6

NOTE.—A straight over-all percentage would be: Democrat, 110.97; Republican, 52.03.

ADDITION OF TABLE A AND TABLE B

	State	Electoral vote	Popular votes		Proportionate division of electoral votes	
			Democrat	Republican	Democrat	Republican
A	17	163	4,564,800	2,140,400	117.4	45.6
B	31	368	16,185,150	24,831,850	144.2	223.8
Total	48	531	20,749,950	26,972,250	261.6	269.4

NOTE.—A straight over all percentage would be: Democrat, 230.88 Republican, 300.12.

If Republican Party should lose 3½ percent of its vote, evenly over these 31 States, to minor parties, it would reduce the popular majority of the GOP by some 850,000 votes, but would reduce the proportional electoral vote of the GOP by about 7⅞ votes and, in the country as a whole, make the Democratic candidate the winner by a fraction of 1 electoral vote although the GOP would have received nearly 55 percent of all popular votes cast.

TABLE B.—*Pro forma vote of States*

[1944 approximate vote; percentage of best showing for Republican Party in 25 years]

State	Electoral vote	Approximate total vote cast in 1944	Proportional division of electoral votes between Republicans and Democrats only (figured to nearest 1/10 of 1 vote) using as basis the most favorable election return in each State to Republican candidate in any election of past 28 years		Approximate division of popular 1944 vote which would be required in each State to warrant the electoral votes shown in previous columns	
			Democrat	Republican	Democrat	Republican
California	25	3,500,000	9	16	1,240,000	2,260,000
Colorado	6	510,000	2.1	3.9	1,785,000	3,315,000
Connecticut	8	824,000	3.7	4.3	381,000	443,000
Delaware	3	125,000	1.05	1.95	43,750	81,250
Idaho	4	210,000	1.4	2.6	73,500	136,500
Illinois	28	4,060,000	12	16	1,740,000	2,320,000
Indiana	13	1,664,000	5.2	7.8	665,600	998,400
Iowa	10	1,050,000	3.8	6.2	399,000	651,000
Kansas	8	736,000	2.2	5.8	202,400	533,600
Maine	5	300,000	1.55	3.45	93,000	207,000
Maryland	8	608,000	3.4	4.6	258,400	349,600
Massachusetts	16	1,906,000	6	10	735,000	1,225,000
Michigan	19	2,200,000	5.55	13.45	643,000	1,557,000
Minnesota	11	1,122,000	4.55	6.45	464,000	658,000
Missouri	15	1,575,000	6.6	8.4	693,000	882,000
Nebraska	6	564,000	2.15	3.85	202,000	362,000
New Hampshire	4	230,000	1.65	2.35	94,900	135,000
New Jersey	16	1,952,000	6.4	9.6	780,800	1,171,200
New York	47	6,298,000	22.9	24.1	3,068,000	3,230,000
North Dakota	4	220,000	1.75	2.25	96,250	123,750
Ohio	25	3,150,000	8.7	16.3	1,096,000	2,054,000
Oregon	6	480,000	2.1	3.9	168,000	312,000
Pennsylvania	35	3,780,000	12	23	1,296,000	2,484,000
Rhode Island	4	300,000	1.65	2.35	123,750	176,250
South Dakota	4	232,000	1.6	2.4	92,800	139,200
Utah	4	248,000	1.85	2.15	114,700	133,300
Vermont	3	126,000	1	2	42,000	84,000
Washington	8	848,000	2.55	5.45	270,300	577,700
West Virginia	8	716,000	3.3	4.7	295,400	420,600
Wisconsin	12	1,326,000	5.4	6.6	596,700	729,300
Wyoming	3	102,000	1.1	1.9	37,400	64,600
Total	368	41,016,000	144.20	223.80	16,185,150	24,831,850

Congress Has Shirked an Important Duty

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. KLEIN. Mr. Speaker, it is a matter of deep regret to me that the Congress has seen fit to strip the Federal Power Commission, by specific legislative fiat, of its power to serve the consumers of the Nation and protect them against a rapacious monopoly of natural resources.

The passage of H. R. 1758, and the adoption of the Senate amendments, have gone a long way toward vitiating the Natural Gas Act of 1938, as an instrument of protection for the consuming public.

WASTE AND INFLATED PRICES

I have been opposed to this bill per se, and I have also been very much opposed to some of its implications and the pressure used to move it through Congress.

I have also expressed my vigorous opinion against the use of legislative fiat to overthrow judicial decisions when the purpose of the legislation is not to better express the will of the people but only to serve a special interest. This is a device as old as parliamentary government, and just as shabby as its hoariness would suggest.

My fundamental objection to the bill remains however, its objective of narrowing the regulatory range of jurisdiction of the Federal Power Commission.

PROPERTY OF THE WHOLE NATION

Natural gas is one of our great natural resources, the property of the whole Nation, and its private exploitation should be carried out as a national trust. Instead, we have had a humiliating spectacle over the last 70 years of wild wastefulness by private exploiters, the levying of charges just as high as the traffic would bear, and a constant pressure of lobbying for special concessions of all kinds, with the amendment of the natural-gas bill topping all the requests in its baldness and brusque disregard of public interest.

Despite the heavy investments required for transmission lines, the production and sale of natural gas is not an expensive process in terms of costs per thousand feet at the consumer's door, and the spotty reduction of consumer prices eulogized by some Members has little relevance to the issue.

Natural gas can be handled just like petroleum: It can be transmitted through pipe lines, or by tank car or tanker or even truck, or in cylinders under compression.

This enactment paves the way for new gouging of the user, whether commercial or household; it further reduces the direct potency of the Commission in preventing or discouraging wasteful practices; and it further encourages high-powered private pressure groups to seek special privilege through congressional tolerance.

THE BILL IS WITHOUT MERIT

As I see it, Mr. Speaker, this legislation is without merit in any phase.

It is against public interest; it is grossly against consumer interest; it is not even properly in the interest of the private exploiters because, relieved of their fears of the restraining hand of the Federal Power Commission, these huge companies—and I find the claim that this bill is for the benefit of small independent firms tragically funny—are quite likely to destroy the gas industry in their frantic efforts to wring huge profits out of this basic fuel resource while they can.

The Congress has abdicated its proper duty in this action; and I fear that their votes on this measure will come back to haunt many Members when they face their constituents.

ECA Competition

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. ANGELL. Mr. Speaker, pursuant to permission heretofore granted, I am including as part of these remarks an editorial entitled "ECA Competition" which appeared in the weekly of the Portland Chamber of Commerce, in its issue of March 17, 1950. I am also including in these remarks as being pertinent to this important subject an article entitled "Britain to Cut Dollar Imports" from the Washington Post for March 29, 1950, and a letter from the manager of Dant & Russell, Inc., a reputable lumber firm in my congressional district. These items follows:

[From Portland (Oreg.) Commerce, of March 17, 1950]

ECA COMPETITION

Canadian lumber piling into United States markets by train and shiploads may well be a sample of what will eventually happen in many other lines of production if the ECA program is successful. In other words, if European producers being loaned money and being instructed in American know-how can ultimately approach United States efficiency in certain lines, it is logical to expect that their products will in the end be in sharp competition with goods made in the United States.

Methods and techniques perfected in the United States have given producers in this country protection against foreign production in many fields. If these elements of protection vanish through European picking up our methods and techniques, then situations similar to that of Canadian lumber on United States markets are most assuredly to arise. When that time arrives, there will be others than Pacific Northwest lumber producers crying for relief. Perhaps, the day may not be so distant as some might think when even Walter Reuther's automobile unionists might be calling on Congress for protection of their jobs, wages, and standard of living.

Canadians start with an advantage of around 10 percent in dollar exchange. Then their lower wage rate, lower taxation, and freight rates pile the advantage up to where if nothing is done, the day is coming when many of our mills will be out of business.

There are those trying to seek a way out. It is probable that the question of a higher lumber tariff agreement will be put on the agenda for discussion with Canada next October. Your Washington representative has talked to one major administration Senator interested in lumber who thinks this may be possible.

In the meantime, lumber is coming down from British Columbia even into Florida. And the southern pine people are shooting their protests in to Washington likewise. There is some hope for relief, but probably not for several months.

Senator MAGNUSON, Democrat, of Washington, is digging into the case, and intends to explore any possible administrative steps that might be urged to effect some relief.

One step that could help not only the lumber producer but many others would be cutting of corporate income tax. It is estimated that buyers of General Motors cars last year paid an average of around $400 a car in taxes of this nature. A lot of people are quite unconscious of the amount of taxes they themselves are paying rather than the big wealthy corporation. The lumber industry with the competition it faces cannot pass on its taxes in higher prices.

[From the Washington (D. C.) Post of March 29, 1950]

BRITAIN TO CUT DOLLAR IMPORTS

LONDON, March 28.—Britain's Labor Government reaffirmed today its hope that the sterling area, by reducing dollar imports about one-fourth, will be able to cut its annual gold-dollar deficit in half by mid-1951.

Purchases from the United States and other dollar countries are to be slashed 25 percent in the period from July 1, 1950, to June 30, 1951.

Originally proposed to the Organization for European Economic Cooperation last January, the cuts were outlined in a Treasury white paper, Economic Survey for 1950, issued today.

The Government has said items on which dollar spending must be cut include bread grains, sugar, tobacco, petroleum products, steel, timber, and pulp and paper.

The white paper, bristling with "ifs," said the reduction from a dollar deficit of $1,531,000,000 for 1949 to one of $785,000,000 for 12 months ending June 30, 1951, can be accomplished under the following conditions:

1. Business continues good in the United States.
2. The lid is kept on wages, prices, and dividends in Britain.
3. British productivity goes on improving with no sharp increase in costs.
4. Exports to dollar markets increase sufficiently to offset the cut in the value of the pound last September from $4.03 to $2.80.
5. Gold earning exports to South Africa can be stepped up.
6. The dollar nations demonstrate readiness to accept imports.

DANT & RUSSELL, INC.,
Portland, Oreg., March 29, 1950.

Representative HOMER D. ANGELL,
The House of Representatives,
Washington, D. C.

DEAR MR. ANGELL: You will be interested in knowing that in February 1950 British Columbia shipped into the United States by water alone 58,713,584 board feet of lumber; this in a month when a great part of the Canadian production was closed down by bad weather, shortage of logs, etc.

This emphasizes the need for some means of protecting the American lumber industry and American labor against countries having low wages and depreciated currencies.

Yours very truly,

R. J. DARLING.

The Dairy Industry in New York

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, last Thursday evening, I had the pleasure and privilege of addressing the Northeastern Dairy Conference, a gathering of representative dairy producers and others interested in dairy production, meeting in their fifteenth annual session. I ask unanimous consent of the Senate to insert in the Appendix of the RECORD the remarks I made on that occasion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Talking to dairymen about dairy problems is an interesting but not a novel experience for me. I have been talking to dairymen about dairy problems for the past 20 years. I think I have made some contributions to the welfare of that industry in New York State as a result of those discussions.

I must point out to begin with, that my acquaintance with dairy problems comes neither from having been a dairy farmer nor from having spent a summer in the country with a cow. I learned about the dairy industry and its problems the hard way, from tackling the tough and snarled problems of that industry in the period between 1928 and 1942 when I was Lieutenant Governor and Governor of New York.

When I was sworn in for the first time as Governor of New York in 1933, the dairy industry was held in the terrible grip of chaos and depression. The price of milk on the farm was 96 cents per hundredweight. Farmers were dumping their milk into the pig troughs. There were farm strikes in those days—in New York, Wisconsin, Iowa, and Minnesota.

I do not think it is necessary, before this audience, to go into detail about the events of those days. We all remember the foreclosures, the glut of milk and other dairy products in the markets, and the terrible combination of apparent overproduction and low prices. And despite the low prices, the consumers, the city people, were still unable to buy the available supplies, even at the low prices then in effect. Low farm prices and high unemployment—a familiar pair. Sometimes we forget that they almost always go together. The price of milk was as low as 96 cents a hundredweight in New York and there were 15,000,000 unemployed in the Nation. The price of feed was low, too. Corn sold for a few cents a bushel. But that wasn't much comfort to the farmers nor to the city folks either. The price of feed was too low for the producers of feed and too high for the producers of dairy products. And milk that sold at retail for 11 cents a quart was still too high for people who did not have 11 cents.

I have not cited these figures nor taken this backward look merely for sentimental or nostalgic reasons. I certainly am not nostalgic about that part of our past. I am sure that none of you is either. No; I have cited these figures and recalled the dark circumstances of two decades ago because today, at this very moment, we are faced with a situation which could possibly lead to at least a trend in the direction of where we stood 20 years ago. The problems of today have that same familiar look, like an old trouble that turns up after a long respite.

I hasten to say that the measures which the Federal and the State Governments have taken since those chaotic days of 1930 have provided a number of essential safeguards against any sudden plunge back into the chaos of 20 years ago. Some of the steps we took in those days were designed to meet the immediate emergency problems. But we also moved to provide for the long-range welfare of the farmers of our State and of the Nation.

It was not enough then—and it is not enough now—to make vague and pious declarations about how the situation could be solved by the initiative and enterprise of the American farmer. The American farmer has, indeed, more than his share of initiative and enterprise. But at that time—20 years ago—we all knew that we were in the path of an avalanche. In the face of the forces which had assaulted us individual enterprise and initiative were meaningless. It took the combined efforts of the entire Nation—citizens and Government, farmers and workers—to deflect the onrushing disaster and to repair the damage which had been done. And today much the same kind of situation exists as far as our dairy farmers are concerned. The problem of the dairy industry cannot be solved by the individual efforts of any one of us. It is far too intricate for that.

The dairy industry is an essential part of the whole complex structure of American agriculture. What is done to help or to hinder the producer of grain helps or hinders the producer of dairy products. Within the framework of the dairy industry, itself, we know that what helps or hinders the producer of butter, helps or hinders the producer of fluid milk and of cheese.

And finally, in the largest framework of all—the framework of the entire American economy—we must recognize and accept as an axiom—as an incontrovertible fact—that the prosperity of the dairy farmer depends upon the prosperity of the worker in the city, of the small-business man, and of all the elements which make up the national economy. The national economy is one and indivisible. No one section of it can prosper at the expense of the other, or independently of the other. What is good for the Nation is good for the dairy farmer. What is good for the dairy farmer is good for the Nation.

Let me turn back for a moment to the steps which we took in 1933 and in the years following for the benefit of the dairy farmers of New York State, in order to illustrate what I mean.

In New York State we insisted that the farmer must have hard surfaced road outlets for his products—farm to market roads we called them—and we built those roads—3,000 miles of them.

We said that it was vital for the farmer to have the commercial advantage of electric power and we saw power lines go up along hundreds of rural roads which had never seen power lines before. We saw that the farmers needed better educational facilities, more adequate health facilities, and regional markets for more efficient food distribution. All these were needed to make of the farmer what he has a right to be—a citizen with the individual dignity and security which is our American birthright. We proceeded to construct rural schools, and to establish rural health programs and regional markets.

These were the general measures we took to benefit all farmers in New York State. For the immediate and particular benefit of the dairy industry we took additional steps to cure the economic ailments which had settled into the very bones of that industry.

In our undertaking to help the dairy industry we did not, however, try to do things for the dairy farmer. Instead we did things together with the dairy farmer. The major role in the milk program worked out in New York State was played by the milk producer himself. We worked out a milk marketing system in which the farmers and their own organizations were the chief movers. This program was and is the farmer's program. The New York milk marketing agreements showed the way, I am told, for the Federal agreements which followed.

Under the terms of the Federal Agriculture Marketing Agreement Act of 1937, 33 marketing agreements blanketing all the main milk producing areas of the Nation were arrived at. The chief effect of these agreements was to establish a minimum price which the distributor had to pay to the farmer for his milk.

But while we were working on specific measures to aid the dairy industry and farmers generally—both in an immediate and in a long range sense—we also worked to raise the purchasing power of the general public. The entire structure of economic legislation designed to stimulate industrial production and to permit the industrial workers to raise their income and their standard of living was as essential for the welfare of the dairy farmer as for the welfare of the worker and businessman.

But we recognized—and still sadly recognize—that American agriculture presented a much more difficult problem than American industry. While it was essential for American agriculture that we abolish unemployment and raise the general standard of living in the cities, special additional measures had to be taken to protect the farmer against the special hazards of harvest, market, and price.

It was because of these factors that the various parity, conservation, and support-price programs were put into effect. While the reasons for these programs are quite clear to you gentlemen—however much some of you might disagree with some of the details of these programs—the basic reasons for these programs are much less clear to the general public. Least clear of all to the general public are the reasons for the support-price program which, as far as the dairy industry is concerned, is confined to manufactured and processed products.

Late in 1948 and early in 1949, when dairy prices began their decline, the Secretary of Agriculture began to invoke these price supports—for butterfat in February of 1949, for dried skim milk in April, and for cheese in July. Today the Federal Government owns some millions of pounds of these commodities.

I must say that the price-support program, even in association with the milk marketing agreements has certainly not been effective in holding up the price of dairy products. This is so true that some of our dairy farmers have been writing to me, petitioning for an abandonment or curtailment of the price-support program for feed grains, on the ground that dairy prices—and poultry and egg prices, too—have dropped out of sight of the price of feed grains.

I shall not tonight undertake a defense of the price-support program. Its defects are obvious to all. But neither these defects, nor any other defects in the farm program can be cured with a meat ax. Something better must be improvised to take its place.

The price-support program is so subject to abuses on the one hand and to public misunderstanding on the other that I, myself, feel strongly that some other formula must be developed. I cannot tonight propose or enunciate a better plan. I have studied and shall continue to study every proposal which has been or will be made to this end.

I know that whatever solution is worked out must be worked out in relation to the entire field of American agriculture. No solution which benefits one field of agriculture at the expense of another is acceptable. No solution which solves the problems of one sector of agriculture without regard to its effect upon the others is acceptable. And, finally, no solution which fails to take into full consideration the welfare and interests of the consumers, of the taxpayer, and of the whole national economy is feasible.

This does not mean, however, that we can dismiss the special problems of the dairy in-

dustry and postpone thinking about them or doing something about them until we have solved the whole problem of American agriculture. We here are especially concerned with the problems of the dairy industry. That industry has its special problems which can and must be attack insofar as they are special problems. I propose to discuss a few of them.

The special problems of this industry do not reside entirely in the decline in the price of milk and other dairy products. That decline is as much a symptom as it is a disease. One of the real ailments which besets the dairy industry is the decline in the consumption of fresh milk. Per capita consumption of milk has been dropping. In 1948—the last year for which I have figures—one-third of the families in the cities of America were consuming less than 1 pint of milk, in all its forms, per person per day. This is a threat not only to the dairy industry but to the health of the Nation. This circumstance again is as much a symptom as it is a disease. For many of the families to which I refer, the price of milk is higher than their capacity to pay. We must reverse this downward trend in consumption. The question is how to do it. One way in which that can be accomplished is through full industrial employment at good wages.

The price of milk has dropped 22 percent within the past 2 years. The price of the products which the farmer must buy has dropped only 4 percent. We must continue to exert every effort to halt and reverse that trend.

It has always seemed to me, that in any business, dairying or industrial, the way to increase gross and net income is to increase the volume of production while reducing the unit cost of production. In specific reference to the dairy industry I believe that a sound and practical approach is to encourage demand on the one hand and to work for an increase in the purchasing power of the consuming public on the other. We must work at the same time to decrease the cost of production through more efficient methods of production and distribution. Nor should the retail price reflect an excessive fraction of profit for the middle man.

I know that all this must sound like A B C to this audience. You have heard this general prescription time and again. Yet, for the long run, it is the only prescription for an industry confronted not only with declining prices but shrinking markets. The only question is how to adapt this formula to the special conditions of the dairy industry.

A few weeks ago, I received a very interesting letter from a professor at the New York State College of Agriculture. He wrote that "Farmers are becoming more and more critical of handlers and processors whose costs also continue high, but who receive an increasing proportion of the consumer's dollar, as the price level declines." I cite this observation as a sign post on the road which must be traveled.

I do not mean by all this that there is nothing which the Congress or your State legislatures can do to help you. There is much they can do. And there is much that they could undo.

Recently the Congress enacted legislation which, in my view, was a heavy blow at the dairy industry. I refer to the repeal of the taxes on colored oleomargarine. Paradoxically, I favored the repeal of those taxes because I disapprove, in principle, of excise taxes. I also felt that these excise taxes were not a proper method of accomplishing the objective that was sought. That objective was to protect the dairy industry against the inroads of competition based on pure imitation. I think that the dairy industry should be protected against unfair competition in this form. Therefore, I voted for the Gillette-Wiley amendment, prohibiting the shipment in interstate commerce of oleomargarine colored in exact imitation of butter. As I told my colleagues in the Senate, the ultimate consumer does not say "Please pass the oleo." He says, "Please pass the butter," whether it is butter or oleo. I think that oleo should make its own market and not move into the market on the basis of an exact market and not move into the market on the basis of an exact imitation of butter.

But my objection to the oleo legislation was based on still broader grounds than even this. I objected to this body blow at the butter industry without first measuring and meeting the harmful effect which would be and will be visited upon the dairy industry and upon the whole of American agriculture by the oleo legislation. I believe and still believe that these harmful effects will be much more extensive and much more serious than a simple reduction in the sales of butter. I believed and still believe that the consumer will not benefit in any major way from this action. I make this latter statement on the basis of the fact that the oleo industry is, to a large extent, a monopoly of a few manufacturing companies which can and will control the price for their own benefit to the detriment of the consumer.

As a Senator from New York, the largest consuming State in the Union, and deeply concerned with the interests of all our people, I feared that the effect of this legislation would be to exploit and not to benefit the consumers of my State.

At the same time, I felt that unless immediate steps were taken to adjust the dairy industry to the losses which the industry would inevitably suffer, great harm would be inflicted upon all of American agriculture and hence upon the entire national economy.

I therefore introduced into the Congress only last week two resolutions aimed at meeting these two situations. One resolution called for an investigation of the monopolistic nature of the oleo industry. That resolution calls upon the Justice Department to investigate the oleo industry and to take such steps under the antitrust and fair-trade practices laws as are merited. I can see no possible objection to the speedy approval of this resolution. I urge all of you here tonight to consider the advisability of indicating your support of that resolution.

My second resolution was a much broader one, aimed at measuring the effect upon the dairy industry and upon all of American agriculture of the anticipated decline in butter sales. The Department of Agriculture is asked, under the terms of this resolution, to make recommendations to the Congress of necessary measures to assist in the orderly adjustment of the dairy industry to the new conditions which it will face.

I consider this latter resolution to be addressed to the heart of the situation in which the dairy situation finds itself today. I believe that situation to be serious and deep-laid. The passage of the oleo legislation was merely the explosion of a long-smoldering fire. A study of the statistics discloses that the per capita consumption of butter has been dropping steadily during all the years since the end of the war. This decline in butter consumption since the prewar years is now estimated at about 8 pounds per person per year, a market drop of 1,000,000,000 pounds of butter, representing about 22,000,000,000 pounds of milk. The per capita consumption of oleo has meanwhile been increasing, despite the 10-cent excise tax which has been applicable. The consumption of butter has been going down, and the consumption of oleo has been going up. The recent oleo legislation will merely accentuate, to a major degree, a prevalent trend.

Let us not blind ourselves to the facts. Let us not pretend that these facts do not exist. Oleomargarine is here to stay and will be taking a greater and greater share of what used to be the butter market—unless we do something about it. I am not prepared to say just what can or should be done. I merely say that something must be done. Otherwise our national economy will suffer.

Perhaps the cost of production of butter can be reduced—without reducing the income to the farmer. Perhaps some new process can be developed for the utilization of surplus milk. I hope that the Department of Agriculture will give all these possibilities its full attention. I know that all of you will give this matter your most thoughtful study.

I have not come here tonight with a ready-made solution of your problems. I appear before you tonight as a friend and as a counselor, and as one who is deeply concerned with the conditions in your industry and with your welfare.

I can offer you some general advice. In the solution of your difficulties I would suggest that your efforts be directed toward the integration of your problems with those of the other sectors of the American economy. I would suggest that you keep in the forefront of your consciousness the interest and welfare of the consumer. He must be your friend as well as your customer.

I suggest that you closely identify your interests with those of the working people in the cities and towns and villages. Once we establish the fact that the interests of those who produce food and those who consume it—those who work on the farms and those who work in the cities—are one and the same, we will have cleared away much of the underbrush which prevents us from seeing a clear way to the common road leading to prosperity for all.

An economy based on scarcity is an economy poised on the brink of disaster. Production based on charging all that the market will bear is production based on insecure and insubstantial ground. While the immediate problems of the dairy industry call for immediate action, you must enlist in your long-range support the wholehearted aid and cooperation of the working and consuming public. They have as much a stake in the future of the dairy industry as you. Work with them to make them realize it. Their interest is your interest. Working together we will not fail.

A Program for the Republican Party

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I have in my hand the text of a splendid address delivered by the distinguished chairman of the Republican National Committee, Mr. Guy George Gabrielson, at a conference of midwestern and Rocky Mountain Republican State chairmen, in Salt Lake City, Utah, last Friday night, March 31. I believe that every Republican in the Nation will be interested in Chairman Gabrielson's comments, and that independent voters, too, will take heart in his rousing message of patriotic appeal.

We are all familiar with the fact that under Chairman Gabrielson and his executive director of the committee, Mr. Albert B. Hermann, there has been a revitalization of party spirit. It is essential that this occur, because we must have a dynamic two-party system in our

land. In my own State of Wisconsin, we have an outstanding Republican leader, in the form of Mr. Wayne Hood, of La Crosse, at the helm, and he is following in the splendid traditions of his able predecessors, and is doing a great job, not only for the Republican cause, but in the interest of good government in Wisconsin.

A strong Republican Party is indispensable to a strong America. A dynamic two-party system is indispensable to a vital America.

I was particularly interested in the statement by Chairman Gabrielson that to be successful, the machinery of a political party must make for a party of inclusion, not exclusion. He suggested that the Republican Party broaden its base, and I believe that if it does broaden its base, not only will we have a stronger America, but we will have a revitalized two-party system.

Throughout Wisconsin, this policy of broadening the base is fully underway. In every one of the 71 counties, alert county organizations are contacting voters, spreading the good word of the importance of public participation in the coming election struggle.

I ask unanimous consent that the text of Chairman Gabrielson's comments be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a very great pleasure to be here in Salt Lake City and to have the opportunity of addressing you chairmen of our western and midwestern State organizations. I believe that meeting here in Salt Lake City has an especial significance for the party, which I will mention a little later; and it gives me an especially good opportunity to discuss what I believe must be the basic theme of our party organization.

To be in the forefront of a battle with that objective is scarcely a novelty to a westerner. Those of you who are native to this region and this State know that from long and personal experience. The rest of us know it from our study of American history.

In those pages of history that were written here in this region of the West, the story of the struggle of the Mormon people and their achievement is one of the most inspiring that occurs in any history anywhere. The hardships visited on Joseph Smith, Sidney Rigdon, and Brigham Young and their followers in their movement from New York to Ohio to Missouri and Illinois and Iowa and, finally, to the valley of the Great Salt Lake here in Utah rival those that any group has had to suffer. The courage, the fortitude, and the faith they displayed during this period of tribulation has few peers in American annals—or those of any other nation.

They reached the new land of which Joseph Smith had spoken. It was arid land, a desert. They suffered hunger and deprivation. Frosts and crickets threatened the first scant crops. Even a bare existence required almost endless toil. But the Mormons persevered. They made the desert bloom. They established settlements which grew and prospered. They built Utah to Territorial status and eventually—after a great deal of trouble with a succession of Washington bureaucrats who apparently don't change much—achieved statehood.

To anyone acquainted with this story it is tremendously impressive for the indomitable courage, the determination, and the fixed purpose of the people who lived it. To me it exemplifies the qualities that went into the making of this Nation and the spirit that has made it great.

I believe it is appropriate—particularly so because of the approach of the annual conference—to pay sincere tribute to the Mormon people and the Church of the Latter Day Saints for their great achievements—material and spiritual. They represent a breed of which the United States, today, stands in sore need. We could use a lot more of the fortitude and the conviction that moved the great Mormon leader, Brigham Young, to tell Captain Van Vliet of the United States Army, in 1857, that he did not want to fight the United States "But if they drive us to it, we shall do the best we can; and I will tell you, as the Lord lives, we shall come off conquerors * * *."

That statement bespoke a moral determination and clarity of purpose that must find a resurgence if we Americans are to survive as a free people.

It is no secret to anyone in this country that the times in which we are living are of the most critical character. Not only do we have problems of dealing with Russia in a cold war, and those of an unsettled world generally; we have the additional difficulty of being forced to face these difficult problems in the chronic atmosphere of insecurity, antagonism, and disorder, which has been created by 17 years of Democratic administrations. With all the bombastic and misleading promises which the administration leaders have made about security, the fact is that what the administration has brought to us as a people is insecurity. We are living today in an era of greater individual insecurity, instability, and unrest than ever before in the peacetime history of our country.

For one thing, it is an open secret that business, whether big or small, has no real confidence in the administration, even though the pent-up demand of wartime is not yet filled and business activity is at a high level. And business has good reason to be hesitant and fearful. For years the principal stock in trade of the administration has consisted of attacks on business. Yet it is our system of business, based on free enterprise, which has produced the real wealth of this country, and given us the highest standard of living in the world.

In addition, the national debt is at unprecedented heights. The problems of managing it, and of paying the more than $5,000,000,000 a year interest on it, are alone tremendous problems. Yet, the arrogant attitude of administration leaders toward the national debt, and deficit financing, makes it perfectly plain that they have no real concern with the crushing load which the national debt is imposing on the American people. Indeed, it is common knowledge that the administration will, if not stopped by Republican leadership, indulge in deficit financing and so-called pump priming, indefinitely, in these times of high-business activity, as well as in bad times, until the inevitable day of reckoning for financial extravagance plunges all of the American people headlong into disaster.

It is also no secret that the tax load today is so high that everyone who works for a living has to devote a very substantial amount of his work to pay taxes. At the present time, the average workingman has to work 47 working days in the year—approximately one-sixth of his entire year's effort—simply to pay taxes.

And along with the crushing load of national debt and punitive taxation which the administration has brought us, we also find the administration catering to every pressure group in such manner as to raise the cost of living steadily. While the statements of the leaders of the administration attract attention to the increases in national income, they are significantly silent with respect to the increases in the cost of living for which they are directly responsible. Indeed, it is no secret at all that, in terms of practical purchasing power, the dollar today is worth only about one-half of what it was worth in 1939. But the administration apparently thinks the American people will not, sooner or later, realize that increases in the cost of living offset increases in income, and cut down our standard of living.

In addition, with the Government's unrelenting attacks on business, with the crushing tax load, increases in the cost of living, and the general atmosphere of instability, unrest, and insecurity, we also find that unemployment is rising. For an administration which talks about deficit financing and so-called pump priming in times of what they also describe as unparalleled prosperity, I shudder at what they would propose under less favorable conditions, or in any sort of business depression.

Moreover, in the field of foreign affairs, we now know that the administration deliberately sabotaged the bipartisan foreign policy, inaugurated by the Republicans, and which is essential to the continuity and effectiveness of the diplomacy of any country. As a direct result, we now clearly see the whole foreign policy of the United States plunged into a catastrophe of unparalleled magnitude. It is no secret that the policy of the Far Eastern Division of the State Department was formulated largely by impractical theorists, who were fundamentally sympathetic with the Communists in China. And it is no secret that, spearheaded by its Far Eastern Division, the State Department carried on a personal vendetta and campaign of sabotage against the Nationalist Government of China and its leaders, deliberately undermining our loyal and faithful ally of the war. Today finds the back door of Asia wide open to the Red menace and the enslavement of the Chinese nation of 450,000,000 people. Perhaps the most realistic way to sum this up is simply to say that the Communists now have China as a result of our policy. And our first line of defense has receded from the Orient to the water fronts of Seattle and San Francisco.

Also, with the sinister spearheads of communism now pushing out in all directions in the Orient, the entire East is seething with unrest and disorder. Nobody knows how far the evil red tide, now that its floodgates have been opened by our own State Department, will surge through the Orient. Even now, it is almost impossible to comprehend the full significance of this colossal disaster in foreign policy, the like of which our country has never experienced, and for which the Democrats are directly and solely responsible.

Now, these desperate conditions under which the administration is forcing us to live—and I call them desperate advisedly—have placed new burdens and new responsibilities on the leadership of our party—the Republican Party. I do not believe that we can ever reach sensible solutions to the problems which are facing this country, and which have in large part been created by the administration, except under Republican leadership. Our policies are designed to remedy these desperate conditions that I have described, and we can do that if our party can win.

Thus, we see the tremendous responsibility which the administration's policies have forced upon the leaders of the Republican Party. Now, as never before, there is a public need for leadership and victory by us. And this public need for a Republican victory brings me directly to the main point of my appearance here today, which has to do with the party organization.

Party organization is something which, to my way of thinking, is of prime importance to the future of our country. Every political party has its leaders and its principles, but

the fact that those leaders and principles exist does not mean that the public realizes that they are there, or senses their value. That is where party organization comes in; for it is the job of the party organization to sell its leaders and its principles to the public, to make the public aware of their importance, and of what, in the last analysis, the party has to contribute to this country. Without effective organization, the leaders of any political party always find themselves crying nearly alone in the wilderness.

Now, in order for a political party to sell what it has to the public, the machinery itself must be representative of the public and in close touch with it. To be successful, the organization of a political party must be a party of inclusion, not exclusion. It must use all the talent which is, as a practical matter, available to it, and it must build constantly. It must bring in and utilize all races, groups, creeds, and colors, and in particular it must make full use of all auxiliary groups such as Young Republicans and women's organizations, and give them adequate recognition. There must be room for everybody in the party. It must harmonize and organize all the segments of our support, gathering up all the basic driving forces which are available to us, into a single powerful organization which is articulate and which can make a genuine impact upon the public.

Moreover, we must realize that in this country we have people of very different temperaments and backgrounds, who live in very different geographical sections, and who have very different views and prejudices, at least on minor points. The purpose of the party organization is not to place these differences into conflict; but, through a spirit of fairness, friendly negotiation, and exchange of views, to compromise and consolidate these differences, to close ranks, and present a united front, and to do it with the enthusiasm which genuine cooperation and efficiency always promotes.

Coming now specifically to our party, I feel that at this very time we have an unusual chance to broaden our base. There are millions of Republicans all over the country who never participated in practical politics, but who believe enthusiastically in our basic Republican principles. A clear majority of the leaders in business and the professions are Republican in sentiment. Many of them can be harnessed and put to work. Above all, we must bring Republicans of outstanding ability into our party organization, whether they have ever previously participated in politics or not; and we must make them available as candidates wherever we can. That is a job which you State chairmen are particularly fitted to do. I hope that you will join with me in trying to put on a continual search for high-grade candidates, for every political office from dog catcher up, regardless of whether those candidates have ever before had any political experience. In this way we can build the party from the bottom up.

Also, I think we must remember that, in the last 50 years, the whole political horizon has changed. Fifty years ago the big city machine and paid political workers were prime factors in political parties in America. Today, all that has changed. With the constant betterment in education which we have had in this country over the last 50 years, the intelligence of the electorate and its knowledge of current events have steadily improved and increased. The foreign-born elements of our population have all become increasingly better assimilated and better educated in the principles and traditions of our country, and its system of government. With these changes voters have come to think for themselves; the big city machines have been steadily declining in effectiveness; and paid political workers have been decreasing in number.

Now, while every party needs paid political workers, it also needs volunteers. We have been finding, in recent years, that the public is taking a far greater interest in politics than ever before, and that as a result there are now vast potential numbers of volunteer Republican workers, available from the general ranks of the public. In broadening the base of our party, we must seek out and utilize them, harness them and organize them into that single, integrated Republican organization which I have tried to describe. A distinct vacuum has been created by the combined factors which I have mentioned, and that vacuum fortunately can be easily filled by this new factor, the increasing number of volunteer workers which are available.

Finally, I think we must remember that all elections are won at the local or precinct level. Only concrete activity at the precinct level, and the caliber of the candidates there presented, provide a clear measure of the strength of the party and its value to our country.

It is significant that this meeting is being held in Salt Lake City. For it was in Salt Lake City that the 1946 campaign had its kick-off, and you will recall, we won the congressional elections of 1946. Indeed, the results were startling. In 1944 we Republicans had only 20 of the 49 Representatives in Congress from the 11 Western States. In 1946 we elected 32. And while, in that area, we had only 5 Republican Senators in 1944, in 1946 we elected 10. We won in 1946 because the public was with us; because, one way or another, the base of the party had broadened enough to take in a majority of the American people.

So, I like to think, as we meet here today, in Salt Lake City, that this meeting forecasts the broadening of the base of our party, and is the harbinger of the Republican victories in 1950 and 1952, which I believe to be essential to the welfare of our country.

Democrats Sabotaged Bipartisan Policy

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including an article by Mr. David Lawrence in which he fixes the responsibility for the crack-up in foreign policy. There never has been an honest attempt by the Democrats to establish a real bipartisan approach to a foreign policy as we saw in both the China and Formosa situations. It has always been bipartisan when it was favorable to Democratic Party policy.

DEMOCRATS ARE RESPONSIBLE FOR ENDING BIPARTISAN POLICY

WASHINGTON.—A lot of holier-than-thou speeches are being made about how the Republicans are upsetting the bipartisan foreign policy, when the truth of the matter is that the Democrats are primarily responsible for destroying the fine spirit of cooperation which once prevailed.

It's all very well for former Secretary Stimson and others with short memories to denounce the Republicans for their attacks on foreign policy, but the principal damage was done last autumn when John Foster Dulles—who, with the exception of Senator VANDENBERG, was the strongest influence in the Senate for bipartisan cooperation—was pilloried by the Democratic Party's wrecking crew in the New York State campaign.

With Senator VANDENBERG in ill health, it was logical that Mr. Dulles would carry the ball for a bipartisan foreign policy at this session. But the heavy guns of the Democratic administration were trained on him just the same. This antagonized the Republicans in Congress, many of whom harbor to this day a bitter resentment against the tactics of the administration. John Foster Dulles himself has magnanimously chosen to ignore the episode and strive again for cooperation. Some of the Republicans in the Senate, however, say that it is all very well for a Republican to cooperate and help the Democrats muddle through a difficult situation, but his reward usually is a series of partisan reprisals the moment he runs for office.

DULLES DEFEAT COSTLY

With all due respect to former Governor LEHMAN, it was far more important for the country to have Mr. Dulles returned to the Senate. The term was only a year, and it would have been a great example of nonpartisanship if the Truman administration had come out in support of the Republican candidate. That would have made sense because it would have been an example of real patriotism on the part of the administration.

The usual cry by the exponents of hush-hush and suppression is that the potential enemy abroad will derive aid and comfort from criticism in the foreign-policy matters. This is an exaggeration. People in the foreign offices abroad know that the only time an administration can be removed from office in the United States is when a change in the Presidency occurs. A minority opposition viewpoint is thoroughly understood and has its constructive values.

Any national or international policy that cannot stand the light of constant criticism probably isn't worth defending in the first instance. Messrs. Attlee and Churchill didn't observe any bipartisan etiquette on foreign policy in their recent campaign.

Naturally if the Republicans overplay their hand by their criticism, they will hurt themselves, and the majority party and administration will be correspondingly strengthened instead of weakened. If the Republicans happen to be right in their criticism, the Democrats will be influenced to change their policies, which is all to the good.

The fight against Secretary Acheson arose not because of any personal antagonism against him in the first instance, but because he is a symbol of the administration, especially since the President appears to have delegated virtually complete responsibility for the making of foreign policy to his Secretary of State.

BIPARTISAN COOPERATION IS OVER

In these dispatches last autumn attention was called to the way the administration was fighting John Foster Dulles, and the prediction was made then that far more than a Republican candidate was being destroyed. This has now come true. Except for a meaningless gesture now and then like the designation of former Senator Cooper, of Kentucky, to accompany the American delegation to London for the forthcoming meeting of the foreign ministers, the days of bipartisan cooperation on foreign policy as carried on heretofore are over. Republican Senators are no longer to feel muzzled to speak their thoughts in the Senate, and there are signs that the Democrats themselves are considerably relieved, too, to be able to accept the political challenge of their opponents whenever it is flung toward them.

The Navy and American Business

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by Admiral S. E. McCarty, Supply Corps, United States Navy, at the thirty-third annual convention of the American Brush Manufacturers Association, at Atlantic City, N. J. Admiral McCarty gives an informative picture of how the Navy's business arm operates, as well as the importance of American business, big and small, to the defenses of our country. With it all is mixed a good deal of sound horse sense and good Americanism:

Mr. Chairman, distinguished guests, and members of the American Brush Manufacturers Association, it is a real pleasure for me to be with you today. Yes, I know all speakers and guests say that on every occasion—but today I have the opportunity of discussing a business that is vital to the Navy, and talking it over with the people who are the real leaders in that business.

As a representative of the Navy Department and the Navy's business arm—the Bureau of Supplies and Accounts—I want to make this session of as much benefit to me as to you. And that is my approach this morning.

Several weeks ago, when your president graciously invited me to be with you during this thirty-third annual convention, I seriously began to evaluate just how important your business is to the armed forces, and particularly to the Navy. Sure, many times a day I must have one of your products for my personal use—a toothbrush, shoe brush, clothes brush, hair brush, hand brush, etc., and it comes so natural that true appreciation as to the necessity in daily personal use is lost.

But it is more toward the industrial angle that I want to discuss, where you can help us and to the end that we understand each other. Just to place myself in this picture, it is my privilege to be in command of the biggest single purchasing activity in the armed forces, and I believe it is not an exaggeration to say it is either the biggest or near biggest single purchasing organization in the United States. While the primary mission of my organization, the Aviation Supply Office of the Navy, is aviation supply, yet as a part of our activity is the job of buying all items of common use for the Navy, such as metals, paper, tools, soap, light globes, and, of course, brushes—all told, a list of more than 5,000,000 items.

In the early days of the Navy, there was procured little material in a systematic purchasing system. Weapons were largely the sword, spear, and boarding pike. Salt horse, hardtack, and water could be procured at almost any port.

But the modern vessel, airplane, and weapons of naval warfare are intricate high-speed machines which soon become useless unless regularly provided with replacement parts. Just how fast we are expanding our needs in the Navy is best shown by the fact that in 1940 our needs could be filled by a quarter of a million individual items; now it requires more than 5,000,000 individual items, of which 80 percent are technical parts. And with this highly complex, closely integrated, and scientifically intricate status we find ourselves wholly dependent on the industrial output of the Nation. There is not a type of industry that does not play a part in our existence.

Any specialist, individual, or organization has an understandable tendency to regard his field as all important. You feel that way about brushes, and if you didn't, your value would soon be lost. We, in the Navy, believe we are justified in regarding our specialty, which is the protection of the national security by maintenance of strong and well-balanced military forces, as all important.

But we fully realize that the fulfillment of our mission is entirely dependent upon the existence of a well-molded and well-prepared industrial organization. Unless we can be assured of a constant flow of ready-for-use products from industry, we will fail. You members of the American Brush Manufacturers' Association represent a cross-section of the American industrial mechanism which has proved so valuable to the Navy in the past and which must continue to future operations. You, industry, are indispensable.

Through the ingenuity, cooperation, and resourcefulness of American industry, of people like you here assembled, the Navy maintained the greatest fleet the world has ever seen. The impact on industry, when the Navy really made its wants known, was beyond the wildest thought of prewar planning. You in industry withstood that impact, and you gave us what we had to have to bring victory. During the actual war period, the Navy purchased $67,000,000,000 worth of supplies. I mean by that, support supplies for our combatant forces. You gave us what we asked for and you gave us the vast store of support when we wanted it, where we wanted it, and in amounts we needed. And even in peace we are still in the big-business bracket. Right now, our procurement of brushes alone runs to several million dollars a year. You in the brush business have a special appreciation of world-wide operation. Industry supports our Navy on a global operation, for our ships are prone to travel to every part of the world. You brush manufacturers, on the other hand, must procure your products from world-wide fields. Your bristles come mainly from China, India, and Russia; horsehair from every continent except Africa; vegetable fibers from west Africa, Brazil, and Mexico; wood, metal, rubber, synthetics, and the other hundreds of items used come from outside the United States.

You brush manufacturers were successful in winning for your trade the respect of the armed forces, and I speak especially for the Navy. Your splendid record of production rates second to none in industry. And you accomplished this despite the many obstacles, including the difficulty of obtaining stores in war-ridden countries. Gen. Joe Stilwell, when flying the Hump out of China, made his famous inquiry to Washington: "Will someone please tell me what the hell we're doing flying pig bristles out of China, when there is a war on?" But without those pig bristles flown over the Hump we would have been in a bad way.

During the last war the Navy fought in many climates. For the first time in history, a large portion of our fighting was in the warm, humid areas of the Tropics. There we found a new enemy of gigantic proportion—rust. More than ever before we needed preservation. In the Tropics, metallic surfaces deteriorate rapidly if not fully protected. So we screamed loud for wire brushes to clean off rust, and paint brushes to put on paint. We needed paint for preservation and needed paint for camouflage. When you realize it takes as much as 400,000 pounds of paint for a single battleship, you can see our task. During the war, in the Pacific Ocean alone, the Navy used 50,000 carloads of paint. And believe me, you people had to produce a lot of brushes for that job alone. We used 3,000,000 brushes of tapered synthetic bristles to fight rust and apply deceptive camouflage alone.

As the aviation supply officer of the Navy, I am seriously interested in the support of our plans on a world-wide operation. We gave you one problem of import during the war, and you gave us the right answer. Great difficulty was experienced in the preparation of a positive metal-to-metal contact for the thousands of rivets that go into plane construction. It was absolutely essential to avoid sparking during flight, and our way was to clean the skin surface with steel wool—all a hand operation. You gave us a small, portable, power-driven end brush, constructed so that the operator could center it quickly in the rivet hole. By that one operation, you brush manufacturers increased airplane assembly 1,000 percent.

Your outstanding contribution to plane building was in the field of engines. At the start we manhandled the hundreds of parts that must be machined to provide flowing contours, highly polished surfaces, and microscopic tolerances. This was a long tedious job and not so accurate. You gave us power-brushing techniques that not only speeded up the production, but established mechanical standards never before obtainable.

The contribution of the brush industry to aircraft manufacturers cannot be measured in precise statistical terms, but the dependence of the aircraft industry upon brushes is well appreciated. You are an example of industrial cooperation which so significantly shows the interrelationship of American industries. You can well be proud of your war record and your peacetime support. We in the Navy know you will always be one of our mainstays.

The Navy desires to foster and improve the understanding, cooperation and good feeling which exist between American industry and the Navy Department. We are always anxious to discuss mutual problems. To this end, I would like to discuss Public Law 413, known as the Armed Services Procurement Act, and how it is now affecting our dealings with industry.

When this act was first passed by the Eightieth Congress, I do not believe industry fully appreciated its import. At that time a large number of commodities were still in the scarce class. But during the past year conditions have changed, and we now have a buyer's market, and this has progressed to such an extent that there have been created critical business areas, or "distressed areas."

The passage of the Armed Services Procurement Act, Public Law 413, appreciably changed the procurement policies and practices of the armed services. The basic concept of buying was changed. Where the wartime buying under the First War Powers Act allowed negotiated procurements in quantity, the Armed Services Procurement Act provided for procuring by public advertising all commodities in which competitive bidding could play a role. This was implemented immediately by the armed forces, and has, I am sure, resulted in procurements effected by real competitive bidding; by contracts being placed throughout the various industries; and by the armed forces obtaining products at a lower price.

For the armed services to procure at a lower price does not mean you in industry are being robbed. By quantity contracting you are able to plan your production, for in our buying we ask for staggered delivery. Then you eliminate a great mass of paper work, such as repeatedly submitting bids, your uncertainty of purchasing raw material, repeated billing, etc. It gives you an orderly program.

To vividly illustrate my thought on competition, I might point out that the bidders' list of the Aviation Supply Office contains the names of some 16,000 firms. Yours

being a most competitive industry, I don't think I need say more on that score.

Since the end of the war, with unification becoming a major issue, there has been developed single-service procurements. By this I mean the Navy purchases certain products for the Army and the Air Force; and the Air Force and the Army, in turn, purchase various products for the combined services. Single-service purchase is based upon a commodity versus a plant breakdown. I can best illustrate my point by examples of the two. By commodity breakdown I mean that the Navy purchases a commodity for three services. On the first day of January of this year the Navy began buying paint for all of the services. I choose this as a representative example because it is related to your industry. Conversely, the Air Force procures photographic material for the three services. This systemized buying is certainly advantageous to both the services and industry. For the services it will mean in the end more economic procurement. To you in industry it wil mean that you will be dealing with one contracting officer and one governmental agency for a specific commodity. Industry comments have been very favorable on this type of procurement. Now we turn to the other segment of so-called single-service procurement—and that is, literally, plant allocation to one service. Again, to illustrate my point, the Navy has been allocated the Pratt & Whitney Aircraft Division of the United Aircraft Corp. This means that all Pratt & Whitney engines and engine parts will be purchased by the Navy for the Air Force, as well as for the Navy's requirements. Likewise the Air Force procures engines and engine parts of the Wright manufacture for the Navy, as well as for Air Force requirements. This again will, we think, produce economy in buying, and the contractor deals with one contracting officer. And this phase of industrial mobilization control is extending to all industry.

Just a word about this unification program. We have already gone a long way, particularly in the procurement field. I do not believe there ever was the intention of Congress for a merger as was so glibly brunted about at one time. I believe Congress intends that there must be an Army, a Navy, and an Air Force, all with definite missions to perform and each branch of the Department of Defense to have control of its logistic support. But those men up on Capitol Hill are well versed in the military set-up and they have decreed a plan of unification, such as procurement, medical administration, etc. And that plan is working to the benefit of the taxpayer. The present unification procedure is good because it is efficient and economical and because it is a benefit to industry and the armed forces.

The armed forces have developed specifications for a great majority of the items that we buy and that go into our supply system. In countless instances, these specifications have been developed with the aid of the affected industry. Industry has always appeared most cooperative in aiding the services in the development of specifications; I am sure that this will hold true in your own industry. We, at all times, invite industry's comments and criticisms on existing specifications, for these serve as the basis of our procurements.

At times we are greatly concerned as to whether the bidder is fully aware of all of the requirements of our specifications. This has been particularly true in our procurement of brushes for the past year. We have recently received comparatively low bids on various types of brushes—bids, which when compared to previous prices paid, are extremely low. It is our responsibility to assure ourselves and the bidder that these prices are correct, and that no error has been made in the computation of the bid. Yet, repeatedly, the reply from the low bidder has been that he will furnish the brushes according to the specifications and at the price bid. After much industry comment on this problem, the Navy decided to establish additional facilities to test the brushes under contract to insure that the brushes did meet specifications. This is a protection to the Navy, the users of the brushes, and to industry, the supplier.

The Navy has wholeheartedly supported the administration's attitude toward small-business men. For a while we mailed invitations to bid to every known source, and in addition sent bids to local chambers of commerce, etc. This led to considerable confusion, but also did a lot of good. Since the 1st of March, a more systematic way has been resolved. We now mail invitations to bid to all known and reputable firms in specialized manufacture and mail bids to regional offices of the Department of Commerce. There are 15 such districts in the United States.

The Navy welcomes new prospective suppliers. We have a list of more than 16,000 firms, but will be glad to add others if they can satisfy the Navy that they are legitimate dealers or manufacturers and able to produce according to our specifications.

The Navy has prepared two booklets that should be of interest to every firm represented at this convention. The first is Selling to the Navy and tells just what our procedures are in dealing with industry. The other booklet, How the Navy Buys, is a graphic description of the channels to be followed. These booklets can be procured for the asking. I am leaving a few here today, if any of you are interested.

Now I know I have talked quite a while, but with your indulgence, I would like to discuss another responsibility of your organization.

You people in industry have a very serious responsibility, added since the last war, to assure this country victory if we are forced into another armed conflict. You must recognize and combat the very strongly organized communistic movement aimed to weaken our inner structure. I am not appearing as a warmonger today, but am sure you partially realize that our situation is not good. Our only potential enemy has now a far greater military organization than the United States. This potential enemy has far more airplanes—and very good ones—than we have; it has far more submarines—and good ones; it has 10 times more men actually under arms than we have.

Where a year ago we had a security in the sole possession of the atomic bomb, now that security is lost because we know that Russia has actually proved their construction. While the hydrogen bomb is still not ready for actual use, yet we know that Russia has the knowledge of how to build one. Matching military strength as unit for unit and man for man, we are far in the minority.

But the real danger right now is the weakening of our national structure from within. In the fall of China to the Communists, the evaluation of factors gave the military but 30 percent of the credit and 70 percent to the political strength. Right today we are being subjected to exactly the same process. If an enemy can weaken us from within our structure, then it needs less destructive military power, and, of course, saves its own men and resources.

You brush manufacturers have beeen directly hit very recently. No longer do you get your bristle supply through China sources. You are being forced to deal with Russia, as since the Russian domination of China the bristle industry has been absorbed. You are already paying more and your costs will continue to increase. A prime thought for your consideration is that Russia can stop the bristle supply any time it wishes.

From a movement of mere propaganda a few years ago, the well-organized plan has developed into material conditions, such as your particular business has already felt. We have not taken this situation in a serious vein. We have been and now are too complacent. We have not made it a personal responsibility. I could talk for hours on this one subject because we in the military have considered what is happening.

You people of the brush industry can rightfully be proud of your past record. In our recent conflict there was no carrier-launched airplane, no torpedo fired from a submarine, no bluejacket fired a gun but what a large factor was the result of your product, the support from the American brush industry.

We will need that same support at all times. But the thought I want to leave with you this morning is that you people of industry, yes, collectively—but much more important, as an individual—must realize your responsibility to first keep our country strong from within. Destroy or weaken our political and economic strength and we are defeated before a need for a military support which by that time would be nonexistent.

We are doing our best to keep out of a shooting war. Yes, it is costing millions of dollars to support the Marshall plan, but if we did not have some such a system we would already be in a hot war and spending many billions of dollars and losing hundreds of thousands of precious American lives.

The United Nations is still the best thing offered to further world-wide peace. It is but a babe as yet and must grow to strength by help. But it has already had a big influence on world thinking.

I urge you as individuals to lend your unqualified help to the United Nations, to the Atlantic Pact, and to our foreign aid program. It is right now keeping us out of a shooting war.

You individuals must do your part now. You must individually fight just as hard to stop this communistic onrush in the United States as you did to stem the tide of the military in battle areas. You can stop it, for you do have the power to stop it if you act. Yes, you have that power, and my thought to you is to realize that you have that power and use it now.

Address of Hon. Eamonn L. Kennedy

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Eamonn L. Kennedy, first secretary, Irish Legation, Washington, at the annual banquet of the Friendly Sons of St. Patrick, Pittston, Pa., March 17, 1950:

Mr. Chairman, very reverend fathers, honored guests, ladies and gentlemen, though I speak to you with some trepidation will you please let me say at the beginning how overcome you have made me feel with the warmth of your welcome, how delighted I have been with this exquisite banquet, and how happy I also am that my first speech in this community should be spoken in reply to the hallowed toast of Ireland. We in the Legation of Ireland in Washington are very deeply conscious of the nature of this annual gathering, we are conscious of the great respect and place of honor in which the Irish community of Pennsylvania and of this city have

always been held, and we are never likely to forget all that the people of Irish descent in Pennsylvania have done for the Irish cause in dark days gone by. I feel, therefore, a very great responsibility in representing the Irish Government and the Irish people at your banquet table this evening. It is a responsibility that is all the greater because I realize that I speak tonight in your society, perhaps for the first time in its history, for that new, independent, self-reliant, and sovereign Ireland which has grown to manhood in the past 28 years. That is the Ireland I have always known. I was born into a free nation and I grew up a freeman. I speak to you, therefore, for a new generation of Irishmen. It is a generation which can no longer think of Ireland as she has been thought of so often in the literature of our long and agonizing past, as a gray-haired old lady mourning in the shadows for the loss of all her sons, and waiting in vain for help to come across the waves. We turn instead tonight to a land which has become a nation once again and which has proudly taken her place among the nations of the earth. And from that land I bring to your society and to your table our warmest and our most respectful greeting.

And as I salute you on behalf of the new Ireland on this St. Patrick's night I bring you, too, a message of hope. Because there is a message of hope in this dark night which is rolling in from the East on the civilization and culture of Europe. Even as the fires of freedom and the lamps of learning and religion are quenched one after one and as the institutions which have guided mankind for more than a thousand years are pitilessly crushed into the dust before our very eyes, yet I repeat there is hope in the midst of all this gloom. For which one of us in this banquet hall cannot think of another St. Patrick's night in the dim and distant past when it seemed once again that the gates of hell might, indeed, prevail? Our minds hurry down the arches of the years to the twilit world after the fall of the Roman Empire. It was an age like our own when the barbarian hordes were rolling in from the East, burning, destroying, despoiling, and deporting the populations which had lived under the protection of the armed Eagles of Rome. The glory of the West had fallen from the skies and in the dark night of paganism which lay heavily on the world it seemed indeed as if the first light of dawning would never again be seen.

And then suddenly in the midst of this ominous darkness a fire is kindled, it quickly flares and it leaps up into flashing tongues which are reflected in the halls of the heathen king on the Hill of Tara. It is the fire kindled by St. Patrick on that first St. Patrick's night on the Hill of Slane. In defiance of the decrees of the pagan King of Tara. Patrick lit the Paschal Fire to proclaim the passing of paganism in Ireland and to claim our land for the empire of Our Saviour. Who has not heard with pride the story of the kindling of that fire on the Hill of Slane in the County Meath on the first St. Patrick's night and how it was the daring beginning of our national apostle's glorious work?

But make no mistake about it: That flame is no mere blaze on an Irish hillside. It marks the passing of a night of spiritual thraldom not merely for Ireland but for the world. It is not merely a fire on a hill in County Meath. It is a light of hope and of liberty to the peoples of Europe already overrun, enslaved, and despoiled by the barbarian hordes who were pouring down unceasingly on the last remnants of European civilization. In the midst of the moral collapse of the fifth century in Europe, the flame enkindled by St. Patrick on the Hill of Slane is a symbol of rebirth, a promise for the future, a fire which would leap across oceans and scale mountain peaks—a fire which would ultimately travel to the ends of the earth—bearing a message of the dignity of the human individual, a message of freedom, a message of no compromise—this was a fire which would never be extinguished.

From Ireland the flame fanned out to the ends of Europe, held aloft by the successors of St. Patrick. They laid the foundations of Christian civilization in England and Scotland. They penetrated into the forests of Germany. They built monasteries in the shadows of the Alps, in Switzerland and in Austria. They recarried their noble message into classical Italy down to the tip of Calabria. Their footprints are still revered in France, in Bohemia, and in Belgium. And to this day the Lithuanian word for peddlar is scotus or Irishman, because the Irish monks visited the shores of the Baltic, peddling Christ to the pagan tribes. And so it was that St. Patrick, the man from Gaul, who had been taken to Ireland as a prisoner in his youth, the first displaced person in our history, returned to the land which had enslaved him, and handed on a flame which has fanned out to the ends of the earth.

Could he himself have known, even for an instant, how successful his beloved Irish would be in carrying his sacred fire across the face of the earth? For the torch of faith and freedom was held aloft, not only by the missionaries who penetrated into the dark recess of Europe. It was held firmly too in the hands of those, who, rather than betray any part of their inheritance of faith and liberty, chose rather to be piled into the prison ships of later and darker days, and sent across the ocean to the West Indies and Australia. And when famine and oppression came with their pitiless scourge, and sent the heaving coffin ships with their human cargo across the seven seas, the Irish emigrant carried his faith and his hatred of oppression close to his breast.

Here, surely, ladies and gentlemen, was a victim nation, carrying the cross to a world-wide Calvary. In sorrow and in confusion, unwittingly and enforcedly, they carried the message of their faith and freedom beyond the frozen forests and across the burning sands to a universal Golgotha. Displaced persons, as St. Patrick was, driven from their homeland as prisoners, deportees, and emigrants, they spread over the face of the earth on a weeping, sobbing, world-wide way of the Cross, which passed through this country linking us every St. Patrick's Day in a world-wide ceremony of commemoration.

Surely there is a message of hope here for each one of us on this St. Patrick's night? Who knows that God may not be repeating the same process which began on the hill of Slane? As Europe once again lies in ruins, as its displaced persons, starving and freezing, once again wander across the face of the earth, and as hundreds of thousands are torn up from their ancestral homes and deported into the unknown regions behind the iron curtain, into a servitude which we thought was forever abolished—may not the Via Dolorosa of the Irish be now repeated with the same results? While we lament the inhumanity of the hour, while God-fearing men and women are uprooted and deported into the center of the Asiatic hinterland, may they not become, like the Irish, the leaven in the mass. They may be nucleus of a great Christianity and a new love of freedom in a new section of the world which will yearn and dream and pray as the displaced Irish prayed on far-flung foreign shores, raising in secrecy new altars under the stars, preaching and teaching a new way of life under God and in freedom, while their oppressors confidently trust to the power of brute force which has never yet stifled the spirits of men soaring to God and yearning for liberty.

Ladies and gentlemen, this is a message of hope, not of sadness, which I bring you tonight. And it is fitting, indeed, that a representative of the new Ireland should bring you a message of hope. Because slowly and surely, in the past 28 years, we have been realizing the aspirations and the hopes of those whose efforts and sacrifices won us our independence. How far we have progressed in the stormy 28 years of our history can only be fully appreciated by those who knew the old Ireland, a land of flocks and herds which had been bled white by misgovernment, which lost 5,000,000 of her people in less than 80 years, and a land in which the Irishman would become more rare (as the London Times once said) than the Red Indian on the shores of Manhattan. Our Nation was born after one great war, it grew up in the teeth of a world-wide depression, and attained manhood status in the midst of a second world upheavel. And yet in those uneasy 28 years the hopes on which our young nation was founded have already in great part been realized. Already the ranches and large estates have been divided into small economic holdings privately owned on which as many working families as possible have been settled. Already the nation's supply of essential foodstuffs has been made certain. Where 1 blade of wheat grew before we have grown, not 2 but 10—that is the astounding truth about our wheat acreage which was 39,000 in 1921 and is now over 400,000 acres. Already we mill our own flour, grow and refine our own sugar beet, make our own clothing, textiles, boots and shoes, furniture, and cement out of the natural resources which God has placed in the soil and in the minds and limbs of the people of Ireland. Hospitalization, social services, and slum clearance have changed the face of our land. Our winter nights are brightened and our new factories are driven by the electrical power from the flowing waters of the Shannon, Liffey, and Erne. And in the air the new air services of international civil aviation in which we take an active part have made Ireland a link of union between Europe and Great Britain on the one hand and the North American Continent on the other.

It is no wonder, ladies and gentlemen, that tonight I bring you hopeful greetings from a new Christian democracy, living under a free constitution of its own making, and dedicated to a code of conduct with which we, as a race, in every vicissitude of our fortune, have been identified at home and throughout the world for more than a thousand years.

Today we are moving on toward the realization of our destiny and to the fulfillment of the hopes of the men who laid down their lives with a smile so that my generation might live as free men and women. I wish I could conclude my reply to the hallowed toast of Ireland this evening by saying that all those hopes have been realized. Yet I cannot, for there still remains one more milestone on the long pilgrimage of our people. Ireland, which is one of the oldest motherlands in the whole of Europe, still prays for territory unity. This Christmas I was home in Ireland and I can speak as one who has seen and heard. There is no aspiration of our people on which there is greater agreement among all classes and creeds than the reunification of our country. We recognize partition for what it is—a grievous wrong imposed from outside on an ancient motherland whose boundaries were made by heaven and the sea until 1920. It is a grievous wrong and a crying injustice of this twentieth century because in three and one-half of the six partitioned counties, taken as a block, there is still a majority in favor of union with the rest of Ireland. Such a position is an outrage against which our people will never cease to cry out, wherever they be, across the width of the world. Indeed, ladies and gentlemen, it comes as a shock to us to realize that the places toward which our thoughts naturally turn tonight, the place where St. Patrick was en-

slaved in Ireland as a boy, the place where he landed when he returned to preach the Christian faith, the city where he established his primatial see—even the very spot where his body has been laid to rest—that all these places are partitioned away from free Ireland by a border which has its roots in no tradition, and is related to no considerations of economies, race, or religion.

I feel that I am not merely expressing my own hopes and prayers, ladies and gentlemen, or the hopes and prayers of the young nation I have the honor to represent here tonight, but the hopes and prayers of all of us here when I hope and pray that St. Patrick will bless the efforts of the Irish people to win back for their own those places which by the very name are sacred to the memory of the Irish people—at home and abroad. Let us tell those who are maintaining the barrier of partition that they are maintaining a barrier against themselves across the width of the world. And let us remember with pride that the tricolor of Ireland is a flag of green, white, and orange. The green is for the original inhabitants of the island. The orange is for the men across the border. The white represents the unity we wish to bring about and which would make our motherland an example to the world. That desire for unity will live as long as there are Irishmen who look forward to an undivided island with its boundaries set in the foaming sea.

We feel, ladies and gentlemen, that a great principle is at stake in Ireland: the principle of whether or not a small portion of a state can break up that nation and impose its desire for disunity on the rest of people. Your great Nation fought a terrible civil war to deny that destructive principle and even today we can hear the echo of the words of the gaunt rail-splitter from Springfield when he asked in Indianapolis in February 1861: "On what rightful principle may a State, being not more than one-fiftieth part of the Nation in soil and population, break up a Nation and then coerce a proportionately larger subdivision of itself, in the most arbitrary way? What mysterious right to play tyrant is conferred on a district of a country, with its people, by merely calling it a State?"

We might indeed repeat Abraham Lincoln's rugged question today at a time when every dispatch and bulletin we read from Europe makes it imperative that the breaking down of artificial barriers be hastened in this hour of danger. The unification of Europe is in the air: it is the fashionable doctrine of the councils of Paris and Strasbourg: let us pray that the reunification of the oldest motherland of that continent will not be forgotten when the time comes to smash down the tyranny of artificial barriers. There is no worthier cause today because those who help to bring an end to the wrong of partition in Ireland are assisting in the great work of world peace. They are helping to remove the only existing barrier to a true and lasting friendship between Ireland and Great Britain.

I know that we can look to the people of the United States and especially to the people of Pennsylvania of every class and creed for support as we advance toward the national unity you have already so happily achieved. For there are not now and there never have been in the whole world any bonds of friendship between nations as close as those which bind Ireland and America today. At the end of this month our missions in each other's countries will be raised to the status of embassies and our representatives in Dublin and Washington will become ambassadors. That is a token of the esteem and friendship which have always existed between our two Republics—an esteem also symbolized in the treaty of friendship signed by your President and by ours just a month ago. But, ladies and gentlemen, our relations go deeper and warmer than the niceties of diplomatic intercourse and the signing of polite protocols. Our relations are those of blood and the Irish nation can have nothing but love and affection for this great land to which she sent so many of her sons in the past and which opened wide her mighty arms to receive them. The footsteps of Irishmen can be traced through every one of the original Thirteen Colonies. They blazed a trail of civilization along your great valleys, bringing in their hearts and minds their twin gifts of faith and freedom in the days when only men and women of willing hands and stout hearts could survive. The local histories of this country tell us how the Irish built the roads, bridged the rivers, hewed down the virgin forest and founded settlements in the clearings to which they gave the sweet-sounding names of their homeland.

But, ladies and gentlemen, surely the page of history shines no brighter with Irish names in those far-off days than it does in Pennsylvania? I can find no history of any town, city, or county of Pennsylvania that does not contain a large proportion of Irish names amongst those enumerated as pioneer settlers. In and around Philadelphia they came, into the counties of Bucks, Chester, Westmoreland, and Lancaster, up and down the beautiful Kittochinny and Cumberland Valleys they flocked in there by thousands. They were a hardy and resolute people with an undaunted spirit of adventure and as early as the first half of the seventeenth century they pressed on to the farthest outposts of western Pennsylvania and the Ohio, up and down the Allegheny and the Shenandoah, tilling clearings in every valley and forest from the Delaware River to the very frontiers of civilization. It was this stock that bore 9 signatories of the Declaration of Independence, 22 Members to the First American Congress of 1774, 7 commanders of brigades and regiments in the struggle for independence and an Irishman also stands in the unique position of Father of the American Navy.

Ladies and gentlemen, it would be impossible for me, even by merely listing all the great achievements of those of Irish descent in Pennsylvania, not to offend you by leaving something unsaid. And yet I cannot but mention with pride tonight the shining name of the Pennsylvania Line which covered itself with glory in the War of Independence. No wonder Gen. Henry Lee, afterward Governor of Virginia, said that they should properly be called the Line of Ireland, no wonder too that when Washington wished to cover his retreat from the disastrous defeat at Long Island in 1776 he chose four of the regiments of the Pennsylvania Line for that purpose—all of them commanded by native-born Irishmen. Yes, indeed, ladies and gentlemen, our people fought and bled in the beautiful valleys of your great State because they carried with them in their hearts a heritage of freedom, because they, in its grandest form, caught the vision splendid, the breath of unity, the soul of nationhood, the gleam of hope's new day.

Forgive me, Mr. President, if I speak with too much pride. The United States of America has meant so much to us in the long agony of our struggle that we like to think, even for a moment, of what we have been able to give in return. Forgive every Irishman if he is proud tonight of the full harvest our fathers sowed in this great land.

For you have always been our inspiration. As our people struck and struck again for their freedom in the nineteenth century they could hear afar off the shouts of the Liberty Boys at Bunker Hill; and on cold gray mornings as shots rang out they could faintly hear the thundering hoofs as Paul Revere rode fast with the stirring news of liberty. I am here to say tonight to everyone in Pennsylvania of every class and creed: Thank you heartily and eternally for all you were to us in tragic days gone by. Thank you eternally for all the times when you lifted up our people, held them to your heart, and wiped away all tears from their eyes. We are proud to think of you as our friends, as tonight the Irish Nation moves forward toward the unification of its territory and the realization of its destiny. We draw inspiration and hope from you as Thomas D'Arcy McGee did in days gone past when he looked around him in this great North American Continent and breathed forth the lines:

"And oh, it were a gallant deed
To show before mankind
How every race and every creed
Might be by love combined
Might be combined yet not forget
The fountains whence they rose
As fed by many a rivulet
The stately Shannon flows."

Orchids to Rev. James Shera Montgomery, D. D., Chaplain Emeritus of the House of Representatives

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to address the following remarks to a great Chaplain of the House of Representatives.

I am very sorry that I have delayed so long in paying to you, Rev. James Shera Montgomery, D. D., Chaplain Emeritus of the House of Representatives, as my colleagues already have done so timely, this my belated tribute of appreciation for your great efforts before your retirement from active duties, but the truth of the matter is that like so many of the other better things which I have endeavored to do in life, it too seemed to be fated to be delayed needlessly and almost forgotten entirely. In this instance the delay was occasioned because I misplaced the things which I had written over a period of months concerning you, and have found them just recently.

You do not know me very well I am sure, but I have been privileged to know you, not as the publican of old from afar, but from a very short distance indeed. Since January 3, 1949, I have heard you in person, deliver many beautiful, heart-satisfying prayers and I want to tell you that I truly miss, very much, your splendid spiritual efforts.

Whether you realize it or not you did much, I am sure, for all of the Members of Congress and their aides and the Gallery guests of the House of Representatives who chanced to hear you.

As stated by another more rhetorically worthy than I am concerning the religious efforts of one of your brothers in the service of the Lord:

You showed them paths of wondrous spiritual dream,
You laid across Life's dark a silver gleam.

I want to observe also that it is my belief that the following revamped lines

of another fit splendidly into your fine life's pattern:

He serveth best who knoweth best,
God's things both great and small,
For the dear Lord who loveth us,
Who made and loveth all.

I hope that you will pardon my egotism in dedicating the following poor verses of mine to you during your lifetime, written bit by bit by me, in an attempt to partially reward you for your rich spiritual efforts in behalf of Him who is everywhere and with everyone.

GOD

I

He's surging with the oceans blue,
He's creeping with the restless tide,
He's coursing with the planets far,
And flashing where the meteors ride.

II

He's fleeing with the dark storm clouds,
He's shining with the blazing sun,
He's brooding with the calm twilight,
When the heartless, weary day is done.

III

He's sweeping with the rivers wide,
He's falling with the gentle rains,
He's waving with the woodlands drear,
He's growing with the ripening grain.

IV

He's marching with the zephyrs sweet,
He's rippling in the gentle rills,
He's blooming on the great prairies,
He's toiling in the busy mills.

V

He's with us in the bread and wine,
He shared with His apostles all,
And every faithless Judas can,
If will he would heed His sweet call.

VI

It's part of His most noble plan,
To know all things both great and small,
And note the most colossal things,
And also mark the sparrow's fall.

VII

He's with us ever, watching, guiding,
Through the waters, land, and boundless space,
Charting the endless course of time,
And ministering to the human race.

VIII

And if our God is everywhere,
As we so surely think he is,
He's in all things placed in our care,
As you best know dear child of his.

IX

When one world men scream out in hate,
And with just blood crimson the sod,
We grieve in deep perplexity,
For those who can't "There is no God."

X

Out of the bad the good he'll take,
Out of the good some bad will show,
If we but knew his perfect plan,
If we could only see and know!

XI

How long, how hard the way leads on,
Through life to what we call our end,
The scourge, the crown of thorns, the cross,
Into eternal life shall blend.

XII

Some day the mists will clear for us,
Some day we'll know the eternal plan,
Some day the most debased of us,
Will have a view of God's true man.

XIII

And when that day shall come my friend,
I hope we'll see you glorified,
And praise to that great scene shall lend,
Because you served the crucified.

Republican Farm Plan

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. JACOBS. Mr. Speaker, under leave to extend my remarks, I wish to make available for reading by the membership a Republican farm plan.

Before you read it I would like you to note that on March 31, 1950, the Wall Street Journal, a publication that is not noted for supporting Democrats, had this to say editorially:

The outline seems to us to shape up into a proposition that the Republicans think perhaps the Brannan plan would be all right if it were not for Brannan.

I am not endorsing the Brannan plan, Mr. Speaker, but I think it is well to point out that much of the talk by our GOP friends is supercharged with politics; that they condemn a thing under one name and advocate it under another name.

And by the way it is a good example to us Democrats as to what we should not do.

[From the Washington (D. C.) Post of March 11, 1950]

GOP GROUP OFFERS NEW FARM PLAN

ELK POINT, S. DAK., March 10.—Axel J. Beck, chairman of the Republican National Committee's subcommittee on agriculture, today recommended a long-range farm plan which he said should be self-financing, provide for full parity prices and be farmer-administered.

In a report to his subcommittee, Beck said the objectives outlined in his recommendations should be submitted to Republican Congressmen as "suggestions for the basic farm policy of the Republican Party."

He said "negative philosophies of curtailed production" should be rejected.

Beck said the Republican Party must have a long-range farm plan if it expects to win the confidence of the farm-belt voters.

He listed these 10 proposals:

1. Administration by farmer-elected local committees and State directors, and a national board appointed by the President, a majority of which shall be State directors or persons who have held such positions.

2. Full parity on all cash nonperishable crops, restricted only by marketing quotas on each farm when on August 15 of any year the total estimated national supply of a commodity exceeds 150 percent of the predicted requirements for the next year.

3. Full parity on all feed nonperishable crops, limited only by acreage restrictions when the supply on December 1 of any year exceeds 150 percent of its assigned production.

4. Unrestricted livestock production, supported at full parity at market by Government purchases. Any losses from sales or accrued surplus would be financed by a $1 fee per 100 pounds imposed on the killing sale of all livestock. The fee could be increased up to $2 per hundredweight in event of a marketing emergency, or suspended when it is not required.

5. Support of egg and dairy products at full parity price levels by a fee on the products marketed under the same general plan as provided for livestock.

6. Maintenance of prices on semiperishable crops at full parity levels under a Government quota system.

7. Provision for on-farm storage facilities for nonperishable feed crops.

8. Provision for soil conservation.

9. Encouragement of research on new uses of agricultural products.

10. Establishment of a flexible tariff at parity level for all agricultural products.

Attention Chairman Buchanan, of the Select Committee Investigating Lobbying

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. O HARA of Illinois. Mr. Speaker, I wish to call the attention of the House to the propaganda campaign which is now being conducted by the real-estate lobby against members of the Banking and Currency Committee who fought for a bill which would have ended the housing shortage and placed homes within the financial reach of the many families in the middle-income group.

This bill, which the Banking and Currency Committee reported out after extensive public hearings and which was opposed only by the real-estate lobby and the mortgage bankers, would have reduced the monthly shelter cost on a home now requiring a $90 payment to $64. It would not have cost the Government one cent. Certainly it lowered the interest rate, but if the bankers can afford to make CCC price-support loans to the farmers on a 3-percent interest, only one-half of which they receive, there is no reason under the sun why they cannot afford to make 3-percent loans to families buying homes, especially when all of the 3 percent would be kept by them.

Because the real-estate lobby is interested only in the continuance of the housing shortage, and has been able to block all legislation which promised an early end of the shortage, it is necessary to extend rent control unless we are willing to face the repercussions certain to follow the throwing of thousands of families onto the streets. As far as Chicago is concerned, I can assure the House that the end of rent control on June 30 of this year would do just that. The blame is on the real-estate lobby and the price is being paid by small landlords as well as by tenants.

I have received hundreds of letters from both small landlords and tenants taking to task the real-estate lobby for what it has been doing in preventing a return to normalcy in the housing situation. These letters have been signed by the good men and women who wrote them.

I also have been receiving a number of letters which were either anonymous or were signed with typewritten names with no address. Although they are mailed from widely separated States, the phraseology is so similiar as to suggest a common source of origin. I respectfully suggest to the distinguished and very able gentleman from Pennsylvania [Mr. BUCHANAN] the chairman of

the select commitee investigating lobbying, that when the spokesmen for the real-estate lobby are summoned before his committee that the inquiry cover the subject of anonymous threats, all in substantially the same phraseology, which from widely separated States are now being sent through the mails to members of the Banking and Currency Committee who have been fighting for the families of America against the real-estate lobby.

Every Member of this body, Republican as well as Democratic, is glad to hear from his constituents, whether they are in agreement with him or contrariwise. When constituents take the time and trouble to write their Representatives in the Congress, it means that dimocracy is functioning at both ends. I am sure none of my colleagues could approve of any inspired resort to anonymous correspondence to muddy the proper, helpful, and legitimate exchange of viewpoints between the Representatives in the Congress and the people back home in the respective districts.

The language in the following letter, which is typewritten even to the name attached, which has no address and which the post office stamp indicates was not mailed from a postal zone in my district, is stubstantially the same as that in anonymous letters I have received from at least a dozen States far removed from Illinois:

Mr. BARRATT O'HARA,
Illinois.

DEAR SIR: When are you fellows going to stop pandering to the gimmie boys and return to the tenets of justice? Let's stop buying votes with the rights of those who have the guts to struggle and succeed.

Since when has it been the function of the Government to force part of the citizenry to support the more indigent members?

As you well know, rent control is the sale of justice for political expediency. Federal housing, as you also know, provides part of the citizenry with housing, schools, parks, etc., at the expense of the remaining stalwarts of private ownership.

We are going to fight this approach to socialism with every means at our disposal. You may join us in our march back to Americanism, or become the target of our initial attack. Make your choice. No fence riding.

I remain respectfully yours,
A VOTER
(Mrs. Helen Rogers).

Now, Mr. Speaker, permit me to turn to the correspondence from the people of Chicago who, when they write me, sign their names in their own handwriting and give me their addresses so that I may know them. They are as forthright with me as I am with them when on every roll call in the House I make public my position. There are hundreds of such letters on my desk. They all tell the same story of the critical housing shortage in Chicago and the certain tragedy which would follow the termination of rent control in Chicago on June 30. I pick the following letter at random:

CHICAGO, ILL., *March 28, 1950.*
Representative O'HARA,
House of Representatives,
Washington, D. C.

DEAR SIR: As a mother of three children I plead with you for some form of rent control for Chicago. The agent of the building in which I have rented an apartment for the past 8 years threatens us with eviction as soon as rent controls are lifted in Chicago or else they will raise the rents to such levels that we won't be able to pay.

This is not an idle threat I know, as there have been several vacancies in the building and all have been rented to people without children.

There is rental housing in the de luxe level (apartments at $125 per month and up) and I understand that even these will accept no children.

I am not the only person in this predicament as I know several families who had to store their furniture, separate their families among friends and relatives and occupy a bedroom in a rooming house sharing toilet facilities with five or more families with monthly rentals for these facilities as high as $80 and $85 per month.

Housing in Chicago for middle and lower income groups has never been plentiful, except perhaps for a short period in the thirties' depression when everything—office, factories, stores, and apartments were vacant as people were unable to secure work. Even 8 years ago, when I rented my present apartment I looked a long time for rental space as children were not accepted even then, when some apartments were available. So you see Mr. O'HARA how much we need your help.

God bless you and please help us.
Sincerely,
ESTHER DOMEROSKI
(Mrs. H. Dombroski).

A Chairman at Last

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I wish to set forth an article taken from the Washington Post of April 1, 1950, entitled "A Chairman at Last." It is as follows:

A CHAIRMAN AT LAST

After more than 15 months President Truman has found a man to fill the vacant chairmanship of the National Security Resources Board. The new appointee, Air Secretary W. Stuart Symington, will be looked upon to rescue the NSRB from its long period of aimless drift—drift at a time when this coordinating agency should rave been pushing manpower mobilization and civil defense plans. Mr. Symington has been one of the most vigorous executives of the Truman administration, and if we have frequently disagreed with him, we have never doubted his determination or capacity for decision. Whatever else may be said of the Air Force, it knows where it's going.

A similar sense of mission is the prime need of the Security Resources Board. This top-level agency has the job of arbiter between potential military and civilian demands on human and physical resources. Its responsibilities include the formuluation of an up-to-date mobilization plan readily translatable into component details, and the coordination of mobilization activities in the various Federal departments. It also, since last year, has been in charge of civil defense planning. But with only a part-time director in the person of Presidential Assistant John R. Steelman, the NSRB staff has been marking time and seemingly has been more concerned with internal administration than with positive accomplishments.

The need now is to get down to practical details—to provide guidance to the Munitions Board and other agencies on mobilization responsibilities, and to see that States and cities receive concrete help in training civilian defense cadres. The job is not one for scaremongering, but for steady, unflamboyant staff work. Mr. Symington has had plenty of experience, both as an industrialist and businessman as well as in Government. If he will use his abundant energies to restore direction to the NSRB, he will help meet an important national deficiency.

Midpoint Anniversary of ECA

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an address by Secretary of State Dean Acheson and an address by Gen. G. C. Marshall. Both addresses were given today at the Hotel Statler, Washington, D. C., at a program observing the midpoint anniversary of ECA. I was present at this historic occasion and invite attention to these two reports on ECA.

ADDRESS OF SECRETARY OF STATE DEAN ACHESON

Two years ago the American people, acting through their Congress and the President, began a heroic adventure with the people of Europe. The phrase is not mine—it belongs to that valiant worker for peace, Senator VANDENBERG. I know his heart is with General Marshall, Mr. Hoffman, his colleagues of the Senate and House, and the men and women of the Economic Cooperation Administration in this celebration of the second anniversary of the program to which they have all made vital contributions.

Looking back, why did we begin this venture? The war had left the people of Europe nearly prostrate. It would have been difficult, perhaps impossible, for them to rise by their own efforts, and we in America knew that a peaceful and hopeful future could not be won for us or for them until Europe once more stood proudly on its own feet.

We did not limit the scope of our offer of cooperation.

The sufferings and the destruction left by the war were not confined to any one area. All over the continent people were longing to rebuild a useful and orderly existence after the long misery and violence of the war. They wanted to restore their homes and farms and workshops. They wanted to plan for the futures of themselves and their families; they wanted to move toward a more promising day, toward a world in which peace might endure.

We in America wanted this, too. And so General Marshall proposed that all European countries should participate in a joint recovery program, to which each would contribute in the measure of its ability. In this way and with our aid, we hoped that the weak and war-wracked organism of Europe could regain strength and health.

We were rebuffed by a small group of men who stood to profit from Europe's misery and who have never viewed the United States with anything but envy and hostility. More important, the principle of international cooperation was scorned. As a result

of an arbitrary and selfish attitude on the part of some, the program was limited to that half of Europe where men were at liberty to choose the path of cooperation.

Within that half of Europe, the recovery plan has now operated for 2 years under the direction of the European countries, working with Mr. Hoffman and Mr. Harriman and the splendid team they have organized and led. This combination has been unbeatable. This has been the kind of a constructive job that arouses the enthusiasm and spirit and devotion of freemen.

Great progress has been made in western Europe. Over-all industrial production in 1949 was 15 percent above the 1938 level. Coal production was 434,000,000 metric tons in 1949, in 1948 it was 398,000,000 tons. Steel output in 1949 was 46,000,000 metric tons, one-sixth more than in 1948. The production of bread grains has risen by more than half in the period from 1947 to 1949.

And these gains will continue, for the farmers and workers have more and better tools and machines. In 1949 the average factory worker produced 25 percent more than he did in 1947.

It would be incomplete if I spoke of European recovery as though it mattered only to that one continent. Western Europe is one of the world's great workshops and one of the world's great markets. The recovery which has been made there has extended its influence to many other countries—to the countries of South America, to Africa, and to southern Asia. It is greatly to the interest of all of us to have western Europe strong and healthy.

This illustrates what has been accomplished through the Marshall plan. This is the exciting record of recovery. These statistics are alive with hope.

The progress that has been made is a triumph of man's ingenuity, of man's will, of man's confidence in the power of free institutions. It is not a triumph for any one nation, or for any one class, but a triumph of cooperation.

We are proud of our contribution. We have supplied a great deal of assistance to this cooperative effort. But our contribution has been only the "something extra" that was needed. It has added the vital margin to the efforts and resources of the people of Europe themselves.

When the European recovery program began, the Communists filled the air with dire predictions that the European countries could not cooperate in this way without its ending in their domination by the United States. The experience of the European recovery program has shown how dishonest and insubstantial this propoganda was. No country has lost anything but poverty; no country has gained domination, but all have gained in self-respect and have won a new confidence and a strengthened independence. Meanwhile, the peoples of eastern Europe and China have learned that there is indeed a part of the world where the harvest of collaboration is a bitter fruit.

Now, as we look forward, what facts do we want to call to mind?

First of all, we must remind ourselves that the real test of stamina is how we do in the long middle stretch of the race. Here is where staying power has to come in to take over the initial enthusiasm. Eighteen countries are cooperating in the most exciting thing that is happening in the world.

Second, the recovery of production—which was the first great object of the program—was difficult and arduous, but it was easier in many ways than the recovery of trade—the second great object of the program. To restore satisfactory levels of trade, the European countries have to overcome maladjustments arising from the economic effects of two great wars and difficulties stemming from political and economic conditions deeply rooted in their history.

The revival of production was mainly a national problem, which required a great national effort and some outside assistance. The recovery of trade, however, is largely an international problem, requiring a high degree of cooperative give and take and difficult, even painful, adjustments. We are aware that it is difficult for the governments of the participating countries, faced with large needs and inadequate reserves, to risk in practice what their own self-interest commends.

We also recognize that trade is a two-way street, for us as well as for them, and that we bear a large responsibility for achieving a satisfactory balancing of our trade with Europe and the world. We are vigorously addressing ourselves to this problem, which is of vital interest to our farmers and workers and businessmen. Together with the participating countries, we have to lay solid foundations during the coming period for the future. We are going to have to continue to cooperate in many ways, to draw more closely together, to coordinate our economic policies, if we are to build a system that works.

Finally, we must remind ourselves that the answer to the forces opposing recovery is the same which we—the United States and the participating countries—gave in 1947, namely, to proceed confidently, seriously, deliberately to the constructive work at hand. Peace is what men make it and the only way to win it is to plug away at it.

The European recovery program lights a path to a future to which man can look with confidence for peace and order in a system based on freedom and justice. We in America continue to regret that the bright hope of progress along this path must be confined to half of Europe. We regret that it has not yet proved possible for all the peoples of Europe, to shake off the shackles of bitterness and violence and to join hands in the creation of a better world. We regret, but we do not despair, for the fear of a few will yet succumb to the hope and the strength and the determination of the many.

Address of Gen. G. C. Marshall

I am very glad to participate in this gathering today because it celebrates a momentous occasion, the half-way point of the ECA. I never consider the European recovery program without recapturing in my mind the tragic state of western Europe in the late spring of 1947. The situation appeared almost hopeless and every plan we made seemed to be thwarted in advance by a vicious circle of conditions which were the product of war.

Frankly, in those days I thought of the rehabilitation of Europe more in terms of material reconstruction—harbors, buildings, communications, and similar matters. But slowly I learned that the most serious phase of rehabilitation was related to other considerations—political, moral, spiritual.

These were less tangible, but far more difficult to deal with. Not only had the trade and business relations of hundreds of years been completely obliterated, but with them had gone the faith and confidence in many of the key institutions of modern civilization. It was the rehabilitation of these that was by far the most difficult task, and one in which we are still engaged. It is in the meeting of these problems that I feel the European recovery program is making its greatest contribution to the world.

The debates on the question of continuing the program, it seems to me, are confused by a variety of motives. An appraisement of the requirements of the day is befogged by a failure to realize that we are now engaged in a great struggle. You here may not be in the same sort of physical danger as troops on the battlefield, but you are engaged in a contest with a foe who has designs no less deadly than those we have ever faced. Make no mistake about it, the chips are down. Winning this struggle is as vital to the peace and prosperity of the world as any military campaign in history. Indeed, unless we achieve victory our great military and financial sacrifices may have been largely in vain, I fear.

The nature of this struggle should be clearly understood. It seemed to me during the time I served as Secretary of State that at each meeting of the Foreign Ministers, assaults against the enactment or progress of the recovery program were timed to confuse the understanding of the negotiations in the minds of the public. They were directed at weakening the program by forcing expenditure of funds beyond our calculations and appropriations.

The opposition has not been confined to strikes and purely political manifestations. It has followed through in every conceivable manner, even to the point where I found myself within an hour of the event publicly accused over the radio of being the major planner in the assassination of an important and popular public figure in Bogota.

But despite these determined efforts to prevent the rehabilitation of western Europe on a basis which would permit a healthy revival of democratic processes, the plan has succeeded, thanks to the financial endorsement of our Congress, the leadership of the President and the Secretary of State, Mr. Acheson, and the splendid work of you people of ECA here and abroad, under the able direction of Mr. Hoffman, Mr. Foster, and Ambassador Harriman.

But your job is only half done. I must emphasize the tremendous importance of carrying through on the scale planned. We must avoid proposals to emasculate and reduce ECA to a mere relief affair. At the same time, it seems clear to me that we cannot continue this sort of extraordinary aid indefinitely; therefore, the termination date of June 30, 1952, should be adhered to. I feel that if this date is settled and clear it will spur the work of the European leaders and people to accomplish the extremely difficult task ahead of lifting themselves above the need for our financial assistance. There will always be in this generation of men a need for our moral and spiritual backing.

To those who assert that our targets cannot be reached within the short span of two more years, I would say that perfection of accomplishment cannot always be expected. But we have seen a close approach to that perfection in these past 2 years.

It is true that for western Europe to get its economic house in such order that it can survive and prosper in this competitive modern world requires a tremendous final effort over the next 2 years. The erasing of old trade barriers and the construction of new channels, such as a clearing union for Europe's varied moneys, may require a miracle of cooperation.

But, looking again at the conditions prevalent in the spring of 1947, and again considering the situation at this moment, I can only feel that one near miracle has been accomplished. We must work for, and expect, another miracle.

Let me sum it up: We are engaged in a perilous struggle with an implacable foe; we must carry this battle to the finish; we must avoid the temptation to imperil the whole investment—and it is just that, an investment in saving all those previous articles of faith and ways of life we call democracy. It is an investment in preserving the freedoms of men in a clean and decent world.

Closing Valley Forge General Hospital a Blow at Our Disabled Veterans

REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. DAGUE. Mr. Speaker, it is a source of acute distress to me to note that the administration, in defense of the closing of several military hospitals throughout the country, of which Valley Forge General Hospital, in my district, is one, gives forth with the pious statement, that, and I quote, "If we really want to make the income of the Government meet its expenditures, the only way it can be done is to cut off some expenditures." Those of us who are urging Federal economy could subscribe to that rather obvious rule were it not for the fact that almost simultaneously with that profound declaration we find the same administration laying down to the Congress a must on the adoption of a point 4 program which, during the next fiscal year will scatter abroad far more millions than will be saved by this curtailment of services to those who have fought their Nation's battles.

In a recent statement made in my presence the Administrator of Veterans' Affairs branded Valley Forge General Hospital as a firetrap, whereas that ill-considered observation was being made at the very time our Government had placed a number of its patients in ill-managed private sanitariums such as Belle Vista, outside of Philadelphia, where a disastrous fire last week caused the death of 10 patients, 2 of whom were veterans. Certainly a policy which condemns a fine hospital like Valley Forge and at the same time utilizes the questionable facilities of a firetrap like Belle Vista needs a drastic overhauling.

Appended hereto is the copy of a letter I have just dispatched to the VA Administrator urging him to reconsider his opposition in the light of this tragic loss of life:

Gen. CARL R. GRAY,
Administrator of Veterans' Affairs,
Veterans' Administration,
Washington, D. C.

DEAR GENERAL GRAY: The newspaper account of the recent tragic fire at the Belle Vista Sanitarium on the outskirts of Philadelphia raises the question as to why some 30 veterans should have been housed in such a firetrap when it is reported that Valley Forge General Hospital has a 300-bed neuropsychiatric section, the occupancy of which could have been arranged for these mentally disturbed wards of the Government under the contractual arrangements the Veterans' Administration already has with the Department of Defense.

In the light of a policy under which you entrust the care of our disabled to an uncertain fate in a private institution such as Belle Vista, I feel that your claim that Valley Forge is a firetrap falls completely flat. A casual inspection of this institution will reveal that the buildings are of concrete-block construction with brick facing, that a highly effective sprinkler system is in place, and that the detached arrangement of the various wards of itself is protection against fire.

May I respectfully suggest that your responsibility to our disabled dictates that you should recede from your present opposition to the taking over of Valley Forge so that veteran patients who are now housed in ill-managed firetraps can be moved without delay to comparative safety of this splendid Government hospital. I would also point out that lack of funds is hardly a valid excuse for inaction in this matter unless a deficiency request has been refused by Congress.

Sincerely,

PAUL B. DAGUE,
Member of Congress.

Tough Job Assigned

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include the article taken from the Evening Star of Friday, March 31, 1950, entitled "Tough Job Assigned." This reads, as follows:

TOUGH JOB ASSIGNED—TRUMAN GIVES SYMINGTON HEAVY TASK OF SELLING INDUSTRIAL MOBILIZATION

(By Doris Fleeson)

President Truman has assigned his most difficult selling job to the best salesman in Washington.

The phenomenally successful Secretary of Air, W. Stuart Symington, takes over the chairmanship of the National Security Resources Board almost coincidentally with a declaration by General Eisenhower that the board's main task—industrial mobilization—is one of the most neglected and most important parts of national defense. The problem, he declared, requires earnest attention and won't cost a nickel.

Nevertheless, it will be a real test of Mr. Symington's mettle. The politician at the head of the Government and the 531 politicians on Capitol Hill are equally timid about real mobilization plans which must necessarily clamp an iron hand upon America in the event of war. Men like B. M. Baruch and General Eisenhower who have made the round trip to two wars may plead and propose, but the politicians will dispose.

CONGRESS MUST BE SOLD

NSRB is a Presidential agency. It must first sell the President, then in conjunction with him, the Congress. This is an election year; in two more years the Presidential campaign will be upon us.

Mr. Symington has shown courage and flair in the battle of Washington. The President first handed him the ticklish and perilous Surplus Property Administration from which he escaped intact. The intrepid maneuvering by which he has outflanked the older services—in one instance, the Secretary of Defense also—and firmly established the infant Air Force, is more recent history.

In his new job, he will still have the advantages of the President's confidence and his own talents. But his product will no longer be popular. Congress dotes on air power; it is the trend of the times and it spares them having to enact universal military training and a heavy draft of manpower. But congressional allergy even to stand-by powers to freeze wages, rents, prices, profits, jobs, and so forth, is natural and formidable.

DELAY UNDER ATTACK

The President has been under heavy attack for the year's delay in filling the NSRB chairmanship. The Symington appointment will be warmly greeted—and much expected from it.

It is understood that Mr. Symington had another preference. He wanted to succeed David E. Lilienthal as chairman of the Atomic Energy Commission. AEC does not have the fun and kudos of the Air Force job; it more than makes that up with its aura of secrecy and power.

But AEC rates as a man-killer among Government posts which perhaps helps to account for the high turn-over among the Commissioners. Mr. Symington has wholly recovered from the delicate operation performed to cure high blood pressure, but his friends, including the President, are solicitous about his health.

The President also had the problem of finding a man acceptable to Congress among his intimate circle. The resources job is potentially so important Congress will not swallow the ordinary White House crony, as witness the Mon Wallgren turndown. But the NSRB chairman must work intimately with the President, who dislikes strangers.

Whether the President intends that NSRB shall fulfill its allotted functions from here on in only he knows. He now has a chairman who can carry on, if permitted.

Know Your Waterways

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit an article published in the Washington Post of April 3, 1950, by the Marine News, of New York, as follows:

KNOW YOUR WATERWAYS—WHAT MR. HOOVER BELIEVES

In 1925, when Secretary of Commerce, former President Herbert Hoover said, in part, in an address that "the topography of our country, the present and future necessities of our population, the development we have already accomplished, and, above all, the goodness of providence in our natural water channels, clearly define for us two major inland waterway systems, the Mississippi system and the Great Lakes system. I visualize the Mississippi system as 9,000 miles of connected waterways—a transportation system of which some 3,100 miles are trunk lines and 6,000 miles of laterals. That is, a main north-south trunk line 1,500 miles in length, reaching from New Orleans to Chicago, and there connecting with the Great Lakes system, and, crossing this, a great east-west trunk line 1,600 miles in length, from above Pittsburgh through Cairo to Kansas City. Over a large part of these main stems we can maintain 9 feet of depth. In addition, we must diligently improve feeders through the Tennessee, Cumberland, Arkansas, upper Missouri, upper Mississippi, Monongahela, Allegheny, and other streams to workable depth for modern craft. It will serve the vast heart of American agriculture and will place great commercial and industrial cities with upward of 7,000,000 people

in the cheapest of communications with each other and cheapen transportation of agricultural and bulk commodities over a great hinterland of States. Diesel engines, improved steam appliances, and better loading and discharging devices have all advanced us a long distance from the old canal boats and the packet boat. But the fundamental for use of these appliances is that we shall have sufficient and reliable depths of water to make them possible for use. Modern forms of development have made water carriage the cheapest of all transportation for many types of goods. With greater depths and with the improvements in craft, it is possible to restore our waterways. Nor will this jeopardize the prosperity of our railways, as some predict." What Mr. Hoover believes to be good for the general welfare is a far cry from the clamor of those interests opposed to waterway competition.

MARINE NEWS,
New York, N. Y.
GEORGE H. PALMER,
President and Publisher.

Communism

REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. DOLLINGER. Mr. Speaker, the current uproar over alleged Communist infiltration of the State Department is causing great concern among the American people. Whatever the truth or falsity of current charges it is obvious that the Republican Party is seeking to make a campaign issue of communism.

Such partisan attempts, however, are not justified in view of the Republican record in the case of Alger Hiss. Alger Hiss, the former State Department official, was convicted—mind you, not by the Republicans—but by the Truman administration. And let us not forget that. Let all of us remember that it was the capable, brilliant Bronx Democrat, Assistant United States Attorney Thomas F. Murphy, who prosecuted Alger Hiss and who succeeded in convincing a jury of 12 New Yorkers that Hiss had betrayed his high trust.

There was no coddling of communism in this case by the Democratic administration. But what is the Republican record in the case of Alger Hiss?

For my information I am drawing heavily from the pages of a brilliant new book, just published, on the Hiss-Chambers affair. The book is called Seeds of Treason, and its authors are Victor Lasky, a star reporter of the New York World-Telegram and Sun, and Ralph de Toledano, an assistant editor of Newsweek magazine.

And may I just add parenthetically that aside from the importance of Seeds of Treason as a first-hand study of Communist espionage in operation, Seeds of Treason reads like a detective story. I sat up with it until 3 in the morning. I just could not put it down.

But what interested me, as a Democrat and loyal American, were the references in Seeds of Treason to the Republican role in backing Alger Hiss.

The book discloses that James Byrnes, a Democrat, had, as Secretary of State, "been growing increasingly suspicious of Alger Hiss." But the book adds that John Foster Dulles, who would have become the Republican Secretary of State, had Gov. Thomas E. Dewey been elected, ignored warnings concerning Alger Hiss' connections with communism.

Mr. Lasky and Mr. Toledano claim that despite these warnings Mr. Dulles placed Alger Hiss in the $20,000 a year post of president of the Carnegie Endowment for International Peace.

But before Hiss assumed his new office—

And I am quoting from Seeds of Treason—

Dulles received what should have been a disturbing letter from Larry S. Davidow, a Detroit lawyer who had served with the Republican policy maker at ecclesiastical conferences.

Mr. Davidow wrote Mr. Dulles, according to Seeds of Treason:

The information we have would indicate that Mr. Hiss has a provable Communist record. If you are interested in becoming more familiar with this situation reliable individuals in Washington will disclose it to you in full confidence.

And what did Mr. Dulles say in response? According to Seeds of Treason, Mr. Dulles replied on December 26, 1946:

I have heard of the reports which you refer to, but I am confident that there is no reason to doubt Mr. Hiss' complete loyalty to our American institutions. * * * I feel a little skeptical about information which seems inconsistent with all that I personally know.

And as the authors of Seeds of Treason point out Mr. Dulles "dismissed the evidence against Hiss even before he had learned what it was."

And, to repeat, Mr. Dulles would have been the Republican Secretary of State had Gov. Thomas E. Dewey won the Presidency in 1948.

Now what did Governor Dewey do when he heard of the charges against Alger Hiss during the 1944 campaign. The information was provided Governor Dewey by Isaac Don Levine, the anti-Communist journalist. According to Seeds of Treason, Governor Dewey "promised to raise the question in a speech—and then he attacked Adolf A. Berle as a fellow traveler."

Gentlemen, I need not go into the anti-Communist record of Mr. Berle, head of the New York State Liberal Party, and I think you will all agree that calling Mr. Berle a fellow traveler is somewhat ludicrous.

After all, according to Seeds of Treason, when Whittaker Chambers broke with the Communists he took his story to Mr. Berle, who immediately tightened up security in the State Department.

Another Republican leader, who was informed of the grave charges against Alger Hiss, was Senator Warren Austin. And I quote from Seeds of Treason:

Early in 1940, Don Levine went to a friend, Senator Warren Austin—later chief United States representative at the United Nations—with a "fairly comprehensive account" of the Soviet underworld in Washington. For some reason Austin did not feel it was up to him to carry the explosive information to the American people.

Mr. Speaker, I repeat my statement that partisan attempts by the Republicans to make capital out of alleged Communist infiltration of the State Department are unjustified in the light of the Republican record in the serious case of Alger Hiss—a case in which the Democratic administration acted firmly and courageously.

Representation of China in the United Nations

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. JUDD. Mr. Speaker, one of the most shocking actions since the founding of the United Nations is that taken by its Secretary General, Mr. Trygve Lie, in trying to maneuver the unseating of one of its founders, the Government of China, and putting in its place the puppet Communist regime set up in Peking and openly proclaiming its subservience to the Soviet Union. As was predicted by those who were willing to study thoroughly the Chinese Communists and their doctrines instead of reading the propaganda of the Fairbanks, Lattimores, Edgar Snows, and the Far Eastern Division of the State Department, the Communists are in the process of making China a colony of the Kremlin. If the UN were to follow Lie's suggestions it would do more to wreck what ought to be the world's best hope for peace than any abstentions or other blackmail by the Kremlin could possibly do. How does it come that the chief official sworn to uphold the United Nations Charter should be engaged in efforts that would destroy confidence in it as an instrument of justice by making it a tool of the Soviet Union?

Under leave to extend my remarks I include the following letter sent to Mr. Lie by Mr. Matthew Woll, president of the Free Trade Union Committee of the American Federation of Labor, and a veteran fighter against Communist subversion. It is encouraging to observe that hard-headed labor leaders who have had first-hand experience with Communist tactics are not taken in by slogans or fatuous arguments and cut incisively to the heart of the matter as in this letter. Every American ought to read it.

FREE TRADE UNION COMMITTEE,
LABOR LEAGUE FOR HUMAN RIGHTS,
New York, N. Y., March 24, 1950.

His Excellency TRYGVE LIE,
Secretary General,
The United Nations,
Lake Success, N. Y.

DEAR MR. SECRETARY GENERAL: The free trade union committee of the American Federation of Labor has given careful consideration to your memorandum of March 8, 1950, entitled "Legal Aspects of Problems of Representation in the United Nations."

You seek to reexamine the status of the legitimate government of China in the UN. It is our firm conviction that fundamental principles rather than formal procedure are

involved in the issue you have raised. We fully recognize the urgent desirability of overcoming or ending the continued boycott of UN sessions by Russia and its satellites. We can only applaud your desire to have the UN function most effectively as an instrument of and a force for just and harmonious international relations. It is precisely for these reasons that we reject any proposal which would admit, through the front entrance or through some back door, into the UN the Communist clique of usurpers who, with the aid of foreign funds and forces, have seized power in China.

We grant that the present boycott by the Russian bloc, like the Soviet's preceding unwarranted walk-outs and unscrupulous exercise of the veto power, hurts the efficacy of the UN. But we must warn against rushing into the adoption of some sort of "solution" of this difficulty which might inflict even graver damage on the UN and hurt it irreparably as an agency of international equity and peace. We solemnly warn against a cure which would be far more poisonous and infinitely more harmful to the body-politic of the UN than its present ailment. It is all good and well to seek the return of the Russian bloc, but let no one seek to purchase it at a price which would appease and foster aggression, facilitate and reward fifth column activities by one member nation against another, and thus seriously jeopardize world peace.

In your memorandum you stress that diplomatic recognition is not a prerequisite to admitting new members into the United Nations. Therefore, you would have the United States, Cuba, Ecuador, Egypt, and other countries stop considering their nonrecognition of the Mao Tse-tung dictatorship as an obstacle to admitting it into the UN. Thereby, all obstacles would be removed and the path would be finally cleared for slipping into the UN the Communist regime imposed on the Chinese people after years of Russian intrigue and intervention in flagrant violation of all international law and the UN Charter itself.

We cannot go along with your reasoning. We must strongly warn against the perilous consequences of any policy based on such reasoning. The analogy of Burma and Yemen whose admission as new members into the UN was voted for by countries which had not accorded them recognition does not at all hold for the present Chinese issue raised by Russia. In the case of China, we are not faced with the problem of seating a new member. Here blackmail and all sorts of pressure are being brought to bear by a distinct and obdurate minority to force the majority to unseat an old, a charter, member of the UN. The Chinese Nationalist Government, with which Russia itself had solemnly entered into a treaty of friendship, has from the very inception of the UN also served as a permanent member of the Security Council. Obviously, this is not a Burma-Yemen case.

Moreover, there is now pending before the Interim Assembly a complaint of the Chinese National Government, which was until recently recognized by all member nations of the UN as the sole legitimate authority in China. This complaint charges the Soviet Government with 455 specific acts of aggression. To eliminate the complainant on one excuse or another would be a brutally unjust and strictly totalitarian method of dealing with complaints. Such arbitrary procedure would be nothing else but rank prejudgment of the complaint.

If upon the bludgeoning demand of a stronger power, a complaining weaker state which put its trust in the UN for assuring it justice should be rewarded with expulsion, then the UN would cease to function and its Charter would be torn to shreds and placed on the scrap heap of history. We emphasize: The UN was conceived and dedicated not to the pampering and appeasing of the strong aggressors but to the protection of the weaker states against aggression.

On the very basis of your proposal to accept as a criterion for admission into the UN the provisions of article 4 of the Covenant, the Mao Tse-tung puppet regime is thoroughly disqualified for and unworthy of membership in the UN. It is still too early to conclude that Communist control of the mainland is solid and final. Over a million Chinese Nationalist guerrillas and well over 600,000 fighting Nationalist troops in Formosa, Hainan, and the coastal islands are yet to be reckoned with by the Peiping puppets. Besides, there is scarcely any economic or political stabilization and consolidation of the usurper regime. Economic collapse and famine are the order of the day in many parts of overrun China. Furthermore, Mao Tse-tung and company certainly have not demonstrated any desire or capacity, any willingness or ability, to carry out the obligations of membership in the United Nations.

In the brief but precarious and pernicious period of its existence, the Peiping regime has already outraged every elementary concept of human decency. It has displayed callous contempt for international obligations and human rights. We need but cite its brazen and brutal refusal to permit the departure of American citizens from Chinese territories which it has overrun. It has murdered in cold blood many of the ablest leaders of free trade unionism in China. Among these martyred heroes of free labor was Liu Sung-shan who was three times the Chinese workers' delegate to the ILO, a most vital agency of the UN.

We are amazed and distressed that anyone with authority and responsibility in the UN should strive for some formula or so-called compromise which would expel from the UN the legitimate Chinese State which has faithfully and consistently fulfilled all its obligations and replace it with a terroristic band of usurpers. We are utterly at a loss to understand why anyone should propose a policy which would penalize the legally constituted State authority of China and reward the usurpers of Chinese legal authority. We cannot believe that usurpation of authority is proof of responsibility and qualification for membership in the UN and its Security Council.

For the UN, directly or covertly, to recognize and reward usurpers as they arise would be fatal to the cause of peace and human progress. Such a course would make the UN itself unstable and uncertain and would make its decisions subject entirely to the fluctuations and machinations of sinister power politics and foreign intervention in the life of weaker nations. Such a policy would prevent the UN from playing the role of harmonizer and stabilizer. It would in effect turn the UN into a source of virulent instability and uncertainty. Such a course could only encourage domestic chaos and widespread fifth column operations. Such a course would remove every assurance of protection which the smaller nations have today in the UN. It would seriously hinder world recovery and gravely endanger the prospects for peace.

We deeply deplore the stubborn and studied boycott of the UN by the Russian bloc. We share with you the desire to end the deadlock. That is why we urge you to direct your appeal for ending this studied abstention to those who are responsible for the damaging deadlock. That is why we sincerely hope that in the interest of the unquestioned and unquestionable impartiality which your high office must have, you withdraw your memorandum of March 8, 1950. Such a withdrawal by you would be fully in line with article 100 of the Charter which provides that: "They [Secretary General and the staff] shall refrain from any action which might reflect on their positions as international officers responsible only to the Organization."

We are sure you share with us our firm faith in the UN and reject unreservedly any notion that this great body cannot function and is futile without active participation by Russia and its satellites. In fact, the UN has been able to do highly valuable work in many fields—without Russian participation. Though boycotted by Moscow, the UN specialized agencies have had a most creditable record. In recent months, the councils and commission of the UN have achieved real results despite Soviet abstentions. In handling the Kashmir case, the Security Council has certainly not been hampered by Russian absence. The Trusteeship Council in its preparation of the Somaliland agreement has not been stymied or strangled by Soviet abstention. Similarly, in its treatment of the problems of rendering financial and technical aid to underdeveloped regions, the ECOSOC has shown that it can get along without the Kremlin's contribution.

In sum, there is no cause for panic. There is not the slightest excuse for haste. While deplorable, the Russian abstention is not fatal. What would be fatal for the UN is for it to yield to bullying and threats by any big power. Indeed, the parallel and precedent of the present difficulty in the UN are not at all with the admission of Burma and Yemen. The present situation in the UN does, however, present a striking and appalling parallel with the crisis faced by the League of Nations in 1935–36 over the Italo-Ethiopian dispute. Then, in order to appease and please Mussolini, whose marauders overran Ethiopia, the League of Nations deprived the government of the momentarily, militarily defeated Emperor Haile Selassie of its credentials and its rights to have a delegation to the 1936 Assembly. That decision marked the death-knell of the League of Nations.

Let not the UN today—in order to appease and satisfy another totalitarian dictator, Stalin, who engineered his Communists' overrunning the Chinese mainland—unseat and expel from the UN the momentarily, militarily, defeated Chinese National Government and replace it with the criminal and foreign-financed Communist usurpers. For the UN to follow the disastrous precedent of the League of Nations would be tantamount to signing its own death warrant. And this time a death blow to the principal international agency and hope of world peace will be more disastrous than was the degrading demise of the League of Nations.

The hour is too grave for appeasement of aggression and injustice. The time is most propitious for a firm stand by the forces of freedom and peace—in the interest of freedom, peace and decency in international relations.

Sincerely yours,

MATTHEW WOLL,
President, Free Trade Union Committee of AFL.

False Pretenses

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the columns of the Waterbury (Conn.) Republican of March 26, 1950:

FALSE PRETENSES

When Mr. Truman does his stumping this election year, the taxpayer will foot the bill.

The fact that it is an old story doesn't make disguise of political as public business any more palatable. It is a cynical procedure, this charging up of electioneering to the taxpayer. If the American people's sense of their own self-interest were really acute, to say nothing of their sense of what's right and proper on the part of their elected representatives, they would stop it.

Some weeks back, Mr. Truman mentioned to reporters that public business would probably call him on long trips before election day. He grinned when he said it, and the reporters knew what he meant. Public business would be just the pretext for political swings around the circle. Now at Key West he has enlarged upon his plans. In early May he will go out to the Pacific coast to dedicate the Grand Coulee Dam. Other Government projects may be visited. But there is no question about all the political speaking he will do along the route, from addressing a giant Democratic rally at Chicago on May 15, to haranguing any group gathered along the railroad right-of-way.

There ought to be a method of sizing up Presidential excursions like this, determining whether public or political business was the chief activity and letting the Democratic National Committee pick up just a few of the tabs for these cross-continental jaunts. It is a cinch that on the trip Mr. Truman is planning for May and the one he has in mind for next fall, his identity as President will be altogether swallowed up by his role as party leader out trying to make a lot of Democratic votes.

Atlantic Alliance Is an Illusion

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including an editorial that appeared in the Christian Century for March 22, 1950:

FRANCE AN UNRELIABLE MILITARY ALLY

Ever since the Atlantic military alliance was launched General de Gaulle has been insisting that, from the standpoint of French security, it is worthless. Now the French National Assembly has done its best to prove correct this estimate of the pact's value, though from the American rather than the French point of view. The first shipments of American arms to France were to leave the United States early this month. Fifty planes were in fact taken aboard a French aircraft carrier at Norfolk. French Communists threatened to tie up ports in which these American arms might be unloaded in France, and other ports from which munitions might be shipped to the Indochina front. Premier Bidault countered by introducing a bill in the National Assembly which would impose life sentences on any persons convicted of such sabotage of military measures. The result was an uproar in Parliament which reduced proceedings to anarchy for almost a week, forced the police to charge in again and again to eject obstreperous Communist deputies, and finally brought from the Assembly's veteran President, Edouard Herriot, the plaintive admission, "I don't know whether this isn't the end of parliament in France." After 5 days of this Premier Bidault finally got his bill through the lower house, but its passage was immediately followed by an outbreak of strikes in utilities which covered most of the nation. The Government broke these only by reverting to the desperation measure of drafting the strikers into the army. In the light of this record, we again register our astonishment that the generals in the Pentagon or any other Americans, should see any value in the Atlantic Pact. Any nation inwardly at war as France has thus shown herself to be is worthless as a military ally. Considering the case purely from a military standpoint, these events in France show that the Atlantic alliance is an illusion. America's arming of a France thus inwardly riven has as little value in making western Europe secure as had our arming of Chiang Kai-shek in keeping China out of Communist hands.

Communism Versus Christianity

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. O'SULLIVAN. Mr. Speaker, some time ago I chanced to receive a small calendar card from a well-known religious society, upon which there appeared the following prayer to St. Francis:

Lord, make me an instrument of Your peace—
Where there's hatred, let me sow love;
Where there is injury, pardon;
Where there is doubt, faith;
Where there is despair, hope;
Where ignorance, light, or sadness, joy.

O Divine Master, grant that I may strive
Rather to console than to be consoled;
To understand than to be understood—
To love than to be loved, for:
It is in giving that we receive—
It is in pardoning that we are pardoned, and
It is in dying that we are born to eternal life.

On the reverse side of the card there appeared this very proper reading matter under the title "Communism Versus Christianity":

Communism teaches hate, revenge, atheism, and materialism.

Socialism teaches cooperation and materialism.

Capitalism teaches selfishness, greed, and materialism.

Democracy teaches cooperation, equality, and responsibility.

Internationalism teaches cooperation, responsibility, friendship, and the four freedoms: Freedom of speech, freedom of religion, freedom from fear, and freedom from want.

Christianity teaches love—the brotherhood of man under the fatherhood of God.

Divine rights are higher than human.

Human rights are above property rights.

Christianity has not failed—it has not been tried.

Communism is a result of failure—the failure of human beings, singly and together, to live the ideals of Christianity.

Communist danger is from within. It is a result of decay—economic, political, social, and religious decay.

Russians are not enemies—Communists are.

Communism is not Russian. It is worldwide. It has enslaved many countries, the largest, so far, being Russia.

When true Christianity is in the market place, the factory, the halls of legislation, the court, the home, the schools, the churches, and in the everyday living of men—then there will be no war, want, fear, or communism.

In time we must all, regardless of race, color, or creed, face up to the fact that, not something, but everything must be done in our Nation, particularly, and generally throughout the world, to combat this terrible menace of spawning and mushrooming communism.

I always wondered why the great Swedish-American humorist, Edgar Bergen, called his dummy by the surname of McCarthy, and I am told that his McCarthy originated in virgin tree form from the forests of Wisconsin, but of course California will immediately deny that I suppose. It is too bad indeed, that the good old name of McCarthy should become famous throughout this land and over the world as a dummy whose life is destined to be spent upon the knee of another to carry out the linguistic purposes of the fellow upon whose knee he is perched.

At this point I am urged to say to myself, let thy right hand with which thou art scribbling these lines, forget its cunning and proceed to introduce the excellent statement given by the Honorable James Green, chairman of the Americanism Commission of the American Legion, before the House Committee on Un-American Activities, on March 23, 1950, in support of H. R. 7595 and H. R. 3903, which bills strike a patriotic blow against Communists and communism:

I am here as the designated representative of the National Commander of the American Legion. Commander Craig is grateful for your invitation to appear and present the attitude of the American Legion. He regrets that the pressure of his official duties prevents him from appearing in person. I appreciate this opportunity to appear in his stead as a representative of the American Legion.

For the record, I am, and since October 1946 have been, Chairman of the National Americanism Commission of the American Legion. I live in Omaha, Nebr., and am an attorney in general practice in that city.

At this late date an extended discussion of the constant position of the American Legion in opposition to communism and other traitorous activities and in support of legislation to curb and control them is not required. Thirty-one years of American Legion history is the most eloquent testimony of that fact. I ask this committee to take notice of that history, which is well known to you. For all of these 31 years this largest of all veterans' organizations has warned against the insidious danger of the amoral Communist conspiracy and has pressed energetically for effective legislative controls to curb and to outlaw it and to rip from it the harlequin mask of pretended political activity.

With its millions of members in every city, town, and county in the several States, representing as they do every walk of life, every creed, and every strata of society, the American Legion truly is one of the most representative organizations in the United States. No national organization reflects the thinking of the unspoken multitude of our population more accurately than does the American Legion.

Time and again at State and National conventions of the American Legion resolutions have been adopted demanding adequate legislation to prevent abuse of citizenship by those who have voluntarily given their

promise of loyalty to an alien power and thereby have become a menace to our national security. Of late years resolutions have been adopted specifically supporting measures of the type you are considering in principle.

Representatives of the American Legion have appeared before this committee and before the Committee on the Judiciary of the United States Senate to state the position of our organization. Specifically, I call your attention to the appearance before this committee of James F. O'Neil, later national commander, of John Thomas Taylor, and myself on the first day of this extended series of hearings in February of 1947. Later, as national commander of the American Legion, in 1948 James F. O'Neil testified again. In May of that same year Paul Griffith, past national commander of the American Legion and presently Assistant to the Secretary of National Defense, testified before the Committee on the Judiciary of the Senate in support of H. R. 5852, a forerunner of the present H. R. 7595. On yet another occasion Robert J. Webb, former chairman of the national Americanism commission of the American Legion, testified in support of similar legislation. Again, on May 4, 1949, I appeared before the Committee on the Judiciary of the Senate in support of S. 1194 and S. 1196, the so-called Mundt and Ferguson bills.

All of that testimony, covering a period of three years, supports in principle the present legislation. If considered necessary or desirable, I request permission to have all of that testimony inserted in the record at this point. If in your judgment it is merely cumulative of other supporting testimony already contained in the record, then, of course, it need not be included.

In that testimony the other witnesses and myself carefully pointed out and argued that the Communist Party was and is the slavishly obedient, willing instrument of a foreign power; that its members and supporters were coldly scheming betrayers, bent upon a mission of liberty destruction, lured by a dream of personal power. We stated further that the Communist Party and its members are part and parcel of a foreign intelligence corps operating in the United States, always willing to obey and carry out the orders of their foreign master. We also called attention to the fact, as did others, that lying, treachery, stealing, any methods were all right according to the philosophy of communism, if they served to advance the Communist cause, and that Communists in government or in any position of trust in our national life were a dangerously weak link in our security. It seemed to us then, and it seems to us now, that it is foolhardy to pour billions of dollars of our national wealth into an effort to contain communism abroad, while blithely blinding ourselves to the danger at home. Why argue for legislation to build up a courageous corps of secret sentinels abroad, only to have Judith Coplon or others like her steal the records of their hidden identity and purpose and turn them over to Soviet Russia and her satellites. Not knowing of any such case, I cannot say that it is so, but wouldn't it weigh heavily on our national conscience to learn that a man serving abroad for his country was convicted abroad, not by evidence obtained abroad, but by evidence forwarded from the United States by American traitors?

Representatives of the American Legion have testified often and at length on this subject during the last 3 years. During all of that time our own research staff has been diligently watchful and quietly and efficiently assembling data. The danger is no less than it was 3 years ago. As our world has become smaller and the Communist-dominated world larger, it is more intense.

This committee and its opposite number in the Senate are deserving of compliment for the careful manner in which they have proceeded. Volumes of evidence have been accumulated. The weight and sufficiency of this evidence have been increased by specific, eminently fair prosecutions in courts of law against persons guilty of hateful acts of betrayal—which the American Legion and others warned might be expected because the only conscience of those who serve communism is in communism, and communism recognizes no conscience, for it recognizes no God.

Legislative findings based upon sufficient study and investigation will not be lightly overturned by courts. You have been careful. You have the facts. Now is the time for action. Americans have been seriously troubled by the full implications of a Soviet fifth column operating in our midst. They have been alarmed by the stark realization of betrayal at the hands of some native-born Americans. They want action and they want it now. To my mind, it is unfortunate that politics have entered this field of inquiry and action. The danger is to national security and, eventually, to national sovereignty. All who have taken an oath to "uphold and defend the Constitution of the United States" should join hands in rooting Red traitors from their hidden holes in our national life.

Act now. Please don't wait for court decisions which may not be handed down for many months. Time is precious. While we debate, our enemies act. At first blush, the request that Congress wait upon a decision yet to be handed down by one of our circuit courts of appeals, and not yet even on its course up to the Supreme Court of the United States, seems reasonable. But that request and that line of reasoning do not take into account the fact that few bills have been drafted with such scrupulous care for their constitutionality as have these, and that is particularly true of H. R. 7595, the Nixon bill. Outstanding attorneys in the field of constitutional law and the standing committee on the Bill of Rights of American Bar Association, in ably reasoned opinions, have expressed belief in the constitutionality of Senate bill 2311, a counterpart of H. R. 7595, and based as it is upon the earlier H. R. 5852. These abundantly qualified attorneys have supported their opinions with an exhaustive study of pertinent decisions.

We are never able to act with certainty. All this committee, or the Congress, or any of us as individuals can do is act with care, governed by our consciences and immutable principles of fundamental justice. Certainly no one can complain with even an infinitesimal degree of right that you have acted in haste or in passion. Haste, when 3 years have been consumed in the study and preparation, is the haste with which a mountain is worn away by the flutter of the tip of a bird's wing. It is haste of the type a small boy experiences in November while waiting for Santa Claus to appear on the 25th of December. Passion which would cause you to act in a fit of anger after three long years have elapsed would certainly be an abiding one. We have had too many of these specious and dilatory arguments. Now the people of America pray that you will act. So does the American Legion.

Legislative measures of this type are intended to expose. They are based upon a sound principle and solidly founded in substantial law. The Federal Government and the Congress have a duty, laid down by our Constitution, to protect the republican form of government to the States and to the ultimate sovereign, the people. This duty cannot be fulfilled if we are not protected against the intrigues of a foreign power carried into operation by its extended arm, the Communist Party.

The character of every act must be judged upon the circumstances under which it is done. Certainly, under existing world conditions and pressures, the acts of Communists and their party are legally criminal and morally wrong. They should be prevented from conspiring together to overthrow our Government. They should be prohibited from employment in our Government; they certainly have no right to it. They should be prevented from stealing and betraying our classified information, and punished if they succeed. They should be denied passports. It would not be wise to give free transport to them so they can exchange information. They should not be permitted to make a mockery of our mails and instrumentalities by using them as transmission belts for their propaganda. They should not be permitted to deduct from taxes funds donated to assist the process of breaking down and destroying liberty. The task to be done by this legislation too long has gone undone. That can be remedied by your thoughtful and patriotic action.

Break in Bipartisan Foreign Policy Held Fault of Democrats

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by David Lawrence which appeared in the March 30 issue of the Washington Evening Star relative to the break in the bipartisan foreign policy.

The article follows:

BREAK IN BIPARTISAN FOREIGN POLICY HELD FAULT OF DEMOCRATS—FIGHT AGAINST DULLES IN SENATE RACE CITED AS TYPICAL REWARD

(By David Lawrence)

A lot of holier-than-thou speeches are being made about how the Republicans are upsetting the bipartisan foreign policy, when the truth of the matter is that the Democrats are primarily responsible for destroying the fine spirit of cooperation which once prevailed.

It's all very well for former Secretary Stimson and others with short memories to denounce the Republicans for their attacks on foreign policy, but the principal damage was done last autumn when John Foster Dulles—who, with the exception of Senator VANDENBERG, was the strongest influence in the Senate for bipartisan cooperation—was pilloried by the Democratic Party's wrecking crew in the New York State campaign.

With Senator VANDENBERG in ill health, it was logical that Mr. Dulles would carry the ball for a bipartisan foreign policy at this session. But the heavy guns of the Democratic administration were trained on him just the same. This antagonized the Republicans in Congress, many of whom harbor to this day a bitter resentment against the tactics of the administration.

Mr. Dulles has magnanimously chosen to ignore the episode and strive again for cooperation. Some of the Republicans in the Senate, however, say that it is all very well for a Republican to cooperate and help the Democrats muddle through a difficult situation, but his reward usually is a series of partisan reprisals the moment he runs for office.

CREDIT MINIMIZED

With all due respect to former Governor LEHMAN, it was far more important for the country to have Mr. Dulles returned to the

Senate. The term was only a year, and it would have been a great example of nonpartisanship if the Truman administration had come out in support of the Republican candidate. That would have made sense, because it would have been an example of real patriotism on the part of the administration.

Today the Republicans are aware that whatever credit is due them for their cooperation will be minimized, no matter how much they help, and also that they will have no opportunity to formulate policy, anyhow. For the Republicans were not consulted in the making of far-eastern policy.

The usual cry by the exponents of hush-hush and suppression is that the potential enemy abroad will derive aid and comfort from criticism in foreign-policy matters. This is an exaggeration. People in the foreign offices abroad know that the only time an administration can be removed from office in the United States is when a change in the presidency occurs. A minority opposition viewpoint is thoroughly understood and has its constructive values.

Any national or international policy that cannot stand the light of constant criticism probably isn't worth defending in the first instance. Prime Minister Attlee and Winston Churchill didn't observe any bipartisan etiquette on foreign policy in their recent campaign.

GOP CAN OVERPLAY

Naturally, if the Republicans overplay their hand by their criticism, they will hurt themselves, and the majority party and administration will be correspondingly strengthened instead of weakened. If the Republicans happen to be right in their criticism, the Democrats will be influenced to change their policies—which is all to the good.

The fight against Secretary of State Acheson arose not because of any personal antagonism against him in the first instance, but because he is a symbol of the administration, especially since the President appears to have delegated virtually complete responsibility for the making of foreign policy to his Secretary of State.

In these dispatches last autumn, attention was called to the way the administration was fighting Mr. Dulles, and the prediction was made then that far more than a Republican candidate was being destroyed. This has now come true. Except for a meaningless gesture now and then like the designation of former Senator Cooper, of Kentucky, to accompany the American delegation to London for the forthcoming meeting of the foreign ministers, the days of bipartisan "cooperation" on foreign policy as carried on heretofore are over.

Republican Senators are no longer to feel muzzled to speak their thoughts in the Senate, and there are signs that the Democrats themselves are considerably relieved, too, to be able to accept the political challenge of their opponents whenever it is flung toward them.

Public Supports McCarthy

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Senator JOE MCCARTHY has the popular side of his controversy with the State Department. Already his action has flushed out homosexuals in that Department, and now the Commerce Department confesses to the same infliction. As part of my remarks, I include an article by Mr. Frank R. Kent which appeared in the Sunday Star of yesterday:

MCCARTHY'S CHARGES EXPRESS PUBLIC VIEW—WRITER BELIEVES PEOPLE AGREE WITH SENATOR

(By Frank R. Kent)

It is contended that while Senator MCCARTHY has offered no real proof of either his blanket or specific charges of Communist saturation in the State Department, nevertheless, he is strongly supported by the public generally throughout the country.

This is the more significant as the great bulk of press and radio commentators and columnists have been vehemently critical, not to say denunciatory, of Senator MCCARTHY from the start. He has been denounced—and with considerable truth—as reckless and irresponsible; as having, without justification, assailed the character of eminent Americans, such as Dr. Owen Lattimore, Dr. Philip Jessup, Mrs. Dorothy Kenyon, and others; as having damaged the prestige of his country abroad in a time of acute crisis; as having inspired an attack upon Secretary of State Acheson well calculated to weaken our foreign policy, deeply disturbing our allies as well as heartening our potential enemy.

A storm of almost unprecedented violence has descended upon Mr. MCCARTHY'S head. Not since 1917, when the late Senator Robert M. La Follette opposed our entry into World War I, has any Member of Congress been as severely excoriated. A good deal of this has been deserved. How, then, in the absence of any genuine confirming evidence, is the public support for Senator MCCARTHY to be accounted for? Unemotionally analyzing the situation, detached men, most of whom feel that the forced resignation of Mr. Acheson would be a calamity, give what seems the only adequate answer: Briefly, it is this—a majority of the people believe (and believed before Mr. MCCARTHY raised his voice) that there is something rotten in the State Department.

The contention is that this belief is justified. Three years ago, it is pointed out, when Whittaker Chambers first told his fantastic story before the Un-American Activities Committee naming Alger Hiss and others, the committee was violently assailed. President Truman called the whole thing a "red herring." The State Department rushed valiantly to Mr. Hiss' defense and many conspicuous friends warmly espoused his cause. The "liberal" commentators who now denounce Mr. MCCARTHY were even more denunciatory then of Mr. Hiss' accusers. In the end, one of the men named by Mr. Chambers committed suicide by jumping out a window. Another—Julian Wadleigh—confessed under oath, claiming immunity because his traitorous acts were more than 10 years old. And, Mr. Hiss, after two concededly fair trials, was convicted. Considering these facts, it is not surprising that Mr. Acheson's two unfortunate Hiss statements should have been misconstrued by the public generally as another defense of Mr. Hiss—and should be resented.

While this feeling was still intense, Senator MCCARTHY burst forth with his charges. It is hardly strange that part of the public was not too much impressed with the denunciation and denials—nor stopped to consider that Mr. MCCARTHY had extremely little with which to back up his sensational allegations. The denunciations and denials could not fail to have a familiar ring. In the midst of all this, their confusion was increased and their resentment enhanced by the statement of Deputy Under Secretary of State Puerifoy that the Department had dismissed nearly 100 homosexual State Department employees as "bad security risks."

Revelation of this situation, which had not been charged by Senator MCCARTHY, came as a shock. Not much has been made of it in the press, but politicians generally agree that their constituents have been more revolted at this voluntary disclosure than by anything else. How, they ask, did there come to be so many of these unfortunate individuals in the employ of the Government and why is the concentration so heavy in the State Department? And how many more of them are there besides those enumerated by Mr. Peurifoy? There seems no adequate answers to these questions, but considering everything, it is not surprising that, regardless of his recklessness and irresponsibility, Senator MCCARTHY should have a large and sympathetic following in his fight.

Rev. Dr. Osmond H. Brown

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. TAURIELLO. Mr. Speaker, recently an important event occurred in my home town of Buffalo, N. Y., which merits being brought to the attention of the Congress.

Dr. Osmond H. Brown, the rector of St. Philip's Church in Buffalo, is the first Negro priest to be appointed as an honorary canon in the 161-year history of the Protestant Episcopal Church. Dr. Brown has been a tireless worker for his church and community and his designation as honorary canon is indeed well deserved and has been well received.

In one of his first statements after receiving this appointment, Father Brown made a plea for the end of racial segregation. Under leave to extend my remarks, I am herewith inserting an article in this connection from the Buffalo Courier-Express of March 18, 1950:

FATHER BROWN ASKS END OF RACIAL SEGREGATION

(By Earl Williams)

A conviction that his new position as the first Negro priest to be appointed as honorary canon in the 161-year history of the Protestant Episcopal Church has world-wide significance was expressed yesterday by Dr. Osmond H. Brown, rector of St. Philip's Church, 166 Goodell Street.

Father Brown, who has been flooded with letters and telegrams of congratulations from all sections of the country since the high Anglican honor was bestowed upon him 2 weeks ago, interpreted the action of the Right Reverend Lauriston L. Scaife in naming him an honorary canon of the diocese of western New York as "a test case for the end of segregation in the Christian church."

"I believe," he said, "that the time is now ripe for the end of segregation, which is a curse to Christianity and an incongruity that makes our present democracy a lie.

"The whole world is now seething for respect of human freedom. In many parts of the world people have taken the wrong road to find this freedom."

MADE BY MAN

"The caste system in western civilization was made by man, not God. Unless our civilization is evaluated by Christian culture and not by economic standards, I am convinced that western civilization is doomed for destruction."

Charging that the church has lagged behind the fields of labor, art, and medicine in practicing human solidarity, the rector said he hopes his appointment will lead church people "to put forth before the world the dogma of civil rights and spiritual benefits for every creature of God regardless of creed, race, or previous conditions."

The stumbling block to the end of segregation of Protestant churches, he declared, has been the unwillingness of Christians "to pay the price of respect for human freedom." The true practice of the "law of love," he added, is an expense of our conscience and offers no social profit.

"No people," he continued, "can develop by themselves. There must be an interchange of racial groups and constant human contact to bring about an understanding one to another. Christianity is a fellowship, not a club. There is an urgent need of a better appreciation of respect of the human personality as given by the Supreme Ruler of the universe."

MUST ADJUST

The opening of the doors for assimilation of Negroes into American life," Dr. Brown said, "involves a tremendous racial responsibility to adjust ourselves in the spirit of humility and common sense that God may be able to use us as servants for all."

Besides his battle for the end of segregation, Father Brown is concerned that the lack of adequate religious training in education of the majority of Americans today is tending to develop a materialistic and godless nation.

News of the precedent-setting appointment of the Negro priest as an honorary canon, first published in the Courier-Express and carried by wire services throughout the country, has brought a total of 20 letters, 8 telegrams, and many cards of congratulations. Excerpts from one of the letters, sent by Dr. J. DaCosta Harewood, vicar of St. Philip's Episcopal Church, Philadelphia, follows:

"Bishop Scaife has conferred an honor, not only on you but he has honored all of us—the colored clergy of the United States. God bless him.

"May God continue to bless you and enable you to serve Him by serving humanity for many more years to come."

Mr. Speaker, I agree wholeheartedly with Father Brown. It is ironical that we here in America—where we consider all men to be equal—should have such a running sore as racial segregation. As an American who steadfastly believes in justice and the protection of human rights, I would be derelict in my sworn duty to the people I represent if I did not support the ideals and fundamentals on which our Nation is founded. Those ideals guarantee freedom, liberty, and equality to people of all races and creeds.

In an enlightened nation such as ours no longer can we continue to boast about our democratic principles and forsake these ideals in practice. Discrimination is a cancer in our society. All over the world, the Communists can point to it as proof of the fact that we do not practice what we preach.

I join with Father Brown and other clergymen throughout the country who have dedicated themselves to brotherhood under God and urge that efforts be continued to eliminate the disgraceful and abusive practices of discrimination and segregation.

Father Brown's appointment is another step in the right direction and I want to wish him good luck and continued success.

Reclamation at It Again

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. WERDEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am inserting the following article which appeared on the editorial page of the San Francisco Chronicle of Thursday, March 23, 1950:

RECLAMATION AT IT AGAIN

In pursuance of its policy to aggrandize itself and to drive private enterprise out of water-power development, the Bureau of Reclamation is seeking to have the Federal Power Commission revoke the licenses it gave last November to the Pacific Gas & Electric Co. and the Fresno irrigation district for developments on Kings River.

Together, though as separate enterprises, the Pacific Gas & Electric Co. and the Fresno irrigation district, with 19 other irrigation districts joining it, propose to develop immediately 418,000 kilowatts with new power company dams greatly increasing irrigation storage on the Kings River.

But the Bureau of Reclamation says it wants to develop Kings River power itself, though its plan would produce only a quarter of the kilowattage proposed by the two present licensees. Incidentally, too, the Bureau proposes to spend $71,000,000 of the taxpayers' money for 101,500 kilowatts, though the Pacific Gas & Electric Co. figures it will get 274,000 kilowatts for $73,000,000.

When would the Bureau have this power ready for a waiting public? It proposes to take 12 years for construction. The P. G. & E. alone proposes to provide more than twice as much power in less than half that time.

The Bureau does not really know when it could turn on the power, if ever. The striking feature of this move by the Bureau is that it has no authorization from Congress for development on Kings River. It may never get one. It is merely trying to block private enterprise. And the grab-everything side of its attempt appears in the fact that one of the licenses it is trying to upset is for the 20 irrigation districts which are public enterprises.

A charge made at the hearing before the Federal Power Commission Tuesday is worth thinking about. It is that the Bureau seeks to grab all economic power sites for Government development and leave only the uneconomic ones for private enterprise. If the Bureau could do this and limit private enterprise to only the marginal undertakings, the private concerns might have to charge higher rates to the consumers. Thus consumers, while being taxed to build overcostly and sometimes unnecessary public plants, would also have to pay more for their electricity.

An example of unnecessary expenditure proposed by the Bureau was turned down by the House Appropriations Committee Tuesday. The committee struck out of the Central Valley project appropriation funds asked by the Bureau for a Delta steam plant and various transmission lines and switchyards. None of these are needed. The existing P. G. & E. facilities are ample, are now meeting all demands and can continue to do so, and, under a contract dictated by the Bureau, at costs which would not be lessened by the duplicate facilities the Bureau wants to spend millions for. Congress after Congress has refused these items, but the Bureau still persists.

The Federal Power Commission was right in November when it pronounced the Bureau of Reclamation's plans for Kings River inadequate and issued the licenses to the P. G. & E. and the Fresno irrigation district. It should not permit itself to be buffaloed by the Interior Department into a reversal.

The Census and the Questions To Be Answered

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Walter Johnson, of Heathsville, Va.:

COUNTRY LAWYER

(By Walter Johnson, Heathsville, Va.)

The Constitution of the United States as so carefully written by the wise founding fathers and as ratified by the people, the Congress is authorized and directed to enumerate the people each 10 years. The purpose is to determine fair representation of the people in Congress on the basis of numbers.

That power to enumerate the people has shamefully been stretched by our Congress into power to impose on the people an enumeration or inventory of all the possessions of the people and of the earnings of the people.

At hand is a large sheet of paper with fine printing on both sides. In this printing are 334 questions, many of which have a number of subdivisions. It is called the agriculture questionnaire. The citizen is directed to answer the question and have it ready for the census taker.

Preparation of these questions was done in the dark dungeons of Washington bureaucracy. Congress did not prepare this monstrosity. But the Census Bureau would never dare impose such a thing on the people without authority of Congress.

That the Government of the United States can force the citizenry to give to it an inventory of possessions both on the farm and in the home is something never expected under the Stars and Stripes.

Government forces the citizen to tell if he has an electric water heater or electric washing machine but somehow it forgot to ask about electric clocks and blankets. Perhaps this information will be picked up by the census taker personally.

Only one Member of Congress has had the courage to raise his voice against this tyranny insofar as this writer has observed. He is CLARENCE BROWN, of Ohio.

In years gone by enumerators have been hired from among ordinary intelligent people in the community to enumerate their neighbors. Not so this year. Now, to make it more expensive and complicated, they are conducting examinations for enumerators.

Among this writer's acquaintances three ladies were examined and rejected as unable to pass. These ladies were all leaders in church and civic affairs and generally recognized as well-informed. They wanted to earn a little pin money and as they thought have a few weeks of interesting employment.

Perhaps it is just as well they were rejected. I am sure they are not the kind who would enjoy propounding unpleasant questions to their neighbors.

This business of forcing the citizen to furnish the Government of the United States with an inventory of his possessions can only be properly described with the one word "tyranny." There is not one iota of authority for it in the Constitution of the United States nor can justification be found any place.

There is only one place to put the blame. That is on our Representatives in Congress. They have failed the people.

Each and every Member of the House of Representatives and one-third of the Members of the Senate will be up for reelection in November. All will want your vote for another term. All will tell you about the fine work they are doing. Let them explain about this inventory they are forcing on the people.

Men like Patrick Henry, George Mason, and Thomas Jefferson are needed today in these United States even more than in 1776. If the men who so carefully wrote the Constitution of the United States could see how the power to enumerate has been wrongfully stretched into the power to inventory possessions of the people those fine patriots would rise out of their graves in angry protest.

Farmers Want a Plan But Not Brannan's

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Farm Journal has just rendered a real service to the people of the United States. A recent poll conducted by that leading farm magazine, indicates what farmers think should be a sound program for agriculture. On a six-point program the Brannan plan was sixth, or last, getting one vote out of every 12. This shows the common sense possessed by people who comprise the great farm business in this country. Complete information is in the April issue.

Mr. Speaker, as part of my remarks, I am including a letter to Congressmen and an article entitled "What Farm Journal Readers Voted On":

DEAR MR. CONGRESSMAN: "Let livestock eat up most of our farm surpluses and replace a good bit of the rest."

That's the idea that most readers of Farm Journal prefer, judging by their vote on the 12 plans we asked them to choose from in our February issue.

Votes are still coming in, but an analysis of the first 2,000 showed the livestock solution easily first, with 23 percent of the total.

This plan, which Farm Journal has been vigorously promoting, makes sense to farmers. They point out that livestock cannot only eliminate most surpluses, but can at the same time improve the national diet, help conserve soil, provide more employment within agriculture, and return more of the consumer's food dollar to the farmer.

That's because a livestock feeder is not only a producer of raw products, but a processor.

Sure, they say, livestock farmers would have to have income support at some level, and in some fashion, but that the support might better be under livestock than under many things we support now.

Not that this would be the whole answer. It wouldn't solve everything for everybody, and it couldn't do it all at once, but these farmers say, it's the big goal.

Second place in the voting went to the flexible, sliding-scale price support urged mainly by the Farm Bureau.

Third place went to a plan to swap surpluses for scarce foreign materials.

"More research" came in fourth—research for new crops, and new uses for old crops.

Some kind of two-price system—a higher price for what we use at home, a lower price for exports—came fifth.

And in sixth place was the Brannan plan, getting one vote out of every 12.

These six plans accounted for four-fifths of all the ballots cast. One of every 11 voters had an idea of his own that he thought was better than any of the 12 ideas we described.

The mail brought us everything, from just the coupon at the end of the February article to a 19-page typewritten letter—single spaced. The opinions ranged from some too violent to print to such whimsical ideas as that Secretary Brannan use surplus potatoes as stoppers on more kerosene cans.

There you are, Mr. Congressman. This was no scientifically prepared poll. The sample consisted of anybody who felt moved to write us. But it could be a mighty significant straw in the wind.

One thing was too obvious to miss, as we read through these first 2,000 letters: farmers want farm income kept high in one way or another, but they want even more to stay out of the hands of bureaucrats in Washington, or, for that matter, bureaucrats nearer home.

They believe that if we look around a little, and don't get too hysterical, we can find ways to do both of these things. They expect to be in the farming business for a long time, and they're looking beyond the next few months.

WHAT FARM JOURNAL READERS VOTED ON—HERE ARE THE 12 FARM PLANS OUTLINED IN THE FEBRUARY ISSUE OF FARM JOURNAL, FOR WHICH FARM JOURNAL READERS CAST THEIR VOTES

1. Let livestock eat us out of trouble, as proposed by Farm Journal. Farm animals could easily do it—in fact could leave us short of nearly everything. This would mean more, and therefore cheaper, livestock. Hence farmers would have to cut costs in order to keep making money. But those costs can be cut, as Farm Journal's current series of cost-cutting articles shows.

While Government price supports would be necessary until livestock could get the job done, here is a long-time answer that would get farmers out of the hands of the politicians.

(Some people are suggesting subsidies on livestock to speed this up.)

2. The Brannan plan. Its main feature is to let prices follow the market, thus giving consumers cheap food while the Government makes up the farmers' incomes. What the cost in taxes would be, no one knows, except that it would be terrific. And farmers would have to keep coming back to Congress for huge new appropriations to pay the bill.

The Farmers' Union supports the Brannan plan in principle, but urges even higher levels of support.

3. A two-price system, run by a bipartisan farm board. Supplies for home consumption would be held to a level that would bring good prices; surpluses would be sold abroad at world prices. This board would also have the power to apply any other remedies needed, including marketing agreements, support prices, and, as a last resort, marketing quotas and acreage allotments. The National Grange supports this plan.

The National Milk Producers Federation also supports a two-price program, but would have it operate through farmer-controlled marketing pools.

4. Flexible, sliding-scale support prices, which would prevent prices from falling to bankruptcy levels, but which would not encourage farmers to overproduce. The American Farm Bureau Federation backs this scheme.

5. Food stamps and free school lunches: The Government would figure how much a proper diet would cost a person, and what share of its income any family should spend for food. Then any family that could not buy a proper diet for, say, 40 percent of its income would get stamps—as a gift from the Government—to make up the difference.

6. An international commodity clearinghouse which would handle sales between hard- and soft-money countries. The United States might sell for full price in soft money, or for a discount in hard money. The Food and Agriculture Organization of the United Nations proposed this, but the United States officially has turned thumbs down on it.

7. Straight sales to foreign countries, to be paid for in soft money, without any clearinghouse arrangement, and with the taxpayers taking any loss on the foreign currency.

8. Higher subsidies on exports, to lower the price to foreigners, with the United States donating the balance. Payments to us would be made in dollars.

9. Permission to the CCC to sell more of its holdings at a loss. (Not much different from No. 8.)

10. Making an outright gift of more of our food to hungry people overseas, forgetting about any payment.

11. Swapping farm products for scarce materials from abroad.

12. Finding new crops to take the place of surplus crops, and finding new uses for old crops through greatly expanded chemurgic research. (Admittedly this won't solve today's pressing problems, but it's got big possibilities for the long run, if we put up enough money for a real research job.)

Montana Wants Early CVA Hearings

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. MITCHELL. Mr. Speaker, I would like to submit a copy of a resolution adopted February 26, 1950, by delegates to the Western Montana Conference for CVA, meeting at Polson, Mont. The meeting and the appended resolution are a strong manifestation of the impatience with the long delay in consideration of the CVA proposal:

That President Truman be commended for his perseverance in pressing for the enactment of the Columbia Valley Administration bill. We particularly commend his most recent action in advising the Bureau of the Budget that while development of the Columbia Basin must be continued for the time being under the joint Corps of Engineers and Bureau of Reclamation Plan, this is no substitute for the full-scale development under a CVA.

We urge the creation of a CVA because: The Army engineers-Reclamation Bureau plan is based on unproved engineering, a pious hope for cooperation between competing agencies, and a total neglect of the natural unity between land and water. A CVA, on the other hand, offers complete, unified, multipurpose development of the Columbia

Basin's varied resources through the efficient mechanism of a public corporation with headquarters in the region.

We recommend establishing an organization of all interested individuals and groups to promote CVA and its program. This must be done immediately to combat the deluge of misleading propaganda put out by well financed organizations fronting for the vested interests, and by well meaning, but misinformed, local groups.

We respectfully request that the congressional Committees on Public Works of the House and Senate hold public hearings throughout the region at the earliest practicable date.

Unanimously adopted by the committee on resolutions.

RAY KELLY,
Chairman, Lake County.
EUGENE FIKE,
Missoula County.
PETE RUDERMAN,
Missoula County.
Mrs. RAY LOGAN,
Lake County.
L. J. CARTER,
Sanders County.
ROBERT WELLER,
Flathead County.
JEROME LOCKE,
Lewis and Clark County.

Not Too Little, Too Late

REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. PLUMLEY. Mr. Speaker, as a minority member of the subcommittee on appropriations for the armed services, on my own responsibility preliminary to what later I intend to say at some length if I am recognized to say anything under the program of procedure I understand is contemplated, I do wish to say now on the basis of 17 years' experience in this House as a member of the Military Affairs Committee and of the Appropriations Committee that this seems an appropriate time—before it is too late—to sound a warning to the Department of Defense and the Members of Congress against adopting the attitude of fetish with regard to the projected military budget of 13 billions.

This figure was agreed upon as one which would suffice for the needs of the hour. The hour, at the time it was enunciated, was January of this year. The planning and the basic agreement on 13 billions predated January by a substantial period.

That same basic agreement of 13 billions was not without some dissent and mental reservation. I have no doubt that there were far-seeing men among the professionals in the Department of Defense, who, while agreeing upon the 13-billion figure at the time, did so with crossed fingers and a murmured prayer.

Since that time the United States of America has been treated to a spectacle of further Russian expansion and the consolidation of aggressive gains by Russian satellites. Communist China is rattling the saber in the direction of the Western Powers, particularly the United States. Communist forces within still-free nations of southeast Asia are agitating against us.

Only a few days ago Communist-trained forces in Indochina touched off a street riot as a demonstration against a friendly visit by United States vessels at Saigon. In addition, shells were fired from mortars in the direction of our ships. American merchant ships have been barred from evacuating American Nationals including our diplomats from Shanghai.

In Europe, satellites of the Soviets have tried to limit our diplomatic privileges within satellite borders. Our freedom of movement within these countries has been hampered in a fashion which seeks to humiliate the prestige of the United States.

And, an American naval officer, traveling from his post in Rumania, was mysteriously killed. Chinese Communists still hold our Navy fliers prisoner, despite all protests.

Many of these things, these far-flung manifestations of unfriendliness and thinly masked aggression, have occurred since it was agreed among the military planners that 13 billions was the limit beyond which we should not go in financing our national defense for the next fiscal year.

From the planners themselves, there have come expressions of doubt as to the capability of our defense plan for 1951. The Navy has supported House moves towards the building of new ships. The Air Force has said it would like to have more planes, if the money could be had.

There are undoubtedly desirable improvements in our ground forces which could be made—if the money could be forthcoming.

I think it is time that we of the House—and the Congress—told our defense people that they need not feel irrevocably bound to the 13-billion budget projection. I think it is time we put them on notice to tell us promptly if this sum fails to provide for the adequate defense of this Nation. I think it is time we adopted an attitude which would be conducive to having them come to us, if need should indicate. For our own part, we should be ready to revise upwards our appropriations rather than be lacking in essential defense.

A large number of the Members of this House have been distressed to learn that within the projected budget for 1951, it will be impossible to maintain many shore installations.

Under the commendable policy of converting the available funds into maximum forces in being, such retrenchment is inevitable. I believe all of us here agree that we ought to have the strongest fighting muscles possible for the amount of money we spend. Therefore, to maintain this muscle, we must cut what amounts to fat.

But what is fat under the operating schedules projected for the ensuing fiscal year, might well be considered a part of the muscle, if larger operating forces were projected. It is an inexorable rule that shore installations of the Navy, for instance, are predicated on the support of forces afloat, and in the air. Therefore, when we cut the amounts available for forces in being, we also provide indirectly the necessity for cutting the shore and base establishment.

The same applies to other branches of the armed forces.

I do not mean to advocate here that we provide funds for greater forces in being without adequate investigation and testimony to back up the need. But, I do not believe, either, that we ought to freeze to a $13,000,000,000 defense budget simply because, when it was drawn, it was believed to be adequate.

The war plans of the United States shift with changes in conditions. The disposition of strategic strength moves accordingly. In concrete demonstration of this fact, we have witnessed the strengthening of our forces in the Pacific during recent months, and we have heard of plans to strengthen them further in months to come. All of this is being accomplished in the face of the requirement for over-all cuts.

In addition, our Navy has wisely given top priority to antisubmarine warfare preparations. To do this, money is going to have to be diverted from other objectives.

Cutting down on forces, and trying to fit one's needs within a figure, which might well turn out in the final analysis to be an arbitrary and inadequate one, is occupying a great deal of time in the Pentagon. Plans for the procurement of many things have had to be postponed. I have been asking myself whether we ought to take this risk.

The projected forces for 1951 have been described as a calculated risk. Under our system of government, we must take some risk. We cannot economically afford total defense. We cannot make a guns-or-butter choice for our citizens which the German people had made for them by Hitler. Stalin has made this same choice for the Russian people.

On the basis of my own investigation and knowledge I am convinced that the Secretary of Defense and the Secretaries of the Army, Navy, and Air Force have tried to make all the economies they could, in good conscience. I know their military staffs have worked hard to bring them about, and to try and fit economies into the picture of necessary ready defense.

I believe it is for us, the Members of this House, to create a receptive atmosphere for their opinions, should they find that the proposed economy budget places too great an element of risk into their planning.

As I said before, I do not believe 13 billions ought to be allowed to become a fetish, or an idol, or an immovable figure which cannot be revised upward if need be. I am deeply appreciative of the efforts which have been made to budget our essential defense within this figure, and for my part, I would welcome the opinions of those who have to work with that budget, if they think it is too small.

Consumers Benefit From Prosperous Agriculture

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. RIEHLMAN. ' Mr. Speaker, there has been a good deal of criticism of the Government farm price support program. A good deal of this criticism has probably been entirely justified.

Over the week end my distinguished colleague from South Dakota [Mr. LOVRE] took occasion to explain why it is vitally important to everyone, everywhere to maintain a prosperous farm economy. Speaking at a meeting of Midwest Republican chairmen at Salt Lake City, Utah, Mr. LOVRE pointed out the critical necessity of keeping farm income high. He declared that every dollar of gross farm production means $7 of national economy. He further asserted that when farm prices are low everyone suffers.

Mr. LOVRE also gave the Republicans some excellent political advice concerning the farm vote. He bluntly told the chairmen and party officials that they must do something more than criticize the Brannan scheme presented by the Democrats.

In the interests of the great congressional district which I represent—a district somewhat different from Mr. LOVRE's in that I represent more consumers than farmers—I am presenting his talk. It contains a message vital to wage earners, consumers, and businessmen. I recommend its reading to every Member of this body whether he be interested in agriculture or in the consumer's position in regard to food prices. This frank account deserves the attention of every American who wants to see this Nation remain prosperous and strong:

SPEECH BY REPRESENTATIVE HAROLD O. LOVRE, REPUBLICAN, SOUTH DAKOTA, BEFORE A MEETING OF MIDWEST REPUBLICAN STATE CHAIRMAN, SALT LAKE CITY, UTAH, MARCH 31, 1950

I am especially glad to be here for this meeting because I feel at home with you people. I was Republican State chairman of South Dakota for 2 years and in that capacity I was a member of your group. I understand the problems which you are facing. As a Republican and as a Congressman, I am vitally interested in your problems. They are the basic problems of the Republican Party.

When I, as State chairman, called county chairmen or party workers together, I always asked that everyone speak frankly.

I ask the same today.

The goal of a political organization, as we all know, is to give the people the kind of government that is believed to be right and proper. This can be accomplished only by election of its members to office. It is the responsibility of all of us—party officials, office holders, and all other members—to work for victory, so the principles of Republicanism will be most strongly felt in local, State and National Government.

You people are experts in politics and government. If this were not true, you would not be here today. It is not necessary for me to remind you that to win elections we must get the votes.

The 1948 fiasco supplied a good lesson. The outcome was a shock to me. But, after the shock had subsided, I sat down—as I suppose 140,000,000 other Americans did—and tried to figure out just why we lost. I suppose there was my answer and 140,000,000 others to the question.

My analysis resolved itself to just one simple fact. We lost the 1948 election because we, as a party, failed to live up to the expectations of our old stand-by—the honest-to-goodness dirt farmer. We can rationalize all we want and point to the tactics of the opposition, which maligned the Aiken-Hope law. The fact still remains: Had we carried the farm States we Republicans would have won.

Some say the Democrats tricked the Republican Eightieth Congress into passing the sliding scale law which the New Dealers knew would cost us votes. In reality, the Aiken-Hope law was nothing new. It was simply a carry-over of the New Deal philosophy of solving the farm problem by pouring out Federal funds to support the commodity market. Farmers didn't like it.

Quick to capitalize on the situation, the Democrats came out with a brazen political scheme, aimed at keeping the farm vote and wooing every other group into the fold. I'm speaking of the scheme of Secretary of Agriculture Charles Brannan. Mr. Brannan's scheme—and I call it a scheme because that's all it is—promises high prices to the farmer. Out of the other side of his mouth, Mr. Brannan promises consumers low food costs. The only one left out in the cold is the taxpayer, the forgotten man—whether he be farmer or consumer—but who eventually must foot the bill. Mr. Brannan has been strangely and significantly silent on this score.

I'm not going to spend a lot of time condemning the Brannan scheme. I'm merely going to list a few of the many objections which I see.

First, the idea is fundamentally unsound. It is foolish to believe we can solve all problems by running to the Federal Treasury for a monetary hypodermic. In this case, it is through subsidies to keep farm prices high. The farmer is being sold on the Brannan scheme because of high price supports. Neither Mr. Brannan nor his hordes of Federal Agriculture Department employees tell the farmer that in return for a cash subsidy—which is nothing more than a dole—he will have to be subjected to rigid Federal controls and regulations.

They don't say that the farmer must obey the edicts of the Washington bureaucrats or lose his subsidy. They don't mention the fact that the farmer who doesn't obey these orders will end up with a stiff fine or jail sentence, or both.

Mr. Brannan, in his appearance before the House Agriculture Committee, spoke of protecting the family sized farmer. Actually, no bill embodying the Brannan philosophy yet reported to Congress makes specific provision for the small operator. The unit limitation which Mr. Brannan originally advocated was stricken from the scheme before it was presented to the House last session. With its provision for subsidy payments to farmers, think of the big operators—about 2 percent of the farm population—who produce 25 percent of the farm crops annually. They could, and would, reap riches at the taxpayers' expense.

The essence of the Brannan scheme is to provide a certain farm income. Let's say $26,000,000,000 annually. With sufficient controls and regulations, that farmers do not want, this could be possible. But suppose farm income on the market fell 20 percent. This would mean that the taxpayers would have to make up 20 percent deficit in farm income to assure the growers their $26,000,000,000 annual income. On the market, this produce would bring $20,800,000,000, leaving $5,200,000,000 to be made up from the Federal Treasury. This might satisfy the farmer, but what about the taxpayers? From what I've seen, I doubt if the farmers could convince the Congress, year after year, to provide this $5,200,000,000 appropriation. That is a grave risk to impose upon the farmer.

Now, let's look at the consumer. You'd expect him to get his food 20 percent cheaper under the Brannan scheme. This is impossible because the farmer gets only about half of what the consumer spends for food. The other half goes into marketing and transporting costs. Hence, the average reduction possible under the Brannan scheme is 10 percent.

For white bread the reduction is even less than that, not quite 3½ percent. Last week my wife paid 29 cents for two loaves of white bread—14½ cents each. Now the value of the wheat that goes into a pound loaf of bread was, according to the 1949 average, 2½ cents. A 20-percent drop in farm prices would reduce this wheat in a loaf of bread by half a cent (20 percent of 2.5 cents=0.5 cent). The retail value of the bread before the Brannan scheme: 14.5 cents. With the Brannan scheme: 14 cents (14.5 cents—0.5 cent=14 cents). The reduction to the consumer in this case is 3.4 percent.

At the same time, however, the consumer would be footing the tax bill to the tune of more than $5,000,000,000 per year, not counting the cost of the salaries of the thousands of employees necessary to administer and police the program.

Furthermore, the Brannan scheme would mean the rebirth of another OPA—on a scale much larger than ever before. Mr. Brannan's scheme would not only regulate the farmer but would of necessity regulate every person dealing with the transporting and marketing of farm produce. Every country grocery and pushcart operator would come under Government regimentation.

Assume for the sake of argument that the Brannan plan would mean 20 percent reduction in food costs. What will that do to the wholesalers, processors, transporters, and retailers of food? They would have to operate their businesses on 20 percent less money. Truck drivers, warehousemen, grocery clerks, country elevator operators, millers, bookkeepers, janitors—everyone connected with converting farm crops into food—would get paid on the basis of 80 cents where they now get a dollar. Uncle Sam would be able to tax them on the basis of only an 80-percent income.

Their income certainly would fall 20 percent. It is obvious what that would mean to the national economy. It would throw it completely out of kilter.

These few illustrations show the fallacy of the Brannan plan.

Despite this unhappy picture, however, there are two good arguments for Mr. Brannan's idea, as wild as it is. They are: (1) the mess into which the present law has put us (some people argue that anything would be better than what we have) and (2) the lack of a plan to substitute for the Brannan scheme.

As JOHN MCCORMACK, the House majority leader, said only last week on the floor of the House: "I call upon those who oppose the Brannan plan to offer a plan of their own." Even Mr. MCCORMACK said he did not know whether the Brannan plan was the correct one, but said one thing in defense of it. That was that Secretary Brannan had the courage to offer a plan.

That statement seems to me to be a direct challenge to our party.

I know that the Republican Party is truly and sincerely interested in the farmer and

his welfare, and I shall explain how we can show this devotion to principle.

Agriculture is the most sensitive and powerful part of a combination of factors influencing our Nation's economy. The farmer produces 65 percent of our raw materials, and the produce of the farm is the kind that moves rapidly on the market and quickly is transformed into buying power. Farm income is thus widely and swiftly distributed over the entire Nation. Hence, far more than the 20 percent of the population of the Nation engaged in farming is affected by any rise or fall in farm prices. As a matter of fact any rise or fall in farm prices affects our entire economy. Our national balance sheet is regulated by the volume of farm production and the price it brings on the market.

The record of the United States for 25 years proves beyond a shadow of a doubt that each $1 of gross farm production on the average generates $1 of factory pay rolls, $4 of retail sales volume and $7 of national income.

That is why stabilizing farm products at a proper price level automatically becomes a floor under our national income, our wage level, business profits, and the goods we consume.

History proves that farm income governs national income. The consumer suffers whenever farm income drops. When farm income drops, wages fall, and when wages fall the consumer must turn a greater percentage of his income to food. A national prosperity graph and a graph of farm income run parallel to each other. The years 1928 and 1932 tell a grim story. Farm production in each of those years was about the same. Yet the farm income in 1932 was just half of what it was in 1928. The national income dropped to less than half; automobile production fell from more than 4,000,000 units to 1,186,000, construction values fell even more sharply.

Another instance is what happened in the 2 years 1937–38. Farm income rose nearly $1,000,000,000 in 1937. National income went up approximately $7,000,000,000. But with a larger farm production in 1938, prices weakened and farm income dropped almost $1,000,000,000. National income fell almost $7,000,000,000, with the loss spread all along the line. Manufacturing, employment, wages and salaries, construction and transportation all suffered their proportionate cuts. All started to rise again with the upturn of farm income in 1939.

These facts demonstrate clearly that if industry wants profits, if labor wants high wages and many jobs, and if Government wants sufficient taxes to balance the budget and reduce the public debt, all of these groups should be among the first to insist on fair and proper prices for what the farmers produce.

The administration claimed the 1938 recession came because governmental spending had been reduced too soon. But governmental spending merely represented money borrowed from the store of capital already in existence. The actual reason was the failure to maintain the flow of new income. It had slackened at its source—on the farms—and consumer purchasing power fell accordingly.

Consumers do not gain from low farm prices. They always lose. At the bottom of the depression, although farm prices were disastrously low, the share of the consumers' total income required for food was the highest in a decade. This was because their total income was proportionately lower. In 1938, when farm prices dropped, consumers did not benefit from lower food prices. The shares of their income spent for food remained the same or was higher because their total income had declined in ratio with farm incomes. On the other hand, in 1943–44, although farm prices were at or above parity, the share of consumers' total income required for food was the lowest in history.

Despite Government supports, right now farm income is down compared with 2 years ago.

Farmers aren't happy about that either.

Consumers are angry when they see warehouses bulging with surpluses, which do not do anyone any good, bought with the taxpayer's dollar. There is even a movement on foot to stop price supports for farmers. Witness the unfavorable publicity which the farm program has received and the formation of the Association for the Abolition of Farm Price Supports in New York City earlier this year.

The Secretary of Agriculture and the Democrats are capitalizing on this dissatisfaction by saying it gives reason for repealing the present support law and forcing the Brannan scheme on the American people. I do not believe the present law is what it should be. But I don't believe the answer lies in Mr. Brannan's scheme.

These factors point to the opportunity which is knocking at the door of the Republican Party. The farm philosophy of the Democrats is as outmoded as the Model A Ford that was popular back in 1933 when the New Deal adopted the idea of solving the farm price problem with money out of the Federal Treasury. The approach to the farm problem which the Democrats have taken and are recommending under the Brannan scheme is the approach of the past—that is, subsidies again, but to make it palatable they promise lower food costs, with the loss to be made up out of the Federal Treasury, which means out of the pockets of the farmers and the consumers alike.

The Democrats are dealing with a 1950 problem by a 1933 approach. They want a 1950 automobile on a 1933 chassis.

It remains for the Republicans to come up with a modern 1950 solution to this 1950 problem.

Arriving at the answer we should remember that there is a great need for clear understanding of economic relationships between groups. Unless all groups are making sound and comparable progress there will be weakness in our national economy. It is vital to the welfare and security of the United States of America that the answer be found because a high level of farm income means a high national income and prosperity for all.

It is my opinion that any legislation which serves to stabilize farm prices is not legislation for agriculture alone. Instead, it is legislation which protects the economic welfare of every segment of our country. I say this because farm income governs our national income on a 1 to 7 ratio.

We cannot be blind to this basic fact. We as a political party must take a positive approach to the problem.

We must do more than poke holes in the Brannan scheme.

To attack without offering a constructive alternative is to say in effect that we as Republicans either do not believe in a farm program or that we recommend a return to the outmoded Government support philosophy on a 60 to 90 percent sliding scale which the voters repudiated in the 1948 elections.

The Republican Party is committed to a price program for agriculture. Our 1948 platform contained such a plank. We can't ignore that.

It is my firm conviction that the future success of the Republican Party lies in what we as a party do about the farm problem.

Axel Beck, national committeeman from South Dakota, and chairman of the Republican National Committee's Agriculture Subcommittee, has recommended a farm plan which I believe provides the answer to the Republican Party and to the farmers of America.

I also have been working on a plan which I submit for your consideration. There is no basic difference of opinion between Mr. Beck and me.

My plan establishes a pattern for a Republican victory in 1950 and again in 1952. It supplies the answer farmers and consumers are demanding.

It is a modern solution to a modern problem.

This proposal is self-financing, thus relieving the taxpayer of a heavy burden that he should not have to bear. It assures the farmer of full 100 percent of parity, thus protecting his income. This means a high national income for other elements of our society.

It uses the same procedure which any successful businessman follows—a two-price system, one price for the bulk of his produce and another price for his surplus.

The basic reason for a farm program is to protect the farmer, who now is the one person in our modern economic pattern who has little or nothing to say about the prices he receives. He has to take what he can get. To overcome this stumbling block of our complex modern economic structure there must be a farm program. I believe I have a plan that will effectively serve the farmer and his family and at the same time serve the best interests of the entire Nation.

In approaching any farm program we should strive for a solution that gives the highest degree of free enterprise and the fewest controls. It must be one that will react to the best interests of both producers and consumers. Furthermore, any farm program must be divorced from dependence upon the Federal Treasury for financing. Farmers don't like to be placed in this position and the howl that has gone up among consumers proves that they don't like it either. This resentment is proof of the dire necessity of a program free from the year-to-year whims of Congress and maneuvering by self-centered pressure groups.

As Joseph Davis, director of the food research institute of Stanford University, some time ago said, "America wants an agriculture that earns its way, instead of being continually and increasingly dependent on Government props, vulnerable to political shifts, and forced to accept the accompanying regimentation. It wants an agriculture that, proud of its strength, competes in domestic and foreign markets on the basis of efficiency and fair play."

I believe I have such a plan. It has as its objectives: (1) Full self-financing, thus ending the use of tax money for subsidies; (2) full parity prices at all times for normal domestic consumption; (3) administration by the farmers themselves through elected county, State, and National committees; (4) specific and real protection for the family-sized farmer; (5) a two-price level the same as any other business uses; (6) provision for distribution of food to needy people under a food-stamp plan; (7) encouragement of nonfood commercial uses for surplus crops; (8) exports on the world market coordinated with United States commitments; and (9) a coordinated soil-conservation program.

I visualize my plan to work in this manner:

Farmers would choose their own organizations, with elected county, State, and National committees directing the program from the farm level. Committees would work with the Secretary of Agriculture who would decide each year the normal domestic consumption of each farm product. This total would be divided among farmers. They would receive 100 percent of parity for produce marketed under these marketing quotas. If the farmer produced more than his quota and wanted to sell it, he could buy additional marketing quotas, paying enough for them to finance food stamps, exports, and new uses of the product. If moving the surplus did not cost the entire sum, the balance would be returned to the farmer through the local farm committee.

Thus, the farmer could control his own production and those who create surpluses would stand the losses. Marketing quota laws, as now provided, would go into effect only after a referendum in which the farmers gave their approval.

The plan would operate under the same sound principle as that under which a merchant or manufacturer determines a fair price for the bulk of his goods and then sells the remainder at a discount. For example: Suppose that the parity price of wheat is $2. Farmer Jones has a quota under which he may sell 5,000 bushels at full parity. But because of good growing conditions, he produces 6,000 bushels. He could market the additional 1,000 bushels only by buying an additional quota from his county committee for perhaps $1 per bushel. He would either sell the additional 1,000 bushels at full parity or obtain a full parity loan on them. Chances are, however, that under such circumstances he would store his surplus on his own farm in anticipation of his next year's quota, or as protection against a future disaster.

The $1 per bushel would go to the national committee (such as the Commodity Credit Corporation). That committee might issue food stamps, good for perhaps 75 cents on a bushel of wheat. Or it might export for $1.50 per bushel. Or it might subsidize plants at $1 per bushel for finding new uses for wheat. If, at the end of the year, it finds it has averaged $1.25 per bushel on sales of surplus wheat, Farmer Jones, who has sold surplus, would collect the additional 25 cents per bushel. Thus he would net $2 per bushel (full parity) on the 5,000 bushels in his regular quota, and $1.25 per bushel on the surplus. He would not be subjected to acreage controls. He would regulate his own production.

Obviously, if he continued producing surplus wheat, the amount that he would net for the surplus would decrease to the point where he would voluntarily reduce the acreage sown because he would get so little from it.

Calling loans or selling surplus when parity is exceeded would protect the consumer who certainly should expect to pay parity prices for food the same as for everything else he buys. The food-stamp provision of this plan would provide for the consumer who couldn't afford to feed himself properly. Consumer-taxpayers would not be stuck with financing the plan either.

Protection for the small operator would be assured by law and soil-conservation practices would be vigorously encouraged.

Chances are that this plan does not furnish all the answers, but, in my opinion, it is fundamentally sound and infinitely more practical than the Brannan scheme. Republicans cannot afford to ignore the fact that a sound and healthy farm economy means a sound and healthy and prosperous economy for the entire Nation.

I believe that this program of agriculture should be based around 100 percent of parity for the farmer.

Here is why:

Our economy can be compared to a large department store. If the store manager prices his products so low as, say, 75 percent of the needed price to operate properly (parity) he will land in the bankruptcy courts. In the same way, if the United States permits its price level to drop to 75 percent of parity, then we lose 25 percent of our ability to consume; we have 25-percent unemployment and national deficits which will eventually force us into bankruptcy. Such a course certainly is not consistent with Republican policy and not in line with your thinking of mine.

With about 26,000,000 persons on the Nation's farms today, and millions more whose living comes directly or indirectly from farm production, it is apparent that prices must be stabilized toward a continual flow of new income from farm production. Price stabilization on these crops will also stabilize our credit dollar and the purchasing power of the wage earner.

Whether or not we like large expenditures for foreign aid, defense, and domestic programs, we have to face the hard, cold fact that we must have a high national income to finance such expenditures. I have pointed out that farm income and national income are closely related by a seven-times turn. Therefore if we as a nation are to meet our obligations we must have a high farm income.

In these days of the cold war between the United States and Russia it is desperately important to maintain American prosperity.

Joe Stalin is patiently waiting for an economic bust in this country as the opening crack is our cold-war defense. In the interest of peace we must keep farm income and national income high.

To maintain farm prosperity the farmer must have 100 percent of parity. In other words, he must make enough money so that he can buy what he needs and wants. Give him less than 100 percent of parity (or buying power) and you give him that much less buying power.

It is my belief that no political party can operate the economy of the United States on a basis of full employment, a balanced national budget, and pay off the national debt unless an average of at least 100 percent of parity is maintained at the market place for agricultural production for domestic use.

A political party that has the courage to foster such legislation can show by this very action that it means business when its members say their party is a party of prosperity and plenty. A political party that can provide such a program for the Nation will naturally attract not only the farm vote but the vote of sound, thinking Americans everywhere.

To espouse any other philosophy than 100 percent of parity for the farmer is to threaten the very economic foundation of our whole economy.

It is also political suicide.

Any compromise or influence that reduces farm prices below 100 percent of parity in the market place will reflect the same percentage in the loss of busines volume and departure from full employment. The effect on the national income is just seven times what it is on farm income.

Full parity under my plan or under Mr. Beck's recommendations can be accomplished without Government subsidies or grants, and that is in line with the Republican philosophy of governmental economy. There certainly is no economy under a program that costs each American $30 per year to buy the surpluses which result from it. Today taxpayers have $4,000,000,000 tied up in surpluses alone. It costs $25,000 an hour just to store them.

The Nation's farmers told the Republican Party what was needed in the way of farm legislation at the Sioux City conference last fall. They stated that they recognized that the farm problem is a price problem, and that they insist on full parity which they believe they are justly entitled to in the market place. They also went on record clearly demanding the preservation of basic American freedoms.

Mr. Beck, showing an acute awareness of the necessity for legislation to protect the Nation and the farmer from economic collapse, not long ago advised a farm plan. It is not basically different from the one I am outlining to you today. His objectives are full parity, self-financing, freedom from Government controls, a soil-conservation program, encouraged livestock production, and an on-the-farm storage program.

Meetings—32 of them—to which I invited 85,000 South Dakota farmers last fall convinced me that the farmers want to turn the farm program back to the farmer. They also insist on getting full parity for their products without a Government subsidy.

Consumers approve of the plan because it lifts a heavy taxation burden from their backs.

I want to make it emphatically clear that I do not want to scrap the present farm program until we find something better. To do that would not only be foolhardy, but it would be dangerous to the entire Nation. We should strive to improve upon existing programs.

I believe the plan I have outlined establishes the means by which the Republican Party can regain the farm vote. It is definitely in line with Republican thinking and Republican principles.

The self-financing feature is consistent with the Republican pay-as-you-go idea of government.

The complete freedom from Government controls which the farmer would enjoy is a preservation of the Republican free-enterprize philosophy.

The guarantee of full parity to agriculture is simple forthright reassurance of the Republican pledge to the farmer.

The two-price system is a businesslike approach to a marketing problem which coincides with the Republican demands for greater efficiency in government.

The orderly disposal of surpluses so that produce from God's ground is used to feed God's people shows a willingness to meet a moral obligation.

By maintaining farm income, thus assuring a high national income, the Republican Party can demonstrate that it is a party of prosperity and plenty.

I frankly feel that active and vigorous promotion of this plan will bring a Republican victory in 1950 and again in 1952. In the interests of American agriculture and in the interests of the Republican Party I hope the GOP will get behind this or a similar proposal.

As a political party we are not discharging our obligations to the American people by blinding criticizing the Brannan scheme without offering something constructive in its place.

Furthermore we, who are interested in Republican gains at the polls, cannot expect to win the vote of the American farmer unless we offer him a plan that will solve his price problem and at the same time preserve his basic American freedoms.

I have spoken frankly but from the heart, and have appreciated your attention. I earnestly feel that unless we awake to the fact that there is a farm problem and present some constructive answer—I don't claim that my plan is the only one—that we will fail to fulfill the trust that the American people have placed in us as a political party.

Failure to deal with the problem in a forthright and constructive manner can mean the difference between prosperity and depression for the United States and victory and defeat for the Republican Party.

Colorado River Controversy

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. POULSON. Mr. Speaker, I am inserting in the RECORD a very informative article on the Colorado River controversy, written by one of the outstand-

ing citizens of Los Angeles, Mr. Marshall Stimson. Mr. Stimson is not only one of the pioneers of Los Angeles, but he has been active in support of the municipal-owned department of water and power which is so vitally interested in this controversy. He is always out in front in good government.

The article follows:

COLORADO RIVER CONTROVERSY

To the CHRISTIAN SCIENCE MONITOR:

That the facts regarding the claims of the States of Arizona and California to the water of the Colorado River are not generally known, especially in the East, prompts me to make this statement.

In 1921 or 1922, when the question of a low or high dam was being considered, I was sent by the Los Angeles Water and Power Board to Washington to interview the then Secretary of Commerce, Herbert Hoover. It had been pretty well agreed that a low dam to control the flood waters of the river was a necessity. Regarding a high dam, there was opposition from two sources. The Southern California Edison Co. did not want the competition of public power, and the immense expense of a high dam caused strong opposition in Congress.

I was instructed to ask for Mr. Hoover's approval of a high-dam project and to assure him that in the event it was built, an aqueduct would be built to carry the water, and that power lines would be built to carry the power produced, except that which might be desired by Nevada or Arizona. Had it not been for that promise the dam would not have been built, because Congress would never have authorized it unless there was a chance of obtaining revenue that would pay the cost of the dam.

On March 24, 1922, the Colorado River compact was signed, whereby the upper States—Wyoming, Colorado, portions of New Mexico, Utah, and Arizona, known as the Upper Basin States—were to be allowed 7,500,000 acre-feet, and the Lower Basin States, composed of part of Utah, New Mexico, Arizona, and California, were to have rights to 7,500,000 acre-feet. Arizona, alone, did not sign. However, California did, with the understanding that 4,400,000 acre-feet and one-half of the surplus would go to southern California.

Southern California immediately began work on its two projects, the aqueduct and the power-transmission lines, and it has completely fulfilled all obligations made to induce the building of the Hoover Dam.

Later, a treaty was made between the United States and Mexico, whereby 1,500,000 acre-feet of the river water were allocated to Mexico, and by the same treaty Mexico granted to the United States certain rights to Rio Grande water in Texas.

Largely, the same group in Congress that thus took away some of the water to which southern California was entitled, and gave it to Mexico, recently voted in the Senate to support the central Arizona project.

This undertaking involves an expenditure of over $700,000,000. It contemplates diversion of 1,200,000 acre-feet of the Colorado River into southern Arizona. This, of course, will come largely out of southern California's share.

Those who have studied the Arizona project say that the cost of the irrigation system can never be financed by the revenues derived from the lands upon which it is supposed to spread the water. It is estimated it would cost $1,750 per acre to bring this water to land in the Salt River Valley, and that the production therefrom will be largely in lines in which we now have an overproduction.

I read a rather pathetic story entitled, "Voices From the Purple Sage," by Harlan Trott, which appeared in the Christian Science Monitor. A Pima Indian was complaining of the loss of water which had been used by his people for many generations, by a diversion of irrigation water on lands outside the Indian reservation. It is to be noted, however, that it was the Arizona people who took this water from the Pima Indians, and not southern California.

Some parts of California, especially around San Diego, have faced a severe water shortage. That can be met only by use of Colorado River water.

On the basis of an estimate, an agreement was signed with the various California agencies, for the use of 5,362,000 acre feet by portions of southern California.

In a decision by the Supreme Court by Justice Stone, it was decided that the use of water by California was restricted to 5,484,580 acre feet annually.

The Metropolitan Water District in 1931 voted a bond issue of $220,000,000 to finance the aqueduct and, of course, bonded itself heavily to construct the power equipment.

It is understood that the negotiations have failed, arbitration is not feasible, and California contends that the matter should be settled by litigation before the United States Supreme Court.

This seems far more equitable than a political determination by Congress, when it is clearly apparent by the vote of the Senate that neither the justice of California's claim nor the consideration of the question of general public benefit, may be the basis for a decision in the House.

It is submitted that the results which might be obtained from the central Arizona project do not justify the expenditure of so great a sum as $700,000,000, and the possible severe loss to a community which made possible the building of the Hoover Dam.

The story which appeared in the Christian Science Monitor of February 24, 1950, admits that the only way any substantial return can be made for the Government's investment in the central Arizona project is from revenue derived from the power purchased by Southern California.

It is of the utmost importance that the entire Nation understand these facts: That it was on account of Southern California's pledge that the Hoover Dam was built, and that practically all of the money advanced came from Southern California, and that they could further recognize that Southern California is expected to pay the greater portion of the expense of the central Arizona project.

Taking these facts into consideration, a detached observer, it would seem, would be justified in giving a conscientious opinion that Southern California was right in its position that the Supreme Court should first pass upon the respective water rights of both California and Arizona, then the feasibility of the central Arizona project could be considered on its merits and in the light of the water to which Arizona would be entitled.

MARSHALL STIMSON.

LOS ANGELES.

AMVETS To Urge Federal Economy

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. DAVIS of Georgia. Mr. Speaker, in all sections of our country, people in every walk of life are becoming more and more conscious of the need for economy in Government and reduction in taxes.

I was glad to note that at a recent meeting in Washington, D. C., of the AMVETS organization, a resolution was adopted calling upon Congress to reduce expenditures and to cut Government costs.

The resolution was introduced by Mr. Joseph S. Crespi, of Atlanta, Ga., vice president of the national service foundation of AMVETS.

I wish to express my appreciation to Mr. Crespi for drawing and introducing the resolution and to congratulate the AMVETS upon their action in adopting it and going on record in favor of economy in Government and reduction in taxes.

Under leave previously granted, I insert herewith a newspaper item regarding this action, this being a clipping from the Atlanta Constitution of March 28, 1950:

AMVETS TO URGE FEDERAL ECONOMY

The AMVETS will call upon Congress to be more reasonable in further taxation as well as expenditures.

A resolution to this effect was introduced by Joe Crespi, of Atlanta, national executive committeeman of AMVETS, at a meeting of the committee in Washington and passed unanimously by the group.

Back in Atlanta, Crespi said yesterday the committee would call the Appropriations Committee's attention to the fact that in 152 years, from 1789 to 1940, the Government spent $167,000,000,000, as compared with the $177,000,000,000 they spent between 1946 and 1949, excluding the cost of World War II, which runs into many more billions.

Crespi was elected vice president of the national service foundation of AMVETS at the meeting.

The Answer to Commodity Credit Corporation Defeatism—Use Farm Surplus To Spur Development of Nonfood Farm Product Industries

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. STEFAN. Mr. Speaker, on March 30, 1950, Ralph S. Trigg, president of the Commodity Credit Corporation, informed Congress that the American taxpayer has more than $4,000,000,000 invested in farm price supports. My people out in Nebraska find it difficult to grasp the enormity of this amount of money. I can sympathize with them. It is beyond the power of most of the Members of Congress to understand why such a sum is placed within the power of a single subdivision of one agency to administer. The only way I know of to explain what $4,000,000,000 represents is to compare it to some known quantity. $4,000,000,000 means approximately the sum of the total holdings of Ford, General Motors, and Standard Oil. $4,000,000,000 means an amount approximately two times as great

as all the deposits, loans, and investments of every bank in the State of Nebraska.

Over 2 weeks ago, on March 15, I included my observations on what the Commodity Credit Corporation could do with the vast surplus of farm products, some of which may now be rotting in their warehouses and elevators. My suggestion was this: Make available to the new industries which are engaged, or which will be engaged, in the manufacture of nonfood goods from farm crops those farm surpluses now stored by the CCC at a price which would stimulate the growth of such industries. The products of the farm to be used as food can be utilized by the American consuming public. Fair farm prices can be consistently maintained.

It is now necessary to emphasize a matter of timing.

I repeat that my remarks on the disposal of CCC surpluses through using them in the development of industries dependent for their raw materials on the farmer were included in the CONGRESSIONAL RECORD for March 15.

The facts on which my remarks were based were requested through usual channels from Dr. G. E. Hilbert, Chief of the Bureau of Agricultural and Industrial Chemistry, Department of Agriculture, around the middle of February.

Now, I want to call your attention to an article from the Washington (D. C.) Post of March 30, 1950. Note the date—2 weeks after my remarks appeared in the CONGRESSIONAL RECORD. This article is an account of the Fifteenth Annual Chemurgic Conference:

(By N. S. Haseltine)

Development of surgical sponges which can safely be left in the patient's body was disclosed here yesterday by a Government scientist.

The surgical accessory is made from specially processed cornstarch which body tissues can readily absorb, said Dr. G. E. Hilbert, chief of the Agriculture Department's bureau of agricultural and industrial chemistry.

He displayed the new product at opening session of the fifteenth annual Chemurgic Conference, at Hotel Statler. Chemurgy is defined as the science of making new uses of agricultural products.

The 3-day conference convened formally at an opening luncheon session with a welcoming challenge by President Truman to put science to work to maintain good income levels for farmers and higher living standards for all.

RESEARCH FINANCING URGED

The challenge was met by Wheeler McMillen, president of the National Farm Chemurgic Council, of New York City, with a request for research financing similar to the $2,000,000,000 spent for the Manhattan project in developing the atom bomb.

Dr. Hilbert, in discussing the new uses of cornstarch, said the material is formed by boiling cornstarch to a paste, then freezing it, and finally thawing it and pressing out the water. "The sponge product," he said, "dries up hard and brittle."

"In clinical usage, in New York, the cornstarch sponges are proving as efficient as the rubber varieties now in use," Dr. Hilbert said. "They have been used with exceptionally good results in obstetrical cases involving profuse bleeding," he added.

The surgical sponge was only one of a number of recently-developed new products from agricultural crops. Others, modeled by Congressmen's daughters in an amateur fashion show, included raincoats of water-resistant cotton, linen-like cotton dresses, and a variety of clothing now being made from corn.

TRUMAN ENDORSES PROGRAM

President Truman in his message sent to the conference, urged the chemurgists to find new ways to use our increasing abundance so as to yield a good income for farmers and at the same time result in a higher standard of living for all our people.

McMillen, without direct reference to Truman's message, said that in the past 20 years the Government has spent $20,000,000,000 in agriculture subsidy (price support).

McMillen then advocated billions for research, and eventually not 1 cent for subsidies.

"What more splendid economy could be proposed than a 'Manhattan project' for the kind of creative research that experience has soundly proved could prevent agricultural surpluses (by new products and new uses for surplus crops), abolish the need for agricultural subsidies, and add the blessings of new wealth, new comforts, new abundance, and new hopes for all mankind?" he declared.

Mr. Speaker, the Washington Post article brings out—2 weeks after my remarks in the CONGRESSIONAL RECORD—that President Truman is apparently in favor of putting science to work devising new means for producing nonfood goods out of raw materials from the farm. He favors such action but neglects to present any method by which the desired end might be attained. In the same article, Mr. Wheeler McMillen, president of the National Farm Chemurgic Council of New York City does suggest that research financing in this field be backed with $2,000,000,000 of the taxpayers' money to be spent in a way similar to that used in the Manhattan project for developing the atom bomb. two billion dollars is almost the exact amount that all the banks in Nebraska have as assets in the form of loans, investments, and deposits.

I think the Nebraska way is much fairer, much more practical and much more American than either a spending suggestion or no suggestion at all. My way—the Nebraska way—is to support farm prices for food crops at a just level; to dispose of American food crops, as food, both at home and abroad; and to make the vast CCC-held farm-product surpluses available to the manufacturers who have started or who will start nonfood agriculture product industries at such a price as give drive and encouragement to these industries which may well prove the key to a prosperous future for our beloved Republic.

New York State Municipal Utilities Oppose the Central Arizona Project

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. POULSON. Mr. Speaker, the steadily growing opposition throughout the Nation to H. R. 934 and S. 75, the central Arizona project bill, is indicated in a telegram I shall submit here. The telegram opposing the Arizona project, which would cost the taxpayers of the country at least $1,500,000,000, was sent to a number of Congressmen on the committee.

The telegram follows:

Your strong opposition to central Arizona project as provided by terms of bill No. S. 75 and House No. 934 is sought on grounds that costs involved are exorbitant and allocations planned are most unjust. Provisions of bill would heavily and unjustifiably burden power costs with irrigation costs. Interested as we are and have been in public power development we cannot approve this type legislation. Even Federal Power Commission states that costs for irrigation would be so high that power could not possibly be low-cost power. In view of fact that this legislation would most certainly injure entire public-power program severely and expose same to attack by privately owned utilities we respectfully request and urge you to vote against the same.

NEW YORK STATE MUNICIPAL ELECTRIC UTILITIES ASSOCIATION,
HAROLD W. LAUDER, *President.*
B. N. SPARKS, *Executive Secretary.*

The Reserves—a Vital Element in Our National Defense

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. JENISON. Mr. Speaker, the strength of the United States rests on the solid foundation of devotion to duty as expressed in many fields and by many groups. Two important elements of this strength were joined in an inspiring demonstration of patriotism on Saturday evening, April 1, at Akron, Ohio. There the Ohio Squadron of the Navy Club of the United States of America gathered in convention, and the principal speaker was a man with outstanding qualifications to discuss a subject of interest to the Navy clubs of the Nation as well as every other city in the land. The speaker was Rear Adm. Irving M. McQuiston, United States Naval Reserve, of Washington, D. C., who serves as adviser to the Deputy Chief for Naval Operations (Air) on Naval Air Reserve matters. Admiral McQuiston took for his subject the importance of the Reserve program in maintaining an adequate national defense, a subject in which he is completely informed due to a lifetime spent in the service and his present status as the only Reserve officer of flag rank in his field of duty.

Because there is Nation-wide interest in the role of reserve military forces, I am including in the RECORD, under permission granted, the text of Admiral McQuiston's address. It deserves the consideration of all Members of Congress as an important aid in charting the future course of our national defense policy:

It is a great pleasure or me to be able to speak to you tonight. At the outset I might

say that naval aviation is the one element of the National Defense Establishment in which I'm most interested.

I recognize among you, people whom I've known in all branches of the Navy, and I know that all of you are interested in what the Navy is doing today. I imagine that some of you are concerned and worried about recent reports of cut-back, censorship, and internal strife within the Defense Establishment. It is natural that any organization such as the Department of Defense must expect certain growing pains during its shake-down.

Just as a beginning I would like to point out that what has happened in the Department of Defense has not been a merger but instead unification. I think the difference is important. Merger implies that the various organizations lose their identity within the Department of Defense. Nothing could be further from the truth. Due to the fact that we are living in a shakily peaceful world, all branches of the defense forces of the United States have been required to conform to a budget which will give the country a maximum safety at a minimum cost to our economy. This is nothing unusual. During each demobilization period, we have gone through problems similar to those which the Army, the Navy, and the Air Force are being confronted with today. During the war, when our enemies who could not match our military and productive power were being forced to their knees, we had a dangerous blank check. While we were certain of the outcome of the war, we expended all our efforts toward speeding up and cheapening that struggle in terms of human lives. That, of course, was most important because in terms of real value, it would have been far better to have saved one of those lives instead of saving a million dollars of our war budget.

I think it is worth while to look back through the past generation to see what has just happened to the art of war, particularly as it applies to the Navy. During World War I, the Battle of Jutland was almost the end of the era of the battleship, although very few of us could see it at that time. Except for comparatively minor incidents, Jutland represented the end of a development which had its origin in the Spanish-American War. Without realizing the implications of the development of the aircraft, we went ahead on the theory that the battleship was the center and most powerful weapon available to naval forces.

The United States, dedicated to the principles of the League of Nations and the Geneva Charter, hoped for a world of peaceful endeavor. Our hopes led us to a point where we of the military were forced to expend our limited funds, not in the maintenance of large forces, but instead, in the development of new weapons and techniques.

During this period I was concerned with the Naval Air Reserve as most of you know. We started the program on a shoestring, and a very frayed one at that. We begged, borrowed, and stole from various agencies of the First Naval District to get the minimum amount of equipment with which to establish the base I was concerned with, that at Squantum, Mass. I remember that Admiral Byrd, at that time a lieutenant, came to Boston under orders to find out whether it would be worth while to put in a training unit in that area. We took money from our own pockets to buy gasoline. We shoveled cinders provided by the commandant of the First Naval District to make a runway we could use. With the help of the one carpenter we had we repaired a war-weary hangar on the old submarine base at Squantum. Somehow we managed to keep two training-type seaplanes in good enough shape so that the aviators attached to the unit were able to fly.

That was the beginning of the program that I've seen grow into a very powerful yet very inexpensive part of our national defense structure. Within a very few years after the Air Reserve's beginning, Admiral Moffett, the first Chief of the Bureau of Aeronautics, was able to prove the need for a well-trained Air Reserve within the Navy. This was in spite of the lack of interest that the country had as a whole in matters concerning a future war. Hopefully, all of us believed that we would not have to fight again.

The Air Reserve expanded to an organization which broke the back of the Japanese aggressors in 1942. As I said before, I've been personally concerned with the Naval Air Reserve program since the First World War, and I have been active in it since 1930. We are proud of the fact that 90 percent of the naval aviators at the two crucial battles of the Navy in the Pacific war, namely, Midway and the Coral Sea, were Naval Air Reserves trained in the naval aviation cadet training program prior to the war. Without these young men and without the hundreds of thousands of reserves in other parts of the Naval Establishment, the United States might well have lost its greatest fight for its own freedom and the freedom of other peoples in the world.

We won that war 5 years ago. During the time since VJ-day, a unification act has been passed. This act has had its enemies and its friends. During World War II it frequently became evident that a more closely knit organization than we had then could have made many of our difficulties easier to settle. The question, of course, was how to achieve a unification among the services which would not destroy their individual abilities and responsibilities. During the period when this act was being considered, there was a lot of fear both within and outside of the Military Establishment as to whether the services would be merged and consequently would lose their individual identities and, more important, their own capabilities. As a matter of fact, the Navy fully supports unification and has been practicing it within its own family for 150 years.

Section 2 of the final act states that the services will retain their autonomy and guarantees the integrity of naval aviation and the Marine Corps. Just to keep the record straight, I quote from section 2 of the act:

"In enacting this legislation it is the intention of Congress to provide a comprehensive program for the future security of the United States; to provide three military departments separately administered for the operation and administration of the Army, the Navy (including naval aviation and the Marine Corps), and the Air Force; to provide for their authoritative coordination and unified direction under civilian control of the Secretary of Defense, but not to merge them; to provide for unified control and for their integration into an effective team of land, naval, and air forces but not to establish a single chief of staff over the armed forces nor an armed forces general staff."

We've been living under this unification act now for several years. Under it, the Navy has been charged with responsibilities as important as any of the jobs it has done in the past. Frankly, I believe that many of them will be absolutely vital to the continuing safety of the United States. During these days of indefinite peace, cold war, and if necessary, hot water, the guaranty of the freedom of the seas and the Navy's traditional ability to give assistance to the other services will insure the safety and continued prosperity of all of us. In spite of the fact that some people think that the need for naval forces has ceased to exist, one of the great scientists of our time, Dr. Vannevar Bush, commented in his recent and extremely important book, Modern Arms and Freemen:

"The mission of the Navy in the future will be as important and as difficult as it ever has been in history. It will need to employ modern techniques to the utmost and in ample quantity. We are a power in the world and we intend to exert that power, if need be, far from our shores to support our friends and strike an enemy where he is more vulnerable. We shall still need to sweep enemy forces from the seas, whether they are under its surface or above it."

One of the greatest menaces our position as a sea power will be called upon to defeat is that of the submarine. The thin-skinned, slow-moving weapon of World War I grew into a vicious, powerful threat in World War II. In both wars it almost defeated us. In 1942 German submarines were sinking or severely damaging an average of over a half million tons of Allied shipping. At that rate we could not supply Great Britain to protect herself, to say nothing of mounting an offensive against "fortress Europe." We beat World War II's submarine, but by a slim margin. At the end of that war Germany had developed several new modifications which make it a far more vicious and dangerous threat to our security than there has ever been before. The snorkel, for example, makes the submarine almost immune to aircraft search. New engines and streamlining have made the submarine's increase in underwater speed difficult for any of our normal surface craft to follow. If we cannot guarantee freedom of our sea lanes for our merchant shipping we are going to be in great difficulty. So much of our vital raw material stocks comes from overseas that to lose our traditional freedom of the seas would cripple us severely.

Ever since the end of World War II this threat of submarine warfare has received full attention from the Navy. Just last week Admiral Momsen commented that we were approaching the position where the submarine would no longer have the advantage it has had since the development of the snorkel and other improvements. This is a great step forward for the Navy, because without the ability to control the seas on the surface, beneath the surface, and over it the Navy cannot do its job. Without the ability to bring our vital necessities to our ports and without the ability to take men and supplies to foreign shores we can do nothing to guarantee our freedom nor the freedom of other peoples in the world. Without the power of the Navy we would become an island of democracy in an ocean of dictatorship very shortly.

Today the Navy is a great power for the safety of the United States and the peace and freedom of the world. We in the United States have returned our Military Establishment to a peacetime budget based on certain requirements and with a calculated risk involved. Within this budget, we in the Navy have developed our forces along the following lines. We believe that for the present circumstances we must have a small, well-trained, up-to-date force in being, these are the operating forces. To go with these we have a research and development program which is charged with the responsibility for the development of new weapons and techniques for the art of sea warfare. Some of the greatest scientists in the world are involved in this program, and we know that their efforts continually contribute to the efficiency and potency of the Navy. The ships and men of our fleets are continually training and practicing with their weapons, both old and new, to guarantee maximum safety to all of us. During these days of trouble these same forces are appearing in threatened parts of the world as visible proof of our refusal to permit any free men to be subjugated against their will. It is an argument to give pause to any world power which tries to enslave any group of men.

Behind these operating forces and the research and development program comes our Reserve program, of which I am very proud.

Thinking back to the dark days of 1942, I'm amazed at the speed with which we were able to expand our entire Military Establishment. Our Reserve forces must give any potential aggressor a lot of worry. In connection with the Naval Air Reserve I like to think that the infant organization of my early days grew into a giant that helped to beat half the world in the last war. When we started out we had nothing; by 1940 we had 17 Air Reserve stations. We were training a considerable number of cadets every year. These were the young men who were the well-trained forces available when we needed them. After the disarmament of the 1920's and 1930's, and with the small number of men available to the military up until the expansion program of the late thirties, the Navy and naval aviation almost pulled themselves up by their boot straps to enter World War II with the power they did. Combined with the Reserve forces was the productive potential of American industry. No one nation in the world nor any conceivable group of nations can match that industry in its ability to flood the defense establishment with more than it can use. Our supplies of material produced by this great industrial Nation has done a tremendous amount to give our military forces the power they have and will have in any future conflict.

To get back to the Reserve forces, I think that any future aggressors should look carefully at the trained men and women who are available to the military forces in the United States in an emergency. In place of the two airplanes and the small group of men with which the Naval Air Reserve got started after World War I, we now have 12,000 officers and 47,000 well-trained men who can fit into a wartime organization immediately. These are modern minutemen. They are linked into our mobilization plans to be available practically overnight. They represent a potential force which can help to put back on the seas a fleet of carrier task forces which no combination of air, surface, or undersea fleets can stop. The potential aggressors of the world will find that they face a new up-to-date Navy which can move, in the same way that it did in World War II, where it wants to move and defeat almost any combination of military strength.

The Naval Air Reserve today is very important to naval aviation. We're flying off 27 air stations right now, and our efficiency and training is excellent. It isn't a paper organization either. Last year we sent most of our carrier aircraft squadrons back to sea. Note this was 4 years after the end of the war. There were new men in these squadrons, along with the combat-training veterans of World War II. We put them aboard carriers for the first time since the end of the war to conduct maneuvers and to practice the proven techniques of that war. Their performance exceeded all expectations. They had no accidents to speak of and their efficiency was so high that they drew praise from fleet commanders and from the Assistant Secretary of the Navy for Air.

In addition to what I have just said, I would like to invite your attention to the fact that the Navy Department is exerting every effort to translate available appropriations into maximum fighting strength and mobilization potential. Savings made are generally available for increasing the state of readiness or authorized forces. Economies already effected have permitted increasing previously planned fleet strength by one large carrier and one cruiser, to provide additional equipment for antisubmarine warfare, and to augment general readiness. Planned economies are an important contributing factor in retaining two additional marine battalions. The Naval Reserve is included in this effort to provide for a ready and able force, and an example of that is that at present the Navy is studying the feasibility of establishing a lighter than air organized reserve squadron in the Akron area. This record speaks for itself.

Naval aviation and the Navy itself are made up of three parts: The operating forces, the research program, and the Reserve. Together, they are a powerful force for peace and a competent weapon in war. No one of them can exist alone; likewise, no one of the three military services can win a war. Under our present system and with an efficient military organization and a free research and development program, we in the Military Establishment make up a team which will do much to guarantee the peace of the world or defeat any enemies to freemen everywhere.

New Deal Propaganda in Colleges

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the Chicago Tribune:

NEW DEAL PROPAGANDA IN THE COLLEGES

To judge from the news report of the recent meeting of the American Association of University Professors in Cleveland, no delegate raised the question which ought to be agitating this group as it has never been stirred before. We refer, of course, to the efforts of the Federal Government to alter the curriculum and the methods of teaching of the social sciences in the colleges.

The charge is readily documented. Within the Federal Security Agency headed by Oscar Ewing there is an office of education and within it a division of higher education. Mr. Ewing recently issued a circular advertising for a man to head up his department of sociology in the division. He is offering a starting salary of $7,600, rising to $8,600, which is higher pay than all but a few sociologists receive. Mr. Ewing expects that this bait will land a man of consequence in the academic world, a man who commands the respect of university professors, because only such a man is likely to prove useful to Mr. Ewing in accomplishing the ends he has in view.

The advertisement starts out with a long paragraph listing the attributes of the man to be selected. He should know the place of sociology in the college curriculum, the nature of the courses taught, the textbooks, the need for education in the various branches of this subject, and "the characteristics of faculty personnel engaged in the teaching of sociology." We don't know what the quoted words were intended to mean, but they could mean that he should know who are the collectivists who will follow Mr. Ewing gladly, and who are the believers in liberty who can be expected to buck him.

Then follows another paragraph telling what the man is expected to accomplish. The language is mostly gobbledygook, but it comes down to this: Dr. $7,600 is to do all he can to persuade the faculties of sociology in the colleges and universities to amend their curricula and modify their teaching methods to accord with the notions of Mr. Ewing.

"More specifically," says the advertisement, "the specialist for sociology will be responsible for such activities as the following: * * * (f) promoting and stimulating cooperative experimental studies and demonstrations of improved practices in the teaching of sociology in colleges and universities; and (g) upon request, participating in surveys or evaluations of the programs of colleges and universities pertinent to the teaching of sociology."

The operative word in (f) is "promoting" and no great attention need be paid to "upon request" in (g) because Mr. Ewing has already said he is going to hire the kind of fellow who won't have trouble getting invitations to meddle.

If the National Association of Manufacturers were to advertise in any such terms, the Association of University Professors would throw a fit, and rightly. But Mr. Ewing gets away with it in spite of the fact that he speaks for the biggest of all businesses and in spite of the fact that no man in this country has as much advantage to gain as Mr. Ewing has from twisting the teaching of sociology to his and the New Deal's purposes.

Mr. Ewing wants compulsory medical insurance. He favors huge Federal grants for education and for expanded social services. He wishes the young people of this country to believe in the wisdom and goodness of his program and he will be helped in all of this if the professors of sociology propagandize for his causes. He is out to make New Deal votes and to indoctrinate in collectivism a crop of college-trained bureaucrats to serve in his offices and divisions. All these are plausible reasons for his trying to influence the teaching of sociology in the colleges, a matter in which the Federal Government has no legitimate excuse for meddling.

Apparently this is all to the good so far as the American Association of University Professors is concerned. Maybe they can't get sore at anybody who offers $7,600 salaries. But just what do they mean when they talk about resisting threats to academic freedom?

Partial Answer to Wheat Surplus in More-Flour Bread

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. HOPE. Mr. Speaker, the following excellent article by John Cipperly, Washington correspondent of the Northwestern Miller, and published in the March 28 issue of that publication, is of interest to everyone who is desirous of expanding outlets for farm products:

LEGISLATORS SAMPLE MORE-FLOUR BREAD—BREAD MADE WITH 16 PERCENT MORE FLOUR SHIPPED TO CAPITAL—WHEAT-STATE SENATORS AND REPRESENTATIVES SPONSOR DISTRIBUTION—PARTIAL ANSWER TO WHEAT SURPLUS SEEN POSSIBLE IN NEW IDEA

(By John Cipperly)

WASHINGTON.—The House and Senate restaurants March 22 featured samples of the newly developed bread containing 16 percent more flour. Wheat-State Senators and Representatives sponsored the luncheon distribution of 500 loaves of the bread after it had been flown to the Nation's Capital from Hutchinson, Kans. Mounting wheat surpluses and the reported per capita decline in flour consumption in the United States whetted the interest of the wheat-State legislators, who hoped that part of the answer to these problems might be found in the new bread formula.

The idea was introduced recently in western Kansas by Morris Coover, Kinsley, Kans., business man, who accompanied the shipment to Washington. He has turned the

promotion of the project over to the Western Kansas Development Association, of which Robert Bird is executive secretary with headquarters at Garden City, Kans. The bread distributed here was baked by the bakery division of J. S. Dillon & Sons Co., Hutchinson, Kans., chain store. The principal change in the more-flour formula is the inclusion of 110 pounds of white flour and 6 pounds of whole-wheat flour, compared with 100 pounds of white flour in the formula for the standard loaf.

On the surface Mr. Coover appeared to have provided a very simple answer to the wheat surplus problem: Put more flour in bread.

BREAD PALATABLE

The Dillon loaf, baked along the lines suggested by Mr. Coover, was palatable bread. It could be buttered generously without crumbling and then folded, sandwich style, for eating.

One Washington baker pointed out that the Coover idea could have been accomplished by the Dillon Bakery without the addition of 16 pounds more flour to the original bread formula. Rather than adding flour, this operator said all he needed to do was to reduce the water content.

It was also noted that the Coover formula, with the greater flour content in the dough mass, tends to reduce the shortening and milk and sugar content of the finished loaves, since no increase in these ingredients is provided to compensate for the increased amount of flour.

Should the Coover idea take hold it would unquestionably expand the use of flour considerably, a point which bakers and millers understand. The significant thing about the Coover idea is that it is another sign of private initiative's ability to explore new avenues of approach to existing problems. It indicates an awakening interest in the problem of disposing of our wheat surpluses. Each slight gain will lead others to attempt further experiments.

A SIMPLE IDEA

Mr. Coover's idea is a simple one. Sparked by a taste memory, possibly the most impelling factor in the sales of food products, Mr. Coover has tried to recapture the type of bread he remembers eating as a youth. He has bypassed the chemists' laboratories and the technician's control towers and asked only that more flour be put into a loaf of bread.

The advent of the more-flour bread comes at an auspicious time when Congress has been viewing the baking industry with a critical eye. This criticism has been directed at the alleged substitution of synthetic products for those of the farm by the baking industry. A Senate Agriculture Subcommittee, under the chairmanship of Senator GUY GILLETTE (Democrat, Iowa) has already closely questioned baking industry leaders on their manufacturing practices and their profits. Other congressional leaders, particularly those from the wheat-producing States, sensing a ground swell of criticism of the farm price support programs from urban areas, are looking for a weapon to strike back and may be ready for an all-out attack on the processing industries which use agricultural commodities.

One baking industry leader after examining the Coover formula noted the percentage reduction of shortening, dried milk, and sugar in the individual loaves made from the Coover mix and expressed concern that a broad use of the Coover formula might provoke criticism from the shortening and dried milk industries, since the Coover plan indicated a reduction in the use of these farm products.

CONTROVERSY PROVOKED

Even if the Coover plan never expands beyond the borders of the State of Kansas it has the great virtue of provoking controversy which will lead others to try and try again to make a better loaf of bread. It also seems possible that the solution of the national farm program does not lie in congressional tinkering but the law of supply and demand and in the ingenuity and initiative of private enterprise in searching for broader markets and profits.

Businessmen in the food-processing and agricultural-distribution field see peril in the cure-alls of the farm price supporters to a point where they let their fears cloud their better judgments. There is reason to hope for a better day when consideration is given to such experiments as Mr. Coover's and the frozen-citrus-concentrate promotion, which saved the Florida citrus industry from the paralyzing effects of a Federal price-support program for that crop. Mr. Coover is pointing the way and inviting others to test their wits on one of the many national problems, the cures of which are too exclusively seen as legislative.

To the great credit of Mr. Coover he appears to have focussed the interest of a broad segment of the public and the baking industry on the use of wheat flour. He is a wheat farmer interested essentially in finding broader markets for that commodity. If his simple suggestion of using more flour in bread suceeds it is possible that the name "Coover" may become more widely and favorably known to wheat markets than those of Jim Patten and Leiter, of wheat-corner fame.

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to include a letter writen by Mr. M. J. Molans, of Pittsburgh, Pa., addressed to the editor of the Pittsburgh Sun-Telegraph, published in the March 29, 1950, issue, endorsing statehood for Alaska:

Your feature articles and mighty editorials on Alaskan statehood are the most gratifying news so forcibly brought to the attention of your vast army of readers. These editorials together with the powerful cartoon by Burris Jenkins, Jr., not only stamps you as a great liberal and champion of true democracy but also as a modern Paul Revere. My sincere hope is, that every one of the 13 Senators you named will have read—and digested the arguments advanced for statehood, and having done so, open the door to our northern territory and welcome it into the family of our 48 States.

I am very familiar with Alaska's needs and problems. My son served with the engineers combat division which built the Alcan Highway and later transferred to the Aleutians, where he served on Attu, Kiska, Shemya, Adak, and Kodiak and during his reenlistment (1945–48) served on Ladd Field. I was in constant contact with conditions throughout Alaska as well as being informed through the pages of Alaska's leading paper (Jessen's Weekly) and through correspondence with Alaskan oldtimers who used to sum up their woes with "Give us statehood."

Back in October 1947, I sounded the alarm that Alaska may be our next Pearl Harbor. I cited the fortifications on Chukotskiy Peninsula, Siberia, a stone's throw from our territory across the Bering Strait, how American fishermen spotted the huge gun emplacements on the Russian side and reported their discovery to our officials at Ladd Field. That was in 1948. Imagine the progress Russia has made to date and how easily they can attack Pearl Harbor, Fairbanks, and all Alaska, if we don't strengthen our defenses there.

Alaskan statehood will unquestionably strengthen all of United States. Billy Mitchell warned "A strong Alaska means a strong America" so—what are we waiting for? If Patrick Henry were alive today, imagine what he would say right now.

Come, Senators, stop treating Alaska as a stepchild. Vote it State and make it a Gibraltar against any aggression from Russia, our potential enemy.

M. J. MOLANS.

What ECA Is Accomplishing in Europe

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Roscoe Drummond:

WHAT ECA IS ACCOMPLISHING IN EUROPE

(By Roscoe Drummond)

PARIS.—The Congress of the United States shortly will be deciding one of the most important questions which will come before it this session—whether to approve the Economic Cooperation Administration request for a new appropriation of $2,900,000,000.

In making this decision, Congress undoubtedly will be responsive to American public opinion. As one who, for a period, is officially connected with ECA, it would not be proper for me to argue the case for the Marshall plan—and I will not do so. But I can offer a report on what is being accomplished in Europe and present the underlying facts as faithfully as I have been able to observe them at first hand during the past 8 months.

The prime task which Congress assigned to the ECA was to help the nations of western Europe achieve an economic recovery which would permit them to function without extraordinary outside aid. The purposes which motivated the Marshall plan were:

To rescue Europe from the brink of economic collapse to which the most destructive war in history had brought it.

To help rebuild a prospering and self-supporting Europe, without which a prospering and secure America would be jeopardized.

To bring about such improved social and political conditions as will enable free institutions to regain their strength and thereby resist the march of communism.

Measured in terms of the Marshall plan's basic objective and its central motives, what are the facts to report? Some of the principal facts are these:

It is accurate to say that the progress of the European recovery program—in production and trade, in expanding productive capacity, in restoring internal financial stability, and in slowly raising living standards—has exceeded the largest expectations of 2 years ago.

AGRICULTURE

When the Marshall plan started, millions of persons were going hungry. Today that menace has been removed. Today agricultural productivity as a whole has been brought nearly to the level of prewar, and, given favorable weather conditions, will reach the prewar level or exceed it during

the present crop year. This means an improving diet, but still a bare diet, since western Europe has 20,000,000 more persons to feed than before the war and is putting, by necessity, a very high percentage of its income into durable capital investment rather than consumer goods.

INDUSTRY

For the Marshall plan countries as a whole, industrial production has been raised one-third higher than it was in 1937. It took western Europe 7 years to regain its prewar level of production after World War I. Today, after 2 years of the Marshall plan and less than 5 years after the end of the far more destructive World War II, industrial production has been brought to 20 percent higher than 1938.

FINANCIAL STABILITY

Until the inflation which gripped the entirety of western Europe in 1946–47 was checked and brought under control, the nations could not even begin to rebuild their industrial plants. Today the governments have put their financial houses in better order. Prices generally are being held, and the outlook is encouraging.

Under the stimulus of sounder financial conditions and mounting production intra-European trade has improved. Total exports have risen 50 percent since 1947.

These are the facts which bear upon the question of whether a solid foundation of European recovery is being made.

Obviously, there are tough problems still to be met. To enable western Europe to close the dollar gap—or to bring it into manageable proportions—and to carry forward the essential economic unification needed to strengthen and secure the recovery already made are the two biggest jobs which face ECA during the next 2 years.

One question which frequently is asked officials of the ECA is whether the Marshall plan appropriations for the third year should not be substantially reduced, particularly in view of the need for governmental economy in the United States.

Facts rather than arguments are more useful in answering this question.

Marshall plan aid for western Europe for 1948–49 was about $5,800,000,000, including the special appropriation for Germany.

The appropriation for 1949–50 was about $4,200,000,000.

The ECA appropriation request which is now before Congress for 1950–51 is $2,900,000,000.

The Marshall plan is premised upon the principle of reducing the aid substantially every year, and the foregoing facts show wherein the ECA itself always has initiated these reductions rather than waiting for Congress to propose them.

What Is Americanism?

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. JENISON. Mr. Speaker, perhaps the most important task of the hour is a development of appreciation for the ideals of freedom and liberty we know as Americanism. Nowhere is the task more important or the results more encouraging than among the boys and girls in our schools. Elks' lodges across the Nation have been contributing to this valuable program by offering worth while cash prizes for the best essays on the subject written by students. Their essays have been uniformly able discussions of problems reflecting credit on themselves and the schools they are attending.

One of the most interesting essays, and winner of first place at Mount Carmel, Ill., High School, was written by Miss Barbara Van Ault, a senior, the editor of her high-school paper, and a member of the Future Teachers of America. Her essay makes good reading for every American, and offers a ray of encouraging hope for the manner in which today's young people are prepared to face their responsibilities in preserving representative government as we have known it in America. For these reasons, I am including the text of her essay under permission granted to extend my remarks in the CONGRESSIONAL RECORD. Each contestant included a short autobiographical sketch. Miss Van Ault's sketch and her prize-winning essay follow:

AUTOBIOGRAPHICAL SKETCH

I was born in Princeton, Ind., July 14, 1932.

My first 8 years of schooling were spent at the Count R. Lovellette grade school in Keensburg, after which I entered Mount Carmel high school, and will graduate from there this spring. In high school, I have been active in music, playing in the band, girls' orchestra, flute trio, singing in the glee club and a capella choir. I have been a contestant at both district and State music contests the last 3 years, and district debate contests this year. I am a member of the Future Teachers of America and editor of the high school newspaper.

BARBARA VAN AULT.

WHAT IS AMERICANISM?

Ask any true American for a definition of Americanism, and he will say that it is his faith in his country and Government, his respect and tribute to her traditions and ideals, his willingness to cooperate with others to fulfill her desires and commands.

It is the spirit of democracy that prevails throughout America, the essence of liberty held so dear in the heart of every American. The torch lifted high by the Statue of Liberty to spread its glow of freedom above our Nation's shores, the book of justice held firmly beneath her arm—these things are Americanism.

Stemming from our forefathers, who escaped from tyranny by sheer perseverance and belief in their dreams of freedom, Americanism, is our way of life, our democratic attributes. By virtue of their faith and constancy, their valiant struggles to gain a free life, we of this generation have been handed a firm foundation upon which to build and to keep as long as progress goes onward.

Americanism is the will of the people to build on that foundation, and to erect a structure that will last throughout the ages, a monument to the faith and deeds of the people who have strived through eras of prosperity, through times of despair and depression, to emerge from the mists of gloom to the sunshine of a Nation's wholeheartedness. It is the freedom of the people to carry out that will, to speak and write as they wish, without fear of depression by the Government.

It is this Government of the people, by the people, and for the people, that makes Americanism what it is today—a realization of the hopes, fears and dreams of generations of American people, their abilities to live a life of happiness and freedom of spirit, as well as freedom of American principles.

Americanism is an indestructible quality of our Nation, a lasting quality that generations far into the future will still hold dear. It is through Americanism that any boy or girl can dream, and can make these dreams come true by working toward a higher goal of success.

The spirit that prompts our soldiers to offer their lives without thought of personal gain to defend our Nation's creed is Americanism, helping to spread our ideals in far-flung nations of the world.

It is the generosity of the American people, their willingness to devote countless time and effort to serve mankind diligently, their generous gifts to help their fellowman. The American Red Cross polio, tuberculosis, cancer, and heart-disease drives, the individual to struggle to help the unfortunate and crippled children are symbolic of the great devotion to Americanism in our country today.

The freedom to express our true faith in any religion that we choose is Americanism. Americans are free to worship in any church, at any time. They are not denied the privilege because of an overruling Government. Religion has been outlawed in some countries; in America, it is looked up to and praised for all to hear.

It is the right of the parent to chastise the child, to correct him when he has done wrong, without fear of an armed policeman saying, "You may not punish your own child—that is up to the government." It is this freedom from fear, freedom from want, freedom from despair, freedom to say what we please when we please, freedom to put our thoughts in writing for the whole Nation to read, freedom to carry out our own individual plans, freedom to worship in the church of our choice, freedom to help ourselves on the road to success, that makes Americanism a truly great loyalty to a truly great Nation.

Yes, ask any American for his definition of Americanism. His ability and willingness to answer your question is Americanism.

BARBARA VAN AULT.

KEENSBURG, ILL.

Time for Action

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. STEFAN. Mr. Speaker, today a letter came to me from Commander Jack F. Jacobson, of the Department of Nebraska Veterans of Foreign Wars of the United States.

With timely remarks in his letter Commander Jacobson included a very important editorial which appeared recently in the official publication of his organization. Because of its great importance, I include it with my remarks so that all Members may read it and that it be made part of the permanent CONGRESSIONAL RECORD:

Everywhere nowadays seriously minded, mature people engage in conversation which concerns our Government and our national debt. From Maine to California, from our northern border to the Gulf, the average citizen manifests a deep and growing concern, and looks toward Washington for an answer.

Two important questions are upon the mind of the public, and an answer is sought. This matter of cold war and our national debt are now of long standing and of sufficient duration to become irksome and disquieting.

In this matter of cold war, conditions are drifting steadily toward a state of siege. Regulation, regimentation, and martial law are casting their shadow upon this free land of ours, unless the present drift is halted and some positive action is set in motion.

In 1917 America went to war. Many died in the mortal combat to rid this earth of militarism.

Only a few years ago, militarism, the scourge of civilization, was permitted to sprout and grow until its weight and might had to justify its existence and purpose. Aggressor nations were literally wiped out and thousands of Americans died in the cause to rid this world of aggression.

Militarism again is permitted to flourish, for no other purpose than to back with force the aggression now in progress. The method now used by this military power is—infiltrate—then conquer. This scheme and method has recurred with alarming regularity, and at this moment no frontiers are respected, at least not safe from infiltration.

Millions of Chinese will augment hostages and political prisoners in the slave camps scattered throughout the Siberias. All this power's efforts and energies are directed toward one accomplishment. The present number of military divisions under arms, the number of aircraft, and the astounding quantities of submarines in service, clearly show that this power intends to wage a global war.

Possessing all the natural resources required, and an abundance of manpower, the weapons of aggression only need more time to fashion and forge. When that time has elapsed, this country will be the major objective, because penetrating and overrunning the frontiers of many of our present United Nations will require only hours, and actual invasion of our own soil would soon begin.

Time is the most precious commodity—it is irreplaceable. So while there is still time, let the people of the United States mould the opinion, and shape a directive to this power that aggression must cease and that we the people will back this demand with force.

There cannot be any appeasement or any procrastination in this.

Such a policy calls for a prompt and realistic appraisal of our national debt. The national annual budget must be given corrective consideration. Along with all of our resources which must be guardedly preserved, our national wealth should and must receive a prime consideration. It must also be given high priority in the scheme of our national security and national defense.

Our present national debt is looked upon favorably by this aggressor. Our deficit spending may well be allied; be it in fact or only in theory to the supposition that the United States could not bridge a crisis, nor wage another war, and survive, with the national debt as it stands today. Solvency should stand high upon the agenda of our national defense.

The Case Against the Mills Bill

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. SHAFER. Mr. Speaker, while the new excise-tax reduction bill has not yet been unveiled, most of the Members of this body have heard rumors that it will contain provisions to speed up the collection of corporate taxes. This proposal was first offered by the gentleman from Arkansas [Mr. MILLS]. Under leave to extend my remarks, I include an editorial from the March 25 issue of Business Week, which, in my opinion, states valid reasons why this proposal should be thoroughly studied before enactment. The editorial follows:

[From Business Week of March 25, 1950]

THE CASE AGAINST THE MILLS BILL

There is something ominous about the way congressional discussion of tax reform keeps looping back to the idea of speeding up the collection of corporate taxes in 1951. It's ominous because it shows that Congress still won't face up to the hard facts of our fiscal situation.

Congress is understandably unhappy about the spot it is in. Even without badly needed tax reforms, President Truman's budget for fiscal 1951 will show a deficit of about $5,000,000,000. Any attempt to reform our painful and dangerously burdensome tax system will automatically increase that deficit—unless Congress can somehow bring itself to cut expenditures. And cutting expenditures in an election year is something that every Congressman tries to duck.

The speed-up idea—usually called the Mills bill because it was originally sponsored by Representative WILBUR MILLS—seems to offer an alluringly simply way out. On its face, it would boost revenues without increasing the tax burden. That's a neat trick if you can pull it off.

Under present law, corporations pay their taxes in four installments spread out through the year following the year to which the tax applies. This year, for instance, they will be paying up their 1949 liabilities. Next year they will start paying the taxes due on 1950 income.

The Mills plan would accelerate collections by requiring corporations to pay all their 1950 taxes in two installments in the first 6 months of 1951 instead of spreading payments over the whole year.

Over the long run this would make no difference in the total amount of taxes due. But in the year when the switch was made it would produce a big jump in government revenue. The Treasury would cram a year and a half of tax collections into a single 12-month period. In fiscal 1951, this would boost its take by something like $5,000,000,000.

It looks too good to be true—particularly to a Congressman who desperately wants a way of raising revenues without slapping on new taxes.

TRICKY BOOKKEEPING

It is too good to be true. Fundamentally, it's nothing but tricky bookkeeping. It wouldn't solve any of the Government's fiscal problems. It would merely permit Congress to duck them for another year.

When fiscal 1952 rolled around, revenue would drop back again. Congress would find itself right back where it is now—with another year of deficit financing and outsize expenditure programs behind it.

Financial window-dressing may be useful for a hole-in-the-wall operator who is trying to impress his creditors. But it's no way to handle government finances. If we have to run a deficit in fiscal 1951, we will be a great deal better off if we admit it frankly instead of trying to doctor the books to cover it up.

There's another good reason for turning thumbs down on the Mills bill or any variation on the same theme: It would exaggerate the unstabilizing effect that the Federal budget already has on business.

Even with its present methods of collection, the Government takes in most of its revenues during the first half of the calendar year. During this time it often runs tremendous surpluses. In the last 6 months of the year, it usually spends more than it collects.

All this puts a lot of artificial and unnecessary strain on the flow of income and credit through the economy. In the first half of the year, the Government is sopping up purchasing power from individuals and corporations. In the second half, it is pouring money back into the system, automatically boosting purchasing power.

The Mills bill would concentrate revenues even more heavily in the first half of the year—not only in 1951 but in all years after that. And it would increase the size of the deficit in the second half year.

In this respect, it would be a step in the wrong direction. We have enough unavoidable seasonal strains on the economy without introducing any artificial ones. One big object in fiscal planning should be to level Government receipts and expenditures as much as possible over the year. The Mills bill would work just the other way.

WHY PAY AS YOU GO?

There's one other point to be considered. Would there be any advantage in putting corporate taxes on a pay-as-you-go basis similar to individual income taxes? If so, the Mills bill could be a step in that direction.

Theoretically, pay-as-you-go is a good idea. It gears tax collections closely to the flow of income. It helps to keep the Government's fiscal policy from getting out of step with the rest of the economy.

But pay-as-you-go for corporations runs into some big practical objections. Corporate incomes fluctuate widely—much more than individual incomes. It's impossible to make any good advance estimate of what they will be. Hence, a true pay-as-you-go system for corporations would probably bog down almost as soon as it started.

Add all this up, and you come out with a strong case against the Mills bill. Its advantages are illusory; its drawbacks are real.

But rejecting the Mills bill doesn't solve the Government's financial problems. To make a start on that, Congress must also reject the whole idea behind the Mills bill—the idea that everything will be all right if somehow we can make the books show a year-to-year balance of receipts and expenditures.

Receipts and expenditures in any one year aren't the important thing. The real answer to the fiscal problem is to set up a well-planned, efficient tax system and then gear our expenditure programs to it. Until we do that, no amount of fancy bookkeeping can help us.

Positive Action Is Called for To Counter the Brannan Plan

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. H. CARL ANDERSEN. Mr. Speaker, my colleague, the gentleman from South Dakota [Mr. LOVRE], meeting with Republican leaders in Salt Lake City, Utah, over the week end, gave the Midwest chairmen a frank and honest appraisal of what he feels is the most serious problem now facing the Republican Party. The gentleman from South Dakota [Mr. LOVRE], representing a great agricultural area, has been vitally interested in the problems of the American

farmer. My distinguished colleague is himself the author of a farm plan which he discussed with the Republican leadership out west. As a result of this forthright, straight-from-the-shoulder recommendation, the Deseret News of Salt Lake City, Utah, on Sunday, April 2, carried the following editorial. Because of its significance to all Republicans and to the Nation, I submit it for the RECORD:

POSITIVE ACTION IS CALLED FOR TO COUNTER THE BRANNAN PLAN

HAROLD O. LOVRE, Republican Congressman from South Dakota, who was once his party's chairman in that State, came out from Washington Friday to talk agricultural turkey to the 19 Midwest and Rocky Mountain GOP State chairmen convened here under the chairmanship of Utah's Republican chief, Vernon Romney, to mull this year's campaign plans.

The party's national chairman, Guy Gabrielson, used the occasion as platform for a Nation-wide radio broadcast Saturday afternoon and was the Friday evening banquet's principal speaker, so he created most of the closely reported news.

But what Congressman LOVRE had to say made more than general sense. It deserves attention.

The main burden of his argument was designed to enlist support for a farm plan for which the Republican campaigners can go out and battle.

He suggested one which he has authored; or a similar anti-Brannan plan which has been submitted to the party by Axel Beck, South Dakota's GOP national committeeman and chairman of the national committee's agricultural subcommittee; or a combination of the Beck plan and his; or any Republican farm plan so contrived as to include these points:

(1) Full self-financing, so as to end the use of tax money for farm subsidies; (2) full parity farm prices at all times for normal domestic consumption; (3) administration of the plan by the farmers themselves through elected county, State, and National committees; (4) specific and real protection for the operator of the family size farm; (5) a two-price level which will make it possible to "remainder" surpluses in a way similar to general business practice; (6) provision for distribution of surplus foodstuffs to the needy under a food-stamp plan; (7) encouragement of chemurgical uses for farm surpluses; (8) exports on the world market geared to our international commitments; and (9) a coordinated soil-conservation program.

He offered that as something substantial, something specific, something positive to talk about, whether the party is willing to agree to all his points or not.

His point and argument was that the GOP needs some kind of positive farm plan, anyway.

The trouble with anti-Brannanism is that it is in action mostly emotional. It is no-no-ism, it is heaven-help-us-ism, it is for-great-gosh-goodness-sakes-ism—but it suggests nothing in the Brannan plan's stead.

That is, as Mr. LOVRE declared, the Brannan plan's strength.

Everyone knows that the ruling farm plan, the Aiken-Hope law, in operation, is a mess. At least politically and socially, the farmers it was written to help suffer most. The Nation s taxpayers who presently have $4,000,000,000 tied up in surpluses alone, with a running added cost of $25,000 an hour just to store them, are sick of it. And they should be.

The Brannan plan is as full of implicit economic and social vices as a Florida cracker's hound dog is full of ticks, and Mr. LOVRE counted them off. That is where most Brannan-plan critics stop.

When they are faced by the challenge that House Majority Leader MCCORMACK hurled a few days ago—"I call upon those who oppose the Brannan plan to offer a plan of their own"—they stop because they are stumped. Nobody has offered one. Nobody does.

The Brannan plan has one real virtue and it is great. That is, as Congressman LOVRE pointed out, that the Brannan plan is, it exists. Secretary Brannan had the energy to think a plan up, if not through all its implications; and the courage to present it, and the willingness to struggle for its adoption.

And the scheme's credentialed opponents have thus far no plan whatever of their own. That was Mr. LOVRE's argument, and it is as true as a well-tuned E-string. It should ring in the Republican Party's ears.

For the credentialed opponents of the Brannan plan are, by political definition as anti-Brannanism stands now, the Republicans. It is their bounden duty to draft a farm plan and fight for it.

If they don't come out with a plan in opposition to Mr. Brannan's, one they are willing to fight for and one that the farmers are willing to support positively, which means with votes—if they fail to do that, the Republicans will lose the farm States this year that they lost in '48—Mr. LOVRE is convinced and we are persuaded—and the loss of the farm States will mean the loss of another election.

The GOP elephant, if it expects to survive as an effective element in American affairs, cannot afford to lose much more skin off its nose.

Is There Room in the Poorhouse for 149,000,000 People?

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Reader's Digest of January 1950:

IS THERE ROOM IN THE POORHOUSE FOR 149,000,000 PEOPLE?

In 1932 Franklin D. Roosevelt, then a presidential candidate, had this to say about Government spending:

"Any government, like any family, can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse."

Those words, important 17 years ago, have even greater significance today. Why? Because in every year since 1932 (with the exception of the two fiscal years immediately following the war) our Federal Government has spent more than it has collected.

In 1932 our Federal Government spent $4,500,000,000. For the fiscal year of 1950, it is estimated that our Federal Government will spend 10 times that amount—$45,000,000,000.

To give you an idea of just how much money this is, consider these facts:

1. If everyone in the United States cashed in all his life-insurance policies, the total would amount to $44,000,000,000. This would not be enough money to run the Government for 1 year.

2. If every urban home owner in this country sold his home, the total would amount to $30,000,000,000. That's just enough to run the Government for 8 months.

3. If every farmer in this country sold his farm, farm equipment, and livestock, the total would amount to $25,000,000,000. The Government could not run for 7 months on that amount of money.

These facts put a new light on the staggering size of our Federal Government's planned $45,000,000,000 expenditure for the fiscal year of 1950. And remember, this excessive spending is in the face of a national debt of more than $250,000,000,000.

Isn't it as true today as it was in 1932 that a continuance of that habit means the poorhouse?

Just what are you doing to end excessive spending by our Federal Government? Have you written your Congressman? Have you discussed the problem with your business associates, your friends, your employees?

Let's make sure our representatives in Government know how we at home feel about the continuance of a habit that means the poorhouse.

The time for action is now.

Brannan Plan

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. HOPE. Mr. Speaker, the farmers and livestock producers of Kansas are opposed to the so-called Brannan plan. At the recent annual meeting of the Kansas Livestock Association held in Topeka on March 18, 1950, a strong resolution in opposition to the Brannan plan was adopted. Under leave to extend my remarks, I include the same herewith:

BRANNAN PLAN

Whereas the farm program proposed by Secretary of Agriculture Brannan to the Eighty-first Congress would promote low market prices for all agricultural products, would subsidize consumers, rich and poor alike, and would eventually necessitate Federal control of all agriculture; and

Whereas the livestock industry cannot be successfully operated by governmental bureaus: Therefore be it

Resolved, That we are opposed to the proposed program. We consider it unsound economically and entirely impractical, and we urge Congress to reject it.

Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 4 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from editorials concerning statehood for Hawaii and Alaska.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

STATEHOOD FOR HAWAII AND ALASKA IN NATIONAL INTEREST

More than 300 editorials collected this year point out overwhelming national support for statehood. Cross section of editorial support shown in following excerpts received since House voted for Alaska and Hawaii statehood the first week in March:

Los Angeles (Calif.) Mirror of March 8, 1950:

"The two Territories are increasingly important to our national economy and our national defense. They deserve the privileges as well as the responsibilities of statehood."

Chicago (Ill.) Herald American of March 14, 1950:

"Immediate statehood for Alaska and Hawaii is urgently needed for the safety and welfare of the country, and approval of the pending measures is thus the most urgent duty of the Senate."

Indianapolis (Ind.) News of March 7, 1950:

"Hawaiians are busy framing a State constitution in advance of a congressional affirmative. They are politically, economically, and patriotically ready. Painstaking investigations have scotched charges of subversion for the falsehoods that they are. The most recent public-opinion poll reveals that the American people favor Hawaii statehood, 4 to 1."

Davenport (Iowa) Democrat of March 14, 1950:

"The findings of congressional committees which have studied the question carefully and at first hand fully support the view that these territories are entitled to stars in the Republic's flag."

Wichita (Kans.) Morning Eagle of March 11, 1950:

"If the Senate fears there will be a dictatorship in Hawaii, either of the right or the left, it shows little faith in principle of freely chosen governments. Probably the people of Hawaii can take care of either the business barons or Harry Bridges with their ballots. Anyhow, they are entitled to the right to try it."

Frankfort (Ky.) State Journal of March 10, 1950:

"Chief among arguments for statehood are that the territories are important and growing, that they have populations capable and desirous of sovereign government, and that the best interests of both the territories and the Nation would be served by giving Alaska and Hawaii statehood's economic and political advantages and closer ties with the Union."

Baton Rouge (La.) State Times of March 8, 1950:

"The time for dawdling is past. Alaska, important for its great natural wealth and its strategic location, might as well be accepted into the family. And so might Hawaii."

Great Falls (Mont.) Leader of March 11, 1950:

"Majority sentiment in Montana undoubtedly favors full citizenship for the people of both Hawaii and Alaska."

New Bedford (Mass.) Standard-Times of March 9, 1950:

"In view of the capacity for self-government the Hawaiians have shown and their loyalty to the United States, statehood is due them, and the Senate should go along with the House in admitting both Hawaii and Alaska as the forty-ninth and fiftieth States of the Union."

Jackson (Mich.) Citizen Patriot of March 10, 1950:

"Both Hawaii and Alaska probably are better qualified for statehood than were many of the States on the continent when they were admitted. Although they are not located on the mainland, modern transportation has brought them close to Washington."

St. Louis (Mo.) Post-Dispatch of March 8, 1950:

"The better government it has, the less chance the Communists will have—and the United States has good reasons for wanting to keep control of Hawaii instead of letting it go to the Communists by default."

Grand Island (Nebr.) Daily Independent of March 10, 1950:

"It is an established principle in the United States that a Territory is to be admitted to statehood as soon as practical. If Hawaii was incorporated into the United States as an integral part thereof, there is implicit in that treaty a promise of eventual statehood. Hawaii has formally applied 16 times in 53 years for the status of a State. It is entitled to that status."

Newark (N. J.) News of March 9, 1950:

"On all grounds of principle, fairness, and self-interest, Alaska and Hawaii should be relieved of their Territorial status and admitted to the Union as the equal partners of the other 48 States. Their admission would prove to the world that our devotion to the democratic idea has practical, present meaning."

Keene (N. H.) Sentinel of March 8, 1950:

"Hawaiians are Americans. They are just as loyal to the United States as we are. They can offer a great deal to the ideal of the United States. They have waited patiently for many years. Hawaii deserves statehood."

New York (N. Y.) Times of March 7, 1950: "The people of these islands (Hawaii), like the people of Alaska, ask to be represented in the Government which taxes them and makes their laws. We on the mainland cannot reject this appeal without repudiating a basic principle of our own democracy."

Cincinnati (Ohio) Enquirer of March 5, 1950: "Our leaders continue to preach democracy to the rest of the world. It might make their preachments more convincing if Congress, at this session, were to practice democracy, in the case of Hawaii, and allow its half million people to enjoy the most elementary right of democracy: the right to be represented in the Government which taxes them."

Oregon Journal, Portland, Oreg., of March 8, 1950: "Both Alaska and Hawaii are key bastions of America's defense system. They are closely linked with the mainland by trade and tradition.

"They pay millions of dollars in Federal taxes without representation in the Congress.

"They deserve something better than colonial status."

Stillwater (Okla.) News-Press of March 13, 1950: "Both Hawaii and Alaska are closer to statehood than they have been in some time. Their natural resources and determined citizens would certainly be a big help to this Nation."

Pittsburgh (Pa.) Post-Gazette of March 8, 1950: "Of course, the basic claim that Alaska and Hawaii have to statehood is the same which the original colonies pressed against Great Britain. As taxpaying members of a political community they want some voice in making the laws that govern them. Hawaii, which has no voting representation in Congress, pays more Federal income tax than any of 12 present States."

Providence (R. I.) Journal of March 11, 1950: "When Hawaii (in 1900) and Alaska (in 1912) were incorporated as United States Territories, the implication was that they would be admitted as States. It is up to this country to make good our implied pledge."

Madison (S. D.) Daily Leader of March 8, 1950: "Both Alaska and Hawaii are genuine parts of our Union. Both have been United States territory for many decades. They should be admitted as States, and given all the rights (and obligations) of statehood."

Jackson (Tenn.) Sun of March 12, 1950: "The people of the islands are being taxed and they have no representation in Congress, the body which imposes taxes. Taxation without representation was the battle cry of the colonists of this country who threw off the yoke of England."

San Antonio (Tex.) Express of March 9, 1950: "Off and on during the first half of this century, the Territories of Alaska and Hawaii, most emphatically Hawaii, have been pressing Congress for admission to the Union of States. Both are fully qualified, by the standards of some earlier statehood grants, and their admission would strengthen this Nation's economy, security, and political structures."

Norfolk (Va.) Virginian-Pilot of March 8, 1950: "Both parties are committed to statehood for Alaska and Hawaii. The House majority has done well in advancing the realization a step nearer."

Spokane (Wash.) Spokesman-Review of March 9, 1950: "The residents of these areas are taxed but have no voting representation at present. Likewise, they are not able to play a direct part in legislation directly relating to their welfare. Politically their vote is no more incongruous than that of Delaware or Rhode Island."

Washington (D. C.) Evening Star of March 13, 1950: "All in all, the advocates of statehood have made out strong cases for their respective Territories. The Senate would do well to follow the leadership of the House on this long-standing issue."

Reply by Hon. Robert A. Taft, of Ohio, to President Truman's Attack on Senate Investigation

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 4 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the reply by the senior Senator from Ohio [Mr. TAFT] to President Truman's attack on the Senate investigation, issued under date of March 31, 1950.

There being no objection, the reply was ordered to be printed in the RECORD, as follows:

President Truman's bitter and prejudiced attack on Republicans in the Senate does not make sense. His assumption of Lattimore's innocence parallels his support of Alger Hiss, when the Un-American Activities Committee of the Republican House first brought out the facts, which finally proved that vital State Department documents were being supplied to Communist agents by high State Department officials.

The President tries to insult Senator McCARTHY by calling him a "Kremlin asset." He is a fighting Marine who risked his life to preserve the liberties of the United States. The greatest Kremlin asset in our history has been the pro-Communist group in the State Department who surrendered to every demand of Russia at Yalta and Potsdam, and promoted at every opportunity the Communist cause in China until today communism threatens to take over all of Asia. How can the Kremlin profit by criticism of those

who were responsible for these policies and by their removal from the State Department?

While Mr. Truman slanders Senator McCARTHY he absolutely refuses to let any representative of Congress look at the files in the State Department, the Civil Service Commission, and the FBI which may give the full records of those whose loyalty is in question. What is he afraid of? It was not the Republican Policy Committee but the Democratic Senate itself which passed a resolution directing the committee to make a full investigation and to obtain these files. Our policy committee has only urged that that investigation be fairly made and that the committee be given the means to make a real investigation, and not merely confined to a whitewash result. This committee should not conduct a smear trial of Senator McCARTHY.

As for sabotaging the bipartisan foreign policy Mr. Truman himself killed that policy from the date of his election in November of 1948. To be bipartisan there must be real consultation on policies before they are adopted with the responsible Representatives of the Republicans in Congress. It is not accomplished by the appointment of an individual Republican to executive office as a roving ambassador. There has been no such consultation since 1948. There never was any consultation regarding the policy in China or the Far East. In 1949 Mr. Truman permitted a bitter and unfair attack to be made on Senator Dulles who had done so much to make bipartisan policy work. "Bipartisan foreign policy" is being used by Mr. Truman as a slogan to condemn any Republican who disagrees with Mr. Truman's unilateral foreign policy secretly initiated and put into effect without any real consultation with Congress.

The Republican Party has acquiesced in many features of Mr. Truman's foreign policy. They have agreed with some and in some cases they have not desired to present a divided front to the world. They will continue to pursue this program, but Republicans would violate their constitutional oath if they did not oppose policies which they believe to threaten the future welfare or security of the Nation. Certainly the facts already proved about Hiss and Wadleigh in the State Department justify our support of an investigation unhampered by executive obstinacy and name calling.

Tribute to Hon. Scott W. Lucas, of Illinois, by Mac Lowry

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 4 (legislative day of Wednesday, March 29), 1950

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Senator LUCAS Plain Speaking Man and a Natural Leader," written by Mac Lowry, and published in the Dayton (Ohio) Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR LUCAS PLAIN-SPEAKING MAN AND A NATURAL LEADER

(By Mac LOWRY)

WASHINGTON, March 31.—Democrat SCOTT W. LUCAS, leader of the United States Senate, has returned to the Capital after making several campaign speeches in the interest of his reelection from Illinois.

The 58-year-old LUCAS is a plain-speaking man who loves politics, loves the wrangle as well as the horseplay, the dramatic flight as well as the picayune thrust.

But despite his habit of plain speaking, the senior Senator from Illinois does not have what could be called a simple temperament. Pundits have often attempted to sum him up in a phrase. They have used in this effort the things that stand out on the surface—good looks, a quick temper, double-breasted suits, party regularity, a worried face, among others.

The phrases are apt, but too easy. And even if one takes them all together they do not explain the fact on which the Capital now finds itself in general, and, to some, surprising agreement:

SCOTT LUCAS, of Illinois, is the natural choice of the Senate Democrats for both the position and the responsibilities of leadership, and the party would look in vain for an alternative. It is probably not necessary to add that no such search is being carried out.

Almost a year ago, when LUCAS had been majority leader only a few months, reporters trying to manufacture a story would ask the President whether he expected a change in the Senate leadership. The administration's civil-rights and labor proposals had effectively bogged down under the opposition of Republicans and southern Democrats.

First the President and then events themselves took care of the story. It was LUCAS who manipulated the events. He went on from the civil-rights and labor defeats to drive the Senate into its hardest peacetime session. Coming out of the hospital with a nervous stomach pretty well under control, he took a grip on his temper and stayed with the legislative program through heat and exhaustion.

It was as hard on the other Senators as it was on LUCAS. But when the session was finally adjourned in October LUCAS was its leader, even though walking toward his goals through splits and recombinations in both parties.

When the present session opened in January the heat was already on one big 1950 issue—deficit spending. Relations between LUCAS and Minority Leader WHERRY (Republican, Nebraska) were noticeably strained. LUCAS still shows his impatience at the length of time the Senate can drag out its business, but he is visibly more relaxed.

Through the long and often angry first session of the Eighty-first Congress, LUCAS forged the Senate Democratic policy committee into a new instrument, and he relies upon it heavily. Best indication of his success is the understanding tendered toward his position by the committee's two southern Democrats, RUSSELL, of Georgia, and HILL, of Alabama. FEPC will bring a knock-down and drag-out battle over cloture, and nobody has yet caught RUSSELL napping on anything that had to do with the calendar or the parliamentary situation. But RUSSELL obviously feels he knows and respects where LUCAS stands as each issue goes through the policy huddle.

It may be true that LUCAS' concern over his health last year taught him to relax, and he has gone on record to that effect himself. But the performance of his heavy duties day by day shows how inaedquate was the superficial impression of a quick-tempered man with nothing but a reputation as a regular. Such a man could not make the use of a policy committee LUCAS has demonstrated.

Riding herd on a divided party as it struggles with the huge Truman program almost in one lump, LUCAS often finds the knives pointing in his direction, as would any other man in the job. He can return the jabs, usually with real effect. But he bears no wounds and no malice. He has been long enough in the Senate to appreciate the pitfalls in the majority leader's position, and he saw every step in the widening Democratic separation of 1948.

What escapes some observers is that LUCAS takes almost everything intensely. It is easy for his face to look tragic, easy for him to work himself up to short speech, even off the floor. He detests making a long speech, frets over the facility with which the Senate drags out a debate and would love to have a rule of relevance which would bind Senators to the subject at hand.

Though the signs point to his victory in his reelection campaign this fall, LUCAS is taking nothing for granted in the race against former Representative Everett Dirksen, Republican, of Illinois, the Chicago Tribune's candidate.

His position as majority leader affects the race in two ways. In the first place it ties him in Washington for the most part, and his quick round of the hustings this week cannot be frequently repeated. In the second place, LUCAS himself believes that the loss of the Senate majority leader would be a heavy one to his party, that the Illinois election will be a kind of referendum on the Truman program.

One thing he won't have to worry about is his party's strong support. His freshman colleague, DOUGLAS, and the new Democratic Governor, Adlai Stevenson, are anxious to use their own efforts to offset the time LUCAS must spend in the Capital. Martin Kenelley, the Independent Democratic mayor of Chicago, after an initial coolness, has jumped on the bandwagon.

And the 3-day Democratic national conference scheduled for Chicago in May, with President Truman and the entire Cabinet on deck, was planned with one eye on the Lucas-Dirksen race.

LUCAS himself believes the Republican attack on him will center on the Truman foreign policy, deficit spending, alleged softness toward communism and Fair Deal socialism. He is anxious to battle Dirksen on the foreign-policy issue, given the latter's wavering course and his subjection to Colonel McCormick, and LUCAS' own record in that field has been consistent and strong. He supported lend-lease and the draft in 1941 in a State where "America first" had its stronghold.

LUCAS has his own answers to the "spending" and "socialism" cries, though his colleagues consider him more conservative than the orthodox Fair Dealers. He is ready to make hay with his civil-rights record in Chicago, and downstate he is at least as popular with the Farm Bureau—all powerful in Illinois—as is his opponent. There are reports that Brannan-plan sentiment in the State is growing, but Dirksen can get no help on this score.

The hardest fight LUCAS made as leader in the Eighty-first's first session was to eliminate the antistrike injunction from the Taft bill. Friends say he was bitterly disappointed when the amendment failed by the narrowest margin. Democrats here expect him to have labor's strong support. He voted for the original Taft bill in 1947, but to sustain the Truman veto of Taft-Hartley.

All in all, the Senate's majority leader should be more than a match for Dirksen, unless observers here completely underestimate dissatisfaction with the Truman-Acheson foreign policy in Illinois. As a referendum on this subject, Illinois is the key spot in 1950.

The son of a tenant farmer, LUCAS qualified for his support of the Roosevelt New Deal by an upward battle toward a successful law practice and his present position. He taught country school, played professional baseball for Bloomington in the Three-I league. He has the manners and the appearance of a man born to comfort, however, and without being social in the Washington sense, he is an accomplished golfer and clubman and looks it.

Some of his friends are said to be telling him he should cultivate the Illinois grass roots in the limited time he can spend in the State. They are thinking of the effectiveness Harry Truman showed there in 1948, and counting upon the affable, direct impression LUCAS can make upon a small group of people.

His friends have no fears about LUCAS' losing touch with his State even while Dirksen is running about making five and six speeches a week. Last month the senior Senator from Illinois got his millionth letter since he came to the upper House in 1938.

Before he was majority leader, LUCAS used to get 10,000 letters a month. Now the average is 37,000. They are coming in from everywhere since LUCAS moved from being a Representative from only one State to the man who has most to say about the Senate Calendar.

It is with these letters that LUCAS, along about 5 or 6 o'clock, sits down to take the pulse of things. He has already, in a typical day, been to two committee meetings, taken part in innumerable strategy huddles, launched the Senate session at noon, entertained visiting constituents, and kept on or near the Senate floor lest other Senators desert it.

It is a man-killing schedule for a Senator about to run for reelection in a popular State with every economic interest represented within its borders. LUCAS appears on top of it today, and the signs are multiplying that he will reap a rich harvest of credit on the morrow. To the Senator from Illinois, it must seem about time.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 4 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, the Washington Times-Herald today carries an editorial entitled "Truman's Pride, It Goeth Before Whose Fall?"

This editorial takes the position that most of the ills which confront the United States stem from the secret agreements made at Tehran, Yalta, and Potsdam.

In contrast with the President's statement that the American people can look with pride upon the foreign policy in effect for the last 5 years, the editorial cites the expansion of Soviet Russia's influence in that period and the steady loss of United States prestige.

I ask unanimous consent for insertion of the editorial in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUMAN'S PRIDE, IT GOETH BEFORE WHOSE FALL?

President Truman says "The American people can look back with pride" on the foreign policy in effect for the past 5 years.

A FAIR TEST FOR TRUMAN'S POLICY

There is only one fair way to gage the value of any policy, and that is by the results. Does the policy leave the country stronger and safer and happier than it was before? Are the people paying less money in taxes and getting better government? Five years ago at this time would be April 4, 1945, Franklin D. Roosevelt was President of the United States and Harry S. Truman was playing the piano, a Vice President of no great interest to anybody.

The country knew that the war against Germany, Italy, and Japan was roaring toward a finish and that settlement day between the United States of America, Britain, and Russia, as the three principal survivors, was drawing near.

Civilization's welfare depended upon the United States using its prestige and power as the financier, munitions maker, and major fighting force of the survivors, to determine a sound peace.

What the country did not know was that during the fatal meeting of February 4–11, 1945, at Yalta, the dying Roosevelt, with Alger Hiss at his elbow, had given civilization a terrible blow and Stalin a new start toward expansion of a Communist empire.

Such was the base for this foreign policy of which Truman is so proud. Let us see how it grew.

April 12, 1945: Roosevelt dead. Truman takes over.

April 25, 1945: United Nations begins organizing at San Francisco with Alger Hiss director of procedure.

July 26, 1945: Britain, surviving the war solely on United States funds and in hope of more of the same, elects a Socialist government sworn to destroy the kind of civilization that has made us what we are.

Truman undertakes elaborate campaign to give this Socialist outfit more United States billions, and succeeds.

August 2, 1945: At Potsdam palace in Berlin, Truman agrees that Stalin shall formally begin his conquest of Europe and Asia as the price of assisting the United States against Japan which is already collapsing and trying to get through to us a proposal of surrender.

Peace overtures sent by Japanese to Moscow for transmission to Washington are never passed on, for Stalin knows a sucker when he sees one.

August 6, 1945: The first full-sized atom bomb is dropped on Hiroshima. Thanks to Dr. Allan Nunn May and Dr. Klaus Fuchs, British spies for Russia and others in the United States of America, as yet not brought to justice, Stalin is already at work on short cuts to atom power.

August 8, 1945: Russia declares war on Japan, thus providing an excuse to begin formal conquest of China.

September 2, 1945: While Truman accepts the applause of his gang and the world celebrates at official surrender ceremonies aboard U. S. S. *Missouri* in Tokyo Bay, Stalin announces Russia's recovery of strategic Kurile and Sakhalin island chain leading up from Japan to Alaska, thus shadowing events to come.

The foregoing are just a few of the significant dates in the first year of this five of which Truman says now we must all be so proud. What is the proved harvest of those episodes above cited?

Today Russia has China and threatens the rest of Asia. Also she has Latvia, Lithuania, Estonia, Poland, Rumania, Bulgaria, Hungary, and the major food-producing areas of Germany. Menaces all Europe.

Today Socialist Britain is boldly suggesting neutrality in the event of a United States-Russian war.

Today the whole world holds its breath in wonder as to whether Russia has enough atom bombs, made from United States plans stolen by United States and British spies for Russia, to risk an open fight with us. The principal doubt of such a war rests in the logical question of why Stalin should fight as long as he wins such encounters as those of Tehran, Yalta, and Potsdam.

The consequences above cited from the first year of Truman's proud five are all of record before the world. Nobody can deny them. God only knows what will be revealed in time to come, as the Nation pries open the secrets of 1946–49.

And now come the Truman gang talking about a bipartisan foreign policy, so the Democrats can make the mistakes and the Republicans can share the blame. In that, Truman's pride goeth before whose fall?

Sporadic Income

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. POULSON. Mr. Speaker, I am inserting in the RECORD an article written by two of the leading tax attorneys of Los Angeles, Mr. George T. Altman and Mr. Richard L. Rykoff, on the subject Sporadic Income. This is a matter about which not only the members of the Ways and Means Committee but all the Members of the House should be concerned, as it definitely describes a case of injustice.

The article follows:

SPORADIC INCOME: A SOLUTION

(By George T. Altman and Richard L. Rykoff, attorneys, Los Angeles)

Within recent years the creative artist has become more and more a lone orphan among taxpayers. The relative brevity and sporadic character of his productive life, and the long years of waiting and hoping, of rags, hamburgers, and rejection slips, of midnight oil but no heat, which are suffered and endured before even that questionable productivity begins—these are his trade-mark and often his boast, but they have found no sympathy in the tax collector.

Other situations of similar character have been accorded some relief under the revenue laws. A taxpayer who holds property for investment or speculation and derives gains from the sale of such property has throughout the years been allowed a low, flat rate on such gains, known as capital gains, largely on the theory that they accrued over the entire period of holding. But the creative artist, despite similar long periods of waiting, albeit not often with the specific product sold, has not been very successful in bringing his creations within that category. If he sells an interest in his product, such as the United States rights in a story, he is receiving royalties, not gain on a sale. If he sells the entire product—lock, stock, and barrel—he is, in the usual case, selling property held for sale to customers in the ordinary course of his trade or business. In that event, also, he has ordinary income, not capital gain. Attempts have been made to accomplish capital-gain classification through the use of a corporate intermediary. But it is not often possible for the creative artist to carry out such a process to the satisfaction of the Treasury Department.

Again, a taxpayer who discovers oil or minerals and sells the property, or any interest in it, has always had the surtax on the gain limited in any event to 30 percent of the selling price. The purpose of the limitation was given by the Senate Finance Committee as follows:

"The prospector for • • • oil and gas frequently spends many years and much money in fruitless search. When he does locate a productive property and comes to settle, it seems unwise and unfair that his

profit be taxed at the maximum rate as if it were ordinary income attributable to the normal activities of a single year."

The creative artist is in the same position. He is in many senses a prospector for ideas and forms. In any event he, too, must ordinarily accept a long period of fruitless effort and struggle. Then, after he has finally found a market for his works, or his works have risen to a marketable level, the fruits are sporadic, at least as far as the larger amounts are concerns. In consequence, the income results of many years of effort and labor are piled up into the brackets of a single year. Yet for him there is no corresponding relief under the tax laws.

Not that fluctuation of income is unknown to other classes of taxpayers. Generally, however, that fluctuation is hinged to the rise and fall of the national income level. Relatively, that fluctuation is modest; it is wholly out of class with the delayed and sporadic character of the income of the artist. A painter may sell a picture or two this year, none the next, and every once in a while he may hit the jackpot with a particularly fortunate sale or series of sales in one year. Or, in the steadily shifting scenes of the motion-picture industry, a writer may have a contract for 20 weeks in one year, nothing the next, and then he may sell an "original" for a substantial price. The following income figures from the files of the Screen Writers Guild illustrate the point, and similar figures are undoubtedly obtainable from all fields among artists:

Individual	1949	1948	1947
A	0	$60,000	$6,259
B	$7,200	0	0
C	3,350	1,500	45,000
D	0	0	60,000
E	0	12,500	0
F	60,000	0	40,000
G	2,400	0	3,800

Of course, under the present code, the full, ordinary income rate is applicable in the year of payment. Thus, the artist with one good year in three must surrender the lion's share in taxes, while the following or preceding few or many years are spent in struggle for that one good year.

LIMITATIONS IN CODE SECTIONS 107 (A), (B)

Sections 107 (a) and (b) of the code are no answer to this problem except in a very few instances. Under those sections relief is available only where the particular work was done over a period of 36 months or more. Where the income is compensation for personal services, such services must have been rendered over a period of 36 months or more. Where the income is compensation for personal services, such services must have been rendered over a period of 36 months or more. Where the income is that derived from an artistic composition or product of the taxpayer, then the taxpayer's work in composing or producing it must have covered a period of 36 months or more. In the one case, the period must relate to the particular services for which the compensation is paid; in the other, it must relate to the particular artistic product from which the income involved is derived.

It is the rare case, however, in which such a period is involved. A writer, for example, may go from one idea to another, developing and shaping each into a story, working months or years on one and only weeks or days on another. Eventually he winds up with a story that makes the big time, and lo, and behold, that particular story took him only a week to write. The ideas may in part come out of other stories he has written, but he cannot trace them with sufficient clarity to satisfy the Treasury Department. Be it story, painting, song, or other artistic work, the particular work which turned out to be an income gusher may have taken only a few weeks to produce. The months and years of toil which preceded it may be brushed aside as experience.

The only solution is to generalize the income. Simplicity and justice also require that the relief be extended to income from personal services of any class. Such a provision could read somewhat as follows:

"If the adjusted gross income of the taxpayer for the taxable year (referred to in this subsection as the current year) is at least 80 percent of the aggregate adjusted gross income for any three consecutive taxable years including the current year, and at least 80 percent of such adjusted gross income for the current year is attributable to personal services, or to income or gains derived from property which is a product wholly of the personal efforts or labor of the taxpayer, then in that event the tax for the current year shall be limited to an amount computed as follows:

"(a) Divide the aggregate adjusted gross income for such three consecutive taxable years by three;

"(b) Determine the tax for each of such years by using the amount so computed as the adjusted gross income with all other factors unchanged;

"(c) Add together the increases resulting from such computation in the taxes for the two taxable years other than the current year; and

"(d) Add such amount to the tax so computed for the current year.

"The amount so resulting shall be the tax for the current year, not to exceed the amount computed without the benefit of this subsection. In the event a computation under this subsection results in a refund for the current year, no interest shall be paid on the amount of such refund."

ANNUALIZATION? RARELY!

Adjustment can be made by means of annualization if a year other than the current one is a year of less than 12 months. That, however, would indeed be a rare occurrence.

With a provision such as illustrated above there could be no complaint that here was not relief but a gift to a special group. The provision would be applicable to delayed or sporadic income attributable to any class of personal labor or efforts. The cost to the revenue would be slight. While instances of such income are many, the aggregate in dollars is not great. No other inequity has been so gross without ever having been resolved.

Communists in Our Foreign Policy Making

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. GWINN. Mr. Speaker, in the Republican Eightieth Congress, Representatives MUNDT and NIXON, and other members of the House Committee on Un-American Activities, carried out the investigation which disclosed the workings of a Communist cell in our foreign policy making. That led to the conviction of one high administration official for perjury about his associations with Communist espionage. The committee had to work with great care to get the proper legal evidence, while protecting our right to true freedom of speech and of association. This they did brilliantly, but nothing was done to rid us of the influence of other members of the ring. Now Senator MCCARTHY is asking bluntly why the administration does not act to rid us of all the Communist agents and Communist dupes influencing our Government policy.

Under leave to extend my remarks I include the following article, from the Brooklyn Tablet, of April 1, 1950, which asks in vigorous fashion, "How long, O Lord, how long?":

KEEP THE ISSUE IN SIGHT

Arthur Krock, well-known journalist, and other Washington newspapermen, as well as Government officials, are surprised at the quantity and type of mail being received at the Capitol since Senator JOSEPH MCCARTHY has made his charges against the State Department.

Mr. Krock, his colleagues and officials, think the Senator's charges are exaggerated, if not untrue, and maintain he has not as yet proven his pro-Red charges against even one State Department employee, or former employee; yet most of the mail from the American people seems to favor the Senator. They undoubtedly wonder why this is so.

The reason the American people either accept or are sympathetic with charges against the State Department is twofold. First, the people, by and large, believe the United States was betrayed or sold out in the recent war, and thereafter, to Russia. The people were led to believe they were brought into the conflict in behalf of liberty and democracy, to vindicate the Atlantic Charter and the four freedoms and to maintain the freedom of small nations against aggressors, and they observe today that despite their tremendous sacrifice of life, blood, armaments, matériel, and wealth there is more slavery, more dictatorial rule, more tyranny, and a greater threat of war than before. They see in communism a greater threat than nazlism, and observe that Russia has endeavored to fulfill to the letter her ideological promise of world revolution, destuction of liberty and all human rights, and international dictatorship.

Moreover, the American people know that at Quebec, Teheran, Yalta, and Potsdam millions of people, whole nations, and tremendous power, were given to Russia with the acquiescence of our representatives.

Americans then ask: Who betrayed our country, our principles, the cause for which we fought? The people reason either our State Department must have been hand-in-glove with Russia, either Communist spies or friends of the Soviet dictatorship sold us out, or else our representatives were too stupid to know what Russia was up to. In whichever case, they are waiting for the answer to this frightening situation of more tyranny and more war which now threatens civilization. Did spies sell us out or were our representatives just unbelievably stupid?

Secondly, the American people read about the Hiss case. They know how this seemingly sinister character, placed in the Government, then promoted to key positions and finally sitting alongside of the late President Roosevelt at Yalta and as former Secretary of State Stettinius' adviser at the formation of the United Nations at San Francisco, was convicted of perjury based upon his espionage activities. Finally the people know that the present Secretary of State, Dean Acheson, not only refused to move against Hiss when he was carrying on his espionage activities but even after his conviction the Secretary refused to repudiate him.

Why wouldn't the people have sympathy for Senator MCCARTHY'S charges? Why wouldn't they condemn the crowd that as-

serts "these charges injure the prestige of the State Department," and "the United States is injured abroad by such loose charges"? What gall. Moreover, is it strange that the people refuse to accept the frantic denials of criticized employees that they are not Communists—Hiss, Robeson, Chaplin, and the rest also deny the same charges—when they know that many of Soviet Russia's best friends here have no membership card in the Communist Party?

In the midst of the Senator's attack someone added an even worse charge than he, namely, that the State Department had acted as a home for a colony of degenerates. And the top security official of the State Department immediately stated that he had dismissed 91 of these perverts from the State Department. Whether or not he got rid of all of them we are unable to say, but police officials in Washington on Tuesday stated that the capital had 5,000 of these offenders and 4,000 of them hold Government jobs. What a shocking scandal; what a curse to put on the American people. What an insult to the morality and decency of our Government. What a threat to our security.

There is no reason to wonder at Senator McCARTHY'S charges—exaggerated, poorly presented, premature or not—being supported, for the people have never had explained to them why and how the Soviet was permitted to capture and enslave one-quarter of the world and seemingly with our acquiescence. The Tablet made a fair suggestion to President Truman when he assumed office in 1945. It urged that he repudiate the secret Yalta agreements—many of which neither he, nor anybody else, save Alger Hiss, knew about at the time—and take full responsibility for whatever went on thereafter. It then suggested that the President re-create the State Department and investigate everyone who had acted as a cat's-paw, if not an agent, of those who betrayed our Nation. This was not done, although later Henry Wallace was forced out. Neither was the proper action taken when Hiss was convicted, for then the President should have ordered an investigation and, if needs be, a trial for those who put Hiss in his posts, who built him up, who covered him up, and those with whom he associated, just as at present there should be an investigation of those responsible for giving government posts to degenerates.

The people have no confidence in the Tydings committee, or officials who consider Senator McCARTHY—a former marine—the principal menace to our Nation while they are trying to protect and hide those who were pro-Soviet in their deeds, words, and activities. What the American public wants to know is this:

Why was the United States sold out at Yalta and by whom?

Who put the likes of Hiss, Wadleigh, in our State Department, Judy Coplon in the Department of Justice and Harry Dexter White in the Department of the Treasury?

Who put the 91 degenerates into the State Department and who kept them there?

Who was responsible for the abandonment of China, the insane set-up in Germany and the loss of liberty to Estonia, Lithuania, Latvia, Poland, Hungary, Yugoslavia, Rumania, Bulgaria, and Czechoslovakia?

Who decided Formosa has no strategic importance?

The exaggerations or misrepresentations—if they be such—of a Senator McCARTHY, or the ridiculing of his charges by officials, newspapers, and the radio, merely concern an effect. The administration and the administration alone can answer to the people for the vicious results of policies which imperil the world. Senator McCARTHY is but a side issue, an individual who is endeavoring to blow the lid off a malodorous situation. The threat to the United States is not so much the Soviet abroad as the pro-Soviet forces, and their defenders, in the United States.

Smearing World Government

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Malcolm Forbes from Forbes magazine:

SMEARING WORLD GOVERNMENT

(By Malcolm Forbes)

American businessmen, having demonstrated their ability, knowledge, and experience to build our present free-enterprise system to its present high level, should perhaps more than any other group in the country be aware of the dire need for a strengthened world organization capable of enforcing world peace. A number, including W. T. Holliday, chairman of Standard Oil of Ohio, and James K. Moffitt, chairman of Crocker First National Bank in San Francisco, have been active on behalf of the United World Federalists and other such organizations. To date 21 State legislatures have adopted resolutions in favor of world government; 110 Congressmen of both parties, including a majority of the House Foreign Affairs Committee, are sponsoring a world-government resolution in Washington.

But now that real progress is being made, various isolationists and some misguided patriots are attempting to smear all efforts toward a world government capable of enforcing world peace as "communistic." A silly charge, considering that from the beginning the bitterest opponent to world government has been Moscow. Reds know well that in any free assembly of the nations of the world the Communist nations would be outvoted on efforts to obstruct world peace as they are today in the UN. They prefer the present UN because their veto power can block any attempt to enforce UN majority decisions. In a strengthened world organization, Russian power to paralyze would be gone.

I doubt if responsible, thinking businessmen would be misled by isolationists and their strange bedfellows in this fight on world government, the Communists, who for opposite reasons fear the only course that offers hope of effectively outlawing war—a strengthened United Nations, with power to enforce peace.

Organization of American Overseas Activities

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. WILSON of Oklahoma. Mr. Speaker, one of the most challenging fields for study in connection with the matter of reorganization of the executive branch is that of organization of American overseas activities. Leadership of the democratic nations of the world has brought with it heavy overseas and world responsibilities. To meet these responsibilities and to administer the occupation of enemy territory as well as the programs of assistance necessitated by economic conditions growing out of the late war, we have added first one agency and then another. There has been no over-all direction or planning to this growth of agencies and responsibilities. Four major departments and several independent agencies are now concerned with foreign policy and overseas administration.

The report of the Commission on Organization of the Executive Branch of the Government, more generally known as the Hoover Commission, effectively high lights the deficiencies and the inadequacies of our present overseas administration. The Commission report calls attention to divided responsibility, the assignment of duties to departments and agencies which are totally unrelated to its normal functions and the qualifications of the personnel normally employed by such departments and agencies. There is no suitable integration of the entire overseas administration field and many of the agencies are responsible but to the President.

Look for a moment if you will at the administration of occupied enemy territories. The formulation of policy is in the hands of the Department of State yet the administration and execution of that policy was assigned to the Department of the Army. If there is delay in the announcement of policy the Army must proceed to formulate its own policy. By its own admission the Army is ill-equipped to deal with problems of nonmilitary nature such as civil liberties, representative forms of government, democratic procedures, and the like.

Another instance of divided responsibility is involved in the administration of Marshall plan funds. The act creating the Economic Cooperation Administration provides merely that the Administrator and the Secretary of State shall keep each other fully and currently informed on matters, including prospective action, arising within the scope of their respective duties which are pertinent to the duties of the other. Should there be areas of disagreement between the Administrator and the Secretary of State it can readily be seen that these would be of serious consequence to our foreign policy and could only be resolved by referral to the President.

Among the departments having overseas duties assigned to them which are unrelated to, and incompatible with, their normal functions are the Navy Department and the Department of the Interior. The Navy Department has the administration of our trust territories of Guam and Samoa while the Department of the Interior administers our organized Territories of Alaska, Hawaii, and the like. Where there is a lack of definition and enumeration of the powers and duties of the administrative agency, as in

the case of the Division of Island Territories and Possessions in the Department of the Interior, it can readily be seen that conflict will arise.

Mr. Speaker, I need but to enumerate our major overseas functions, the administering department, commission, or agency, and the expenditures for the function involved, to show the complexity of the problem of reorganization and the need for a thorough study to the end that functions may be regrouped and administration may be integrated. I wish to read into the RECORD at this point a concise statement of the functions involved, the responsible agency, and the expenditure made therefor. The figures on the expenditures involved were furnished me by the staff of the Library of Congress and are for the year 1949.

Tabulation of overseas functions, responsible agencies, and expenditures therefor

1. Occupation of enemy territory (Departments of State and Army)	$1,348,385,558.51
2. Marshall plan aid (Economic Cooperation Administration)	4,637,266,717.90
3. Trust territories (Navy Department)	1,125,000.00
4. Non-self-governing territories, e. g., Guam (Navy)	1,861,019.92
5. Self-governing Territories, e. g., Alaska (Interior Department)	49,371,385.31
6. Office of Foreign Liquidation (State Department). (Figures not available.)	
7. American Battlefield Monuments Commission (an independent commission)	453,197.62
8. Philippine War Damage Commission (an independent commission)	170,305,667.67
9. Philippine Alien Property Administration (independent)	423,808.00
10. Panama Canal (Department of the Army)	24,877,687.51
11. Special missions (State Department—ECA). (None in 1949.)	
12. United States participation in international organizations	96,661,225.38
13. State Department expenditures over and above those heretofore enumerated	208,864,619.73
Total	6,539,595,887.55

If war and its aftermath have created problems beyond our power of anticipation at the time, that is no reason why we should longer delay a thorough investigation of our overseas activities and obligations with a view to regrouping of functions, a realinement of responsibility, and the reduction of administrative costs to a minimum. The Hoover Commission recognized the complexity of the problem faced and its sole recommendation with respect to overseas reorganizations was "that the Congress direct a comprehensive study to be made of the entire problem of overseas operation and administration."

I have recently introduced a bill, H. R. 7554, to create a commission to make a study of the administration of the overseas activities of the Government and make recommendations to Congress with respect thereto. This bill, similar to one already passed by the Senate, would create a study commission composed of 12 members. Four members of the commission would be Members of the House of Representatives, four would be Members of the Senate, and four would be appointed from the executive branch of the Government. Such commission would be required to report to Congress not later than March 1, 1951, and would cease to exist on April 1, 1951. Members would serve without additional compensation.

With our present preeminent world position and with the prospects of continued conflict between the East and West, it seems unlikely that our world and overseas responsibilities will be greatly reduced. Expenditures in the categories I have listed above have decreased since 1949, but even now we are considering the institution of a program of technical assistance to backward nations. With the increasing use of economic aid as an instrument of policy, Congress, which controls the purse strings, should play an increasingly more important role in the administration of foreign affairs. It is altogether appropriate, therefore, that the study commission proposed by my bill should have able members from both Houses of Congress.

We should not longer delay enactment of legislation to expedite reorganization in the field of overseas administration. I am confident that the proposal contained in my bill will result in concrete and constructive recommendations for the organization and grouping of our overseas functions and their administration. I am confident that it will bring about, in time, reorganizations which will provide a maximum of efficiency in the handling of our overseas obligations with a minimum of cost. It may well lead to a reevaluation of our expenditures in this field and of their importance or lack of it. In view of the tremendous expenditures involved, this may well prove one of the most fruitful fields for savings by way of reorganization.

I thank you.

The Greater Lawrence Industrial Corp.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Evening Tribune, Lawrence, Mass., of Monday, April 3, 1950.

All of us are most hopeful that this committee of representative citizens and members of the Chamber of Commerce of the City of Lawrence will be able to assist in obtaining new industries for that community:

MOVE TOWARD SELF-HELP

The Greater Lawrence Industrial Corp. is the answer to the spirit of defeatism which cripples any attempt to deal with a tough problem. As a nonprofit organization set up to foster general prosperity in this area, it is an affirmation of the principle of free enterprise, which, in the long run, has the horsepower to pull any economic load. All the theory in the world will accomplish no good unless it is tied in with hard-headed, intelligent aggressiveness capable of translating the blueprint into wood and stone, and finally, into whirling wheels and efficient production. Theoretically Greater Lawrence, with a vast reservoir of individual skills at its disposal, with the facilities for the accommodation of a broadened program of industrial development, will find its salvation in selling businessmen the idea of settling here. It is one thing to say it, or think it; it's another thing again to go to the trouble of doing something about it. The Greater Lawrence Industrial Corp. is no theorist's dream, but a practical piece of machinery designed to apply the right kind of leverage in the right places. And as Archimedes pointed out long ago, a big enough lever can pry anything out of the mire.

The kind of confidence we have in the future of Greater Lawrence, and New England generally, is all the more genuine because it stands pruned of any blind optimism. The facts and figures of recession are there to be scanned by any eye, and you can either recoil from them in terror as being harbingers of ultimate doom, or you can react with positive courage, face the facts, and then cast logically about for some means of pulling their fangs. In America this formula has been repeated over and over again. It is the Rx which settled and raised a plenteous yield right in the teeth of the most cantankerous agents of adversity—in the North, in the West, right here in Massachusetts when the Pilgrims stepped from Plymouth rock into the bleak embrace of an untamed land. The pioneer spirit has not atrophied; the qualities of courage, resourcefulness, pertinacity need only to be furbished up a bit to provide us with the sort of mainspring we need to power a new dynamism here, and all over New England. We are most certainly not going to abandon ship because there is a report of a thunderhead 500 miles off our starboard beam.

The Greater Lawrence Industrial Corp. partakes of the nature of a pioneer enterprise because it is one of the first of its kind in New England. Because it aims to meet our collective problems squarely at the local level, without the solicitously paternal intervention of cluck-clucking Federal agencies, it can be greeted as an experiment in self-dependence in an age when there is too much of tendency to look outward, rather than inward, for help and sustenance. Lawrence has been in existence as a going concern for a good many years. She'll be around for a long time to come.

How Many of the People Does the State Department Think It Is Fooling?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following letter received from one of the justices of the Supreme Court of Minnesota. The real indictment of those responsible for conducting our foreign policy in the latter half of the war and in the 4½ years since its end is the incredible record they made of miscalculations regarding the nature, objectives, methods, strength, and determination of the Communist movement all around the world, especially in China and Asia. It is impossible to say how many and which of those responsible, or of their advisers, were actually members of the Communist Party. That is relatively unimportant. The indisputable facts are that what they did has consistently worked out to the interests of the Communist movement and the Soviet Union and against the interests of the United States and world order and peace. The letter follows with the signature of the justice omitted for obvious reasons.

THE SUPREME COURT OF MINNESOTA,
St. Paul, Minn.

Hon. WALTER JUDD,
United States Congress,
Washington, D. C.

DEAR MR. JUDD: I am very grateful to you for sending me the copy of your January speech in regard to China. The developments since that time have proved your predictions, as well as your conclusions, to have been wholly correct.

Our whole foreign policy in regard to Asia has been very stupid. Had the whole State Department been card-carrying members of the Communist Party they could not have done more for Russia than they have done. I do not see why we should concern ourselves about weeding out the few who are still there. In fact, the foreign policy of the United States, since war was first threatened in Europe, has been stupid in the extreme, it seems to me.

Now we find ourselves at the end of two world wars with no advantage resulting from the victory in either and at the same time saddled with the prospect of a third war and with the necessity of keeping up a tremendous military establishment because military might is the only argument that is persuasive with the Russians. Not only is that true, but we must be careful in our negotiations with them, if any, that they do not trade promises which they do not expect to keep for advantages which they do keep.

More power to you and best regards.
Yours sincerely.

False Suspicion

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Boston Daily Globe, Boston, Mass., Tuesday, March 28, 1950:

THE STAKES OF DEMOCRACY

"There is more at stake in this matter than the rise or fall of individuals," declares Mr. Henry L. Stimson in his forthright letter to the press, commenting on the Indian war dance that swirls around the Department of State in Washington.

Mr. Stimson, whose distinguished record in public office, both as Secretary of State and as Secretary of War, places him beyond the impeachment of small suspicions and above the tides of political factionalism, points an unerring finger at the danger about which the present Secretary of State and half a dozen other important spokesmen, in both major political parties, have already warned us.

Such goings on, Mr. Stimson remarks, dangerously impede the conduct of the foreign affairs of our Government. The procedure "creates abroad a feeling that we are frightened and suspicious of each other; it diverts our attention at home from the genuine and pressing problems of our foreign affairs; it requires of many high officials that they desert their proper duties in order to prepare and deliver * * * extensive replies. Not one of these effects would have resulted from a disinterested study of the loyalty of any suspected State Department employees."

This aspect of the present situation—its disabling consequences for our policy around the world—is pointed up by the press reaction already evident beyond the seas. "It is ridiculous as it is tragic," comments the influential Manchester Guardian in England, that the fate of Europe should wait upon American uncertainties. Whether the United States can, under such conditions, shape and carry on any rational foreign policy at all, is similarly questioned.

The same uneasy doubts pervade discussions in responsible organs of opinion from Norway to Turkey. And the alacrity with which the Russian press and radio have seized upon this new opportunity to sow distrust and impair confidence in American policy, throughout middle and southeast Asia, provides interesting testimony as to the acumen of the Kremlin's propagandists.

De Tocqueville, writing early in the nineteenth century, thought that it was a piece of great good fortune for the United States that it did not then need a foreign policy, thanks to aloofness from the rest of the world. Had circumstances forced our Nation into the struggle of world politics then, he opined, the consequences would have been disastrous to our survival because of the instability of our democracy. Time and history have borne witness to a greater inner strength and resourcefulness than the famous French critic conceded. Yet is is well to remember that the testing time he foresaw is now upon us.

If this country's position has altered irrevocably under pressure of the tides of history, if isolation has been demolished by science, by growth, by war, and by the shifting of economic and political centers of power, our responsibility for mature procedures in the formulation and administration of foreign policy has become inescapable. To disable that process, to scatter doubt and confusion, to balk and cripple it, is to play lightly with dangerous risks.

The weight of the innumerable charges upon the Department of State in the wide span of our Nation's interests and safety is, in itself, evidence sufficient to convince sane citizens on that point. In Indochina and the neighboring region the issue involves the security of the free peoples of the whole of southeast Asia as well as, eventually, ourselves. In India and Pakistan the riddle of the future freedom and independence of more than 380,000,000 persons is involved, as well as, ultimately, our own. In Persia, Afghanistan, and Tibet where our policy effort is to fortify confidence and strength against tremendous pressures from the north, the destiny of the Middle East and Africa is at issue.

From the easternmost reaches of Turkey to the Italian peninsula, policy problems also swarm for America; and from Austria to the Baltic. Even this scant summary omits the vast riddle of Pacific Asia. To all, those who labor on our policy must address sober, informed, consistent attention. In each region they must endeavor to fuse practical program with constructive purpose, depending for support and useful criticism upon foreign understanding and an attentive, adult public opinion here at home.

Those who would toss monkey wrenches into this difficult undertaking display a sinister disregard for their country and our lives.

UNCLE DUDLEY.

Penny-Wise and Pound-Foolish

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Post, Boston, Mass., Thursday, March 30, 1950:

RISKY CHEESE PARING

In Washington the House, in a rare mood of economy, has voted to cut the European recovery plan appropriation for next fiscal year by $250,000,000 from the $2,950,000,000 requested by President Truman and his advisers. That the House members were not very sure of their ground in this matter is shown by the small margin, 165 to 163, by which they voted the reduction.

When we look back over the past several years and see what has been accomplished by the Marshall plan European aid program, this $250,000,000 cheese paring as against a possible $250,000,000,000 expenditure for a third world war is false economy. When we see how the Marshall plan money has brought Italy and France back from the verge of communism 3 years ago to the point where they are now safely in the family of democratic nations, we think our investment has been small and the return upon it has been enormous.

Yesterday came the announcement from the Netherlands that the chiefs of staff of 11 Atlantic Pact nations have agreed unanimously on an integrated defense plan. The plan is based on the agreed strategic concept of the North Atlantic Pact countries of "all for one and one for all" against any threat of attack. Each nation solemnly pledges to participate with the maximum resources it can provide in assuring the continued security of the territories covered by the North Atlantic organization.

So today we have a unified western Europe ready to cooperate with us in repelling the common enemy of civilization, whereas 3 years ago we were in danger of being left alone in the world. It is more than possible that this western European alliance will soon include western Germany which we have also saved from communism by the Marshall plan aid. Former Prime Minister Winston Churchill in the House of Commons this week, while saying that he did not believe war was either imminent or inevitable, repeated his plea that the new German Republic should be taken in as an equal in this federation of western Europe. He said he could see no reason why the Germans should not aid in the defense of their own country; and, further, that there could be no hope of a united Europe without Germany, nor hope for Germany except in such a free and united Europe.

With such a federation of Europe, recovering economically as it is, we should in a year or two be able to substantially cut down the multi-billion-dollar defense bill we are now paying to fight the cold war. We should not endanger this objective by trying to save a couple of hundred millions now.

Why Coast Guard Needs Reserves

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Passaic (N. J.) Herald-News of April 1, 1950:

WHY COAST GUARD NEEDS RESERVES

New Jersey has a special concern in the refusal of the House Appropriations Committee to provide funds for peacetime training of the United States Coast Guard Reserve. In view of the many key industrial plants located on bays and rivers along our extended coastline, their protection in an emergency becomes vital.

The security of seaports is the responsibility of the Coast Guard in wartime, when it becomes a part of the Navy. Adequate patrolling of harbors and piers, inspection of vessels, and protection against ships carrying A- or H-bombs would require tremendous expansion of the personnel of 22,000 this unit now possesses.

Those extra men can come only from a well-trained reserve. The special skills required for this service cannot be learned overnight. But the House committee has rejected the Budget Bureau's request for $4,100,000 for reserve training in the 1951 money bill. In this atomic and guided-missile age, when an innocent-looking freighter or lighter might blow up a harbor area, that may be short-sighted economy. Secretary Johnson and Admiral Sherman have testified to the need for these funds.

Representative CANFIELD, of Paterson, has offered an amendment for restoration of part of this money on the floor of the House. Support for what he proposes can be expressed in letters to members of the Jersey delegation on Capitol Hill, in care of the House Office Building for Representatives, and the Senate Office Building for our two Senators.

A Realistic Labor Law

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. VELDE. Mr. Speaker, as a minority Member of the House I have been patiently waiting for the administration in power to initiate some new action in consideration of a more workable labor bill to rectify the inequities and objectionable features of the Taft-Hartley Act. Nothing further has been done since both the administration's labor bills in the House and Senate were defeated last year. Responsibility for this inaction lies with the administration spokesmen who apparently are more interested in obtaining political advantage than in writing a law which is in the interests of all parties concerned and particularly in the interest of organized labor.

When I realized some time ago that the administration had given up on labor legislation for this Congress and was planning to dust off the issue of Taft-Hartley repeal for the coming elections, I set about writing my own bill to revise the Taft-Hartley law.

My labor bill constitutes an honest attempt to meet the legitimate objections which have been made to the Taft-Hartley law. In fact H. R. 7696 repeals the Taft-Hartley law and then incorporates the best features of our labor law as we have developed it over the past 15 years.

It retains all of the substantive guarantees of the Wagner Act. In the exact language of that law it protects labor's right to organize, to bargain collectively, to be free from discrimination.

It is regrettable to me that any law regulating labor-management relations should be so complicated as the several acts now on the books. We must realize, however, that as the intricacies of organization of both labor unions and employers increase, regulatory legislation must also increase and must become more intricate and involved. My colleagues, this bill, H. R. 7696 was written with the view in mind of eliminating inequities and unfairness of the present law of the land. It may be possible to simplify it considerably and if such is the case, I am heartily in favor of it.

Mr. Speaker, H. R. 7696 embodies no less than 30 material changes in the present law governing labor-management relations. I ask that there be printed at this point in the RECORD the complete list of changes to the Taft-Hartley law incorporated in my labor bill. They are are follows:

1. The definition of "supervisor" is revised so that no one may be exempted as a foreman unless he is actually a foreman. The words "assign" and "responsibility to direct" are eliminated (sec. 2 (11)).

2. The term "agency" is redefined to make it perfectly clear that a labor organization is only responsible for the acts of its authorized agents to the extent of other business concerns and is not responsible for the acts of any member of the union solely on the ground of membership (sec. 2 (13)).

3. The National Labor Relations Board's membership is increased from five to seven and made bipartisan (sec. 3 (a)).

4. The vote to authorize the union shop is eliminated although a vote to deauthorize a union shop is retained (sec. 8 (a) 3).

5. The closed shop is allowed in those States where the State law specifically legalizes the closed shop (sec. 8 (a) 3).

6. Unions may require the discharge of men expelled from the union for five additional reasons; engaging in Communist activities, wildcat strikes or any activity which subjects the union to civil fines or criminal penalties, disclosing confidential information of the union and conviction of a felony (sec. 8 (a) 3).

7. An employer may notify a labor organization of any vacancy and give it a reasonable opportunity to refer qualified applicants for such employment (sec. 8 (a) 3).

8. Consistent with the change in section 8 (a) 3, unions are permitted to demand that employers discharge men expelled from the union because they are Communists, fellow-travelers, and wildcat strikers (sec. 8 (b) 2).

9. "Struck-work" clauses in collective-bargaining contracts are specifically legalized allowing employees to refuse to work on orders being performed for the account of an employer whose own employees are engaged in a lawful strike (sec. 8 (b) 4).

10. Statements by employers shall be admissible in evidence before the NLRB in all cases where such statements would be admissible as evidence in a court of law (sec. 8 (c)).

11. The clause providing for 60 days' notice and a waiting period is retained, but corrected so that a strike is not illegal in case the contract is reopened in accordance with its terms. Also the penalty against employees engaging in a strike before the 60-day period is repealed (sec. 8 (d)).

12. Whenever a petition has been filed in accordance with such regulations as may be prescribed by the NLRB the Board shall investigate such petition "immediately" and "forthwith" provide for a hearing upon "not more than 10 days' " notice (sec. 9 (c) 1 (b)).

13. Employees on strike will be eligible to vote, even if they are not entitled to reinstatement (sec. 9 (c) 3).

14. To protect employees against the possibility of being held in bondage in union shops they wish to terminate, there is provision for "deauthorization" elections when requested by 30 percent of the employees (sec. 9 (e) 1).

15. While unions are still required to file reports, the form of the report is greatly simplified (sec. 9 (f)).

16. Unions are allowed 120 days of grace after the end of their fiscal years within which to file financial reports (sec. 9 (f)).

17. The non-Communist oath is continued, but applied also to employers and their officers (sec. 9 (h)).

18. The statute of limitations on the filing of charges is increased from 6 months to 1 year (sec. 10 (b)).

19. The provision prohibiting the Board from reinstating an individual if he was suspended or discharged for cause is eliminated (sec. 10 (c)).

20. Language has been changed to carefully limit the cases in which injunctive relief can be sought against unions, and provides that, even in these limited cases, only an official of our Government can seek the injunction (sec. 10 (j)).

21. Section 10 (k), which placed great obstacles in the way of settling disputes over work assignments or conflicting jurisdictional claims of unions is eliminated.

22. Section 10 (l), which required the general counsel to seek an injunction in cases arising under sections 8 (b) 4A, B, and C is also eliminated.

23. As a saving provision, the NLRB is not permitted to continue processing violations of the Taft-Hartley Act that would not be violations of the new law (sec. 102).

24. In national emergency strikes the President is authorized to appoint a board of inquiry after an injunction issues, rather than before (sec. 207 (b)).

25. The period within which a board of inquiry is to report to the President after an injunction issues is extended from 60 to 80 days (sec. 207 (c)).

26. The vote of employees on the employer's last offer before an injunction against a strike expires is eliminated (sec. 207 (c)).

27. Rearrangement of Taft-Hartley clauses concerning the composition of boards of inquiry, their pay, and their powers (sec. 207 (c)).

28. While the provision regulating welfare funds is retained, it is no longer required that there be joint control if the employer does not desire it. Criminal liability is removed if the Secretary of Labor approves the

terms of the welfare fund. Other changes meet objections in the operation of the law (sec. 302 (a)).

29. Check-off limitations are modified to permit authorization to continue from year to year unless rejected (sec. 302 (c)).

30. Addition to the law relieving unions of liability for damages in court cases to the same extent that the "struck work" clause of section 8 (b) 4A would relieve them from proceedings under section 10.

Why ECA Authorizations Should Not Be Cut Further

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of Sunday, April 2, 1950:

THE ANTICS ARE OVER

Having gotten the clowning out of its system, the House settled down to business Friday and passed a European aid bill which is subject to but one valid criticism.

The absurd Irish partition amendment, adopted last week by a vote of 99 to 66, was knocked out of the bill when House Members who take their responsibility seriously got back on the job. The final vote on this provision was 226 to 60. Also deleted from the bill in its final form was the provision which would have earmarked $1,000,000,000 for use only in the purchase of farm products in the United States. This proposal, rather appealing on its face, might have had a seriously crippling effect on the ECA operation, and the House is to be commended for finally rejecting it.

What remains as a matter of serious concern is the $250,000,000 cut in the authorization for ECA. This cut was made partly in a spirit of misguided economy and partly in response to the preposterous appeal that since the Members had cut the pork-barrel rivers-and-harbors bill they could not go back home and face their constituents without also cutting the European-assistance program.

There are at least two reasons why there is no true economy in cutting ECA. One was set forth by Representative JUDD in arguing against a proposal for a $500,000,000 reduction. He said: "If I thought that this would save the taxpayers of America half a billion dollars I would vote for it, but I am convinced that it would not save them anything, and might, indeed, cost them a great deal. In fact, I am convinced that the Marshall plan has not actually cost the American taxpayers 1 dime. If we had not adopted it we would be deeper in debt and going further in the red in this year's budget than we are, because unquestionably we would have had to increase our defense expenditures by an amount larger than the cost of this program." The other reason lies in the demonstrated fact that Paul Hoffman, ECA Administrator, is not the kind of official who spends money simply because he has it in hand. Funds not needed in the current year's appropriation were not squandered; they were carried over. The estimate for next year represents a cut of 25 percent over the present year. In other words, Mr. Hoffman is adhering faithfully to the assurances that he has given.

In the Star's judgment, Mr. Hoffman should get the full authorization requested. He has carefully pruned his own estimates, and if they should be too high he has shown that he can be trusted to hold on to the unneeded money. On the other hand, an arbitrary cut of nearly 10 percent might well serve to break down the recovery program just when it is beginning to succeed. To invite that risk is not economy; it is foolishness. The Senate will have an opportunity to restore the cut, and it ought to do so.

Withholding Taxes

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Malden (Mass.) Evening News of March 23, 1950:

WITHHOLDING TAXES

Now that the income tax accounts are squared for another year, in a manner of speaking, it is interesting to note that the withholding tax is coming under heavier fire. Vivien Kellems, a New England industrialist, has been a rebel for some time. Now James F. Byrnes, the converted New Dealer, is training his guns on the system, contending it was adopted as a wartime emergency measure and should be dropped. "The system," says Byrnes, "was established on the theory that in wartime workers were constantly moving from place to place and it would be difficult to check their returns." But the practice continues, with the result that millions do not seem to realize they are paying taxes because the taxes are withheld from their pay envelopes. If the worker paid quarterly installments out of his take-home pay, there would be such a ruckus that the demand for reduction of Government expenditures would be irresistible. Byrnes suggests that employers not now doing so should insert in workers' pay envelopes a statement showing the total amount of pay and how much has been deducted for income taxes and social security. When a worker's wife gets the slip, she will think of the many things she could have bought with the money deducted and may be moved to write to her Congressman about Government expenditures. The idea has merit. Taxes and Government extravagance will not be reduced until a majority of the people demand reductions.

The American Way

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I am enclosing an essay by Gladys Huntington of 31 Washington Street, Lawrence, Mass., on the subject The American Way. This article was submitted in the contest sponsored by the National Wood Association. The writer of this article is one of the employees in the mending room of the Pacific Mills located in Lawrence, Mass., which recently celebrated its one hundredth anniversary of its organization.

This is the subject in which every man, woman, and child in this country should be vitally interested, and I personally feel that this essay is not only educational but most interesting.

We in the United States should and must be thankful for all of the privileges that we enjoy in our American way of life. This employee has in a very excellent way stated the facts concisely and truthfully:

THE AMERICAN WAY

(By Gladys K. Huntington)

Perhaps the paragraph most often quoted from our Declaration of Independence is the following:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

Reviewing the early history of America, the thrilling story of struggle for existence and possession in a land rich with resources and opportunities seems almost fantastic when viewed in the light of present-day privileges and opportunities.

From those early years of struggle and hardship have come untold blessings to everyone fortunate enough to call America his home.

We have become so accustomed to the advantages and rights which are ours that we take them for granted.

It is only when we read and hear of what is taking place in other lands that we are truly cognizant of our great blessings.

In the last hundred years we have made steady progress toward a higher standard of working and living conditions. Revolutionary changes have taken place in our mode of life.

Where, but in America, do we find workers going to their jobs in automobiles?

Even those spoken of as in moderate circumstances come home to families where bathrooms, telephones, refrigerators, vacuum cleaners, furnaces, and even television are commonplace fixtures.

There is also an abundance of staple food and good clothing.

Still many people in America are discontented. Our struggle is no longer one of physical hardship, but rather the obstacles to be overcome are mental and moral.

In a land rich with opportunity and privileges there is no place for oppression and inequality. When America became a free and independent Nation the thought was that all men should live together and work together, in peace and brotherhood.

This is still the American way.

Never for a moment should we forget that with "life, liberty, and the pursuit of happiness" come duties and responsibilities, as well as privileges.

Perhaps first and foremost is our political duty.

To be well informed on civic and national affairs; to vote intelligently on every question presented; to study issues and candidates with open minds.

We have heard it said that "the most powerful enemies of a country are those from within." This is true of a man, as well as a nation, for it is out of the heart of man that first comes the thought that later developed into the act which will build or destroy all that we now hold dear and cherish as the American way.

United States Coast Guard Reserve

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. BONNER. Mr. Speaker, I am very interested in the United States Coast Guard Reserve, as is everyone who is at all familiar with the duties and responsibilities of that very important branch of the armed forces.

The item for the training of the Coast Guard Reserve has been deleted from the omnibus bill assertedly as an economy measure, and for no other reason.

The fact that no money has been appropriated for this organization in the past is no basis for argument that this legislation is not vital. The Coast Guard has been unable to secure this money due largely to a lack of appreciation by the Congress of the absolute necessity of maintaining a trained organization, to perform at a moment's notice, the many duties performed by the Coast Guard Reserve at the instant a national emergency is declared.

The Navy, Army, and Air Force are confronted largely with problems of expansion at the outset of hostilities while the Coast Guard must not only expand to seven times its peacetime size, but at the same instant, offer full scale police protection to all harbor areas in the United States and its possessions. The full-scale investigation of all who seek access to ships and water-front facilities, must begin immediately and cannot wait 6 months or 2 or 3 years while the reservists are again recruited and trained to perform this herculean task. In the city of Seattle, Wash., alone more than 50,000 persons were investigated and either given clearance or denied access to the very vulnerable, very vital harbor areas.

The loading of explosives must begin at once if the Army, Navy, and Air Force are to be expected to carry on a full-scale assault as even our largest battleships carry only enough ammunition for 24 hours of constant barrage.

The small-boat patrol of each harbor must begin and be maintained constantly day and night, requiring the use of thousands of men and motorboats.

The beach patrol must begin to function, furnishing enough trained men to patrol the entire coastal distance of the Atlantic seaboard, the Gulf coast, and the Pacific coast. An assignment which taxes the imagination when one considers that all these men are in a reserve status, and have no nucleus to cling to but must develop and grow instantly from no personnel to many thousands of members.

The remark has been made that it is ridiculous to expect that the Coast Guard Reserve can train men to the proficiency required on one drill night a week—and that statement is very true so far as it goes—however, it must be understood that the Coast Guard Reserve does not intend nor expect to teach men these very complex skills in 2 hours per week. The fire-prevention personnel are drawn from the underwriters and the best talent the local fire departments have to offer—the Coast Guard Reserve intelligence men are from the very cream of the local police department.

Explosive loading personnel are developed around physicists, and chemists, and ballisticians, who need only military training. These experts who are now members of the Coast Guard Reserve, are all veterans of World War II, some of both World Wars I and II, are now and have been since October 1948, busily engaged in developing explosive loading personnel, beach patrol and intelligence personnel and the many other groups so necessary at the first sign of war.

This work has been purely voluntary and no money whatever has been given them to either furnish them with training equipment, or for pay purposes as is done with all other components of the Armed Forces.

Under Public Law 810, the Coast Guard Reserve is entitled to training on the same basis as the Army, Navy, Air Force, and all other military components and it is the only military organization in existence in this country today which fought and died together with all other services, and yet received no recognition insofar as training appropriations are concerned.

The majority of the House has insisted on economy, reduction in appropriations, and I believe we all feel that we have about reached the saturation point in taxation, but it cannot be shown that to completely ignore and turn our backs upon the most vulnerable, most vital link in our chain of defense, is either economy or sound judgment.

On Italy's Water Front

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. RODINO. Mr. Speaker, under leave to extend my remarks. I include herewith the following editorial which appeared in the April 2d issue of Il Progresso.

Nothing which I may say will add to the article which is both revealing and enlightening. Those of us who one day hope to see Italy a member of the family of nations will be more fortified in that hope.

The editorial follows:

ON ITALY'S WATER FRONT

The riots and sabotage which have gripped the ports of France are spreading to Italy. These are lavishly financed, carefully prepared actions directed on a military basis by foreign military agents for a foreign power dedicated to the destruction of the Italian way of life and Italy's subjection to a totalitarian Communist dictatorship. These are not bona fide wage movements to better the conditions of Italy's dockers and seamen. These are solely actions instigated and organized by Russia in its drive to weaken Italy and the other democracies so as to conquer them the more easily in a war now being feverishly prepared by the Kremlin.

We repeat there are no Italian Communists. There are only Russian-dominated Communists in Italy who serve not their people but the enemies of the Italian Nation. This is treason and should be treated only as treason by the Government and people of Italy.

We are confident that the great mass of the Italian maritime workers are loyal to their country and devoted to democracy. Russian-paid-for saboteurs will more and more be finding it difficult to go through with their traitorous plans. Communist schemes for the sabotage of American arms shipments have already suffered some telling rebuffs. In Italy's second largest port, Naples, over 1,000 of 1,800 dockers voted to unload all cargoes, including American war material. Eight other southern Italian ports have followed the example of Naples. Among these are Bari, Brindisi, and Palermo in Sicily.

RUSSIAN HOOLIGANISM

All rowdyism, riots, and sabotage in the wake of these votes are only bought and paid for ruble performances. The Italian authorities will treat their instigators, we hope, just as ordinary spies and foreign saboteurs are treated. To allow criminal stool pigeons and ruble robots to hide behind the democratic legal system for the purpose of overthrowing it is as suicidal as it is unpardonably stupid. There is no rhyme or reason for permitting the Communist-controlled so-called labor federation to serve as an open Russian espionage agency. Such organizations and movements have nothing to do with the ideals and aspirations of trade-unionism. Such outfits are the worst enemies of free trade-unionism. Were such Communist bands are in power free trade-unionism does not exist. Government-controlled company unions have replaced the genuine trade-unions throughout Russia and its satellite areas. The first thing the Communists did when they seized Shanghai was to shoot the outstanding leaders of free labor in the Chinese metropolis.

The spring offensive of the Russian despots against Italian democracy is as much the concern of the American and all other liberty-loving peoples as was the historic electoral contests in Italy in April 1943. When the Communists were defeated then world democracy was greatly aided. Similarly, if the totalitarian tools of the Kremlin will be smashed in Italy's docks now, the forces of freedom will be vastly strengthened everywhere. And just as the democratic groups outside of Italy aided their Italian colleagues in April 1948, so they must aid their hard-pressed Italian colleagues in April 1950.

WE MUST ALL HELP

Americans of Italian origin were in the forefront of the assistance to the people of Italy 2 years ago. Il Progresso rendered distinguished and decisive service to the cause of democracy in Italy in April 1948. There is every reason to feel confident that all these forces will once again respond with enthusiasm and energy to help the fighters for freedom in Italy. Such help is indispensable. The Communists have at their disposal huge sums of Russian money for expenditures on fostering treason and sabotage in Italian ports. The democrats in Italy are themselves too poor to match this part of the giant Soviet military budget. They must, therefore, be helped from outside of Italy. This is living democratic solidarity. Without it, democracy cannot live, especially when it is under fire of Russia's heavy artillery and poison gas warriors.

Specifically and at the outset, the members of the unions on our American waterfronts in the cities where Italian ships dock should fraternize with and explain to the Italian seamen what is behind the Communist insur-

rectionary assault against the transfer of arms. There are many longshoremen and other transport workers in our midst who are of Italian extraction and who speak Italian. In general, the Italian seamen visiting our ports should be contacted, drawn into our social life and told the truth about the Communist fifth column operating in ports, like Genoa and Leghorn. Here such enlightenment can be engaged in freely. In the Italian ports, gangsters, paid by Moscow and operating behind the mask of Tovarish Di Vittorio's outfit, have succeeded in creating an atmosphere of terror and thereby preventing the workers from learning the truth.

In this connection, the International Transport Workers Federation should get into the picture and have an Italian representative here to establish an Italian seamen's center in the port of New York. This would provide immediate facilities for bringing together the membership and representatives of Italian and American transport workers' unions. The best way for promoting understanding and solidarity among the longshoremen and seamen of both countries would thus be provided. We are confident that the International Confederation of Free Trade Unions and its American affiliates, the A. F. of L. and the CIO, would do their share in the cementing of such Italian-American friendship and labor solidarity in the interest of world peace and freedom.

Ohio Oil, Coal, and Railroad Industries Injured by Heavy Imports of Petroleum and Fuel Oil

---

EXTENSION OF REMARKS
OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. JENKINS. Mr. Speaker, I have today introduced a bill to increase the import excise tax on petroleum, fuel oil, and other oil products. I shall, under leave to extend my remarks, append the bill to this statement.

Mr. Speaker, it is one thing when imports of oil have increased to such proportions that our own oil output and our own employment is severely affected. It is two things when our production of coal is severely curtailed by the unrestricted importation of competing fuel, and it is three things when our railroads are required to lay off hundreds of workers who depend on the transportation of coal for their bread and butter.

When unrestricted imports of oil are brought across our borders and the supply exceeds the demand, what do we do? We reduce our domestic output. Some States curtail output by law and even require some wells to close.

What do we do about imports when the supply exceeds the demand? Do we apply the same formula to the foreign wells as we apply to our own? We do not. On the contrary administration leaders continue to go here and there about the country crying for still greater imports, pointedly ignoring the thousands upon thousands of oil and coal and transportation workers who are forced into idleness.

In the great State of Ohio the coal industry is very important, and transportation of coal is a major source of work and income for the railroads of that State. Now we find that the coal mines are closing down and the railroads have idle equipment and hundreds of unemployed workers. Many of them are rapidly discovering that free trade is not the best policy as applied to fuel products.

The administration's trade agreement program has degenerated into a give-away program. Our diplomats pointedly ignore the cartels, the monopolies, the subsidies, the State trading and bilateral deals of other nations and continue to open wide our doors to products made by the cheap labor of foreign countries.

If the State of Ohio attempted to ship goods produced in mines or factories that paid starvation wages, exercised monopoly control, or engaged in other cutthroat and unfair labor practices, the Departments of Justice, Commerce, Labor and a number of Government commissions and committees would be investigating us within the hour. Many of the practices engaged in by our foreign competitors would not be permitted for 1 minute in this country and the products of those industries could not be sold on the domestic markets.

How is it then that we not only countenance those practices in foreign countries but we openly encourage them by freeing imports from all regulations. We have even been playing host to numbers of foreign salesmen invited here to learn more about how to capture our home markets.

The so-called escape clause in the trade agreements is a joke and is recognized as such by almost every industry. If there had existed such a thing as a true escape clause it would not have been necessary for me to introduce this bill. The Vice Chairman of the Tariff Commission which administers this escape clause has specifically stated that increased imports and decreased domestic production were foreseen when the trade agreements were negotiated with the foreign countries. Not one of the applicants for aid under this ridiculous section were able to get any redress, even though injury was recognized by the Tariff Commission in some cases.

The independent oil producers asked for an investigation by the Tariff Commission and proved that rapidly increasing imports were followed by rapidly decreasing domestic production. They proved that upward of 25,000 oil workers were out of work. They proved that oil exploration was being abandoned and many domestic wells were being closed. Not one iota of encouragement or help was given, and none has been given to this day.

The coal miners, the railroad workers, and the producers of chinaware, pottery, glassware, and numerous other important items manufactured extensively in Ohio are joining the petroleum industry in the discovery that they have been sold down the river and that there is no such thing as "escape clauses." Congressional action is the only possible solution left, and that must run contrary to the commitments of our overzealous, free-trade State Department.

This great hullabaloo about closing the trade gap is a greatly exaggerated cry of "wolf, wolf." The tables are about to be reversed, and we will soon find that our shipment of dollars abroad is greatly exceeding the amount being returned. In the month of January we exported goods that were valued at about $112,000,000 more than our imports. That is the so-called trade gap. However, the Department of Commerce states that we send abroad more than $107,000,000 per month in the form of tourist expenditures, and sums sent abroad by private individuals and institutions. Actually that leaves only a little more than $5,000,000 as the true gap. This amounts to about $70,000,000 a year, and is a far cry from the three billion which the Government orators point to as the dollar gap.

For a long while more than half of the items imported by this country have been permitted to enter free of any duty. It must be remembered that if we are to increase imports by tariff reductions, then the blow must fall on a comparatively few industries. It has fallen on some, and more will soon feel it as have the oil, coal, and transportation industries already. Our shipment of dollars abroad is now almost balanced with the shipments of dollars into this country. Soon we will be in the embarrassing position of having most of our export markets closed to us and our home market wide open to all the goods of every other nation, including Russia and all her Communist-dominated satellites.

In introducing this bill I have paid close attention to the desires and attitudes of the people of my State and the district I represent. If a cancellation or moderate renegotiation of one or two trade agreements is necessary to prevent the unemployment of thousands more of our workers in the oil, coal, and railroad industries, then it is our duty to see that it is done.

Ohio wants all the international trade that is profitable, but it must, out of all fairness to our own workers, be based on equality. Wage rates, living conditions, fair-trade practices, and other factors that bear upon costs of production must be taken into consideration so that true equality at the borders of our country is the measuring stick for our import regulations.

The bill referred to follows:

A bill to increase the import excise tax on petroleum, fuel oil, and other petroleum derivatives

Be it enacted, etc., That, because of the large quantities of petroleum, fuel oil, and other petroleum derivatives entering the United States from foreign sources and the resulting drastic curtailment of domestic employment, and because of the serious effect of such large imports of fuel and other oil on the very important coal industry of this Nation, and because, as a result of the substantial curtailment in the production, transportation, and use of domestic coal, the railroads normally transporting that product are being severely injured, and because many thousands of workers producing and transporting oil and coal are being driven out

of work by excessive imports of oil, and because it is the sense of this Congress that a weakening of our domestic economy is dangerous to our security and should be mitigated wherever possible, it is therefore declared to be the policy of this Congress that some fair and economically sound methods be devised to increase the production, transportation, and use of domestic oil and coal.

SEC. 2. To implement the policy of this act section 3422 of the Internal Revenue Code is amended to read as follows:

"Crude petroleum, 2 cents per gallon; fuel oil derived from petroleum, gas oil derived from petroleum, and all liquid derivatives of crude petroleum, except lubricating oil and gasoline or other motor fuel, 2½ cents per gallon; gasoline or other motor fuel, 3 cents per gallon; lubricating oil, 4 cents per gallon; paraffin and other petroleum-wax products, 1 cent per pound. The tax on the articles described in this section shall apply only with respect to the importation of such articles."

SEC. 3. The President is hereby directed to immediately modify any foreign-trade agreements entered into under the authority granted him by Congress in section 350 of the Tariff Act of 1930 which are affected by the passage of this act, and to proceed as soon thereafter as practicable to renegotiate such agreements. However, the taxes established by this act shall not hereafter be subject to changes under the authority of section 350 of the Tariff Act of 1930 as amended.

New Taxes Aren't Needed

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Medford (Mass.) Mercury:

NEW TAXES AREN'T NEEDED

Mr. Truman's most recent recommendations on taxation have met an extremely mixed reaction, both in Congress and throughout the country. His views on the wartime excise taxes provide a particularly good illustration of that.

The President advocates that these taxes, which are levied on a sizable list of commodities and services—including such luxuries as baby oil; commercial transportation for both passengers and freight, and long-distance telephone and telegraph charges—should be substantially reduced. However, he added this all-important proviso—that the loss in revenue must be offset by new taxes, and that he will not approve any bill which does not accomplish this plan.

The President is entitled to his views. However, the fact remains that the excise taxes—which manufacturers, retailers and others concerned say are a definite barrier to trade and employment—were strictly wartime measures which are still on the books many years after the war ended. It is also true that the goods and services they apply to are necessities in many cases, not luxuries. And it is further true that the only sound way to make up any loss of revenue their reduction or repeal would cause is to cut the cost of Government—not to pile more taxes on our overburdened individuals and businesses.

The present temper of Congress seems to be in favor of repeal of the excise taxes—even as it is against tax increases of any kind. That is the right attitude. The enormously impressive Hoover Commission reports have shown where the administrative cost of Government alone can be reduced by three or four billion a year. Congress could make no greater contribution to our economic stability and prosperity than by putting into effect a rigorous policy of economy for every Government activity and every bureau.

President Truman Fails To Handle Food Situation

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. JENKINS. Mr. Speaker, mismanagement and unsound policies are the cause of agricultural surpluses—not makeshift legislation as charged by the President. Under the Reciprocal Trade Agreements Act the President by simple administrative action can set quotas and fees that in effect will stop the importation of agricultural products that are in surplus supply in this country. Why doesn't he act? Why should he continue the do-nothing policy that permits the stealing of our farmers' domestic market by foreign competition?

The Secretary of Agriculture can by present law request studies, and findings by the Tariff Commission of the effect of the importation on our domestic economy. So far he has not seen fit to act. The recent potato scandal is an example of the failure of the administration to carry out its duties and responsibilities to the American people when they permitted potatoes to be brought in from Canada while American potatoes were dumped or converted into cattle feed.

In the formulating of a price-support program for dairy products this year the Secretary of Agriculture saw fit to ignore the recommendations of the industry and dairy farmers and long-established trade marketing practices. The result has been that the Government owned on February 28, 1950, 92,796,753 pounds of butter. I am informed that most of this butter would have remained in trade hands had the recommendations of the dairy industry been followed. The taxpayers however are saddled with a storage bill of approximately $5,000 a day on butter alone because of mismanagement and the efforts of the Secretary of Agriculture to discredit existing legislation in favor of his unsound promising Brannan plan.

The American people are entitled to know the real reasons for our agricultural surpluses. The American taxpayer should be relieved of the burden of unnecessary storage charges on agricultural stocks that have been hoarded by the administration. During a 6-month period, July to December 1949, the handling charges on stocks owned by the Commodity Credit Corporation cost the taxpayers approximately $25,000 an hour and are unquestionably much higher now. The American people want and are demanding fundamental improvements—sound policies and sound management.

One Man's Prayer

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. RODINO. Mr. Speaker, in man's darkest hour he turns to prayer. Strong as we might be with the atom bomb in our possession, and with the knowledge of the hydrogen bomb, the world is still in a troubled state. One wonders about tomorrow. Will there be peace in our time—and in the time of our children? No one knows. But no one can deny that there is yet hope—so one prays.

Herve L'Heureux and his story of Prayers for Peace should give many of us pause. It is the story of a man and his belief in the efficacy of prayer. That this movement of prayers for peace which belongs to no one sect, no particular denomination has taken such hold of peoples everywhere is indeed inspiring and encouraging. In its simple fashion, it merely urges that one be conscious of our desire for peace, of our striving for peace; and that each of us devote a minute of prayer for peace in these troubled times.

Under leave to extend my remarks, I include herewith the following article which appeared in March 19 issue of the Sunday Mirror:

MILLIONS EVERY DAY JOIN ONE MAN'S PRAYER

(By Francis Anthony)

In the hearts and in the minds of men of faith, the issues are clearly drawn: The power of the Almighty and of prayer versus the atom bomb and war, the hydrogen bomb and chaotic destruction.

In Washington each day at noon, a great, burly man bows his head in a minute of prayer for peace. He is joined, in spirit, by millions of his fellow men. Eighteen months ago he prayed alone. By his faith in a cause, his belief in an idea, he has built, single-handed, a movement that is gathering followers like an avalanche—prayers for peace.

Herve L'Heureux is no platitude-prating pacifist. A wounded veteran of World War I, he was one of the founders of the American Legion. As a career diplomat (now chief of the visa section of the State Department) with 20 years' foreign service, L'Heureux knows only too well the forces that threaten civilization today.

A famous atomic scientist who personally has endorsed prayers for peace states it this way: "It is scientifically sound to believe that the power which creates atomic energy is even greater than the product. I believe that power is faith, and that we should use

it to curb and control the destructive forces that have been revealed to men."

In October 1948, at an American Legion meeting in his home town of Manchester, N. H., Mr. L'Heureux spoke of his private custom of taking a minute each day to pray for divine guidance toward the goal of world peace. He invited fellow members to join in his prayer, wherever they might be. The result was a resolution, passed a few days later, pledging members of the organization to daily supplication—in whatever way their hearts and their religions indicated.

In the intervening months more than 500 veterans' groups have adopted similar resolutions. Nearly a hundred business firms, scores of fraternal societies, high school and college student bodies, unions and church organizations have joined the sweeping movement. The total of organizations is now more than 750, the number growing each day.

No contributions, no dues are solicited by Prayers for Peace. There is no fund-raising or publicity organization behind it. Neither is it incorporated. Prayers for Peace is Herve L'Heureux. All money expended in its propagation has come out of his pocket. In a year and a half L'Heureux has replied to more than 12,000 letters. He has typed each answer himself and paid for all postage. In fact, at Christmas, he requested and received postage stamps as gifts from his family.

Rejecting an offer of $15,000 to help promote the movement, L'Heureux told a generous friend: "You cannot buy the spirits of men. Prayers for peace must come from the heart, from the desire of Americans to show the world that we are God-loving people—rather than money-loving and materialistic."

A skeptic who finally became convinced summed it up in this one sentence: "Men have always prayed when they were in greatest trouble—and never has the race of men been in more trouble than now."

Benefits From Waterways

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I wish to include an article from the Washington Post of April 4, 1950, by the Marine News of New York, entitled "Benefits From Waterways—the Great Lakes System":

BENEFITS FROM WATERWAYS—THE GREAT LAKES SYSTEM

One of the marvels of America is its amazing rate of growth. What are the greatest contributions to this growth? One of them is the unparalleled Great Lakes transportation system, making for the economical movement of iron ore, grain, coal, and lumber. Eighty-five percent of all steel made in America is from ore transported down the Lakes and through connecting channels made navigable by the Federal Government. Since 1855, approximately 2,500,000,000 tons have been delivered from upper Lake Superior points to steel mills along Lake Michigan and Lake Erie or to ports there for short transshipment by rail to inland mills. The average 1,000-mile haul costs about 1 mill per ton-mile—lowest cost transportation in all the world. It saves money for every taxpayer in America, and more than pays for the entire Great Lakes waterway system during every single year of normal operation. The improved St. Clair and Detroit Rivers carry more tonnage than any other channels on earth. Deeper channels for deeper draft vessels for still more economical operation will add to the already incalculable value of the Great Lakes system.

(Marine News, 26 Water Street, New York, N. Y., George H. Pamer, president and publisher.)

Is It "Loose Talk"?

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Star of April 1, 1950:

IS IT "LOOSE TALK"?

In 1948 President Truman called the congressional inquiry into the Hiss case a red herring. This year he says the GOP charge that misfits and Communists still hold jobs in his administration is loose talk and that it is an attempt to sabotage the bipartisan foreign policy of the United States.

But the President and his Secretary of State have already sabotaged the bipartisan foreign policy by refusing to allow any Republican leaders to help make policy as well as to vote for it. All of the new foreign programs have been drawn up by the administration and presented to Congress and the GOP as the final answer to everything. If that is bipartisanship it is a new way of describing it.

Toward the President's repeated assurances that he has cleaned out the rats' nests of Communists and perverts in the Government, the people have adopted that old Missouri attitude and are saying, "Show us." Since the Hiss case, the Coplon case, and the Fuchs case we can be less sure than ever that the President knows what he is talking about when he says he has chased all the Communists out.

The people know that hundreds of Communists and sexual perverts have been kicked out of Federal jobs. They also know that these people were hired while President Truman and President Roosevelt were in office. When they hear charges that the Government is still infested with Reds, when they hear the Commerce Department announce that 27 poor security risks are still in the Department although not allowed to see Government secrets and when they are given no proof that the charges are not true, why shouldn't they suspect Mr. Truman's assurances?

The President says that criticism of his State Department and charges of Communist infiltration are doing irreparable harm to his Government. They may be doing irreparable harm to the administration's future political hopes, but if the charges are true much more harm is being done to the best interests of the American people than the publicity Senator MCCARTHY has been receiving.

Let the President prove he is right, that the loose talk is really loose, and the people will breathe easier. Until he does, they will keep on wondering.

Address by T. R. Green

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Mr. T. R. Green, secretary-manager of the West Memphis (Ark.) Chamber of Commerce:

It's a real pleasure for me to be up here at the Tyronza Rotary Club today, and to have so many of our friends and visitors here from throughout this part of Arkansas: we have Mountain Home, we have Marked Tree, we have Trumann and two of our own good citizens from West Memphis. So when I talk about this last frontier, eastern Arkansas finds itself in a very unique position: the position of leadership, position of untold and untouched resources which tomorrow will develop one of the greatest outstanding sections of Arkansas. Surely we all will admit that Arkansas is really the opportunity land of America. You know, as we are sitting here, I can't help but realize what a wonderful thing it is for meetings of this kind, when we can get together and talk a little bit about a few things, and I want to tell you that there's only three things of which I am absolutely certain. One of them is that America is the greatest country in all the world, has been and will continue to be; that Arkansas is by far the greatest State in America; and the third thing of which I am certain is that at 1:10, when we adjourn, I will have finished any remarks I might have to make.

So we can relax a little bit and talk for just a few moments about Arkansas. You know, in the old days, we have overlooked one of the most important phases of our whole education, and that is, teaching ourselves a little bit more about this great State in which we live. Most of us have chosen to live here, not for any definite reason, but, because we thought that the opportunity for providing the security that we needed and sought would be greater than any other place. And yet as we go along we hear so much about our friends down south of us in Texas, yet anytime a man from Texas says any more than Texas is the largest State in the Union, he immediately brands himself as a liar. And then let us go to our good people down in Florida who have citrus groves, everglades, swamps and hurricanes. It's the only State where a man puts a little flag up, and what happens—everybody nails boards over their windows, stores, and the business houses so you can't possibly tell what's going on. What about our good friends in California, we've heard a lot about them, we find out that California is a State that has grown great through its sham, through its publicity and through its photography. You know, out there in California they don't have any rain at all, while we here in Arkansas are proud of the 51-and-some-odd inches that we have each year, equally divided throughout the year, with April and September being the two greatest months for water. While in California, the last time I was out there, the first 3 months they had 31 inches of dew, and believe me folks it's rather heavy. And so I say, that Arkansas can be proud, because the encyclopedias say that it's the only State, of all the 48, around which a fence might be built and

the same standard of living maintained throughout the years, without any encroachment from our neighbors or without any dependability upon them for any of the needs for a normal living. But, we don't want that kind of a living. You know I was thinking about two friends of mine the other day, they were discussing the fact of what an early season it was to have the flies coming in here, one of them had killed five flies, three males and two females. The other friend said to him, how do you know which were the males and which were the females? He told him that three of them were on a beer bottle and two of them were on a mirror. And so I tell you that as my friends alertness and vision were indications to him of the flies' sex, there are national indications today, if you will just stop long enough to analyze them, which are very definitely along a trend, that if we don't work out the problem that's confronting us we're going to have some difficulties in carrying out our program of continued development and growth along the American way of life.

And I say this as a chamber of commerce man, the chamber of commerce organization has been in existence for some 8 years prior to the writing of the Declaration of Independence, and that organization that was founded back there in 1768 is still in existence and has never stopped functioning for one moment. And so, as a chamber of commerce man, I'd like to tell you a little bit about America. To offset some of the "isms" we've heard about we'll talk for just a few moments about Arkansas. How many of us have stopped to realize, that over at Magnetcove, 12 miles from Hot Springs, we have 109 different minerals that are known at this time? How many of you have stopped to realize that down in Pike County, we have the only diamond mine on this hemisphere? And about those diamonds, they contributed much to the winning of the war, for the simple reason that those diamonds are commercial, they are not gem stones, but they are commercial stones. In winning the war you had to have tools and diamond dies and diamond points in the drill bits to reach a perfection where there was a very definite limitation in the tolerance that you could have in providing radar, the proximity fuze and some of the other outstanding developments of this past world war. Not to forget for one moment Bauxite and Benton, Ark., two little communities over here where, in the old days, we mined, and realized that we mined, 93 percent of all the aluminum that was mined on the Western Hemisphere. This aluminum was shipped to East St. Louis where it was pulverized and powdered into what is known as aluminum oxide, from there it traveled to Pittsburgh, Pa., to be placed into aluminum ingots. From Pittsburgh it was shipped back to Alcoa, Tenn., where it was made into sheet aluminum, and from there to the various factories that processed pots and pans. So we originated aluminum through bauxite ore and then we bought the finished products, pots and pans; and out of every dollar that we spent, 60 cents of it was for transportation. Then we got a little bit different approach to this situation and decided it was best to process bauxite in Arkansas and what happened, in World War II when Hurricane Creek and Jones Mill were formed—and they're still functioning under lease to the Reynolds Metal Co.—aluminum was processed directly, and the income per family in Arkansas in that one particular area, from that one industry, was greatly enhanced and trebled in value, due to the fact that the money made by manufacturing is in the processing and not in providing the raw material. And so everything in Arkansas is just that way, it's new and the boundaries are vast and unlimited, but we've got to remember one thing, and that's why I want to pause at this time and tell you about the friend that we've lost. And that's our good friend, George. If we're going to accomplish any purposes and any missions, developing our own area, developing our own State, keeping America American, we have to do so with our own efforts.

We've got to pull together and pull hard in order to provide the continued prosperity which we are entitled to as being the dominating factor in the world today, just merely carrying the prestige of the last great democracy isn't enough, in which to sit back and forget about the hardships that our forefathers went through in order to provide us with the standard of living that we have in our day. But coming along into the present days' centuries I want to pause for a moment and call your attention to two things: First, in the years 1900 to 1930, out of the average dollar that was earned by the workingman, 65 cents of it was spent upon food, clothing, and shelter; 15 cents of each dollar he earned was made available for pleasures, such as picture shows, automobiles, radios, etc.; 15 cents out of each dollar he had left over to provide him with the necessities, such as insurance, such as investments, such as improving his plant and working over his facilities, purchasing stocks and bonds, for an income and investment purpose; and 5 cents out of each dollar was to take care of the county, State, and National taxes. From 1930 to 1939, a 9-year span, 65 cents out of the workingman's dollar earned was still spent for food, clothing, and shelter, but instead of the 15 cents for pleasures and the nice things, automobiles, radios, etc., he's lost that; instead of the 15 cents for investments, insurance, maintenance, improvements of factories and building and business, he's lost most of that; the cost of government has gone from 5 cents, in the first 30 years of 1900, to 30 cents out of each dollar, almost half of what food, clothing, and shelter cost him. That leaves only a nickel for the normal investments and improvements, building up an estate and providing a means of security for his loved ones. And so the picture had radically changed, but that's not the worst picture of all, the worst picture can be brought along a little bit further when we take and compare the total expenditures of this great Nation from its inception back in 1776 where, 169 years, until 1945, we find that our Government spent some one-hundred-and-sixty-odd-billion dollars, this figure includes both World War I and Word War II, and from 1945 through 1949, this same Government of ours has spent $190,000,000,000; more in the last 4 years than in the first 169 years of our existence. And, so I say that, we as Americans have a right to know just what is happening to our money, why it's costing so much, and what we can do as individuals to prevent this continued trend toward increased expenditures in providing more government than is necessary to operate our great Nation. We can't help but realize that if we don't take this matter into our own hands and consider it as each an individual task, that it's going to be too late. I mentioned George a minute ago and I think that this is probably the most fitting time that we can deliver George's obituary and place him in the past, in the hall of fame with the heroes that have lived and have reigned supreme, remembering that he has contributed much to the American way of life.

But, you know, to offset George, we've got a fellow now by the name of Joe, we've got to keep our eye on Joe. Joe does nothing for you and I. If a job arises Joe takes advantage of George and he's been a friend of his. When George was getting along in years and getting a little old and couldn't do much, Joe would pat him on the back and say that's fine I'll help you, but Joe was helping himself, not helping you and I. He was helping himself to the things that we had fought and maintained by our fathers and by our forefathers and that same fight is going on and it's stronger than ever because now there is no George, he's dead. We only have Tom, Dick, and Harry and when we stay with those three men, and that's you and I and our friends, we have a task definitely assigned that we can't shirk. We must continue to plan our program of activity, to let our people know, we've got to take an interest in what's going on in Washington, we've got to take an interest in our own State legislature, we've got to take an interest in the quorum court of Poinsett County, if we don't take an interest how can they tell what we would like to have them do. As actual people and taxpayers, we are stockholders in each of these governments, our own county government, our State government, and our Federal Government. And as a taxpayer and a stockholder in big business, and, gentlemen, it is big business, all three of them, if we do not take an interest how can they tell what we would like for them to do in the way of establishing a program of activity. We've got to sit back and stop and let them know exactly what we are interested in, we've got to provide for them the means with which they might express the views of their constituency, we've got to also back them up when they take a stand that is just exactly the way we would like to have it. Now, in talking about George once again let me cite you the case of the individuals who sat back and didn't busy themselves about what was going on. A few years back, the Government thought it was necessary to move in and take over Muscle Shoals, by forming the Tennessee Valley Authority. And they went in there because they wanted to help the people in that area in a way that they couldn't be helped otherwise. And they had no intention of doing anything but going in there on a temporary basis, but after a very few short years it became a known fact that the Government had taken over all the utilities in the whole area, they had taken over all the appliance firms and operated other stores in direct competition to free enterprise and private business. In so doing they found that they had to expand, and constantly, their plea has been to the various legislatures, please give us more money in order to provide the service which these people are entitled to. They first bankrupt the competitor, which is private enterprise, and then turn right around and ask for private enterprise and the taxpayer to provide them with more money with which to compete with more private enterprise. Now they've asked for 54 million with which to construct the Johnsonville steam plant. That plant is to provide additional kilowatthours for the Tennessee Valley Authority; and it's to be built by, not private enterprise, but it's to be built by the taxpayers' money, the people living out in Oregon, Idaho, Washington and California, and in the State of Maine are just as much a part of that enterprise as if it were built in their own back yard. And yet the benefits are very limited in scope, its benefits are for a chosen few which isn't the pure American way of business.

And then let's talk a little bit about this socialized medicine that we've heard so much about. If you'll read your new issue of Reader's Digest you'll find the story about Granny Didn't Live. And that's the story about the old lady that went to the doctor because she was very sick. Critically ill, she went to the doctor and the doctor looked at her name and said, "I'm sorry, I don't have you on my list." Her kinfolks, who had taken her there, explained to the doctor

that she was critically ill and didn't know where she was to go. He said he couldn't help her in any way; he had his orders and he could hardly take care of his own people. And so, Granny went from doctor to doctor and found the same thing and finally she died, merely because her medicine was paid for out of taxpayers' money, but not provided, as it would have been provided, in a free-enterprise system. You can't regiment the people into a healthy situation any more than you can regiment their thinking by providing automatons and robots to go along the streets and the highways of this great Nation. Socialized medicine is not good for England, they know it today, socialized medicine is not good for America, and never will be; it's just another means of getting a toehold into the business which has been built through the hardships and the sweat and toil of the individual in providing 18 and 20 hours of service every day to the people in their communities and getting in return a great reward of thanks and appreciation from the people because of a more complete life. Whereas in socialized medicine, as a regimented national problem, national legislative deal, it is impossible for the individual to be provided with the type of medication and the type of service they're entitled to, and for which they are willing to pay to the private man who has spent his time in providing the education, background, and experience to justify his taking care of their needs. And so, again, there is another ism that we've got, crept into our system of government, that inalienable right of an American cannot be challenged by the isms, there's no place in our whole democracy for anything other than the way our grandfathers planned and prepared the basic background of this great Nation. Now you know, back in Washington's time, he threw a dollar across the river and the world is still talking about that little job, and yet today, Washington throws millions of dollars across the ocean and no one pays attention to it. Hasn't time changed, but it hasn't changed all that much, that we can completely disregard what is taking place in Washington.

If we are to eliminate the causes and the threats to our type of Government which jeopardize this last free democracy, then we must prepare to actively expose such things as the TVA, socialized medicine, and these other encroachments on private enterprise that cannot be and will not be tolerated when the final whistle blows. I've talked to you for quite a while here to tell you a little bit about some of these things, about Arkansas, about our own county and our own State, and I don't know of anything that can be more helpful than the fact that in carrying out these things, we have often talked about England, and we referred to her socialized medicine, a good friend of mine, Clayton Rand, called attention to the fact that England was known as the mother country, and was so known because she was always expecting. In her type of government she hasn't been able to get her budget balanced, and yet we continue to pour millions and billions into their hands and coffers so that they might go ahead with their form of government, entirely foreign and entirely opposed to that which we are trying to operate. And yet we sit here while all the other people criticize our type of Government with one hand and ask that the other be filled with coin and money in order to take care of their own needs because their type of government doesn't work. And so I say it's time for us to stop, look at that mirror in the morning when we get up and say, "Now listen, fella, let's look this day right square in the face," and walk down the street and do a little about what we need to do to take care of the demands upon our business and upon our way of life. You know our public relations throughout this Nation have just about gone to pot and it's all because we, as employers, will not stop long enough to talk to the employees and get acquainted with them, let them know a little bit about our business, tell them a little bit about the problems that we have and by so working together we have an opportunity of better understanding so that our problems could be worked out. If that employer knew the employee better, the employee knew the problems of employer, you'd have none of this strike business, you'd have no labor difference, you'd have a better understanding between management and labor and we'd be able to go ahead with terrific strides in carrying out the development of this great Nation. Now as it is, you walk through your plant, you look at a man over on one corner working over a machine and you say, "Giving me 15 minutes work for every hour I pay him." Isn't that a fine situation? You smile as you go by very nicely, and as he goes by your office to punch the time clock as he goes home, he grits his teeth and says, under his breath, "That's the guy that's trying to kill me, wear me out, without any understanding of what troubles I'm having." Now that isn't right, that isn't a healthy situation, and so, with this American opportunity program, now is the time to get better acquainted, now is the time when we can stop for a moment, pause, and take inventory and say, "Well, it's not too late and I wouldn't trade places with any other three people in this whole world." But it's time for us to also stop and take cognizance of the fact, we can't just go along, it just doesn't happen, we've got to give a little bit of our time and effort, we've got to divide a little bit of our thinking for the benefit of those who have thought before us.

Logic Instead of Emotions

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Somerville (Mass.) Journal:

LOGIC INSTEAD OF EMOTIONS

When the Hoover Report was submitted to Congress, Herbert Hoover warned the American people that unless the people themselves demanded action on Federal reorganization, the report would just gather dust on some forgotten shelf.

He also warned of the danger of the report being killed by the grasshopper bites of those who say reorganization is fine for everyone else but don't disturb my agency.

Almost every proposal made by the Commission steps on the toes of some special interest group.

If the Commission's proposals were to be adjusted to take care of all special cases, nothing would be left of the Hoover reorganization program.

Perhaps no group or individual can find himself completely in agreement with every recommendation made by the Hoover Commission. Within the Commission itself there was disagreement in many areas.

Most individuals, however, find themselves substantially in agreement with all save a very few proposals.

Lately, however, serious misconceptions about some of the Hoover Commission's recommendations have arisen in the field of veterans' affairs.

To leave these uncorrected would be unfair to the Hoover Commission. Incidentally, it would be unfair to the taxpayers, including millions of ex-service men and women. It would be equally unfair to veterans organizations which have often called for better and more economical management of Government.

Before we go so far as to say that the Hoover report would dismember or do away with the Veterans' Administration, let's read the actual recommendations.

At no place in the Commission's report can be found any recommendations for either the increase or curtailment of medical benefits or other services to veterans. The Commission stated that such policy decisions were outside its terms of reference and should be the subject of congressional determination.

The Commission's recommendations covered only the better management of existing programs.

It would seem logical and sensible to wait until specific legislation affecting veterans is introduced before allowing emotional thinking to wrap our view of the Hoover blueprint for a more economical management of our Government's business affairs.

It is terribly important that we achieve as much as possible of the program for which most Americans have waited so long.

Pageant of Charity

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. RODINO. Mr. Speaker, though I am not a member of the Nutley lodge of Elks, nonetheless as a brother Elk from Newark lodge, it is with a sense of fitting but modest pride that under leave to extend my remarks I include herewith an editorial which appeared in the March 31 issue of the Nutley Sun lauding the fine, charitable, and praisewortny work of the Nutley lodge of Elks. This is indeed democracy at work:

A GENEROUS GESTURE

Nutley lodge of Elks, in a ceremony open to the public tonight, will inaugurate its Pageant of Charity which will be marked on its calendar each March hereafter. In a ceremonious fashion, the Elks will distribute $1,000 to all the churches in town, regardless of creed or color, to be used as each church sees fit in its own charity work.

The Elks gesture befits an organization with a splendid record of generosity and service to the town. Nutley lodge has but 348 members but with funds which it raises directly or through its minstrel show and other entertainments, it has financed its own work among crippled children, paraplegics, needy veterans as well as supporting the Red Cross, united drive, cancer and heart campaigns, March of Dimes, and seal sales.

Generosity is a virtue, but in times like these when one drive or campaign follows another, it behooves service clubs like householders and businessmen to budget their gifts to charity. The Elks, in setting up their Pageant of Charity under Mayor William J. Jernick as chairman, have shown a way.

Address by Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. MURPHY. Mr. Speaker, under leave to extend my remarks, I am including an address by the Honorable James A. Farley at the Common Cause, Inc., dinner which honored Federal Judge Harold R. Medina in absentia at the Waldorf-Astoria Hotel, New York City, March 14, 1950:

As some of you may know, it happens that I go to a great many dinners, nearly all of them honoring one preeminent guest of honor.

This, I think, is the most unusual dinner I have ever attended. Senator Dulles, Mrs. Paine, and the rest of us in making up the committee for this affair, had just one thought in mind—that this dinner would enable us—and you—to do honor to a brave and patient American judge. He was to have been our guest of honor. We had no sooner announced our plans and sent out the invitations than we received an avalanche of responses. They saw in this dinner a long-awaited chance to salute a man who represented all that we admired in a fine American, who had carried through a difficult job without fear or favor.

We did not presume to pass judgment on the legal points at issue in any case over which this judge has presided. But we did want to pay tribute to the character, courage, and patience he showed in doing his duty as he saw it. We did want to defend him from the vilification and smears heaped upon him by a powerful and well-organized pressure group which owes no allegiance to the American ideals of justice. We did want to show our support for the methods and safeguards of the American judicial process, in contrast to the terrible examples of totalitarian justice which are coming to us from across the sea. We felt that if American civil liberties rightly permit people to criticize our judges, certainly it is permissible for American citizens to defend them. As I said, the response to our invitation was terrific. One enthusiastic citizen wrote me that "if a dinner will give the judge some idea of how the citizens feel about his service to the country, we ought to give him one every month."

Well, here we are. And now we find that we have come together to pay honor, not so much to the man himself, but rather to the principles of American justice and decency and fair play for which he stands.

This is the way Judge Medina preferred us to do this. His withdrawal as our guest of honor was unquestionably one of the most difficult decisions he has ever had to make, and yet I am sure he was motivated by just one thought—he wanted to do what he felt was right.

The case so recently before him is still in the appellate courts, where it may remain for a long time. Until, therefore, that case comes to a final and binding decision our honored guest does not feel that he can appear publicly at an affair of this sort.

That decision does him nothing but honor and naturally we abide by it. In making it he has earned our still greater respect and admiration.

And so I say that this is an occasion unique in the history of dinners. Called to honor one man, the affair goes on in his voluntary absence and is dedicated instead to a principle which that man has exemplified. This, it seems to me, is something new and yet it is a distinctly American thing.

And so I think that it is especially important that we have met here tonight. Let us look briefly at the situation in which we meet.

It seems to me that for every eventuality there is either an old Spanish proverb, or that Confucius had something to say. This time the Chinese have a word—or rather an ideograph—for it. A Chinese friend of mine pointed out to me recently that the Chinese ideograph meaning crisis is actually a combination of two symbols—one meaning danger and another meaning opportunity.

I think that our Chinese friends have something here that merits our consideration.

That there is danger I am sure everyone of us here will agree, for we have only to look at any map to see the cost of apathy elsewhere. That this danger has lead to crisis is equally obvious. But what is most important for all Americans, and especially for those of us here, is the fact that inherent in this situation there is real and tangible opportunity.

What then are we going to do about it, the crisis and the danger and the opportunity?

We Americans have been in situations before where there was danger and crisis—and opportunity. It was so when we had to decide whether we would stand as free men or continue as tyrannized colonists. It was true when the issue was whether we could permit a power-drunk Kaiser to work his will with us on the high seas—and we have just emerged from the danger and the crisis which was Hitler, into the opportunity from which there may still be created a free world.

Now we find ourselves once more in danger, this time from an enemy more subtle, more ruthless, more fanatic than any we have ever faced. If our present situation has reached the point of crisis, it is because the time has come for Americans to challenge—wherever and whenever we find it, here or abroad—the aggressive, godless, and treasonable practices of totalitarian communism. If, once more, we have reached the point of danger and crisis, it is through no fault nor wish of the American people. It is because the masters of the politburo have exhausted both our patience and our hope that any moral and ethical relations between our nations can be possible under present conditions.

But let us remember that there is opportunity for us in this situation. One of the first, certainly one of the most vigorous and courageous groups to point out to us that opportunity is the organization which has sponsored this affair tonight—Common Cause, Inc. Ready and alert to take up the gage which aggressive communism has thrown down, Common Cause calls all Americans to battle stations. This does not mean that we want war. God forbid that it should come again. But it does mean that we dare no longer engage in wishful thinking or indifference to a very real and present danger. It does mean that we do not sleep through a crisis.

This freedom we Americans cherish—as individuals and as a Nation—was bought for us at Lexington and Gettysburg; at Chateau Thierry and Omaha Beach. We have tried vigilantly to maintain it, and the right to it of every man and woman. Nowhere was that more vividly shown than in the recent trials where every possible right was granted to the people accused of plotting the overthrow of the Government, whose privileges they demanded.

I need not recall the contrast of the tragic cases and forced confessions and mock trials on the other side of the world, where victims are held incommunicado for months, where they cannot even select their own lawyers and where there are neither free judges nor jury of any sort. Indeed some of the judges in recent totalitarian trials have been the same men who meted out Nazi justice on behalf of the Fascist governments which served Hitler. Today, thanks to such mounting evidence of the deadly danger of Soviet communism, the period of illusion and self-deception is over in America. We no longer hear Chinese Communists fatuously referred to as agrarians; we are becoming less patient with the kind of liberalism which is only a facade behind which moves the hand of the Kremlin. Thanks to the work of Common Cause, and of other fine organizations, Americans today can discern the red hue regardless of the other colors behind which it may be masked.

In spite of this awakening, it is true that this is a dark moment when things are going badly in the cold war. Liberation for the enslaved peoples looks further away than ever. Defeatism is rife, and there is a tendency now to exaggerate Soviet strength just as we used to underrate the danger. We have gone from one extreme to the other. But let us remember, as we read Churchill's book, that things looked just as black in 1940 after the battle of France, and again in 1941 after Pearl Harbor, and again a year later, until the victories of Stalingrad and El Alamein. The democracies came up off the floor to win. Even in this cold war we have won some great and unexpected victories. Think back to 1946. Stalin already had physical control of eastern Europe, of Manchuria, and much of Iran—Greece, Turkey, Italy, France, Norway, and above all, Berlin, were terribly threatened. Most of the experts had already written off western Europe. Remember what they said about the failure of the Truman doctrine in Greece even a year ago? But one of our speakers tonight will tell you how Greece looks now. Who believed in the success of the Berlin airlift in the early days, except perhaps General Clay? Each of these was a real and largely unexpected victory, and we have had another real victory of a negative sort in Yugoslavia.

In every one of these countries our position today is stronger than anyone who understood the Soviet danger dared to hope 4 years ago. Altogether these successes balance our defeat in China. In the minds of many Americans, we did not put up a real fight for China. We let the battle go by default. We really lost China when we signed away Manchuria, her only rich, industrialized province, at Yalta. Some American organizations, including Common Cause, warned against that course. We must see to it that we are not fooled again and we must increase our power to defend every foot of free territory we still hold.

Here, however, is opportunity once more. Here you good Americans have been willing to come and be counted, have wanted to signify by your presence your deep gratitude to one who has so splendidly manifested the highest American traditions. By coming here you have set your individual seal upon those American principles, of liberty, of loyalty, of decency, in which we all believe.

I believe that Common Cause places a continuing opportunity before you, and that with your help it will be enabled to go on, a constant and courageous challenge to those who would divide and undermine and betray us here. If I were to point out to you tonight the greatest opportunity which this evening offers you, it would be to ask you to lend a hand with Common Cause, and by aiding this fine organization, to do your part in flinging back into the teeth of traitors the ringing notice that we are awake, alert, and ready.

Lord Vansittart and Mr. Stimson

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald:

LORD VANSITTART AND MR. STIMSON

On motion of Lord Vansittart, former permanent undersecretary of the British Foreign Office, the House of Lords has adopted a resolution calling for continuous and resolute precautions to protect Britain from Communist infiltration of the Government. Vansittart charged that Communists are entrenched in the public service, the schools, and the British Broadcasting Corporation, a government monopoly.

He mentioned 16 known Communists in the Department of Inland Revenue and said that others were in the Admiralty and War Office, and in the Ministries of Food, Education, and Health. The desirability of cleaning the Communists out of the British Government was as clear to his fellow peers as it was to Vansittart.

Now, let us make a comparison. There is a similar problem in the United States Government. The House Committee on Un-American Affairs has turned up Alger Hiss and numerous other traitors in Government service. Currently Senator MCCARTHY has charged that some 115 persons who are or have been in the State Department are Communists or have Communist sympathies or associations. What has been the reception of such charges in certain influential quarters?

CAREER PARALLELED LORD VANSITTART'S

Henry L. Stimson has occupied a place in recent American politics corresponding in some degree to that of Lord Vansittart. We do not have any position in the State Department which can be directly related to that of the British permanent Undersecretary for Foreign Affairs. Mr. Stimson, however, was Secretary of State. He was Mr. Roosevelt's Pearl Harbor Secretary of War. In influence and length of experience in Government, his station has been not unlike that of Lord Vansittart.

Mr. Stimson has come forward from retirement with a letter to the New York Times in which he attributes various mean motives to Senator MCCARTHY and prophesies various damaging effects because the Senator has made the same allegations against the American Government that Lord Vansittart has made against the British Government. Like Vansittart, Senator MCCARTHY says that there are Reds in the Government and that they should be driven out. His reward is a snide crack from Mr. Stimson: "The man who seeks to gain political advantage from personal attack on a Secretary of State is a man who seeks political advantage from damage to his country."

Would Mr. Stimson say that similar motives govern Lord Vansittart? The British lord has had most of the honors and posts of responsibility within the grant of his country. He has a lifetime seat in the House of Lords. What more would he hope to gain by saying that there are Communists in the Government? Is it possible that Mr. Stimson would concede that Vansittart makes that charge only because he believes that Communists are injurious to the operations of government, and that he seeks to get rid of them? If Mr. Stimson will concede that to Lord Vansittart, why should he attempt to impute a different motive to a United States Senator?

DIDN'T ANSWER 176 QUESTIONS

On other occasions, Mr. Stimson was not quite so eager to volunteer his opinion or so voluble in expressing it. The congressional committee investigating Pearl Harbor sought him as a witness, for he had a very close association with the events at issue. Mr. Stimson pleaded illness and never came before the committee. He was sent 176 questions in writing by a member of the committee minority. He answered none of them. The same Senator addressed 61 additional questions to him. His answers, according to the minority, did not make up for the deficiencies in his earlier failure to respond.

Now, in upbraiding Senator MCCARTHY for what he implies is an improper way to conduct an investigation, Mr. Stimson says that the Senator should have relied on "the fully developed and tested procedure of the executive branch of the Government." That is, he should have let the executive branch render judgment on its own appointees through the Loyalty Review Board, appointed by Mr. Truman and presided over by Seth W. Richardson, general counsel of the Pearl Harbor investigation, which led to an administration whitewash.

Mr. Stimson may remember that the "fully developed and tested procedure" of the New Deal majority in the Pearl Harbor inquiry saved him embarrassment. The majority voted to deny itself access to his diary and made no effort to insist upon his answering the 176 questions which were highly pertinent to the inquiry.

Perhaps Senator MCCARTHY has not the same faith in the "tested procedures" that Mr. Stimson has.

Soil Conservation Needed

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Press of April 1, 1950:

SOIL CONSERVATION NEEDED

New dust storms sweeping priceless topsoil off unprotected farms in the western Great Plains lend a fresh urgency to calls for conservation.

A couple of years ago the Nation saw quite a flurry of books deploring in alarming tones the wasting of United States natural resources, particularly our best soils. They caused a big stir for a while, and then an almost inevitable reaction.

Critics, some of whom didn't like the gloomy mood of these books, sought to minimize the dangers. The fears were exaggerated, they said. American scientific ingenuity would keep us all in foodstuffs no matter what happened to our topsoil.

Some cited experiments indicating rich crops might be grown in the subsoil, the coarse layer lying beneath the fine topsoil so often washed or blown away. They suggested, too, that the expanding chemical age will turn up many new soil-enriching ingredients to add to present-day fertilizers. It was even hinted that subsoils thus built up would be better than the best topsoils.

It would be foolish to say these things will not happen. The chemical age is indeed producing many miracles, and tomorrow's discoveries might revolutionize agriculture speedily.

Yet the one thing all these rosy forecasts ignored was how much these possibly potent soil builders might cost. Farmers today are finding it expensive to doctor their lands with existing fertilizers on an increasing scale to offset mineral depletion caused by heavy cultivation through the war and postwar period. There's good reason to believe any new enriching elements might also prove costly.

The critics can't get away from the fact that good topsoil spread over the land to a depth of several inches is a tremendously valuable natural resource. If it is carried away by wind or water, its food-producing chemicals must be replaced or the stripped land becomes sterile and nonproductive.

None of the critics was able to refute the documented facts of soil depletion. On that point the conservationists quoted Government authorities with chapter and verse. Millions of tons of life-supporting soil lie useless today at the bottom of the oceans and bays where they were borne by silt-laden rivers. Other millions of tons have been caught up in swirling winds and deposited hundreds of miles away as worthless dust.

The dust storms of 1950 thus far are but a faint reminder of the tragic winds of the 1930's when thousands of farms were ruined. But maybe they'll help us to buckle down to the job of preserving the rich soil we still have. It's both cheaper and safer than counting on scientific wizardry to rescue us from folly.

Conservation of America's Soil Resources

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, I believe that every Member of this House is impressed with the importance of conservation of America's soil resources. I believe also that every Member who is familiar with the work of the Soil Conservation Service appreciates the significant task which this agency is performing in educating farmers and rendering technical assistance in preserving our Nation's irreplaceable topsoil.

A valued friend of mine and a sincere soil conservationist has furnished me with a copy of Chester W. Gee's Creed of the Soil Conservationist. I am pleased to insert a copy of that statement in the RECORD:

CREED OF THE SOIL CONSERVATIONIST
(By C. W. Gee)

As a soil conservationist, I believe God created the earth by His divine processes for the benefit of man, not one man, nor one generation, but mankind for all time.

I believe the Almighty gave man an inheritance of the earth, not to be hoarded as a miser guards his treasure, but to be used with wisdom and in the fullest for the perpetual benefit of all men.

I believe all of mankind, regardless of race or creed are entitled to a fair and equitable share of the earth's bounty commensurate with their own efforts. But in so believing, I hold the irrevocable conviction that man himself owes earth a debt of respect and fealty.

I believe that whatsoever a man soweth, that shall he also reap; that he who manages

his fields, pastures, woodlands, and streams with respect and wisdom shall reap the bountiful harvest and so shall his descendants, while he who uses them selfishly, thinking only of his own immediate gain, shall bring to grief his land, himself, and his children's children.

Holding these beliefs to be true, I dedicate myself to the task of helping my fellow men realize their own personal responsibility in conserving the earth for the generations which follow them. To this end I shall devote my best knowledge in guiding the efforts of those who till the soil so that the land which nurtures us shall be fruitful without end.

For truly, the earth is the Lord's and the fullness thereof, but the responsibility for its stewardship is vested in man.

Partition of Ireland

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered before the Federation of American Associations for Irish Independence on Sunday evening, April 2, 1950, in Philadelphia:

Thanks for inviting me to join you. We are here tonight because Irish blood flows in our veins. Our principal concern is to voice our objection to partition of Ireland. Our ancestors and present-day Irishmen and their friends have suffered and worked to achieve a fractional victory. We express our deep gratitude while we pledge our every effort to increase that fraction from twenty-six-thirty-seconds to thirty-two-thirty-seconds to make Ireland one. I say Irish blood flows in our veins. We could have other backgrounds and our hearts and our minds would be the same in this fight. If we believe in the right of small nations to self-determination—if we adhere to the principle that powers of government should be derived from the consent of the governed—then we might be Swedish or Czechoslovakian or Danish and we could take no stand other than the one we are advocating tonight.

We come as Americans who love our form of democracy. We bring a notable page from our history to show how our own Nation fought partition. It took 4 years of bloody civil war to fulfill Daniel Webster's words, "The Union will and must be preserved." The great Civil War President, Abraham Lincoln: "On what rightful principle may a State, being not more than one-fiftieth part of the Nation in soil and population, break up the Nation and then coerce a proportionally larger subdivision of itself, in the most arbitrary way? What mysterious right to play tyrant is conferred on a district of a country, with its people, by merely calling it a State?"

There are some issues that can be compromised to the benefit of all. This is not one of them. At this time an American Congressman has every right to voice publicly, and for possible publication, his denunciation of partition. An Atlantic Pact has been formed, of which we are a member. It commits our blood and our treasure to the common defense against communism. One of its purposes is to make democracy look attractive to that portion of the world where majority rule is denied or where it is wavering. With us Great Britain is a member of that pact. She has before her our example of granting complete independence to the Philippines. So when Americans urge the same treatment for Ireland we are consistent. When a fellow pact member is less than that, our mutual cause is damaged before the world. We have every right to tell our partner that he is causing embarrassment to his fellow members.

To put it mildly, this whole history of partition reveals a lack of sincerity on the part of the British. It was first proposed by Prime Minister Herbert Asquith in 1912. His Liberal Party had introduced a home-rule bill for all Ireland which was withdrawn because of tory pressure. This took the form of threats of force and actual mutiny by British Army brass hats. A substitute was prepared which provided for cutting off four Ulster counties. Before this went into operation World War I occurred, and the legislation was tabled while Britain went to war to secure the freedom of small nations. In fact, Premier Asquith named that as the motive when he said in the House of Commons: "We are fighting to vindicate the principle that small nations are not to be crushed * * * by the arbitrary will of a stronger and overmastering power." Home rule was promised at the end of that war, one in which 300,000 Irishmen served and 50,000 gave their lives.

Partition came up again in 1916. The uprising was brutally crushed, and its leaders were executed. It was outside pressure, mainly from this country, which finally compelled Britain to seek some solution to the Irish question. Prime Minister Lloyd George persuaded the leaders of the Irish parliamentary party to accept a home-rule bill which excluded some Ulster counties. This, he assured them, would be temporary. But at that very time he wrote a letter to Sir Edward Carson, Belfast Tory leader, "We must make it clear that Ulster does not, whether she wills it or not, merge in the rest of Ireland."

So great was the popular reaction against partition that the proposal was abandoned and the Irish parliamentary party, which had accepted it, was defeated at the polls in the next general election of 1918. In their place the people elected representatives pledged to an independent and united Ireland. These democratically elected representatives of the Irish people met in Dublin in January 1919 and established (Dial Erin) Dail Eireann, the Parliament of Ireland. In the name of the Irish Nation they declared the independence of Ireland, just as a band of patriots once did for America but seven city blocks from where you are now sitting.

It took 2 years for the British to put partition into operation, 2 years after the Irish people had willed their complete independence at the polls. When the 1920 Government of Ireland Act, partitioning the country, passed Parliament, it did not receive the vote of any Irish Member of Commons, not even those who represented what is now called Northern Ireland.

That is the manner in which partition was accomplished. It has been continued by the British, in spite of the overwhelming majority verdict at the polls that has been expressed against it. It is not a very enticing sample to show the customers who are scrutinizing the Atlantic Pact member nations. It is more in the iron-curtain pattern than western democracy.

Most of us want to forget the mistakes of yesteryears. Everyone here tonight would like to see Ireland and Britain side by side and friendly. Each needs the other, but only when both are completely free. We would like to dismiss from our minds the old British foreign-affairs strategy of divide and conquer. As a boy I read of her sweet Christian intercession in India. The Hindus and the Mohammedans would fly at each other's necks the moment Britain withdrew her troops. Well, the regiments have been called home, and Pakistan and Hindustan are engrossed in building up home industries at a merry rate. Both are doing a pretty fair job at keeping the peace without any outside assistance.

I mention this because it illustrates how the British Foreign Office, on occasion, has put their nation in the light of peacemaker or averter of internal strife. So some peoples elsewhere have this impression: Ireland is a nation composed of Catholics, all of whom are in the South, and Protestants, all of whom are in the North. Kindly Britain keeps them from committing mass murders of one another. Were it not for their sweet neighbor, Ireland would be entirely depopulated after one March 17 and one July 12. No Irishman would survive to see what use was ever made of the H-bomb. Heaven would have an immediate and tremendous housing problem imposed upon it. But Britain, full of sweetness and light, prevents all this from coming to pass.

Of course we know there is no religious problem in Ireland, while the country is preponderantly Catholic, there is religious liberty in the 26 counties when men run for office there is ofttimes less attention given to their church affiliation than is sometimes accorded to candidates here in America. Through the centuries there have been many Protestant national leaders, and more than a few of the present-day topnotchers in political life are Protestants. Moreover, they want a united Ireland. If this sentiment for unity were not so prevalent, why does Britain have to resort to the most flagrant gerrymandering witnessed anywhere on the globe? This makes a complete farce of the election system, as practiced in a democracy, on a serious question like that of nationhood.

Of this Mr. De Valera said: "If they left it to be settled in the ordinary democratic way by a majority vote of the Irish people resident in our island home, it could be settled overnight. But British statesmen apparently do not like the settlement that would ensue. Our island has therefore to be gerrymandered and remain gerrymandered into two areas. The one designed to give in perpetuity the result that British statesmen desire, though it is in violation of every principle of justice and fair play.

"The crippling of our nation by the division of its people and its resources, and the frustration of its national will, are to be of no account. The integrity of the selected gerrymandered area is now to be formally guaranteed. The supporters of British policy concentrated in the neighborhood of Belfast, are to be assured a continuing domination over the majorities in Derry City, in the counties of Tyrone and Fermanagh, and in South Armagh, South Down, and East Down.

"Having contrived and left us with an intolerable situation, British statesmen are now trying to shuffle off their responsibility. But the Irish people will not cease to hold Britain responsible. Britain has created this position. Britain has maintained this position. She has sought to consolidate it. That design must be opposed by the Irish race, by every means that is effective and just."

Something of consequence to the discussion of partition happened a few days ago in Congress and something important is about to occur in the way of a new arrival. Whatever the effect of the Fogarty amendment on foreign aid in the House, it will serve to attract greater American interest on the subject of complete Irish independence. Then, too, we hear we are to have a visitor.

We can hail him as an individual while we detest everything he stands for in his official capacity. Who can criticize my old friend, the Mayor of New York, for not greeting him at the city hall? Press photog-

raphers would record the handshake and under the picture could appear copy which might infer Irish-American acceptance, or at least indifference. When he comes to Washington, you can depend upon it I will not even say "Hello" within camera shot. But, like you, I want him to visit America, and above all, I want him to talk. Let him discuss the Irish question that is uppermost in the American mind. Here is his grand opportunity to debate partition on the radio and television. Some of us will use what influence we have with the broadcasting chains to get him time, and plenty of it.

We have the men, in and out of public life, who can present our side of the controversy. If partition can stand the white glare of American public opinion, then our visitor should be eager to use every radio and television minute that is offered to him for fair debate. There can be no way quite so important of devoting his time in America. If his cause is just, the American listener will discern that.

For in the final analysis it is our public opinion which will determine how our goodwill (and I mean really good-will) toward Britain is headed. The two nations have a common destiny from here on out. We are playing for the high stakes of freedom and democracy. And the world we seek to win and to hold says that freedom and democracy, like charity, must begin at home.

Somehow, I have a feeling tonight that we are going into the late innings of the game. Too bad we cannot have with us all those who contributed so much to Irish freedom. But I cannot help believing that victory is within sight. This is a time that calls for vigilance and making our influence felt. It will mean genuine peace within our own western nations when Ireland can take her place amongst us with dignity. It will mean a common front against today's tremendous menace—communism.

Make no bones about it, when the chips are down, Britain fights beside us. We want good relations with her, but they can never be good while there is a partitioned Ireland. We say to her, "Clean your house so that the Atlantic pact can go before the world unsullied. Take one of your blackest pages and make it white as snow. The Irish are a forgiving and patient people. But there is a point at which patience ceases to be a virtue. Part with the past and face the future united and as friends. Everything in the Irish heritage demands it. Everything in the American heritage eagerly desires it."

No other country had her boundaries set for her by a provident creator. There she is, entirely surrounded by salt water, a natural entity if there ever was one. No man-made line should ever divide her. Please God, one day soon, none shall.

Acheson's Appointments of New Deal Republicans Won't Fool Those Who Think

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. SHAFER. Mr. Speaker, the President and his Secretary of State are making frantic efforts once more to play politics with the national interest and to attempt by subtle methods to squelch discussion of our national problems. They are trying to revive the so-called, miscalled bipartisan foreign policy, which proved to be a snare and a delusion to the people of this country in 1944 and in 1948 and will prove to be so again if the Republicans fall for this line of baloney.

The mere fact that Dean Acheson, friend of Alger Hiss, should name a former New Deal-voting Republican to a high Department of State assignment does not obligate me, or any other Republican in office, to follow Mr. Acheson down his trail to ruin for America.

Dean Acheson can appoint 1, 10, or 100 nominal Republicans—of the stripe he and the Fair Dealers find useful—to high-sounding but meaningless posts in the Department of State. That is his prerogative. But if he thinks that in so doing he is going to revive the so-called bipartisan foreign policy, which strangled the Republicans and left them gagged and helpless in 1948, he has another think coming.

Foreign policy and domestic policy are so closely interrelated today that it is impossible for a logical person to swallow the administration's foreign policy without swallowing the economic absurdities it preaches at home. The foreign policy moves—spending billions in Europe, literally pouring it down rat holes—causes higher taxes in America, makes prices go up, causes people to be strapped for money, and encourages them to think of moves of how to get their hands into the Federal Treasury. A dupe may argue that he supports all these overseas projects and yet is against socialism at home, but no informed and aware person can argue that way.

A foreign policy leads to something internationally. It also leads to something domestically. The British foreign policy, which never has been bipartisan regardless of how often you hear this lie repeated, has led to one thing for Great Britain—first, the development of great social differences—chasms of economic difference—and then, straight to socialism. The British people cannot vote against socialism any more. They already have socialism, whether Churchill wins, Attlee wins, or whoever wins over there. That is because Great Britain's foreign policy has denuded the taxpayers of Great Britain. It has sapped the nation's vitality. It has given rise to pressures that made socialism inevitable there, just as our foreign policy today is giving rise to pressures that, unless stopped, will make socialism inevitable in America.

I have consistently opposed the so-called bipartisan foreign policy since the late President Roosevelt cleverly unfolded it in anticipation of the political campaign of 1944. It served in that year as a gag on Thomas E. Dewey. But Dewey did not feel the strangling hands of this bipartisan ghost fully enough. He allowed himself to become gagged with the same fallacies in 1948. A great many Members of the Republican Party, many of them no longer with us, felt the same terrific results.

Every poll taken has shown the people are overwhelmingly opposed to these huge appropriations of American money to European nations. Every poll shows the people are opposed to Communists, would-be Communists, fellow travelers, or Russian-lovers in the Department of State. Yet, we have had a succession of these small men in the very highest posts. The stream of them never seems to end. One leaves and another takes his place. Again and again and again, America has been sold short.

Yet, we hear apparently intelligent men standing around telling one another that we must have a bipartisan foreign policy. That is sheer tommyrot, utter drivel, and pure political cant. It is so fallacious, so unreasoning, so deadening, so intellectually dishonest, I cannot understand how intelligent men can fall for it.

The Republican leadership has been foolish now for 20 years. In the past 6 months, there has been a reawakening among rank-and-file Republicans and citizens who believe in America, regardless of party. That reawakening has come in spite of commentators, do-gooders, and a veritable avalanche of propaganda. At long last, Messrs. Truman, Acheson, and company see their policies slipping out of public favor.

What is the first old stratagem that occurs to them to get out of the closet, dust off, and use again? The so-called, miscalled bipartisan foreign policy. If the Republican leaders fall again for this drivel, the Republican elephant might as well lie down and die quietly.

Labor Dedicates Its Stand

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. CROOK. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the CONGRESSIONAL RECORD, I include an excerpt from the CIO Union News of Indianapolis, Ind.

Organized labor has had a very unique evolution in its dedicated efforts to sustain working conditions conducive to providing respect for the integrity of the human soul, healthful working conditions, collective bargaining, reasonable working hours, education, wholesome family life, security for the twilight years of life, and a fair remuneration for its part in creating the wealth of our Nation.

We, today, are a better and stronger Nation by virtue of organized labor. Its courageous and militant fight in behalf of the workingman has been no different from that of numerous other organized agencies given inception to preserve the rights of certain segments of our people. Organized labor was born of necessity to cope with many other agencies that too frequently were guilty of exploitation and slave labor.

By virtue of the fact that organized labor fully realizes what it has done in the way of promoting and protecting the rights of the working man and woman living in this, the greatest democracy in the world, it now proposes not to turn

back the wheels of time and partake further of the treatment netted it of the yesterdays. This fact is fully predicated by an excerpt from the CIO Union News of Indianapolis, Ind., entitled "A Word to the Wise," of which Neal W. Edwards, president of the Indiana CIO, is the author, and it reads as follows:

In labor's quest for a sound and logical solution to its social and economic problems, imposed on it by big business under the capitalistic system (free enterprise at its worst, if you please), we attempt to carefully consider and analyze the many and varied phases of the labor-versus management conflicts. On what battle front did these conflicts originate? What steps led up to the creation of these conflicts? What was the ultimate end, or was there an end?

Will there ever be an ending to this ages-old war between the two forces * * * one the producer and the other coupon clipper? I hardly think so, unless there is a complete turnabout in the present system practiced by the greedy monopolistic-minded lords of finance. Therefore, it behooves labor to strengthen its bailiwick to enforce their demands for their rightful portion of the goods they produce.

The first American workmen realized, as have those who followed in their wake, that if they were to realize even a bare subsistence from their labors, they must join hands and unite all the forces of labor under one banner. It becomes as increasingly and alarmingly apparent today (as it did to our forebears, that to get even a living wage or fair treatment from the employer can only be accomplished by the united efforts of many. It cannot be accomplished by a few or on an individual basis. Therefore, the first American workers had no alternative and the workers of today have no alternative but to band together into strong trade-unions.

LABOR AWAKENS TO ITS RIGHTS

Labor will never go back to industrial serfdom for labor realizes and justifiably so that it is the pulse of industrial might. Without labor, there would be no capital, there would be no coal mined or Chryslers built. (Some few are beginning to realize that fact.) Labor planted the wheat and milled and made it into bread. There is nothing made by man of which labor had no part. While the du Ponts and their like have their fingers in every pie to pull the juicy plums, it must be remembered that labor made the pie and has a right to a fair portion of the pie. Without labor, there would be absolutely nothing.

Much was accomplished by the first trade-unions in solving part of their problems and many advancements that labor enjoys today were gained through the courageous and united efforts of these ancestors of the present-day American laborer, who out of sheer necessity and a strong urge to see their children enjoy more benefits and opportunities than they had realized, took the steps necessary to establish a beachhead. It took real courage in those days to buck the employer and his hirelings, coal and iron police, State militias, Pinkertons, and hired strikebreakers. Some of our large corporations spent a great deal of their profits to maintain highly organized and very efficient espionage systems. During the early thirties, the La Follette investigating committee proved beyond a doubt that many corporations were spending hundreds of thousands of dollars for spies, finks, guns and ammunition, tear gas, etc. Despite all this, labor has advanced.

WHAT SOME WILL DO FOR MONEY

Much more could have been accomplished and far greater gains achieved had it not been for the traitors within labor's ranks who for personal gain, were willing to sell their fellow unionists out to the industrialists, for a few pieces of silver—blood money for the informers.

In their desire for personal gain and prestige, they were blinded and did not see the sweat dropping from the undernourished and half-naked bodies of men working long, strenuous hours under unbelievably rotten, revolting conditions. The tinkle of the silver in their hands and the promise of lucrative positions offering them further prestige, drowned out the anguished cries of the oppressed workers whose spilled blood denoted the supreme sacrifice they offered to the cause of labor. They failed to see the tears of the widows and orphans brought about by their being individuals devoid of principles. These traitorous stoolpigeons sold their souls, wrecked the unions and the lives of their neighbors and families.

A REAL UNION MAN

A real union man, whose sole interest is the betterment of mankind, wonders why anyone with the least semblance of morals or principles would stoop to this level. He knows by personal experience and his knowledge of the past history of the labor movement that his salvation and that of his children rests in his being a member of a strong union. He is aware that his everyday wants and needs will be forthcoming only when he participates jointly with his fellow workers in a valiant show of economic strength.

Loyalty to his union and the principles for which it stands are the uppermost thoughts in his mind. Little does he realize how easy it is to inflate the ego of certain individuals and how easy it is to appeal to the grasping natures of these same individuals.

The industrialist knows and uses this knowledge at every opportunity to weaken the union which he hopes to eventually break, usually by pitting one worker against another under the speed-up system, by showing favoritism with promises of job advancement, and the use of spies and finks to infiltrate labor's ranks.

THE SELL-OUT BOYS

And so it goes. When management feels labor is getting too strong economically or politically, they resort to practically the same methods, using the same type of individuals for their tools—the sell-out boys. For a few pieces of silver and the promise of political advancement, these individuals become willing tools in the hands of the financial lords. They forget their union and close their hearts and minds to the pleading from their friends and once fellow unionists, completely ignoring those who made it possible for them to be in their present position through zealous effort and smarting sacrifice, both morally and financially.

Such individuals, devoid of conscience yes, destitute of honor, little realize that should labor lose its political foothold and the advancements gained therewith, they, too, will lose their dubious position. They will be left alone with a newly awakened conscience to torment them. They will have lost the respect of their former labor associates. And the heartless industrialists who used them as tools against their own people will cast them aside as tools no longer needed.

Then these smart boys, self-esteemed shrewd politicians will learn the agonizing torment of a guilty conscience as did Benedict Arnold, the infamous traitor.

AS I SEE IT

I deem it neither advisable or necessary at this time to point the finger of guilt at any particular individual, but should it become necessary at some future date to successfully eliminate the possibilities of a complete breakdown or even the lessening of the tempo of our well-oiled machine, I certainly will not hesitate to expose them regardless of the consequence, or where the chips may fall.

We would like and do believe that the overwhelming majority of our members are honest, sincere, and militant. But in many instances each barrel, "due to pressure," has at least one bad apple. Let us not dispose of the entire barrel in order to get the one bad apple.

This is not a threat. It is a promise.

In the 1950 elections, we shall maintain our previous stand of being independent voters, owing our allegiance to neither political party. We will call on our CIO members to cast their vote accordingly, urging them and our friends to support candidates on their past record, or new political aspirants on their pledge to support liberal legislation regardless of party ties.

We have not, as some would have you believe, endorsed and supported candidates running on the Democratic ticket merely because they were Democrats. It was because ordinarily more liberals are running on the Democratic ticket than on the Republican. One needs only to check the voting records of State legislators or that of the United States Congress to find the source of the majority of our liberal votes. Despite the fact that we have a few liberal Republicans and quite a few reactionary Democrats, we will continue to toss bouquets to our friends and bricks at our enemies, either within or without our union.

Selection of Hon. Stuart Symington as Chairman of National Security Resources Board Brings Man of Proven Ability to One of Nation's Most Important Posts

---

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. EVINS. Mr. Speaker, the recent announcement by President Truman that he was calling upon his able and trusted aide, Hon. W. Stuart Symington, Secretary of the Air Force, to take over the Chairmanship of the National Security Resources Board has generally been greeted with approbation. Mr. Symington is an administrator of proven ability and through his dynamic personality and far-sighted vision has been of inestimable value in the welding of a great and unified defense force for our Nation. His elevation to the new post will give new impetus to one of the most important tasks in our national life and will further bring to our citizens the sense of security to be gained from the knowledge that the direction of our defense and security resources lies in good hands. The people of Tennessee and of the Fifth District of Tennessee hold Mr. Symington in high regard and I am pleased in this connection to ask consent that there be reprinted in the Appendix of the RECORD, a recent editorial from the Nashville Tennessean concerning Mr. Symington's appointment.

The editorial is as follows:

MAJOR TASK IN GOOD HANDS

President Truman's appointment of Secretary of Air W. Stuart Symington as chairman

of the National Security Resources Board can be taken as a sign that atomic-age civilian defense will now get the attention it deserves.

The country, we think, has been laggard in organizing to meet the different kind of war that will be experienced in the future. There has been a recognition of need for action, but a strange reluctance to face up to the job. In Washington there has been a prevailing fear that the peoples' nerves would be shaken by a candid approach to the need of preparing for atomic attacks.

Instead of being alarmed at evidence that this Nation-wide task will be undertaken without further delay, the national attitude actually should be one of approval.

As Secretary for Air since 1947, Mr. Symington has shown himself to be an efficient administrator. He has brought the Air Force up to a high standard of efficiency by the same qualities that will be helpful to the Security Resources Board.

With the ability to fuse new life into the Board, Mr. Symington can be expected to make rapid progress on an assignment that calls for understanding and administrative skill. Although his new role brings less monetary reward, it is unexcelled in importance to the security of civil and industrial life.

In all Washington circles, the new chairman enjoys the confidence that will encourage helpful cooperation. His standing with the civilian population also is of the highest, thereby paving the way to rapid progress in a field where any more delay could be extremely dangerous.

Attacks on the State Department

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles by Thomas L. Stokes, from the Buffalo Evening News:

[From the Buffalo Evening News of March 30, 1950]

THOMAS L. STOKES SAYS "CHARGES BY MCCARTHY SET NEIGHBOR AGAINST NEIGHBOR"

WASHINGTON, March 30.—Senator JOE MCCARTHY, Republican, of Wisconsin, has done enough damage to our Government and to its prestige and that of our Nation abroad in a very critical era by his wild and slanderous charges about persons in the State Department from behind the cloak of his congressional immunity.

But he has started something even more insidious and poisonous here at home. It affects the lives of people of probity and decency, their right to privacy and freedom from annoyance and persecution. And if it spreads, it could set neighbor against neighbor in a ghastly un-American fashion.

Because of the terrible significance of this modern witch hunt and because you may have overlooked what has happened here to people like yourselves—decent, law-abiding citizens, and their families—the experiences in two cases is recited, as they were told to the Senate Foreign Relations Subcommittee investigating the McCarthy charges.

Speaking in the first instance, is Mrs. Esther Caulkin Brunauer, who has served faithfully in the State Department:

"In my household there are two small children and an elderly grandmother, besides myself and my huband. We are all upset and bewildered. Since March 13 (when MCCARTHY made his charges about her) we have received anonymous telephone calls at all hours of the day and night, accompanied by threats and profanity, with such advice as 'get out of this neighborhood, you Communists, or you will be carried out in a box.'

"All of you who have families will realize the effects this has on the atmosphere of a home. You know how much you would feel it if it was happening in your home. Senator MCCARTHY may have his own reasons for what he has done and the way he has done it, but I will never be able to understand them."

Speaking, in the second instance, is Haldore Hanson, Associated Press reporter during the China-Japanese war, who has been in the State Department for 4 years. He told how in the farm community in which he lives in nearby Virginia one neighbor had called him a "Russian spy" and "that Communist."

"My latest information of this kind," he said, "concerns a meeting of a county agricultural committee at Leesburg at which a Virginia State official from Richmond denounced the growing number of Communists in Government and named me as one of them."

Mr. Hanson challenged Senator MCCARTHY to say outside what he had said about him under his congressional immunity and he would sue the Senator. But the Senator does not accept the challenge, though he said in his speech in the Senate February 20, when he began making his charges about State Department personnel that "I will not say anything on the Senate floor which I will not say off the floor. On the day when I take advantage of the security we have on the Senate floor, on that day I will resign from the Senate. Anything I say on the floor of the Senate at any time will be repeated off the floor."

[From the Buffalo Evening News of March 28, 1950]

THOMAS L. STOKES SAYS "GOP LIBERALS TAKE ISSUE WITH DRIVE ON ACHESON"

WASHINGTON, March 28.—The Senator JOE MCCARTHY Communists in the State Department flimflam has shoved the Republican Party into an obviously uncomfortable spot.

This was dramatized when one of the party's elder statesmen, Henry L. Stimson, took pen in hand to disclose the danger, both to the party and to the Nation, of the whole shabby episode in a staunch defense of Secretary of State Dean Acheson whom he commended for his "extraordinary record of able and distinguished public service." He warned his party against the little men who are seeking to make a political issue out of the attacks by the Wisconsin Republican Senator which Mr. Stimson frankly recognized as a political attack aimed at the present Secretary of State.

It was significant that his letter to the New York Times giving his views was inserted in the CONGRESSIONAL RECORD by Senator IVES, Republican of New York, a close associate of Governor Dewey who heads the more progressive and international-minded wing of the party.

This issue seems to divide the party along familiar lines.

For it is the Midwest nationalist wing of the party that set up the hue and cry against Secretary Acheson, and is whipping up the McCarthy witch hunt. Noisiest is Senator WHERRY of Nebraska, Republican floor leader, while Senator TAFT of Ohio, chairman of the party's Senate Policy Committee, has given his support to the Wisconsin Senator's still fruitless search for Communists in the State Department by revealing he had urged his colleague to push the matter "and if one case doesn't work to bring up others." This, and his statement that the reaction to the McCarthy charges seems to be good on the whole, disturbed some of the Ohio Senator's friends because of the frank political connotation.

The progressive wing of the party apparently has taken sharp issue with such an attitude. It obviously shares the opinion of Mr. Stimson who concluded his letter by saying that "this is no time to let the noisy antics of a few upset the steady purpose of our country or distract our leaders from their proper tasks.

"This is rather a time for stern rebuke of such antics and outspoken support of the distinguished public servants against whom they are directed."

The nervousness of Republicans over the position in which Senator MCCARTHY has put them was best revealed in a Senate speech by Senator SMITH, Republican of New Jersey, who placed himself timidly on all sides of the issue. He did not want it in partisan politics. He said, on the one hand, that he is supporting Senator MCCARTHY; but, on the other, he regretted to see innocent people injured. Then he urged that the rest of the proceedings be in closed session.

Who, it might well be asked, put the matter in politics?

Mr. Stimson—though he never used JOE MCCARTHY'S name—seemed to understand easily enough, and he said that "the man who seeks to gain political advantage from personal attack on a Secretary of State is a man who seeks political advantage from damage to his country." That would apply, of course, to others who are doing that. He also said:

"It is already obvious that in any test of public confidence the men of honor, in both parties, will choose to stand with the Secretary."

The President's Water Resources Policy Commission

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. HOLIFIELD. Mr. Speaker, the American Public Power Association on March 30, 1950, passed the appended resolution commending the establishment of the President's Water Resources Commission. The association also joined in the principle of deferment of major changes in water resources legislation pending the report of the Commission in December 1950.

Resolution 2

President's Water Resources Policy Commission

Whereas on January 3, 1950, the President appointed a Water Resources Policy Commission of seven members, with major instructions as follows:

"The President's Water Resources Policy Commission shall study, and make recommendations to the President with respect to, Federal responsibility for and participation in the development, utilization, and conservation of water resources, including related land uses and other public purposes to the extent that they are directly concerned with water resources. The Commission shall give consideration in particular to (a) the extent and character of Federal Government participation in major water-resources programs, (b) an appraisal of the priority of water-resources programs from the standpoint of economic and social need, (c) criteria and standards for evaluating the feasibility of water-resources projects, and (d) desirable legislation or changes in existing

legislation relating to the development, utilization, and conservation of water resources"; and

Whereas the President directed the Commission to submit its report not later than December 1, 1950; and

Whereas in a covering letter January 3, 1950, to Chairman Morris L. Cooke, of the Commission, the President said:

"In many cases, piecemeal or partial approaches to a problem as broad as water resources development tend to confuse, rather than clarify, many of the basic, underlying issues. It is essential, in my judgment, that a comprehensive study and review be made of all existing water-resources legislation and policies and that recommendations be made in the full knowledge of national needs and objectives"; and

Whereas the President, in his budget message of January 1950, said, with respect to the Water Resources Policy Commission:

"Some changes in present Federal legislation can and should be made at this session of the Congress, but major changes should be deferred until the Commission's recommendations are available": Now, therefore, be it

Resolved, That the American Public Power Association commends the establishment of the President's Water Resources Policy Commission, and recommends that consideration of legislation making major changes in Federal water-resources legislation be deferred until the Commission shall have made its report and recommendations.

The president and executive committee of the American Public Power Association are directed to cooperate with the President's Water Resources Policy Commission, and to designate committees or personnel for consultation with and assistance to the Commission.

Backing Up Our Statesmen

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks, I insert a letter appearing on the editorial page of the New York Times, published March 30, 1950. The letter is as follows:

BACKING UP OUR STATESMEN—LINCOLN'S REMARKS RECALLED REGARDING CRITICISM OF GOVERNMENT

To the EDITOR OF THE NEW YORK TIMES:

Most of us have our own petty problems and are engrossed with them. There are very few Americans who have the time, the energy, the experience, the poise, the perseverance, the intellect, the character, and the power to understand, grapple with, and solve the delicate international problems of tremendous moment which confront us today. The men responsible for reorienting our foreign policy and deciding upon national action need all of their capacities for the great work remaining before them.

Our world leadership, our national security, perhaps our existence as a powerful, prosperous, independent Nation, all require that the President and the Secretary of State devote their efforts to the uttermost to achieve and cherish just, lasting, and honorable peace with all nations. This is not a part-time task. If world government is the only alternative to world cataclysm we should decide and act before it is too late. The formulation of wise national policy requires calm, intense, deliberate thinking. Leadership, statesmanship, and vision of the highest order are indispensable lest we, leaderless like the swine described in the Bible, rush over the cliffs to destruction on the rocks and in the sea far below.

Democrats and Republicans alike have learned to relish Abraham Lincoln's quaint sayings and revere his homely but persuasive philosophy. When a congressional committee, a Senator, a Representative, an editor, indeed any man or woman, is moved hereafter to nag, badger, or attack our President and our Secretary of State solely for personal or political advantage or for any other selfish or unpatriotic motive let him pause and reflect. Let all of us heed what President Lincoln said to a committee which came to him with a complaint from the West:

"Gentlemen, suppose all the property you were worth was in gold and you had to put it in the hands of Blondin, to carry across the Niagara River on a rope. Would you shake the cable or keep shouting at him, 'Blondin, stand up a little straighter; Blondin, stoop a little more; go a little faster; lean a little more to the north; lean a little more to the south'? No, you would hold your breath as well as your tongue, and keep your hands off until he was safe over. The Government is carrying an enormous weight. Untold treasures are in their hands; they are doing the very best they can. Don't badger them. Keep silence, and we will get you safe across."

HAROLD J. BAILY.

BROOKLYN, N. Y., *March 26, 1950.*

The Economic Cooperation Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. BOLTON of Maryland. Mr. Speaker, in order that the membership of the House, as well as the people I have the honor to represent in Congress, may understand my position in reference to the $250,000,000 cut in ECA funds, I should like to give my reasons for voting for this reduction.

In the first place, Mr. Paul Hoffman, Administrator of the ECA program, reported to the House Committee on Appropriations that there was a balance of $150,000,000 from the amount appropriated for this work last year. In addition to that, we all know that many of the countries which are participants under the Marshall plan had abundant crops last year, and they have gone a long way toward rehabilitation of their war-torn countries and the need is not nearly so great as immediately after cessation of hostilities.

The Appropriations Committee has seen fit to cut appropriations all along the line, and I have been in favor of most of those curtailments. In many instances the reductions made by the committee were as much as 50 percent as was done in the appropriation for a survey and dredging of the Baltimore Harbor in my own State, the largest port of entry in the United States from a standpoint of tonnage handled. We have appropriated money under the technical cooperation program for every conceivable kind of assistance such as economic, engineering, medical, educational, agricultural, fishery, mineral and fiscal surveys, demonstration, training, and similar projects, in other words, assistance from the cradle to the grave.

I was fully in accord with the purposes of the Marshall plan in helping these stricken nations to get back on their feet economically, but I am not in favor of the American people footing the bill for the economic development for all the backward nations in the world. There must be an end to this kind of spending sometime.

I have talked with a great many people this year who were in various European countries last year. Without a single exception, they reported the people they saw were well dressed, apparently well fed, and that they encountered no shortage of food, clothing, or other necessities.

Mr. Speaker, if I am the only Member of the House who insists upon the tremendous appropriations for all kinds of hand-outs and subsidies being reduced to a point where we can balance our budget and get this country back on a sound economic basis, I intend to do it, but the vote on the $250,000,000 cut in ECA funds indicates there are many who agree with the position I have taken.

God Is Our Judge

EXTENSION OF REMARKS
OF
HON. CHRISTOPHER C. McGRATH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. McGRATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Catholic Monitor, by Joseph Marchiselli:

"He who say I love God and hates his brother is a liar." 1 John 4: 20.

I am happy I am not a Negro. Not that I would be ashamed if I were, for no one should be ashamed of how God made him. I am happy I am not a Negro because I certainly would not like to be treated like they are.

An example of how the Negro is regarded in this country was recently typified by the manner in which the FEPC bill was handled in the United States Congress. That spectacle is an indictment on the American people that will never be lived down until the end of time. Like Caesar, that bill was assassinated not only by its sworn enemies, as represented by the coalition of southern Democrats and Republicans, but also by those representatives who shouted their approval of it, but like Brutus, assisted in its death by conveniently hiding behind the labyrinthical technicalities of parliamentary procedure.

The Fair Employment Practice Act is, or was, a measure to create a commission with power to see that discrimination in employment is not used against men or women because of their color or creed. It was not to be a law to grant special privileges, but to restore to the discriminated minorities, especially the Negroes, a right given them by God and taken away from them by men—the right to live.

There are 17,000,000 Negroes in this country and the biggest percentage of these hu-

man beings are Americans by many more generations than many of the other races that make up our heterogeneous population. The preamble to the Declaration of Independence included the Negroes, I'm sure, when it said: "That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."

Let us examine our hearts and conscience and see what these high-sounding phrases have meant to these people. The last to be hired and the first to be fired, their employment consists of mostly porters, charwomen, elevatormen, track walkers, red caps, coal stokers, waiters, and all such menial jobs. They are denied entrance in many colleges and universities, so that they could not even aspire to their educational and cultural ambitions.

By denying them of the right to live we have forced them into poverty, squalor; forced them to live with two and three families in one vermin-infested apartment, where they never breathe clean air.

What has come of this economic slavery of the Negroes? What could be expected but debauchery, crime, disease, prostitution, and sex perversion. Surely, if you treat a man like a beast he will react like a beast.

If we believe in God, we must accept His teaching that He created all living creatures; that He created the black as well as the white man; that He created the world for all men to have dominion over the fowls of the air, the fishes of the sea, the beasts of the forest, and the resources of the earth.

We went to Germany to destroy Hitler and his nazism, with its philosophy of the master race, only to find its personification right in America in the manner in which our minorities, particularly our fellow Negro Americans are treated. No man is qualified to judge as to which is the superior race. Man was created not to judge, but serve God.

All believers in God, regardless of what denomination, who hate and discriminate, come in the same category as the scribes of old, who occupied the high seats in the synagogue to be seen praying, and prayed out loud to be heard, and Christ said: "Hypocrites that you are. You occupy the high seats to be seen and pray out loud to be heard, but during the week you rob the widow's pension."

To all of you who discriminate, let these words of St. Paul sink into your hearts: "If I speak with the tongues of men, and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal.

"And if I should have prophecy and should know all mysteries, and all knowledge, and if I should have all faith, so that I could remove mountains, and have not charity, I am nothing." 1 Paul 13: 1–2, Corinthians.

Mourn the Loss of Nate Robertson

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. CELLER. Mr. Speaker, I note with real regret the death of my dear friend, Nathan W. Robertson, Washington correspondent for over 25 years. This is sad news indeed, for Nate was an exemplary newspaperman, devoted always to the public interest, diligent and painstaking in his efforts to become what he was, a good and conscientious reporter.

Recognition of his ability came to him in the form of a Nieman fellowship to Harvard University in 1944, as well as the American Newspaper Guild's Heywood Broun Memorial Prize. He was a charter member of the Washington Newspaper Guild and a former vice president of the American Newspaper Guild.

Nate was a well-known figure in the House Press Gallery as well as in other Federal agencies. I have known and respected him for many years, and grew to have an affectionate regard for him when he wrote the Washington column for Labor Press Associates.

His loss will be a shock to all newspaperdom.

Our condolences go to his parents, brothers, and to his wife and children.

Charges of Communistic Influence in the State Department

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. TAURIELLO. Mr. Speaker, recently the papers have been filled to overflowing with accounts of the wild statements and shotgun tactics being used by a Member of the upper body in connection with his charges of communistic influence in the State Department.

The matter in hand is supposed to do with the actual persons employed in our diplomatic service of the State Department. However, last week this Republican Senator brought up the Amerasia case of 1945.

Five years ago this case was tried in the courts under our democratic procedure and a grand jury held that insufficient evidence existed to warrant prosecution of John S. Service, who was charged with dealing in secret documents. The matter was supposed to have ended. Mr. Service was reinstated and is now consul general in Calcutta. In other words, Mr. Service was exonerated by a jury of his peers under our democratic judicial system.

Some Republicans took occasion to accuse a personal friend of mine of mishandling the Government's side in the Amerasia case. I refer to Robert M. Hitchcock, a Buffalo lawyer, who was formerly an assistant United States attorney and a special attorney for the Department of Justice during the war.

There were charges hurled at Mr. Hitchcock, insinuating that his present association with the firm of Kenefick, Cooke, Mitchell, Bass & Letchworth, of Buffalo, was the result of Hitchcock's failing to prosecute Miss Kate Mitchell, one of the six defendants in the Amerasia case. Miss Mitchell's uncle, the late James M. Mitchell, was formerly a member of that law firm.

When questioned about this charge in Buffalo 2 or 3 days ago, Mr. Hitchcock replied that he had never met Mr. Mitchell until after he went with the firm in 1947 and that he was employed to help in the defense of the many portal-to-portal cases which were flooding the courts at that time.

Moreover, these same charges now being hurled with such abandon under the cloak of congressional immunity were brought up approximately 3 years ago. They were fully investigated at that time by a subcommittee of the House Judiciary Committee and Mr. Hitchcock's handling of the matter was fully vindicated by that subcommittee. The Congress under which that action was taken was the Eightieth Congress which was preponderantly Republican.

I have known Bob Hitchcock, personally, for many years and know him to be an able and conscientious lawyer. While with the Department of Justice, he rendered invaluable service to the Government including the prosecution of a number of cases dealing with espionage and notably the case of the Nazi spies who landed on the coast of Maine.

He is a man of integrity and fine character and, I know, is the last person to be influenced by outside pressure of any kind.

The firm with which he is now associated is an old Buffalo firm, highly respected and well thought of, not only in my home community but in legal circles throughout the country.

Certainly the attack on Mr. Hitchcock is but another degrading chapter in the Red hunt in which the Republican Party has engaged, because it has no constructive program to offer the people in this election year. Its objective is to defeat all social-reform measures by throwing suspicion on a "guilt by association" basis on all progressive groups and forward-looking citizens.

It is a shame that congressional immunity, so grossly abused by some members of the Republican Party, prevents redress to the people, such as Bob Hitchcock and others who have been smeared by such vicious name calling.

Such charges can do us a great deal of harm as it falls upon the ears of those gullible persons here at home and as it is relayed to nations abroad who look to the United States for leadership, but who have no way of learning that some members of the Republican Party are talking through their hats.

Under leave to extend my remarks in the RECORD, I insert herewith an editorial from the Buffalo Courier-Express of April 1, 1950, entitled "When Slander Strikes Home":

WHEN SLANDER STRIKES HOME

Perhaps it is just as well that the outrageous and absurd nature of Senator McCARTHY's Red hunt has been brought home to Buffalo. Senator McCARTHY and Representative DONDERO, of Michigan (who seems to operate on a political level as low as McCARTHY's own) have extended their smear-campaign to a Buffalo law firm which has numbered among its partners a President of the United States and many of the country's outstanding lawyers.

One of the junior partners in this firm is a former special attorney in the Department of Justice. Five years ago he prosecuted a case in which six persons were arrested on

charges of unlawful removal of State Department documents, allegedly in the interest of a magazine of left-wing tendencies. Among the magazine employees accused was the niece of a nationally eminent Buffalo lawyer, now dead, who was one of the principal partners in the firm mentioned. She voluntarily went before a Federal grand jury and told her story. The grand jury was convinced that she had no part in misuse of State Department documents and refused to indict her.

All this happened in 1945. Two years later, after having returned to private practice, the former Federal attorney was associated with the Buffalo firm in defending portal-to-portal lawsuits not connected in the most remote degree with the magazine case. Before the portal-to-portal litigation, the former Federal attorney had not even met the uncle of the young woman whom the grand jury cleared in the State Department documents inquiry.

Distorting such material into evidence of something or other supposedly sinister, Senator MCCARTHY continues on his silly, vicious, and slanderous course. President Truman spoke sharply, but not too sharply, when he described the Wisconsin Senator as the Kremlin's greatest asset in this country.

Address by Hon. Robert A. Taft, of Ohio, at the Maine Republican State Convention

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 4 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the senior Senator from Ohio [Mr. TAFT] at the Republican State convention in Portland, Maine, on March 31, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is stimulating for a Republican to come to the rock-bound coast of Republican Maine from the stifling vapors of the Capitol City, the home of deals of all kinds which obscure a good deal of clear American vision. The State of Maine has exceptional representation in the United States Senate. OWEN BREWSTER and I went to law school together, and I have long had the highest regard for his ability and character. In MARGARET CHASE SMITH the State of Maine has a unique privilege. She has proved to the country that a woman Senator can be as effective and as able as any man.

This year, Maine, as usual, takes the lead. Here in this convention, you open the campaign in 1950 to elect the Eighty-second Congress. Few elections have been fraught with so much significance in the future of America. In 1948 President Truman was elected on a personal platform which, if carried out, would have established a labor-socialist government in this country similar to that of Great Britain. Fortunately, the people at the same time elected a Congress most of whom had never endorsed or approved the Truman program. The Eighty-first Congress, while much more radical than the Eightieth Congress, still refused to accept the dictates of President Truman, although by a narrow majority and after a violent battle. The election was indecisive because, I believe, the people did not clearly understand the issues.

But in 1952 the people must decide whether they will elect a Congress whose policies will be guided by the principles of liberty which guided this country for 150 years, or one which will accept the Socialist proposals of President Truman. The recent Republican statement of principles and objectives says that the basic domestic issue today is liberty against socialism. It goes on to define these terms. Liberty, it says, means a free people in constant control of their government. Socialism means an all-powerful Federal Government with unlimited power to tax and spend, to direct and operate our agriculture, industry, labor, and local communities, and the daily lives of our citizens.

In the past 4 months I have traveled through the 88 counties of Ohio and visited hundreds of cities and villages, schoolhouses, industrial plants, and farms. I am confident that the people of Ohio—and they are typical of the people of America—believe in liberty, and I think I know what the essential quality of that liberty is. It is the freedom of people in every walk of life and every form of activity to think their own thoughts and carry out their own ideas; the freedom of man to have his ideas taught to others if he can convince his teachers; freedom of the press; freedom of religion. It is the freedom of each community to determine how its own children shall be educated and its health, welfare, and other local activities conducted. In a country this size it is impossible to exaggerate the importance of local self-government if we are to maintain freedom at all, for the bureaus of a central government are never responsive to the will of any considerable number of the people of different sections of this great country.

It is the liberty of men and women to choose their own occupation, and to establish and operate their own business, if they so desire, as they feel it should be operated without interference from the Government, or from labor-union bosses so long as they themselves do not interfere with the rights of others. It is the liberty which encourages every boy and girl to feel that the world is open to their abilities and their efforts, in occupation, in local politics, and in public and private life throughout the Nation.

The results of that freedom have made this country the greatest and the happiest country in the world. An essential feature of liberty is freedom from the direction of government, and particularly a central government. We have a great system of education, probably the best in the world, and it is partly socialized in our public elementary and secondary schools, but it is free because there is no central power directing it. Power is diffused among thousands of school districts and between 48 States and between thousands of private schools and colleges. Many of these schools may have entirely erroneous ideas. Some may do harm rather than good, but the net result is a great system of education with more freedom than is given by any other country. It has resulted in millions of people developing their own ideas and a general opportunity to try them out to see whether they are worth while.

This kind of freedom made the American soldiers the greatest army in the world. Certainly it was not because they were better trained, because they were not, or better disciplined. Their discipline was poor according to military standards. But they outfought the leading military nations of the world because every man was able to think for himself to meet the situation as it occurred.

So, in the field of economic progress. In every industrial plant I have visited the managers think their plant has a peculiar excellence, a new product, better morale, better machines or better methods and production lines. We are ahead of other countries because of the tremendous advance in tools and machinery and the productivity of every workman resulting therefrom. The American farmer is just as far ahead in his methods and productivity.

We are ahead because of freedom, because there are millions of people stimulated to develop ideas and free to put those ideas into effect without some bureaucratic interference. We would be far behind today if Government had owned every little industrial plant in this country as Mr. Attlee desires to have the Government own them in England. Our system has led to a production so great that it gave the basis of victory in two World Wars. It has led to a standard of living in this country two and a half to three times that of Great Britain, or in Europe.

We happen to have today a very vivid comparison with the industrial system of England. The freedom of industry in England was abused, and the importance of freedom was never realized. Monopolies were encouraged rather than competition. Government control and assistance was sought and encouraged until today it is a matter of course. Neither workmen nor management had the interest in new machinery which complete liberty of ideas gave in this country. As a result today, the British workman is getting $20 a week and the American workman $55 a week. The very measures advertised as benefiting the workman have reduced him to a life of austerity. Government control and government taxation have removed any incentive to individuals to invest their money in new plants or new machinery or new methods. And England is unable to make goods cheaply enough, even with cheap labor, to compete with American goods and earn the dollars they need.

What is the greatest enemy of liberty and its accomplishments? Obviously in America today it is the concentration of power in Washington. It is the course of these mistaken individuals who cannot abide the scattered planlessness of liberty however excellent its results, and must establish a regulated order organized to carry out the particular ends they have in mind. Already we have created in our Federal Government the greatest monopoly in the world, an institution spending $46,000,000,000 in 12 months, one-sixth of all the activity in this great country. While the people have resisted many increases of power sought since 1939, spending has gone on until by its mere size and the weight of taxation the freedom of men is limited. If the Government takes from me 20 to 50 percent of my earnings, it is depriving me of liberty to spend that money for myself. It is saying to me that the Government will select the services that I shall receive, whether I want them or not. It removes the income by which men may experiment and carry out their own ideas, and also the incentive to spend their time and their money and their ability and their genius in further improvement.

Socialism is the taking over of human activity by government. Of course socialism is a relative term. Some activities have always been socialized like public schools and the post office in this country. A few Socialists will carry their program to the complete control of all individual activity. But it is not necessary to go so far to bring an effective end to liberty. There is a point at which the growth of government so weakens the effective operation of liberty that government is forced into still greater expansion. In England they have effectively ended economic liberty. They think they can do that and still maintain individual liberty, but I doubt if a real socialistic regime can be continued in force in the economic field for many years except under a dictatorship.

It is said that Harry Truman is no Socialist. That makes little difference if all his policies lead to socialism. We are in

danger of complete Government control not only because of his policies, but because the totalitarian philosophy has affected the thinking of a lot of other people in this country who ought to know better. There was a time when men expected to solve their own problems, when they were solved by cooperative effort and local effort. Today the first thought is to turn to Washington for money and action. The organization of pressure groups has been a dangerous factor in that movement. Every pressure group, whether from business or labor or professions, concentrate their interest on Washington activity. Their paid lobbyists find it much easier to seek a Federal statute than to go out and educate the people or even their own members, to achieve by their own efforts a solution of their problems.

We have been faced in the Eightieth and Eighty-first Congresses with a detailed Truman program which would leave little freedom in the people and concentrate power in the Federal Government, greater even than that it exercised during the war. Every policy which Mr. Truman advocates means more power in Washington. Perhaps he does little realize the total effect of his own program, forced on him item by item by the political necessity of appeasing the CIO Political Action Committee.

In the first place he has been demanding the power of price-fixing, wage-fixing—in a very moderate way, of course—and allocation which means rationing. There was a time in the summer of 1947 when he referred to these powers as "police state controls." Since December 1947, he has continuously demanded these powers now spelled out in the Spence bill.

He demands the power for the Government to go into business. He supports the great expansion of government in the power business and incidental activities through Valley Authorities in every region of the United States.

He insists on the Brannan plan with subsidies to farmers and consumers and the power of government to direct in detail the operation of every farm, the number of acres to be planted to wheat, to corn, to cotton and other crops; the number of animals to be raised—hogs, beef cattle, dairy cattle, chickens.

These measures have been developed by those men who believe in economic planning, and Government control to order those plans to be carried out. They would mean a complete power in government to direct the detailed operation of industry, commerce, and agriculture. They would involve the control of labor and the allotment of jobs. If Harry Truman is not a socialist, then he simply does not understand the effect of the measures which he supports.

Then he advocates the socialization as well as the nationalization of medicine. Under his plan the Government would levy six or seven billion dollars of new taxes and put it all in the hands of a Federal bureau to set up a vast organization to employ all the doctors and hospitals in the United States to give free medical care to 150,000,000 people. All doctors would become employees of the Government and it would destroy the freedom of the medical profession which has contributed more than any other to the remedies against human illness.

Many other proposals before us extend the activities of so-called social insurance to other contingencies of life. Of course, it is not really insurance at all, but merely a plan of additional taxation to provide the cash for free handouts of all kinds of welfare service. This year's report of the Federal Security Agency says "The administration believes that comprehensive welfare services should in time be available to persons requesting them—whether needy or not—in all communities of the Nation."

Naturally enough, Mr. Truman has also advocated universal military training and is not at all fearful concerning a system which would take boys out of their education and occupations in time of peace and subject them for 12 months to the indoctrination of some bureau in the War Department.

As part of all this program, we have the necessary extension of spending and taxation. Already we are spending about 28 percent of our national income on Government. Every man works more than 1 day in 4 for Government and less than 3 days for himself. Taxes increase the price of every product the housewife buys by about 20 percent on the average so that this burden falls on millions who do not realize that they are paying taxes. It destroys the incentive of men to expand their business and their business activities and may soon leave voids which the Government will be urged to fill up with Government investment requiring more taxes. In Great Britain a tax burden of 40 percent of the national income has practically brought a stagnation of progress in industry. Even here there is doubt whether we can get the money necessary to keep up the growth of industry required to give a million new jobs every year to the young people entering the labor market and those displaced by technological improvement. Certainly, some rearrangement of taxes is required.

It is quite true that Mr. Truman does not present his program in its true light. In England the Socialists are proud of their program. They admit freely its cost in taxes and the limitation of freedom, but insist that it is worth the price. Mr. Truman's advisers despair of convincing the American people along that line. They try to play down the radical nature of the proposals they make. Powers are only to be stand-by powers to be occasionally used. The medical program is to retain the liberty of choosing your own doctor. Also, the people are not asked to pay the price. We have a deficit of $5,000,000,000 a year, and no new taxes are asked for. The people are urged to accept all the programs because they are not going to have to pay for them. They are to get something for nothing.

Each step in the past has been taken without warning of those to come. Now, at last, we have the whole program before us. We know that if Mr. Truman can elect a Congress subordinate to his will and that of the labor unions, it is not just a question of socialized medicine or economic control, it is the whole program of the hand-out state and the police state which a radical Eighty-second Congress can put into effect before the end of Mr. Truman's term.

It is important that the people be not fooled by Mr. Truman's occasional hesitations and his olive branches extended to the businessmen. There has been no repudiation of any of these policies. The only way to avoid a creeping socialism is to elect a Republican Congress in 1950 and a Republican President in 1952. The only way to get rid of the Communists in the State Department is to change the head of the Government. It can't be done with men in control who think they are only red herrings. The only way to get a judicial treatment of labor problems is to elect an impartial President. As long as Mr. Truman is there, he will sabotage whatever policy Congress may adopt as he has sabotaged the Taft-Hartley law.

The issue is clear. It is inconceivable to me that the American people would throw away a system at the very time that it has proved its ability to improve the condition of the great mass of the people to a standard of living far beyond anything the world has ever seen, and adopt a system which in Great Britain has failed to benefit the very workmen to which it promised utopia. The issue is, in fact, the issue between continued progress under liberty and a socialized state.

And liberty is the only key to real progress. The Republican Party believes that if we follow the same principles, we can secure the same improvement as in the past. There is no limit or frontier to the productive ability or the standards of living of our people. There is no reason why they should not constantly improve, providing we follow the same principles of freedom which have succeeded in the past. We are opposed to a planned economy through Federal regulation and control, but we support the policies which the Federal Government has pursued for 100 years. We insist on a sound fiscal policy to maintain the value of the American dollar and the savings and insurance policies of the people, a stability which is the base of full employment and prosperity. We favor Federal concern with every important problem—research, advice, and assistance to individuals and business and States and communities, and financial aid in those cases where the need is clearly shown and where the objective is clearly beyond the power of the State or community to achieve.

In the whole field of education, welfare, health, and housing the Federal Government must take that interest. These matters are primarily in the jurisdiction of the States and local communities, but that does not exclude an active interest on the part of the Federal Government. The Federal Government is specially concerned that there be equality of opportunity throughout this great country, particularly for every child who is born into an American family, no matter how poor the family or the community into which he may be born. I believe the American people are convinced that we are sufficiently wealthy so that we can provide a minimum decent standard of living for every family in the United States. This is the obligation recognized by most States and local communities, but all of them are not able to carry out that program, and financial help from the Federal Government can assist them in doing it.

Conclusive figures on illiteracy show that the poorer States in this Nation are not able to provide a minimum decent education for all their children after raising taxes for education in excess of the average throughout the Nation. Consequently, I favor a bill for Federal aid to education in the nature of an equalization fund to see that every child shall have a primary and secondary school education.

We have as good health as any nation in the world, and we have always undertaken to see that free medical care is furnished to those who cannot afford to pay for it, but Federal aid can make that service more complete in providing a sufficient number of hospitals and of doctors, and see that real insurance is available to those who desire to take advantage of it to spread the risk of every illness in 1 year.

I have regarded decent shelter as essential for providing minimum standards of living and supported the bill which will subsidize housing for those in the lowest income brackets.

In this whole field, it is most essential that we do not impose Federal control as a condition of Federal assistance. Administration must remain in the States and local communities. In general, the Federal Government should not be called in unless the need is clearly shown. I do not think the Federal Government should undertake any program to provide free services for those who are able to pay for them and that means the great bulk of the population. Above all, we cannot impose on Federal Government any more than on local government an excessive burden of taxation. The only way we can give free service or support to those who are not working is out of the earnings of those

Americans who are working. The burden on them must not be so great as to threaten their liberty or reduce the incentive and reward for hard work, ability, and daring.

Nor do we adopt any laissez faire principle. Federal action is often essential to maintain liberty itself in industry by preventing monopoly and unfair competition. Federal action can prevent economic oppression by setting a standard for a minimum wage. It can prevent economic inequality by some reasonable price-support program to prevent the destruction of agricultural purchasing power through forces far beyond the control of the individual or the united farmers.

Every proposal for Federal action, however, must be judged by its effect on the liberty of the individual, the family, the community, industry, and labor. Such liberty cannot be sacrificed to any theoretical improvement from Government control or Government spending.

I am convinced that the people of this country are strong believers in liberty and I have a complete faith in their decision in 1950 and 1952. That decision involves not only the future of America. Only if the American people convince themselves and convince the world that they believe in liberty can we hope to meet the aggressive ideology of communism. Communism has spread through the world because there has been no ideal to oppose it. Our leaders have been apologizing for America for 20 years. The time has come when we must spread the banners of liberty throughout the world as did our forefathers after 1776.

Address by Thomas M. Hennessey

EXTENSION OF REMARKS
OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. FURCOLO. Mr. Speaker, I know all Members will be interested in some of the remarks of Thomas M. Hennessey before the Tuesday Club in Springfield on March 21. The address follows:

Last Friday was St. Patrick's Day—a day commemorated by Irishmen everywhere as the great day of their race.

Going back to the dark dawn of our human history we find far out in the Atlantic a little island which is set apart from the populous Continent of Europe. It was then, as it is now, free from Europe's bickering politics and was inhabited by a race called the Celts. They were a mixture of bloods that came long before, it seems, from Germany, from Scandinavia, and from Spain. They were pagans and their gods were the trees, the stars, and the moon. Yet they had achieved a culture and a civilization that is the wonder of historians.

Even before the coming of St. Patrick the old Irish were living under community laws and regulations that were far ahead of the known world. Their completeness and thoroughness surprise us even today when a new law gets drawn at almost the drop of a hat. They regulated the basic elements of human conduct and consequently, there were laws of property, of contract, of agency, of bankruptcy, and of crime.

Then, also, the lawyers were expected to know the law and to abide by it themselves. When they didn't, their fines were many times more severe than those imposed on ordinary men. It seems that even in those days the lawyers had buried their laws in obscure phrases and meaningless words—"whereas, the party of the second part, when, as and if, and so on." And so only the lawyers were able to understand it. Finally, King Conor, in great disgust, reprimanded the offending lawyers and ordered that henceforth the practice of law and pleading in court should be open to everybody.

And now let us look for awhile at St. Patrick. He is a misty figure—his clear outline lost in the distance of remote centuries. His birthday even, nobody knows; nor the country of his birth; but he was born in either Scotland or France about the year 375. His name Patrick is an abbreviated form of the Roman Patricius, which indicates that his father was of high rank in the Roman Army and in the Republic of Rome. The first certain fact we have about him is that he was kidnaped when a youth, 16 perhaps, from the shores of France and sold as a slave in Ireland. The next few years he spent as a shepherd for his Irish master, tending his flocks on the green hills and resolving to come some day to convert these lovable Irish people to Christianity—to his own God of gentleness and love.

So equipped, he returned to Ireland to undertake the work of his dreams. He failed to convert his former master, but he did succeed in enrolling his two sons. Then on he went to Tara, the palace of King Laoghaire, the most important of all the Irish kings.

I think St. Patrick must be the happiest man in heaven because the pious legends of Ireland have obviously stretched the truth to make him the greatest man that ever lived.

At last the preaching career of St. Patrick came to an end and he retired to the great cathedral he had built at Armagh. After writing his biographies which, typical of his humility, he called "confessions," and after helping the people of Ireland to combine their laws and their government, he died sometime in the fifth century, probably at the age of 87. And over his body there was held a great wake—12 days and nights during which, it is reported, the sun did not set. Some reports go so far as to say that the sun did not set for a whole year. These stories at least reflect his popularity. The people of Ireland had followed him and had come to love him almost to the point of worship. Few men in the history of the whole world have won such devotion and faith from their followers.

"Lives of great men all remind us," said Henry Wadsworth Longfellow, "we can make our lives sublime, and departing, leave behind us, footprints on the sands of time." Look for a little while at the marks St. Patrick left across the centuries. His chief work was religion. And that is why we look particularly upon the contributions he has made to the religious life of his time and the people who followed him.

The history of the religion we call Christian began with the ancient Jews. Yet if we follow its history down the ages, we find a period in early times when Christianity might have been lost except for Ireland. In the Middle Ages, teachers and priests went out from Ireland to every corner of Europe to bring back again the religion which St. Patrick had taught them generations before and which slumbering Europe seemed likely to forget all about. They faithfully kept alive the fire that Patrick had kindled. And so it is, that we find Irish teachers and Irish saints in so many countries—in Italy, in France, in Germany, in Scotland, and even in far off Iceland. They were bringing back again the faith and religion that Patrick had brought them before.

And with religion went learning. Explain it as we will—but throughout the history of the world, religion has been foster mother to education and learning. And for its great accomplishments in this field, Ireland has been sometimes termed the "land of saints and scholars." It was a proud and well-reserved title during the Middle Ages, for out from its quiet, busy monasteries went preachers to awaken the hearts of mankind, and teachers to keep their minds alive. St. Patrick made of Ireland a storehouse for learning and for Christianity. From it, during the Middle Ages, came the resources that stirred and developed the minds and hearts of men.

When we mention the hearts of men, we cannot help but think of the social and domestic virtues of the Irish. And here it is that the Irishman outstrips all his competitors. His hospitality is not only a habit—it is a principle. For the stranger, for the friendless, for the hungry, and for the thirsty—he quickly finds a channel to his heart and his billfold. And it is not merely this virtue but the manner of showing it which records the charm that runs through his conduct. There is a natural politeness and sincerity in his manner which no man can mistake.

But a great part of the work of St. Patrick was in building a nation. Ireland makes St. Patrick her hero. This year she celebrated perhaps her one thousand five hundredth St. Patrick's Day—we will celebrate our one hundred and seventy-fourth Fourth of July. By comparison our Nation is but a youngster.

The history of Ireland is largely one of warfare against oppression. Beginning with the heartbreaking misunderstandings between England and Ireland, with the religious revivals of the sixteenth century, and with the cruelties of Henry VIII and Cromwell and Queen Elizabeth, the people of Ireland were frequently in trouble. Yet they worked constantly for freedom and self-government. Their list of patriots is a long one—and every generation, it seemed, furnished a leader. There was Robert Emmet, who went cheerfully to be executed. There was Daniel O'Connell, who gained a seat in England's Parliament and who bargained as a skillful statesman to secure advantages for his people. There was the great Fenian movement that spread through the world among Irishmen in every country. (As we look back on the Fenian idea, however, it was the sheerest folly, to attempt to attack an empire with a plan so childish. But it was brave.) Then there was Terrence McSweeney, who undertook a hunger strike and gave up his life as a martyr to freedom. There was the rebellion of 1916, the leadership of Eamon DeValera, and finally the establishment of the Irish Republic now recognized, even though partitioned, as an independent nation completely outside the British Commonwealth.

Today Ireland is a good country to live in. It still has its wonderful climate which makes for perpetual delight. It has begun a program of industrial and power development which is making life easier for people who will always get their living from the farms. While there is little great wealth, there is also little of the mass of terrific poverty that is besetting so many of the nations of the world today. The people as well as the country are free. There is little government interference in private living, either through excessive taxation or over-regulation. In short, the Irish in Ireland today are "doing all right, thank you."

And that's probably why, for the first time in centuries, there are more Irish coming to Ireland than leaving it. Emigration has always been one of Ireland's tragedies. Throughout the years she has seen her youngest, her pluckiest, and her healthiest leave the country to seek opportunities in different parts of the world. And they did find opportunities, especially here in America. America has been good to them as she has been good to all immigrant races who were honest and industrious. Irishmen and Irishmen's sons have gone far here. In industry, in the professions, in finance, and in government they have reached the top. And they have done it by the intelligent and indus-

trious application of the talents, skills, and virtues which originated in the teachings of St. Patrick. Now it is the responsibility of all of them to merit the confidence that others have placed in them, and by good example merit the priceless heritage that it has been their good fortune to receive.

So let us think of the great monuments we have in America—the right to think, the right to work, the right to worship. Let us expose those who believe the only monuments in this world are those to be found in the Red Square of Moscow. And finally, let us demonstrate our great sense of national loyalty and carry out to the fullest our self-imposed obligations to become still better men—to become still better Americans.

Keep Our Country Free and Independent—Go to the Polls and Vote—You May Lose a Few Minutes by Voting but You Could Lose a Lifetime of Happiness by Failing to Vote

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an address of Hon. Charles F. Sweeney, secretary of state of Ohio.

Charles F. Sweeney, Ohio's secretary of state, served four terms as a member of the General Assembly of Ohio. He attained a reputation as one of Ohio's aggressive, constructive, and progressive lawmakers. As a young man he served under Gen. John J. Pershing in Mexico, and in World War I was in the Army Secret Service checking espionage and sabotage.

As Ohio's secretary of state he has won the respect and confidence of our people by his efficient, industrious, and economical administration of that important office.

The address follows:

We are assembled here today in the spirit of good fellowship and brotherly love to celebrate a dream come true in dedicating a new home, to commend those who planned and labored long and hard to make this dream come true. It has been a long time since an idea was born by a small group of men gathered in a lumberyard, out of which grew one of the largest benevolent organizations in the world, the Fraternal Order of Eagles. Their benefits and charitable acts to those not so fortunate are many and varied. This is made possible only in a country where men are privileged to free speech and free assembly.

The task before us is clear. For our principles of action we must go back to our Constitution, to our Declaration of Independence, to our history, and to the example set by our national fathers.

As the chief election officer of the State of Ohio, I am responsible for the proper operation of the election machinery of the State and to see to it that elections are properly conducted in the various counties.

The office of secretary of state has channels of information that does not ordinarily get to the general public, and this in part is what I want to talk to you about.

I did not come here to frighten anybody; I merely want to pass along to you a few facts. People have become so complacent and have taken such a matter-of-fact attitude toward our democracy, that the danger signal is out as to just how long we can live as freemen.

J. Edgar Hoover, Director of the Federal Bureau of Investigation and the country's greatest authority on the Communist conspiracy, had this to say during an appearance before the House Un-American Activities Committee:

"The size of the Communist Party is relatively unimportant because of the enthusiasm and iron-clad discipline under which they operate. In this connection it might be of interest to know that in 1917, when the Communists overthrew the Russian government, there was one Communist for every 2,277 persons in Russia. In the United States today there is one Communist for every 1,814 persons in the country."

We have seen the White House picketed and our President debased when the policies of our form of government clashed with those of the Communist Party line, and this very thing happened to our Governor at the State house recently.

The forces of communism are running loose in the entire world today. These facts are proof of the necessity that every citizen of the United States must be depended upon to protect the interests of their families and children and to do everything possible to preserve our form of government and our great educational and religious institutions.

What can we do to combat these forces? I'll tell you what you can do. You can exercise your franchise, as the Constitution of the United States guarantees, the privilege of casting a free and secret ballot at election time.

It may be of interest to you to know that only a mere majority of the eligible voters take advantage of this privilege.

Why don't people vote? Some are too lax and indifferent. To those I say don't complain about how the Government is being run. You lost your right to criticize when you failed to exercise your right to vote. Others don't vote because they are afraid they might sometime be called for jury duty. All right, maybe you'd like it better in the Soviet Union, where they don't have any juries. If enough of you stay away from the polls we may have that system in the United States before long.

Another excuse for not voting is that there is no difference between the political parties, so what is the use. Maybe there would be a bigger difference between the parties and issues if you, who give that excuse, would vote, not only at the general elections but at the primaries, where the candidates are nominated.

Some people also have the idea that their vote won't count because there will be so many on the other side. If everybody felt that way there would be no reason for holding elections, and some dictator might as well appoint all the public officials. A lot of people consider themselves to be good citizens if they go to church, pay their taxes, live within their means, attend to their jobs, observe the laws, and don't get into fights with their neighbors. I don't believe that anyone who fails to vote can be regarded as having fulfilled all his duties of good citizenship.

A recent survey of some of the different classes shows among automobile dealers, whom you would expect to have a vital interest in political affairs, 37½ percent of them are either too busy or not interested enough to vote, and 21 percent of them were not even registered.

And here are the facts—members of the chambers of commerce, whom you would expect to be interested in maintaining our kind of government, that 24.57 percent were not sufficiently interested to exercise their franchise, and 19.35 percent of the members were not even registered voters.

The clergymen, who influence the majority of our population, 32 percent of them did not vote in the 1948 Presidential election, and 27½ percent weren't registered.

Independent grocers, who are the very grass roots of democracy, 37 percent of their members couldn't be bothered about voting, and 32 percent of all groups checked were not registered.

And the doctors, who are so perturbed about "socialized medicine," 20 percent stayed away from the polls, and 15.82 percent are not registered.

The Rotary and Kiwanis service clubs throughout the Nation have been outstanding in their work for civic betterment, yet 14 percent are not voting and 9.96 percent are not even registered.

Independent druggists, 26.67 percent are not voting and 23.53 percent are not registered.

And here's something startling—school teachers—here is a group which has the serious responsibility of leadership and of molding public opinion through the medium of education and enlightenment, yet 11.51 percent are not voting and 6.10 percent are not even registered.

It may be of interest to you to know that in the last general election a very small minority of those eligible to vote amended the constitution of the State of Ohio. When a thing like this can happen, in changing the constitution, it is time we wake up to the fact that something is wrong in our democracy.

The right to vote freely is the fundamental basis of a true democracy. Our best guaranty of keeping and preserving our country free and independent, is to guard every hour, the thing which made our country great, namely, the two-party system of government.

I am a firm believer in party politics—so much so, that in my opinion it would be a tragedy for the United States if either the Democratic Party or the Republican Party were to pass from the scene. There is a belief in some quarters that, with the radio and other kinds of high-pressure propaganda methods now available, the old type of political organization is bound for disuse or decay. Not to my way of thinking, and if it is true, the fact should be deplored by every thoughtful American citizen.

The great contribution of the political parties to our way of life is that it has allowed the United States to avoid the destructive blight of government by minority.

The two great political parties help to keep the United States a free Nation because they promote national unity. Without them, it is easy to see how a lot of geographical or sectional political movements might spring up.

If the party government, and especially the two-party system should crumble in this country, then the United States will be at the mercy of every organized minority, every ambitious demagogue, every radio spellbinder, and every political crackpot who comes along. They will spring up overnight and take over control of the Government, and when that happens, it will be a sorry day for the majority of wholesome and fair-dealing American citizens.

Under the two-party system of government we have done well for over 150 years. We are the freest, the best governed, the most prosperous country in the world and the two-party system made it so, and the two-party system will keep it so. It behooves all of us, who are eligible to vote, to exercise our franchise by voting at every election. This way—and this way only, can we be assured of maintaining our kind of government.

Any person able to say "I am an American" should be the proudest person in the world.

The privilege of being a citizen of the United States has been won for us by almost

175 years of suffering and blood. It has taken five great wars to establish the Government of the United States and to maintain it throughout the years.

Deep down in my heart there is this realization that we have a wonderful land, and I am trying to get my fellow Americans to study it a little bit and to understand it a little more and see if we haven't some responsibility as citizens of the greatest country in the world.

I would like to conclude by saying: What kind of an America would you like to live in tomorrow?

My friends, to keep our country free and independent, all you have to do is exercise your franchise, and go to the polls and vote. You may lose a few minutes time by voting, but you could lose a lifetime of happiness if you don't!

Labor Leader's Eulogy of Hon. Mary T. Norton, of New Jersey

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. HART. Mr. Speaker, in The Wash Line, official publication of Laundry Workers, Cleaners, and Dyers International Union, Local No. 284, of Essex and Hudson Counties, N. J., a splendid tribute to Hon. MARY T. NORTON, Representative from the Thirteenth District of New Jersey, is paid by Mr. Winfield S. Chasmar, president of the local. Under permission to extend my remarks, I am happy indeed, to append this expression of appreciation to Mrs. NORTON for the aid she has extended to labor throughout her long career in the House:

LOCAL 284 SALUTES MRS. MARY T. NORTON—RETIRING MEMBER OF CONGRESS HAILED AS "LABOR'S FRIEND"

(By Winfield S. Chasmar, president, local No. 284)

It was with a feeling of deep personal regret that I read the decision by MARY T. NORTON to climax her career as a Member of Congress. This means that Mrs. NORTON will not seek reelection in the Thirteenth District which she has served for 25 years.

In view of her long record of championing labor's cause in Congress, I feel that we should pay tribute to this grand lady through the medium of our union publication, the Wash Line.

I have known Mrs. NORTON for many years, and her long record of valuable service to the cause of organized labor, plus her admirable qualities of leadership, have made a lasting impression upon me. On many occasions I have received the cooperation and assistance of Mrs. NORTON in legislative matters affecting our own membership.

In endeavoring to heap praise upon Mrs. NORTON, I can think of no better tribute than to review her long record in Congress.

Through the years since labor first realized its potentialities and organized on a national basis, there has been in the opinion of many no better friend of labor and stancher supporter of its cause in the Halls of Congress than Representative MARY T. NORTON. Elected to the House of Representatives in 1924, Mrs. NORTON served on the Labor Committee as one of its outstanding members until 1937, when she was made its chairman, upon the death of Representative Connery.

As the new chairman of this important committee—which was one of the outstanding cogs in the legislative machinery of the Roosevelt administration—Representative NORTON found her first real opportunity to serve in a constructive way the cause of labor in which she believed so sincerely.

Both during his campaigns and following his election in 1932, President Roosevelt had advocated higher wages and shorter hours for the working men and women of our Nation. Representative NORTON was selected by the Democratic administration as the medium through which the campaign promises could be effectively realized. What an excellent job she did is one of the notable chapters in the history of labor's progress during 18 years.

BATTLE FOR STANDARDS ACT

Admitting that it is the outstanding act of her legislative career and the one in which she gained the greatest pleasure, Mrs. NORTON in 1937 sponsored the Fair Labor Standards Act, more familiarly known as the wage-and-hour law. Recommitted to the House on December 17 of that year, after a full week of discussion on the floor, from which Mrs. NORTON was never absent for a minute, the bill was, under her leadership, again considered by the Labor Committee and reported favorably to the House April 21, 1938. Blocked by the Rules Committee from bringing the bill to the floor of the House for consideration, Mrs. NORTON placed a petition on the Speaker's desk to discharge the measure from that committee.

Evidence of the support she gathered for the petition and her bill is shown by the fact that in only 2 hours and 22 minutes (record-breaking speed), the 218 signatures for the petition, which would permit the bill to again be considered in the House, were obtained.

The bill came up and the Fair Labor Standards Act was passed in the House, May 24, 1938, by a vote of 314 to 97 approved, and the conference report (joint House and Senate) about 3 weeks later by a majority of 202.

This bill established a graduated minimum-wage scale of 25 to 40 cents per hour and a similarly graduated workweek of 44 to 40 hours.

Although Mrs. NORTON had encountered numerous discouragements during the consideration of the legislation, she kept uppermost labor's interests, believing that the time had arrived when the laborer in this country must be recognized and given an opportunity for a decent standard of living.

The morning after the bill was first recommitted, President Roosevelt called Mrs. NORTON and, believing she would be completely discouraged by the turn of events, inquired what she intended to do, to which the congresswoman replied, "Mr. President, I am going to give you a bill." She never wavered from that course and by her sponsorship of the Fair Labor Standards Act gained the gratitude of labor. President Roosevelt joined in calling her "Labor's Friend."

Known as labor's "Bible," the Fair Labor Standards Act placed a ceiling on hours and a floor on wages and all constructive labor legislation since that time has incorporated the basic principles of the act.

Labor assumes Mrs. NORTON's name will ever be associated with labor's first gains on a national basis.

PROTECTED ACT

Through all the years Mrs. NORTON has worked to protect the act, and, as chairman of the House Labor Committee from 1937 to 1947, she guarded zealously the gains made by labor. During that period numerous bills were introduced which would have weakened the law, but none was reported from the Labor Committee, and, finally, when any such measures were introduced in the House, they were so drafted by their authors so as to bypass the Labor Committee and referred to other committees of the House, where labor did not have so stanch a friend. Representative NORTON protested this action herself, declaring in the House that the Labor Committee had "honorably fought for legislation we considered to be for the best interests of the country" and asking that the House "deal with the Labor Committee as you would with any other committee of the House." Labor's enemies knew in the chairman of the House Labor Committee they had a foe whom they could not sway or conquer.

This woman's great work was not yet over.

Mrs. NORTON has been ever cognizant of the needs of the workers of the country, and believing that the 40 cents per hour minimum wage adopted in 1938 was far too small and completely out of line with rising living costs, Representative NORTON in subsequent Congresses introduced legislation to increase the minimum hourly wage to at least 75 cents, and in the Eighty-first Congress offered legislation that established the 75-cent rate.

As a member of the Labor Committee, she helped to sponsor the so-called "Magna Carta of Labor," the National Labor Relations Act, and later when amendments were offered in the House, to practically destroy the statute, Mrs. NORTON was almost alone responsible in blocking their passage. That the act remained intact through all her years as chairman of the Labor Committee is evidence of her keen leadership in behalf of labor.

HER OPINION OF HARTLEY

When, in 1946, the Republicans gained a majority of the Congress and Representative Fred Hartley assumed chairmanship of the Labor Committee, Mrs. NORTON resigned from the committee, stating that she "could not serve with a chairman for whom I have no respect." She further said that her reason for resigning was that "while I was chairman of the committee the gentleman who is now chairman and who talks about labor as if he knew something about it, attended exactly six meetings in 10 years."

When the Taft-Hartley bill was first considered in the House, Mrs. NORTON spoke out against it, deploring what she termed the attempt of Congress to strangle labor and accusing "labor baiters" and "labor haters" in the House of forgetting "the great war record of labor, without which it would have been impossible to win the war."

Mrs. NORTON was one of the first to remind other Members of the House of the great part which labor had played in victory. Feeling that all too few people realized that victory in 1945 would not have been possible without labor's devotion, Representative NORTON helped to lead the fight against the Taft-Hartley bill, voting against it herself and working among her colleagues, urging them to oppose it also. Terming it "a retreat—not just a step backward—but a wholesale retreat to the day when labor had no rights," she predicted on the floor of the House the defeat of the Congress which adopted the Taft-Hartley Act. How accurate was her prediction is a matter of record in political annals. A Democratic Congress was elected in 1946.

In the campaign of 1949 in her own congressional district and nationally, Representative NORTON advocated the Taft-Hartley Act repeal and promised to support legislation to abolish the act. During the first session of the Eighty-first Congress the "watered-down" Wood bill was introduced in the House which would have changed some provisions of Taft-Hartley, but would not have repealed it outright. Mrs. NORTON voted against the measure, feeling that the only solution to the "strait-jacket" in which labor found itself was entire repeal of the Taft-Hartley Act. When the Wood bill failed of passage, she

voted to recommit the legislation to the Labor Committee.

The Taft-Hartley Act is still law. Its fate depends on the congressional election next November.

Untiring foe of compulsion and advocate of voluntary methods to settle labor disputes, Representative NORTON has taken a deep personal interest in legislation which would insure voluntary and free action in labor problems. For example, she sponsored in the Seventy-seventh Congress a bill which provided specifically for voluntary mediation of disputes in defense industries. She believes that labor is capable of solving its own problems intelligently without the compulsory features of the Taft-Hartley law.

Recognized as an authority on labor and its problems, Representative NORTON was appointed in 1945 by President Truman as an alternate delegate and adviser from the United States to the International Labor Organization in Paris. The outstanding part Mrs. NORTON played in these deliberations is well known and admired by those associated with her in this great movement.

The Congresswoman has always been an opponent of discrimination and has led the fight for the establishment of a permanent Fair Employment Practices Commission. Author of H. R. 2232 in the Seventy-ninth Congress, which prohibited discrimination in employment because of race, creed, color, and national origin, she has exerted every means within her power to have FEPC reestablished by legislative statute after the termination of the first Fair Employment Practices Commission created by Executive order. Stymied by the Rules Committee from bringing H. R. 2232 to the floor, she again introduced similar legislation in subsequent Congresses. She is untiring in her efforts to create a new FEPC, and has often hit the headlines with the scathing tongue-lashing she has given congressional opponents from the South.

Known as an advocate of tolerance in all fields, Representative NORTON has sought to eliminate discrimination because of race, creed, color, and national origin, not only in employment but in many phases of our national life. One of her outstanding acts of the first session of the Eighty-first Congress was her introduction of H. R. 3199, a bill which provides that the payment of a poll tax shall not be prerequisite for voting in a primary or other election for national officers. Her bill was adopted in the House July 26, 1949, by a vote of 273 to 116. If finally enacted into law, MARY NORTON will be regarded as responsible for an epic advance in the democratic processes of the Nation.

Chasing Chameleons

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a very important article by the noted writer, Freda Utley, which appears in the current issue of Human Events:

CHASING CHAMELEONS

(By Freda Utley)

The chameleon is a species of lizard which protects itself by its power to change the color of its skin so as to become indistinguishable from its environment. According to the dictionary, it also has a projectile tongue and moves slowly. Except for their demonstrated ability to move fast many of those whom Senator MCCARTHY is endeavoring to track down and prove to be Communists could very well meet the definition of chameleons. The Senator from Wisconsin, whose boldness is equaled only by his ignorance of the magnitude of the task he has set himself, must feel that he is in a nightmare in which his quarry continually eludes him, or changes its appearance as soon as he catches it.

Those who only yesterday were joining Communist fronts, advising the administration to place its trust in Stalin, telling the public in speeches, books, and articles that the Russian leader was an ever-loving friend of peace and democracy, and in general deluding the American people as to the nature of the Soviet regime, are today quite otherwise engaged. Either they are fighting a battle of words with the Soviet representatives in the United Nations, or giving advice as to how to contain communism, or shaking their fists at the Kremlin from behind their desks in the State Department. And if rude men like MCCARTHY press them concerning their records they can reply in Dorothy Kenyon's words:

"I do not deny that my name may have been used, even at times with my consent, in connection with organizations that later proved to be subversive but which, at the time, seemed to be engaged in activities or dedicated to objectives which I could and did approve."

And how can one deny the validity of this argument unless one is prepared to denounce, not only Roosevelt, Churchill, General Marshall, but all those who followed in their train? One should recall that the American people—whether Democrats or Republicans—almost all welcomed Stalin as an ally, and rushed to give aid and comfort to the Soviet Union in order to destroy Germany and Japan.

Until about 4 years ago friendship for Soviet Russia was all the rage. The most respectable people appeared on the mastheads or platforms of the multitude of organizations with democratic names founded to ensnare the gullible, the ignorant, and the vain. And many a rich and foolish man gave huge donations to Communist causes to pay for the privilege of being called a liberal.

It was also advantageous to be kind to Communists. During and immediately after the war the anti-Communist was often regarded as a potential, if not actual, Fascist; or at least as not quite nice to know, and dangerous to associate with if one hoped to get on in the world. Anyone in the State Department who took a dim view of the Soviet Union, or who questioned the popular assumption that the Chinese Communists were harmless agrarian reformers, had little hope of promotion, and his advice was disregarded by successive Presidents and Secretaries of State. Alger Hiss, whom Roosevelt chose to take with him to Yalta, in preference to the loyal experts on Russia in the State Department, would never have been singled out for rapid advancement had he not been pro-Soviet.

As regards most of the magazines, newspapers, radio programs, universities, and research associations (such as the Institute of Pacific Relations and the Foreign Policy Association), it was about as hard for an anti-Communist, or critic of the Soviet Government, to obtain a hearing as for the proverbial camel to pass through the eye of a needle. All in all it was profitable to be red, or at least pink; and unprincipled careerists are as responsible as Communist sympathizers for the dangerous situation in which America is now placed.

II

Today the political climate has changed. It is no longer possible to be a Russia-firster while also posing as a loyal American. Today it is as necessary for the time servers to denounce Stalin as it was formerly to praise him. So the political chameleons have suddenly discovered that Russia is ruled by a totalitarian tyranny as bad and as dangerous as Hitler's. One is reminded of the old English song about the Vicar of Bray who got preferment by changing his religion in each reign from the Stuarts to the Hanoverians. Its refrain runs:

"And this is law that I'll maintain
Until my dying day, sir,
That whotsoever King shall reign,
I'll be the Vicar of Bray, sir."

Many of those responsible for the disastrous course taken by American policy from Tehran to Potsdam and for a year or two afterward now cling together in preserving each others' reputations and denying their responsibility. They neither confess to, nor repent of, their past errors and sins. Moreover many of them still display a sneaking regard for communism, even while condemning Russia's aggressive policies. This is evidenced by the friendly attitude displayed toward Tito.

The real Communists are, of course, as adept in changing their outward color for protective purposes as the careerists. Indeed it can be surmised that if there is a "top Soviet espionage agent" in the State Department, as charged by MCCARTHY, he will have taken such care never to display his true colors that his name is not included in the list of suspects. Those Government employees who embraced communism out of conviction and openly displayed their sympathies, can no doubt count upon the discreet silence of the careerists who no longer follow the party line. And might not the threat of exposure be used by the Communists to blackmail those who formerly influenced, or implemented, American policy in accordance with Moscow's interests, but are now pretending that they have always been loyal Americans? Could be.

III

On the other hand those Government employees who have never been sympathetic to communism, or who have never gone along with the Communists in hope of preferment, and are in a position to know or suspect which of their colleagues are disloyal or security risks, cannot testify for fear of losing their jobs. This seems to me the most shocking aspect of the present senatorial investigation, yet it causes little or no comment. The newspapers are full of criticisms of the concept of guilt by association, and of the infringement of civil liberties entailed by loyalty investigations. But no one seems to view with alarm reports that loyal Government employees hesitate to testify against those whom they have reason to believe are Communists, for fear of being victimized by the administration. And the manner in which Senator TYDINGS has conducted the investigation, coupled with the Executive's reluctance to allow the Senate committee to see the files of those accused of subversive activities, suggests that the administration is more concerned to save face than to root out Communists in the Government service.

We must have gone further than we realize along the road which leads to totalitarian tyranny when it is assumed that the administration has the right to demand of Government employees that their first loyalty be to the party in power, not to their country or their conscience; and when Americans are willing to forego their inalienable rights under the Constitution rather than lose their jobs.

Our military government in Germany was instructed at the war's end to hold all Germans guilty of the crimes of the Nazis, and specifically to punish anyone who had been associated with, collaborated with, or been

related to the Nazis. Our law of liberation from national socialism, as the denazification decree was called, penalized not only all party members and their wives and children, but also all members of associations affiliated with the Nazi Party. In other words the principle of guilt by association was made the law of the conquered territory. I have yet to find a liberal commentator, or columnist, now insisting that no man should be suspected on account of his associations, whoever raised his voice to condemn the denazification decrees.

IV

It is the decline of ethical standards and of belief in universal principles of justice, together with the lack of moral courage, so evident today, which has allowed the Communist disease to spread, and which makes it so hard to cure. McCARTHY would achieve more positive results if he concentrated on proving that those who direct United States policy are poor security risks on account of their lack of integrity, their bad judgment, their ignorance, and their gullibility, as shown by the record. Those who directed American policy along the line most advantageous to Moscow, whatever their motives may have been, are far more dangerous than espionage agents. The harm done to the Republic by Alger Hiss at Yalta and San Francisco was incomparably greater than the activities which helped persuade the jury to convict him.

The difficulty is that a real inquiry into the causes for the disastrous policy toward Russia pursued by Presidents Roosevelt and Truman would require a quality of greatness in certain eminent Americans which they have so far not displayed. If General Marshall, for instance, were to testify before the Senate Committee would he admit his mistakes in China? Would he take responsibility for having prepared the way for Moscow to conquer China—by his policy of placing an embargo on arms to Chiang Kai-shek, and by pressing the Generalissimo to take the Communists into the Nationalist Government? Would he, at least, fix the responsibility on treacherous State Department advisers? Without such frank speaking, it is difficult to foresee real progress from loyalty investigations.

Basically the problem is up to the American people. They have the power to make an irresistible demand that the administration which they elected follow the courageous and honest path. Unless the people exert this power, their undoubted desire to defeat totalitarianism will be thwarted by the Vicars of Bray.

Tree Farms

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks, I include a factual statement on tree farms and forestry, by W. D. Hagenstein, a prominent forest engineer in the Pacific Northwest region. I am sure the information presented by Mr. Hagenstein will be found extremely valuable by all Members of the House who are interested in forestry and the perpetuation of our forest resources.

The statement follows:

[From the Oregon Business Review, Eugene, Oreg., for February 1950]

TREE FARMS: A PACIFIC NORTHWEST BUSINESS ASSET

(By W. D. Hagenstein, forest engineer, Forest Conservation Committee of Pacific Northwest Forest Industries)

The first "tree farm" in the United States was dedicated in 1941 in Grays Harbor County, Wash. After an intensive forestry study, the Weyerhaeuser Timber Co. set aside a 120,000-acre property for the permanent production of timber crops. The property was named the Clemons Tree Farm in memory of Charles Clemons, pioneer Grays Harbor County logger. The term "tree farm" implies business forest management.

Prior to the establishment of the Clemons Tree Farm, forest landowning companies in the Pacific Northwest had made a number of starts in forestry as far back as 1901. They soon learned that many serious obstacles beset them. Chief among these was the big gamble with forest enemy No. 1—fire. Because of the huge accumulations of highly inflammable debris in century-old forests and the frequent protracted droughts during July and August, the forest-fire problem in western Oregon and Washington was unparalleled elsewhere in the world.

To solve the fire problem, private-land owners in western Oregon and Washington organized a number of fire-protection associations over 40 years ago. Their early attempts emphasized safeguarding merchantable timber, logging facilities, and other property. The idea of protecting baby trees and saplings didn't enter the thinking of that period. Because of inadequate technical forestry knowledge and know-how of fire protection, results of the early protection efforts were hit and miss for nearly 20 years.

As the forestry profession developed in the region, its research was focused primarily on problems of fire prevention and control. An important discovery was that relative humidity, the amount of moisture in the air as compared with what it could hold at the saturation point, was the best indicator of impending fire danger. Following this discovery, private timber landowners, logging operators, and forest-protection organizations began to watch weather very closely. By 1933 the State forest-protection laws in Oregon and Washington had been modified in the light of operators' experience to provide a good basic code. But more was needed; fire records indicated that, despite good compliance with the forest-protection laws, the region was burning far too many young trees each dry summer.

Realization of this pointed the forestry efforts of a handful of private foresters toward the development of a system of forest management, which offered possibilities for overcoming the fire limitations to economically successful forest management. They termed the system "tree farming."

After studying the fire history on the property which was destined to become the Clemons Tree Farm, foresters determined that, if the company were to manage successfully its forest properties for continuing crops of wood, the fire problem would have to be approached on an entirely different basis than formerly. Their thesis was that a forest property must have protection commensurate with its worth. They established the worth of the company's Clemons property by determining the growing capacity of the land, the fire losses of second-growth trees on lands which had been harvested, and the replacement cost of such trees by artificial means. In this way they demonstrated how much could be spent for fire protection designed to keep within a predetermined maximum the loss on areas burned over annually. They found that the average annual expenditures for forest-fire protection had been about 8 cents per acre and that the acreage of young trees lost each year under this intensity of protection was costing the company a great deal more. To replace the trees lost would require many times the outlay for adequate fire protection. An immediate capital investment of about $1 per acre to provide satisfactory fire-protection roads, fire-detection facilities, a communication system, and modern mechanized fire equipment similar to that used for protection of urban property was recommended. An average annual expense of 25 to 30 cents per acre was estimated as necessary to complete the job.

The company, convinced of the business logic of these recommendations, undertook the type of fire protection suggested. The capital outlay and annual carrying charges for forest-fire protection appeared to be a reasonable insurance premium to assure the long-term investor, the tree farmer, that there would be a crop of ripe trees available when harvest time rolled around.

Basically, that is the genesis of the tree-farm program in America's Northwest corner, the Douglas-fire region. With a modest beginning on 120,000 acres as recent as 1941, the program has since spread throughout the Nation, and there are now over 20,000,000 acres of taxpaying forest lands certified as tree farms in 27 States.

Private foresters have been the leaders in spreading the tree-farm idea to privately owned forest lands, through their efforts to convince forest owners that money can be made in growing trees as well as converting them into forest products. Men conserve things of value; and, when they are shown that cut-over forest land is valuable for growing another crop of timber from which they can expect a reasonable return, nothing can stop them from practicing such forestry as will assure that return. The profit motive is the strongest impelling incentive to forest management, just as it is for good management of other renewable natural resources.

Nearly one-third or 3,270,692 acres of the taxpaying forest lands in western Oregon and Washington are now certified as tree farms. This is indicative of the magnitude of 9 years' progress since the Clemons Tree Farm of 120,000 acres was dedicated in 1941. Along with the increase in the acreage of certified tree farms in this region has come the continued increase in employment of professional foresters by private landowners. In the Douglas-fir region today there are 250 professionally trained foresters whose principal job is to provide efficient fire protection, grow timber, plan timber harvesting, and otherwise manage taxpaying lands for continuing forest crops. Foresters have become just as much a necessary and integral part of the forest-products business as sawmill managers, logging superintendents, salesmen, engineers, accountants, and lawyers. In addition to the tree farms in the western halves of these two States, there are also 1,344,779 acres of certified tree farms in eastern Oregon and Washington.

Tree farms are important business assets of the Pacific Northwest for many economic reasons. To demonstrate the economic impact of wood as a supplier of the wherewithal for the sustenance of the 4,000,000 people in Oregon and Washington, a few general statistics are pertinent.

Oregon and Washington furnish the people of the United States with more than one-fourth of their total annual forest-products needs in the form of lumber, wood pulp and paper, plywood and veneer, shingles, sash and doors, poles and piling, railroad ties, and a wide variety of refined products such as wood furniture, caskets, wood pipe and tanks, cooperage, ladders, crossarms, masts

and spars, and woodenware. Over 2,500 of Oregon and Washington's nearly 7,000 industrial establishments use wood as their basic raw material. The direct wage earners employed in 1948 by the wood-using industry was 170,000, more than the total employed in the use of any other single raw material. The direct wages earned by this large group of industrial workers was about $500,000,000. The value of forest products at Oregon and Washington wood-using plants in 1948 was just a few dollars shy of $1,500,000,000. This is $375 worth of forest products manufactured for every man, woman, and child resident in the two States. This is one-half again as much as agriculture contributes to the Northwest's economy; the 1948 value of the region's agricultural products, including price supports, was about $1,000,000,000.

In addition to the direct employment provided by the wood-using industry, the services and products of other Northwest employers should be considered in an appraisal of the effect of wood upon the region's economy. Fifty-eight percent of the 1948 revenue freight tonnage of class I steam railways originating in Oregon and Washington consisted of forest products. The number of railway employees affected directly by forest products is more than 20,000. Eighty percent of the entire revenue tonnage of water carriers originating in Oregon and Washington is forest products.

Another substantial pay roll directly attributable to the forest industry is the pay roll of the diversified manufacturing and distribution concerns which cater to its material, supply, and equipment needs. There are no reliable data available as to the number of people so employed, but the number has been estimated to be between 30,000 and 35,000.

As a source of taxes the forest industry undoubtedly is the principal regional contributor, though it is impossible to estimate the exact proportion of its contribution to the tax revenues of the two States.

The wage earners directly affected by the growing, harvesting, manufacturing, and marketing of forest products in the two Northwest States probably total about 250,000. It is obvious that the primary wage earners in the forest-products industry, whose average hourly earnings are as high as any group of heavy industrial workers in the world, contribute importantly to the economy of the Northwest's 4,000,000 people. The continuation of this contribution to the two States' well-being depends entirely upon how forest lands are managed to provide the region's principal industry with a continuing supply of raw material.

While a tree farmer's intent is to grow timber for harvest and use, local benefits to soil and water conservation, provision of a natural habitat for wildlife, and, to a limited extent, recreation opportunities will also accrue from the movement. But the recreation-seeking public must cooperate in the protection of private forest lands, especially during those portions of the year when the fire risk is high; one forest fire started during bad fire weather can completely obliterate 10 to 100 years of forest growth.

Tree farms are not just a public-relations stunt designed to convince the public that something is being done about forest management on taxpaying forest land. Tree farms are serious private timber-growing ventures ranging from just a few woodland acres of an enlightened farmer to managed industrial forest properties of 100,000 or more acres. Each in its own way is contributing to the regional and national wood pile through good forest management. The way this job is being done is by no means perfect as yet. But the transition from mere fire protection, and that not always effective, to forestry—in which the attainment of an annual balance between timber growth and timber harvest is the aim—is not something that can be accomplished in a few days, weeks, or years. It took Europe several centuries to attain its present intensity of managed forests. Forestry is only 50 years old in the Unietd States and younger than that in Oregon and Washington; but a substantial start has been made and the passing of each year shows discernible progress. In the Douglas-fir region today many of the best-managed forests are on private land.

Privately owned forests in western Oregon and Washington are certified as tree farms in the following manner:

1. An owner signifies his intentions to qualify as a certified tree farmer in a formal application to the forest conservation committee of the Pacific Northwest Forest Industries; he agrees (a) to maintain a specified area of forest land for growing forest crops; (b) to provide adequate protection from fire, insects, disease, and destructive grazing; (c) to conduct planned timber harvesting to assure reforestation; and (d) to supply information concerning his progress to the forest conservation committee.

2. The applicant is required to submit a plan of development for his property, covering fire protection, timber-harvesting practices, and plans for artificial reforestation, if necessary, for the first 5 years following date of his application.

3. After receipt of a formal application for certification of a private forest as a tree farm, a staff forester of the forest conservation committee examines the property on the ground to determine its suitability as a tree farm. The forester discusses with the owner the policy for his property. If satisfied that the owner sincerely desires to enter into timber growing as a long-term business venture and will agree to carry out the pledges covered in the application, the forester recommends to the forest conservation committee that the property be certified as a tree farm. At a regular meeting of the forest conservation committee the landowner appears to support his applications and is questioned concerning his plans and policy. Should the application and the recommendation of the staff forester not be acceptable to the forest conservation committee, the property is not certified as a tree farm.

Once a property has been certified, annual inspections are made to determine whether the landowner is living up to his pledges for constructive forest management. If it is found that the owner is not living up to the rules of the game, his certificate may be revoked. Four certificates for lands in western Oregon and Washington have been revoked; where violations of landowners' pledges are observed, certificates will continue to be revoked. The only kind of timber-growing program which means anything to the owner of the property so pledged is one which produces results. The Forest Conservation Committee does not condone the certification of taxpaying forests where the owner won't or can't do the job. The tree-farm program is not a philanthropic movement designed to do a fine job of forest management exclusively for public benefit; but, if it succeeds in doing a good job of forest management, the ultimate benefits will accrue to the public at large in the form of adequate timber supplies.

The Pacific Northwest's people have not been sufficiently acquainted with the tree-farm program to realize fully that a tree farm is not a forest property which has been badly treated in the past and is being reforested exclusively by artificial means. Actually, a tree farm may have old-growth timber which is ready for harvest now or in the next few years, natural second-growth trees which are too young for use, trees younger still which have developed naturally on lands from which the original forests have been harvested, lands which did not reforest naturally because of bad cutting or fire and which therefore need rehabilitation, and lands which have been harvested so recently that it is not certain yet whether they will reforest naturally or will require help from man. Present Douglas-fir tree farms have nearly one-half of their acreage occupied by mature timber ripe for harvest, and one-fourth is in natural second-growth trees too young and small for use; the balance consists of land recently harvested, hand-high seedlings, and areas needing rehabilitation.

Because of systematic reservation of seed-bearing timber on each harvest area and because of the subsequent fire protection provided, 90 percent of the lands currently being harvested in the Douglas-fir region are reforesting by natural means. The balance must be reforested artifically by planting of nursery-grown seedlings or by seeding by airplane or by hand.

When tree farms were begun in the Douglas-fir region, there was no source of nursery-grown seedlings for artificial reforestation of taxpaying lands; in 1942 the forest industry developed a cooperative forest-tree nursery for furnishing trees at cost for commercial reforestation by landowners in western Oregon and Washington. This nursery has supplied sufficient seedlings since it began operation 9 years ago to put nearly 60,000 idle acres back to work growing raw material. The nursery is a continuing project to provide artificial means of assuring seedling trees for reforestation wherever natural means fail or where hard luck is encountered in fire protection.

Forestry must not be confounded with tree planting, because tree planting makes up a very small part, although important, in its practice. Common-sense timber harvesting practices, where seed trees are reserved and good protection provided, will do the job of replacing 9 out of 10 trees cut. It is only for the tenth tree where nature fails that man must lend a hand. Tree farms do not mean planting trees. They do mean the management of taxpaying forest properties by wise cutting of mature timber; skillful reservation of seed-bearing trees to reforest the lands harvested; planting or seeding where nature fails; utilizing the raw materfal to the fullest extent possible; providing society with a continuing supply of needed forest products; assuring plentiful well-paying jobs in forest communities; maintaining a local tax base; and contributing to the happiness and welfare of the Nation.

In Oregon and Washington, where the public owns over 50 percent of the commercial forest land and where the balance is held by taxpayers, it is necessary that forest management become a part of our economic system. The public forests are managed under forestry principles which assure continuous production. The private forests, which to date have contributed more than 90 percent of the annual raw-material requirements of the region's principal industry, have not always been handled in the best possible manner, because of economic impediments and the uncertainty of the success of forest-fire protection efforts. Tree farms, which the wood-using industry is proud it sired, have already put nearly one-third of western Oregon and Washington's highly productive private forest land under permanent forest management by showing the way that timber growing can be made pay—through adequate fire protection, sound harvesting practices, artificial reforestation where needed, and full wood utilization. Promotion of tree farms on lands not so dedicated as yet is continuing each year; eventually the owners of most privately held forests will be practicing tree-farm management.

The tree farms which are already established in the region constitute an important business asset which helps assure a continued high standard of living for the citizens of the Pacific Northwest. The continued success and further development of tree farms will depend upon public support, particularly in the matter of fire prevention, and sympathetic understanding of the fact that timber growing is a long-term program, which must be made to pay its way as long as the American way is opportunity for private ownership and initiative.

Praise for the Late Honorable Schuyler Otis Bland

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. HART. Mr. Speaker, as part of my extension of remarks I append herewith article from the Grace Log for March and April 1950, commenting upon the career of the late lamented chairman of the Committee on Merchant Marine and Fisheries, Hon. Schuyler Otis Bland. The tributes to Mr. Bland quoted in the article are more than deserved. He was one of the great Americans of his time and certainly the outstanding advocate in America of an adequate merchant marine. The tribute follows:

REPRESENTATIVE SCHUYLER O. BLAND

Representative Schuyler O. Bland, a senior Member of the lower House of Congress, chairman of the House of Representatives Committee on Merchant Marine and Fisheries, died in mid-February.

At the age of 77, the sturdy advocate of a strong United States merchant marine, was in his thirty-second year a a Representative from Virginia. Mr. Bland's years of service in Congress were exceeded by only four other Members of the House of Representatives. Despite his years and recently uncertain health, he was active in the promotion of the welfare of the merchant marine.

A resident of Newport News, Mr. Bland continuously had represented the First District of Virginia since 1918. His personal integrity and dignity helped to make him one of the most respected Members of the great legislative body, and were responsible, in part, for the success of much of the legislation which he sponsored.

As chairman of the Merchant Marine Committee for many years, he deserved much of the credit for strengthening United States shipping prior to World War II. Deeply concerned in the postwar years by the deteriorating position of coastwise shipping, the shipbuilding industry, and the merchant marine in general, at the time of his death, he was sponsoring a new long-range program for United States shipping.

Frequently called the "father" and "progenitor" of the Merchant Marine Act of 1936, he steered that legislation to passage. Representative Bland maintained constant vigilance to see that its provisions were being followed.

In November of last year, all United States flag ships in New York harbor "dressed ship" as a tribute to Mr. Bland, who was the guest of honor that evening at a testimonial dinner attended by representatives of government, the shipping and shipbuilding industries.

Commenting on the death of Representative Bland, Mr. Frank J. Taylor, president of the American Merchant Marine Institute, declared, "The entire United States shipping industry, both management and labor, will sorely miss Schuyler Otis Bland, who is truly the father of the Merchant Marine Act of 1936, which made possible our present fleet of fine new ships. It is the most important piece of shipping legislation passed in the history of United States shipping. His long tenure as chairman of the House Committee on Merchant Marine and Fisheries was filled with other important contributions that aided not only shipping but the Nation as a whole. Every ship afloat in our new merchant marine is a monument to his memory."

Mr. Stanley Ferguson, in the New York Journal of Commerce, commented on Representative Bland's death. He said, "his death * * * removes from the national scene one of the best, most influential friends the United States merchant marine ever had in Congress, or, for that matter, anywhere else.

"* * * he will be remembered with equal admiration for the courage and perseverance with which he continued to fight for the cause of United States shipping in the face of failing health, as well as of political adversity, in the years following the war.

"Mr. Bland's dignity, simplicity, and personal integrity carried such weight in the House that at critical moments it was probably the deciding factor in the enactment of legislation of vital importance to the maritime industry."

Electric Power Restored in Tornado Area

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. RANKIN. Mr. Speaker, you have heard the rural electrification program criticized many times. Its enemies have invariably attempted to show that it is inefficient.

I want to call your attention to one of the greatest demonstrations of efficiency that I have ever known.

Several days ago a cyclone swept down on the town of Paden, in Tishomingo County, Miss. It destroyed a large number of homes, as well as public buildings, and left the entire area in darkness.

That county is served by the Tishomingo Electric Power Association, of which Mr. William J. Brinkley is the manager. As soon as the notice of the storm was given, Mr. Brinkley got busy and had electric service restored with a speed that certainly challenges everyone's admiration.

At this point I am inserting an article from the Iuka Vidette, which in plain terms tells the story of the efficiency of the Tishomingo Electric Power Association under the direction of Mr. Brinkley, in this trying situation.

The matter referred to follows:

NO LOSS OF TIME DUE TO RADIO SERVICE

Bill Brinkley said the local power company suffered losses up to $500 in the recent tornado at Midway and Paden. We were able to get power restored in the Midway area in about 2 hours, Bill said, and in about 6 hours at Paden.

The extent of the damage at Midway consisted of service wires broken by falling trees and houses being blown off foundations. At Paden, he said the 12,000-volt primary lines were torn down by trees and debris from demolished houses.

Due to facilities such as the two-way radio installed on the trucks and at the main office all the trouble was isolated and repairs were made in a total of about 8 hours. Without this service the same job would have taken fully 2 days. Due to the radio communication facilities we were able to investigate the damage throughout the entire county in a matter of a few minutes, Bill said, otherwise had we depended on telephone it would have taken hours as telephone lines were torn down by the storm.

Political Trends in Guatemala

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. McCORMACK. Mr. Speaker, a little over a year ago, I made a speech about "reckless minorities in Latin America" which is recorded in the CONGRESSIONAL RECORD of February 21, 1949. At that time there were some who thought me harsh in my description of the communistic tendencies of the present Guatemalan Government, both in its attitude toward American investors and toward attempts of the United States to bring concord and economic cooperation between the nations of the Western Hemisphere.

I have, therefore, been interested in recent revelations of how correct I was in my interpretations of events and my prophecies of trends in Guatemala.

Far from being harsh, I apparently understand the communistic influence in the Guatemalan Government and how much the United States should be concerned about its effect on our interests, including the recent threats on the life of Hon. Richard C. Patterson, Jr., our Ambassador to Guatemala. Recently a five-nation committee of inquiry including representatives of Uruguay, Bolivia, Ecuador, and Colombia, as well as our own State Department, officially found Guatemala among three nations that have deliberately disturbed the peace the United States has been trying to encourage in the Western Hemisphere. As reported in the Washington Post:

A five-nation committee of inquiry yesterday branded Cuba, Guatemala, and the Dominican Republic as responsible for recent plots to stage revolutions, assassinations, and armed invasions in the Caribbean.

That corroborates exactly what I said in my speech a year ago, to wit:

Guatemala has made particular difficulty for the United States in all the attempts of the United States to bring concord and economic cooperation between the nations of the Western Hemisphere. Members of the Guatemalan mission made difficulties at the Rio Conference. They also made difficulties in the Bogota Conference. They have undone a great deal of the efforts of better-intentioned Latin-American governments to bring a feeling of the feasibility of economic

cooperation between the United States and its sister Republics to the south.

In connection with my other charges of the Communist influence in the reckless minority ruling Guatemala, there was published in the Washington Post a short time ago, a long study of the nature of the present Guatemalan Government and its purposes by Mr. Fitzhugh Turner, a reporter of high reputation who made a long trip to Guatemala to learn the facts. In order that we may understand these dangerous symptoms in a country whose airfields dominate the Panama Canal, I am including the entire text of Mr. Fitzhugh Turner's study on Guatemala inserted in the RECORD.

This is an election year in Guatemala for a 6-year presidential term. The influences that have, as Mr. Turner says, brought Guatemala to its present state, are seeking to put themselves in power for at least 6 years and perhaps an indefinite period.

As part of that drive for power, we may expect over the next 6 months a maximum of Communist-inspired attacks on American business and upon American foreign policy such as the attack on American relations with Puerto Rico which occurred last month and the threats to Ambassador Patterson.

For that reason I hope that the people of this country will inform themselves from these articles of Mr. Turner's so that we may fully understand these anticipated attacks in their true significance as part of bigger plans of the Communists for the cold war everywhere.

Mr. Turner's article follows:

The United States, too, has a soft underbelly—Central America and the Caribbean—and trouble has developed there. While North America tries to combat communism in Europe and Asia, Latin communism bores in where it hurts.

Personal and ideological hatreds boil up among the presidents and dictators, small fights rock the area and a big explosion, some say, is on the way.

Others say that talk of an explosion is nonsense, that the State Department and the Organization of American States can deal with the danger. But diplomatic pressure has achieved nothing impressive to date.

Cuba and the Dominican Republic are engaged in a running quarrel, Haiti and the Dominican Republic are at each other's throats, Costa Rica and Nicaragua have tangled in wrath. And the self-styled rebellious child among the erstwhile good neighbors, the 110-year-old Republic of Guatemala, threatens to become more of a problem than ever.

LOOKS FURTHER LEFT

Guatemala is the volcano-studded little country which, with Cuba, harbors a private army, the Caribbean Legion, dedicated to the overthrow of nearby governments. In the geographic sense, it is the nearest to the United States of the six Central American Republics; in the political sense, it is halfway to Poland.

This reporter has just returned from an investigation into conditions there, a sort of sampling of what goes on. The conclusion: Communism exists in Guatemala (although it is not necessarily Russian communism nor the most virulent in the world) and the leftist government is about to leap farther left.

The situation is as senseless as it is dangerous. Guatemala has much, and could have everything.

There is a fertile, scenic plateau where the weather is spring the year around. Poinsettias grow tree high. Easter lilies reach quart size without urging. Mayan and Spanish ruins dot the landscape, along with mountains and big fresh-water lakes.

The area is a little less than that of North Carolina, the population (3,643,000) about the same as in that uncrowded State. About 60 percent of the people are Indians, colorful and primitive. Perhaps 200,000 persons of Spanish or other European descent form the property-holding, and normally, the ruling class.

The volcanic soil is incredibly rich. Coffee and bananas are sold to the United States for dollars, and the Guatemalan quetzal is as valuable as the dollar, with which it is freely interchangeable. Abundant production, good prices, and close ties with the North American economy have eliminated public debt.

DEVELOPERS REBUFFED

With all this, the country is virtually undeveloped. There is oil in the Peten, where Guatemala juts into the Yucatan Peninsula. American interests in the country would like to expand. New American interests would like to come in. President Truman's point 4 program could work as well there as anywhere in the world. But there is little atmosphere for development rather, suspicion, opposition, and rebuff.

Some important investors have pulled out of the country, others have abandoned millions of dollars' worth of improvement plans and still others have refused to come in.

At least part of the reason for this hostility lies in history. The country for 300 years was the seat of repressive Spanish rule in Central America, and for another 100 years of some of the most brutal dictatorships that have sprung up in a dictator-ridden corner of the world. American interests played ball with the dictators, and American diplomacy was hinged to the dollar until the good-neighbor policy came along.

It has been only 5 years since Guatemala became a democracy—near democracy would be a better term. It is understandable, perhaps, that a new government should turn violently against the past. An extreme turn to the left is less understandable. Except emotionally, no Guatemalan really would like to remove his country from the United States orbit, nor believes that it could be done.

President Juan Jose Arevalo's course has been one of cross purposes. He has improved the lot of Guatemala's ordinary people. He has introduced a labor law, has raised wages, has begun social security and has made a start against illiteracy. But he has attacked the sources of his country's wealth.

Economic development has lagged. Roads have deteriorated so much that the four-wheel drive jeep has become a necessary form of transportation. The government pecks at repairs and pleads lack of funds, yet it is spending $4,000,000 on a site of Central American Olympic games.

Marxist propaganda, meanwhile, is encouraged. "Wall Street imperialism" is denounced at every turn. American little business meets red tape, and big business is kicked around with gusto. The Government press gives free space and the government radio free time to leftist attacks on the gringo, and the Communist line, a faithful echo of Moscow, is heard loud in the land.

Spies are everywhere. The Government reads the telegrams and even the mail of those Americans (and Guatemalans) it distrusts. No outsider knows which waiters at hotels and restaurants are police ears.

President Arevalo employs his own agents out of his secret funds of $473,000 a year, and at least one cabinet minister employs agents to watch for signs of revolt. It may be a good idea; more than 20 revolutions have been plotted in the past few years.

There are other agencies at work against the Government. Nicaragua's Anastasio Somoza and the Dominican Republic's Leonidas Trujillo keep constant watch on Dr. Arevalo, who hates them, and on the Carribbean Legion, which is aimed primarily against their two dictatorships. Neighboring Honduras and El Salvador watch for agitators who try to spread Guatemalan ferment to their territories.

There is evidence that both the United States and the British keep an undercover eye on the situation. When a hot foreign issue becomes desirable, Dr. Arevalo whips up Guatemala's claim to adjoining British Honduras, and His Majesty's government maintains Irish troops at Belize to guard against an air-borne Caribbean Legion attack.

ONLY ONE FRIEND

Of all the nations of the Western Hemisphere, Guatemala is on intimate terms with only one, Cuba, where there is also a left-wing regime. Relations with Panama, Costa Rica, Haiti, Honduras, El Salvador, the Dominican Republic, and Nicaragua range from suspicion to open break.

Relations with the United States have improved a little since Arevalo supplanted an open leftist with a more friendly Foreign Minister. But the new Minister, Ismael Gonzales Arevalo, has been heard to complain that he has been surrounded by Communists who attempt to thwart his work.

For many years Arevalo lived in self-imposed exile near Buenos Aires. There he obtained Argentine citizenship and acquired friends who turn up quite often now in Guatemala. Some of them have taken to communism in their dislike of the United States, or to dislike of the United States in their pursuit of communism, and sometimes Arevalo has given them Government jobs.

Anti-North American Communist sympathizers, as well, have been installed in important Government press and radio posts, and others have risen to power in the political parties and labor unions which give Arevalo his strength. Still others work with the President in his office, and still others have infiltrated the diplomatic service.

Some of these Communists, pro-Communists, Communist sympathizers, or whatever may be Soviet agents, this reporter does not pretend to know. Those to whom I talked denied it, or said they canont be Communists at all, since the constitution outlaws the party in Guatemala.

There is no Soviet espionage network in the country, so far as experts can tell. (There is nothing much for a Russian to spy on.) Nor is there, despite recent furor, a Russian submarine base on the coast. Nor does the Moscow radio concentrate on Guatemala.

A PECULIAR MIXTURE

Guatemalan leftism, it is a fair conclusion, is not Russian, but is largely of the peculiar Latin variety, earnest and befuddled rather than cynical, entangling Marxist ideology and Communist propaganda with antigringoism, with local nationalism and with the personal politicking traditional in the Latin world.

This does not mean there is no link to Moscow. The nearest Soviet Embassy to Guatemala is the one in Mexico City, which also is headquarters for Vicente Lombardo Toledano, the pro-Communist Latin labor leader. Guatemala's labor is allied with Toledano's pro-Communist federation, the CTAL, and through it with the Communist-dominated World Federation of Trade Unions.

When Soviet propaganda appears in Guatemala, it arrives in company with copies of the CTAL newspaper, and Toledano's agents move freely back and forth between Guatemala and Mexico. Some seem on intimate

terms with President Arevalo. One, for example, was appointed by Arevalo in 1948 to advise the Guatemalan delegation to the Bogota Conference.

A current visitor is Cesar Urrutia Godoy, an exiled Chilean Communist and one of Arevalo's old friends. Godoy passed 2 or 3 months in Guatemala last summer trying to organize a United Front for Democratic Liberation, to unseat Caribbean dictators.

Once when two visiting Americans of the CIO made speeches of friendship to the Guatemala railroad union, Godoy followed them to the stand and denounced them as imperialist agents.

"These people have autos and refrigerators and comfortable houses," Godoy declared. "How can they be on your side here?"

Godoy left Guatemala after that to organize the pro-Communist World Peace Congress held at Mexico City in September.

A BLONDE "WITCH"

Another old friend of the President, also a Chilean, is a plumpish, middle-aged blonde named Virginia Bravo Atelier. She formerly was a Chilean cultural attaché in Washington; some Americans who have encountered her at work in Guatemala call her "the witch of the coffee country."

President Arevalo gave this rather shrill lady a job in the Ministry of Education about a year and a half ago. She travels around the country lecturing to rural teachers, denounces American-sponsored teacher training as Yankee imperialism, and spreads the party line wherever she goes.

Most active Communist front outside the labor unions is the Democratic Youth Alliance, known by its Spanish language initials as AJDG. Composed largely of students and dupes, AJDG spreads the Communist line interspersed with cultural programs, has the backing of the government and is headed by Jose H. Zamora, a Salvadorean who holds a government job as the President's publicity chief.

MERELY LEFT WING

President Arevalo denies that he himself is a Communist, and the general opinion gives him the benefit of the doubt. Objective people, including some of his enemies, say he is a left-wing idealist with a flair for practical politics and with a sincere desire to achieve social progress in Guatemala.

He has included Communists among his supporters, they say, because he is anti-American, because his only real support comes from labor and the left and because he believes he can control them.

It is true that the President has curbed some excesses. With his term about over, however, and with more extreme leftists coming to the fore, it is not clear now whether he is clearly in control of his supporters.

FIVE THOUSAND ACRES DOOMED

One of the requirements of President Truman's point 4 program is a favorable climate for American investment. In Guatemala the Government not only has failed to create such a climate but has convinced existing interests that the aim is to drive them out of the country.

Some $250,000,000 is involved, most of it in three large companies.

United Fruit, with $100,000,000 invested, has abandoned a $10,000,000 development program because of the Government's attitude; this, by 1951, will return 5,000 acres of Atlantic coast land to jungle and will cost some 4,000 Guatemaltecos their jobs. Empesa Electrica, a $12,000,000 subsidy of Electric Bond & Share, is in danger of expropriation, and the International Railways of Central America, an $89,000,000 property, is engaged in a wage dispute which threatens to make it a losing financial proposition.

The companies, admittedly, have a history of exploitation. They throve in the time of dictators, and played more than a small part in Central American politics. They still operate under concessions dating to those times, and their contracts extend far into the future, granting low taxes in some cases and tax exemptions in others.

But they long since have changed their old ways. An additional requirement of point 4, the State Department says, is that American investors must exhibit statesmanship abroad.

The Guatemalan companies, then, would like to renegotiate their contracts to make them more acceptable.

United Fruit, for example, already has renegotiated in Honolulu and El Salvador, and has made overtures in Guatemala, only to be rebuffed. Guatemalan leaders have made it clear that renegotiation means huge cash payments, $11,000,000 in the case of the railroad. So the companies have determined to stick to their present contracts until discrimination against them ends.

PAY DISCRIMINATION

Meanwhile, the government and labor unions kick them around. Arevalo's labor law provided that agricultural concerns with more than 500 employees must pay time and a half for overtime, against time and a quarter for others, and must grant 10-day vacations, against 5 days for others. Agricultural concerns with more than 500 employees, in Guatemala, means principally the fruit company.

In most of the anti-American Communist-line propaganda in Guatemala, the three big companies are singled out for the harshest adjectives. Some clue to the reason may line in what Defense Minister Jacobo Arbenz told an American in a drinking moment. "You people are doing things for your workers that we won't be able to do for 50 years," he said. "That's why I hate you."

The fact is that the American companies pay by far the highest wages in the country, and take the best care of their employees. The railroad pays manual labor $1.67 per day; the Government pays 64 cents for equivalent work. United Fruit pays agricultural labor a minimum of $1.36 a day, as opposed to 40 cents paid on government coffee plantations. The fruit company maintains two central hospitals, two dozen infirmaries, 54 schools, recreation halls, commissaries, and the like, and even its critics concede its employee housing is the best in the country.

To develop Guatemala, Ismael Gonzales Arevalo, the pro-American Foreign Minister, talks of a World Bank loan for roads and electric power. If a loan is granted, it will be over the objection of United States Ambassador Richard C. Patterson, Jr. He has told the Government he can recommend no loan until corrective action is taken against injustices to American interests.

A PRIVATE ARMY

Besides its Communists, Guatemala has the Caribbean legion mentioned earlier, a private army of exiles and adventurers with designs against neighboring governments. The legion had the use of Guatemalan planes, rifles, and ammunition in an attempted invasion of the Dominican Republic last year, and it is now assembling small boats at Puerto Barrios, on the Atlantic coast, for another expedition, presumably aimed either at the Dominican Republic or Nicaragua.

The legion, which has its headquarters in Cuba, is behind much of the uproar in the Caribbean, according to the Organization of American States. Considering its size, this is something of an achievement. For the legion, between invasions, consisted of no more than 25 to 100 persons, most of them broke.

A few are Communists, others are non-Communist leftists or moderates or rightists, and personal as well as ideological jealousies divide them. Most are Nicaraguans and Dominicans, or exiles from Honduras or El Salvador, although Guatemala, Cuba, Venezuela and even the United States and Britain are represented from time to time. What most have in common is this: that they are out.

Juan Rodriguez, a wealthy Dominican exile, put up most of the money for the attempt against Trujillo, and another Dominican exile, a tough, bearded soldier named Miguel Angel Ramirez, was commander at last account.

TWO HUNDRED AND FIFTY ONE-THOUSANDTHS BATTING AVERAGE

Legion strategy once was full-dress invasion, but this is no longer possible. The force is not strong enough nor can hemisphere opinion be expected to countenance anything as blatant as that. The tactic, rather, is to plot rebellion within the country under attack and to move in simultaneously with the outbreak of revolt.

Results have been fairly dismal; the batting average only 0.250. Members first came together in 1947, in a large-scale attempt to invade the Dominican Republic from Cuba. The expedition included 11 bombers, 2 infantry landing boats, and about 1,100 men. Publicity, undercover United States intervention, and the cooperation of certain Cuban Government officers broke it up before it left Cuban soil.

Internal dissension helped. At least 10 separate participants, it developed, expected to be made Dominican President when Trujillo was dead.

In Guatemala City some months later, a group of the rebels hired a United States pilot, James Hurst, to kill General Somoza of Nicaragua from the air. Gen. Emiliano Chamorro, an exiled rightest revolutionary, was to become President. Hurst was ready to load the explosives when Chamorro objected to the choice of a leftist, Edelberto Torres, to be Vice President, and the plot fell through.

SHREWD DEFENSE

It was not until March 1948 that the exiles came into their own. Some of them joined with Jose Figueres, a Costa Rican planter, in an uprising against his Government. The revolt succeeded. The Caribbean Legion was officially organized, with a coat of arms, headquarters at San Jose, and a scheme to unseat General Somoza next door.

The canny Nicaraguan dictator acted first, however. He started a border fight which brought the Rio Pact into action, exposed the legion to publicity, and forced it again to disperse.

Last June's expedition was remarkable even in Central America for mismanagement and bad luck, although members of the Guatemalan Government helped and allowed Guatemala to be used as the main base of operations.

At least six planes loaded with men and arms took off from Guatemala. Some of the arms were from Guatemala stocks and two of the planes were Guatemalan Air Force DC-3's with their official markings, T-1 and T-2, only thinly disguised.

One plane crash-landed en route, three were detained when they landed in Mexico to refuel, one missed the rendezvous, and only a flying boat reached the goal at Luperon, on the Dominican north coast, on time. The three North Americans and eight Latins aboard found no revolutionaries to meet them, and a Trujillo force hunted them down in the hills and killed all except one, a Dominican.

The Guatemalan Government later denied that it participated in the Luperon affair. When this reporter asked a cabinet member why the Government harbors the legion, he replied that this is untrue. But people in and out of the Government have friends, he added, and if individuals wish to help in-

dividuals with food, transportation, or other things, that is their own affair.

ELECTION WORRIES

A presidential election is supposed to be held in Guatemala toward the end of this year, but the odds, probably, are no better than 50–50 that it will come off in peace. Most of the country believes that unless he is chosen as the Government candidate and is elected, Defense Minister Arbenz will attempt to seize power by force.

This could lead to much bloodshed. For besides Colonel Arbenz, the two strongest men in the country are pro-Communist labor leaders who have staked their futures on an election and many of whose followers are armed. The Government itself gave them rifles, some 2,000 or 3,000, during an attempted revolution last summer.

The labor leaders are Manuel Pinto Usaga and Victor Manuel Gutierrez. In recent weeks they have consolidated Guatemalan unions into a single federation, and have organized labor into a more or less solid national political action committee. They themselves disavow personal political ambitions but hope, they say, to install the candidate they favor in the Presidency. Their aim is to see that the new President continues the revolution and puts through agrarian reform.

If the labor candidate should win, the new regime would be even further left than the present government. Guatemala's neighbors fear that a government will emerge which will take orders from Moscow, and will seek to install communism in Honduras, El Salvador, and other countries. Further subversion of the labor movement in Latin America might follow, and, conceivably, destruction of the inter-American system.

These worries are traceable, in part, to fears of Pinto Usaga and Gutierrez. For both men are known Communist sympathizers and opponents of any except the tamest United States financial interests.

POWER IS ALL

A well-informed Guatemalan, himself a presidential possibility, believes, however, that Pinto Usaga and Gutierrez will disappear in short order if a strong man takes over. And since the election will be rigged by the Government, that strong man is likely to be Arbenz.

The Defense Minister, he says, professes leftist views only because he happens to be a member of a leftist Government, and he represents himself as a friend of labor for the same reason. What he really wants is power.

The colonel last summer began to be threatened by the rise to prominence of an old-time partner, Col. Francisco J. Arana, chief of the armed forces, a political moderate and friend of the United States. He was acquiring a large following in the army and among the people, and was talked of as a presidential candidate.

One July day Colonel Arana learned that Lieutenant Colonel Arbenz had been helping the Caribbean Legion, and that a quantity of Guatemalan Government arms had been cached by the legion at Lake Amatitlan. He drove off to investigate and was ambushed and killed with submachine guns.

The assassins neglected to kill Arana's driver, and the man escaped to name two of the gunmen. One, he said, was Mrs. Arbenz's chauffeur, and the other was Alfonso Martinez, business manager for Colonel Arbenz.

ARTILLERY BATTLE

The killing set off a revolution by some of Arana's army friends, and fighting raged for 2 days with weapons as heavy as 105-millimeter artillery. The Government won, the revolutionaries fled, and nobody bothered to bring the Arana assassins to justice. Rumor a few weeks ago was that Martinez, who is a prominent figure in Guatemala City, was about to be appointed chief of police.

In the army since then, Colonel Arbenz has entrenched himself by placing his supporters in key positions and by paying bonuses to officers. Guatemalan officers make from $50 to $250 a month, and favorites receive from $50 to $125 extra from the Defense Minister.

A new man, Maj. Carlos Paz-Tejada, has taken Colonel Arana's post; he refers to himself as "the unknown soldier," and so far at least has done nothing to threaten the Arbenz ambition.

Espionage

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. BOLTON of Maryland. Mr. Speaker, on May 20, 1949, the Committee on the Judiciary of the House, by unanimous vote, reported H. R. 4703, relating to the internal security of the United States. After many delays, a rule was finally granted and the proponents of this important bill were able to bring it to the floor for consideration and vote on March 15, 1950. I was more than glad to support this legislation, and I regret exceedingly that this bill was not passed long ago.

This bill was drafted by experts of the Department of Justice, the Military Intelligence of the Department of the Army, the Office of Naval Intelligence, and the Central Intelligence, so that all of the intelligence units in the Government joined in a request to the Judiciary Committee and the House that this measure be passed.

The bill does not in any respect change the existing wire-tapping statutes. We all know, of course, that wire-tapping is not illegal and may be exercised under decisions of the Supreme Court of the United States. However, information obtained by wire-tapping cannot be used as evidence in any court.

There are many gaps in our security laws and this bill goes a long way toward filling those gaps. Our military laws are adequate to deal with military personnel, but most of the violations of our military security laws are committed by civilians who are not covered by military law.

We have recently had the distressing case of a man in a high Government position accused and convicted of passing confidential Government information to agents of a foreign government. The espionage laws could not apply to that crime because the statute of limitations had run. The culprit was tried on a lesser charge of perjury and sentenced under the laws dealing with perjury. Is a few years in prison enough punishment for a highly intelligent man who betrays his country? Because so many Members of Congress thought not, this bill was reported to the House for a vote.

In general, this bill's section 1 compels persons having in their possession certain enumerated classes of items to surrender the same under penalty for refusal to do so. Presently, the law affords no adequate punishment. For example, there is no violation unless the specific person entitled by law to receive the documents makes the demand for their return. This bill extends the offense to persons who know the material entrusted to them has been illegally removed, lost, stolen, or destroyed and who fail to report the loss or theft promptly to their superior officer. The present penalties are increased in this bill for conspiracy to commit the forbidden acts from $10,000 or 5 years or both to 10 years or $10,000 or both. This increased penalty conforms to the general statute. It makes, in a word, the conspiracy to commit an offense as grave as the crime itself.

Section 2 in general increases the statute of limitation for espionage from 3 to 10 years.

Section 3 amends the Foreign Agents Registration Act so as to make failure to register a continuing offense.

Section 4 delegates to the Secretary of Defense the power to promulgate orders and regulations, the violations of which are made punishable by fine and imprisonment for the security of new military installations.

There may be some question as to whether this Congress has the right to delegate broad authority like that to the Secretary of National Defense and permit him to make regulations and rules concerning military installations and to prescribe penalties. The Supreme Court has frequently sustained that delegation of power to the executive branch.

The only criticism that the Supreme Court has offered is that there must be clearness and clarity in the writing of the statute so as to clearly and succinctly describe the limits of the grant of power.

Mr. Speaker, if we are to preserve the democracy that we all love so well, I believe it is necessary that we deal harshly with those who would betray our beloved country. This bill should act as a deterrent to those who would sell their birthright for a mess of pottage—or worse, for communism.

The High Cost of Food Prices—Why That Is So

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an editorial that appeared in the Kenosha Evening News on the subject of some farm surplus costs. The information contained in that editorial is very pertinent to the whole question of farm surpluses:

SOME FARM SURPLUS COSTS

High cost of keeping food prices up under the administration's price support plan is itemized in a recent table printed in the CONGRESSIONAL RECORD. On January 31 the

Government had the following quantities of agricultural products in storage—the total valued at nearly $4,000,000,000. Storage costs alone amount to $200,000,000 a year, or about $23,000 per hour.

	Quantity
Cotton, long staple----bales--	3,008
Cotton ----------do----	6,459,499
Cottonseed ----------tons--	118,922
Flax----------pounds--	178,145
Butter----------do----	100,736,962
Cheese ----------do----	25,307,469
Milk ----------do----	274,723,846
Linseed oil----------do----	411,943,603
Peanuts----------do----	246,974,902
Peanuts, shelled------do----	14,669,287
Fruits, dried----------do----	57,651,595
Potato starch----------do----	10,172,827
Potatoes----------do----	1,148,054,700
Barley----------bushels--	52,998,083
Beans----------pounds--	1,182,391,300
Corn ----------bushels--	627,480,162
Flaxseed----------do----	22,237,676
Grain sorghums----pounds--	4,237,623,000
Oats----------bushels--	41,698,990
Peas----------pounds--	55,842,100
Rice ----------do----	168,120,800
Rye ----------bushels--	1,563,618
Seeds (pasture)----pounds--	725,422
Soybeans ----------bushels--	13,102,695
Wheat----------do----	475,034,491
Wool ----------pounds--	51,378,140
Eggs, dried----------do----	75,918,088
Turkeys----------do----	1,017,105
Rosin ----------do----	391,164,467
Turpentine----------gallons--	5,107,213
Tobacco ----------pounds--	373,868,064

Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement made by the Honorable J. Bracken Lee, Governor of the State of Utah, when he designated the week of March 19 to 25, 1950, as National Wildlife Restoration Week.

I realize this observance week has passed but I feel it is of sufficient importance to be inserted at this late date.

Governor Lee's statement follows:

One of the attractions that has made the West a center of scenic America has been its wildlife—from fish of mountain streams to the elk and moose of the remote hills. A century ago, the wildlife was a prime source of food for the pioneers and Indians who lived here. Today, the wildlife is largely a memory, to be preserved by this generation for the generations of tomorrow.

The strength of a nation is reflected in its natural resources. We have watched the rapid depletion of our forests, and have awakened to the need to provide for the future, through reforestation. Similarly, we have watched the near disappearance of our wildlife and have seen the need to restore and perpetuate them.

In recognition of this effort to preserve our resources and our wildlife, I am designating the period March 19 to 25, 1950, as National Wildlife Restoration Week in Utah, and I urge all citizens, sportsmen's organizations, civil and service clubs, schools and other organizations, to observe this week through appropriate ceremonies devoted to the restoration and preservation of our wildlife and other valuable natural resources.

J. BRACKEN LEE,
Governor.

MARCH 9, 1950.

Convincingly Logical

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. MACY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by the distinguished Catholic writer, Rev. James M. Gillis, C. S. P., which appeared in a recent edition of the Catholic Virginian:

THE LADY'S LOGIC

(Sursum Corda by Rev. James M. Gillis, C. S. P.)

Logic is considered—by a certain type of mind—something reprehensible.

In the mental world as in the moral world there are persons who think we should chuck all rules of thinking, make a blind choice of opinions, jump at conclusions and look upon as "reactionary" or "medieval," anyone who insists that thinking is an art which must be learned and practiced. That's all there is to logic. The logician holds that thought must proceed step by step in a straight line and not, like Stephen Leacock's young man, "ride off madly in all directions."

Perhaps the most reckless disdain for the rules of reason amongst our contemporaries is that of Mrs. Eleanor Roosevelt. I look at her column only semioccasionally (or semi-demi-occasionally), but every time I become careless in the custody of my eyes and let them fall upon one of her daily effusions, I seem to happen upon a logical howler. One recent instance is not from her column but from a speech she gave at Iona State College at about the time the verdict in the Hiss case had been reached.

Mrs. Roosevelt is reported as saying: "A man who has professed innocence is involved by a man who by his own admission is a perjurer and a former Communist. It seems rather horrible to condemn someone on the word of someone else who admits to guilt."

Note the antithesis: one man has professed innocence; the other is, by his own admission, a perjurer. So it is horrible (at least rather horrible, whatever that may be) to condemn the professed innocent on the word of the confessed perjurer. The point, of course, is that the man who protested his innocence was just as much a liar and a perjurer as the man who admitted that he was a liar and a perjurer. Professing innocence didn't make Hiss innocent. The quick and careless reader, deceived by Mrs. Roosevelt's legerdemain, might jump to the conclusion—as she does—that an innocent man was condemned on the word of a guilty man. It's a trick.

In my first year in logic when, by way of diversion, we used to play with some false syllogisms, we had one that went thus: "Epimenides (quoted by St. Paul) said that all the Cretans were liars. But Epimenides himself was a Cretan. Therefore if he was telling the truth, he was a liar." Any fairly bright child in a grade school could pick the flaw in that syllogism. I can see the hands raised in class and hear a chorus of piping voices say, "Teacher, a liar may sometimes tell the truth." Mrs. Roosevelt doesn't seem to realize that Chambers who was sometimes a liar could and did on occasion tell the truth.

GUILTY ON EVIDENCE

Take the second part of her statement, "it seems rather horrible to condemn someone on the word of someone else who admits to guilt." The fact, of course, is that Hiss was not condemned on the word of Chambers. Three juries sat on the case; the grand jury which handed down the indictment, and the Federal juries, one of which voted 8 to 4 and the other 12 to zero that Hiss was guilty. They declared him guilty not on the word of Chambers but on the evidence produced in court.

Let's have another example of careless thinking reported in that same speech—or it may have been in an interview before or after the speech—at Iona State College. The lady want on to say: "If you had been disloyal and your conscience troubled you, the only way you could go scot free would be to accuse someone else of the things you were accused of."

But, dear lady, there is more than one way of "going scot free." You may go scot free in your own conscience, or you may go scot free before the law. You go scot free in conscience by repenting, confessing, and making amends. Such is the way ordained by God. The other way of going scot free is to confess to the civil authorities and turn state's evidence. Chambers did the latter. Perhaps he did the former also. We don't know. Only God knows. At any rate Chambers finally told the truth and stuck to it. Hiss kept on lying to the end. As between the two which was the more pardonable, the man who lied, repented, and atoned or the man who lied and lied and lied?

Mrs. Roosevelt's pity goes out to the unrepentant. In that she disagrees both with the State and God. And all because she has no concern for straight thinking, that is for logic.

National Holstein Week

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. RIEHLMAN. Mr. Speaker, I have today introduced a resolution designating the period beginning June 5 and ending June 10, 1950, as National Holstein Week, in recognition of the fine work done by the Holstein-Friesian Association of America in bringing about Nation-wide improvement in the dairy industry. The membership of the association, of more than 40,000, includes Holstein-Friesian cattle breeders in every one of the 48 States as well as the Territorial possessions and other countries of North America. The sixty-fifth annual convention of this association will be held in Syracuse, N. Y., during the week of June 5–10. We are all aware of the outstanding achievements of this organization, and I sincerely hope the Congress will adopt this resolution making it possible to designate the period of the convention as National Holstein Week.

Port Security

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. BOLTON of Maryland. Mr. Speaker, in these days when we are so concerned about the adequacy of our provision for national defense, it is alarming to discover that we have left a serious gap in our national defense. We have thus far completely neglected the security of our seaports in the event of an emergency. These ports are the bottlenecks through which our men and supplies must be moved in time of war. If they are damaged or destroyed by sabotage, accidental explosion, or fire, much of our other preparations for national defense for which we are spending billions of dollars, could become useless because of our inability to move our men and materials to the fighting fronts.

The protection of our ports, specifically port security, thus becomes a vital aspect of national defense. The problem of port security is one that is not generally realized. It was handled quietly and effectively by the Coast Guard during the recent war, and has received little publicity. Neither the important part which it played during World War II nor its even greater role in any future conflict are generally recognized. But the significance of port security can readily be seen when we stop to reflect on the known Communist infiltration into waterfront areas and organizations. The Russians recognize the vital importance of the ports, and vulnerability in those areas. It is imperative that we, too, recognize their importance now and make provision immediately for filling the gap in our national defense by providing for a trained Coast Guard Reserve which will assure the maximum security for the ports.

The part of our armed forces which is responsible for port security is the Coast Guard, but the Coast Guard must rely primarily on its Reserves for carrying out this responsibility. This is due both to the magnitude of the job as compared with its peacetime personnel and to the specialized training required for port security. The Coast Guard's peacetime strength of around 23,000 officers and men must be expanded about 7 times during war to fulfill its responsibilities. Then, too, while many of its wartime duties are expansions of its normal functions for which regular personnel are trained, the port security duties generally require highly specialized training in fields not normally within the scope of regular personnel training and experience.

In respect to the importance of port security, which is now being brought to the attention of many of us for the first time, let us look a little further into the subject and try to consider and answer some of the quetsions which I know have arisen.

The term "port security" refers to the protection of the ports from damage or destruction by sabotage, explosion of munitions or fire. The measures through which port security is achieved include the continuous use of antisabotage patrols and inspections, supervision of the handling and loading of explosives from freight car to pier and vessel, and the prevention and fighting of fire. All of these are highly specialized and technical duties requiring extensive training and constant instruction in modern developments in weapons, munitions, techniques, and other factors affecting them. This training must be provided in advance of an emergency in order that the personnel responsible for port security will be prepared to assume their duties within the shortest possible number of minutes or hours in the event of an emergency. If the port security specialists are not prepared to be on the job within a matter of minutes and hours, and if such an organization is not constantly alert, a crippling blow could be struck by the damaging or destruction of our ports in the earliest stages of any conflict.

During World War II we were fortunate in that there was no extensive and well organized enemy infiltration into our ports for sabotage. This, and the delay in getting our production and overseas movements of materials and men actively under way, provided time for the expansion and adequate training of the Coast Guard Reserve which had been created in 1941. We are not likely to be fortunate enough again to have so much time for organization and training at the last minute. Furthermore, those who were closest to the rush of last-minute preparations during World War II will tell you that it is anything but an effective, satisfactory or safe way to do the job. Our port security specialists must be highly trained in advance if they are to do us any good in any possible emergency. It is a matter of record that during World War II the Coast Guard, in addition to its participation in every major invasion, established port security organizations in over 75 ports in the United States, including every major port, and, as the war progressed, assumed those functions in our advance base ports overseas. It required a minimum of approximately 16,000 officers and men for these duties in the port of New York, 8,000 in Boston, 4,000 in Philadelphia, 4,000 in Norfolk, 1,200 in Chicago, 8,000 in San Francisco, 4,000 in Seattle, and 2,900 in Baltimore, to cite but a few examples. These port security specialists supervised the loading of about 29,000,000,000 pounds of explosives without a single explosion. This involved the enforcement of specified safety measures in handling explosives, supervision and approval of stowage areas and methods, determination and enforcement of limitations as to type of explosives and other dangerous cargoes which could be stowed together, or which must be separated by specified distances, stowed in specified locations aboard ship, and so forth.

In addition, the port security specialists were successful in detecting and preventing various acts of sabotage, they also discovered and brought under control literally hundreds of fires in ports which might otherwise have been disastrous, and in at least one instance played an important part in preventing the demolition of port facilities by the spread of a raging pier fire to an ammunition-loading area. These few examples of their activities in the last war will give some idea of a few of the vital functions of the port security specialists.

The present situation is one which is most alarming. Although charged with the responsibility for port security, and necessarily relying on its Reserve to fulfill that responsibility, the Coast Guard has been provided no funds with which to maintain the essential training of the Reserve or even to maintain the Reserve in the necessary organized form.

Following the war, the Coast Guard's Reserve officers were placed on inactive duty, retaining their commissions, while its enlisted reservists were discharged. Since then, a few enlisted reservists have returned, but the Coast Guard has had no funds for either the recruiting and organization or the training of a Reserve. The Reserve, therefore, is now simply a skeleton consisting of about 4,000 officers and a handful of enlisted men for whom the Coast Guard can provide none of the essential training. Some of these have been meeting voluntarily once a week for the past year and a half and trying to conduct refresher lectures themselves. This, of course, is not a satisfactory or effective approach and certainly does not fill the needs of national defense.

The question arises as to why the issue of Coast Guard Reserve training funds has not come before the Congress prior to this when you consider what the Reserve components of other services received from this body. Following the war, the Coast Guard, which operates under the Navy in time of war, continued to operate under the Navy until January 1946. This means that the needs of its Reserve, which was being rapidly demobilized, were included in the budget under Navy operations through the fiscal year 1947. Furthermore, the emphasis in all of the services at that time was on demobilization rather than training.

As world conditions became more precarious, however, the Coast Guard turned its attention again to the organization and training of its Reserve to meet responsibilities in the event of an emergency. Funds were requested through the Bureau of the Budget, but the approval of the Bureau was not received until a survey of the relationship of the Coast Guard Reserve to the Reserves of the other services was completed. Unfortunately, this survey was not completed until after the 1950 budget had already gone to the House, and consequently, the matter was not before the Treasury-Post Office appropriations subcommittee when its hearings were held. This subcommittee, however, indicated in its report that although it could take no action in view of the absence of a request, it would give such a request sympathetic attention and a hearing when it was received.

Following approval by the Bureau of the Budget of a request for $3,500,000,

this amount was requested in hearings before the Senate Appropriations Committee, which disapproved it in view of the absence of prior House hearings. Strong statements favorable to such an appropriation were made by Members of the Senate when the appropriation bill reached the floor of that Chamber.

The President then, in the third deficiency bill, again requested the appropriation of $3,500,000 for Coast Guard Reserve training. Of the four Treasury Department items in that bill request for Coast Guard Reserve training funds was the only item not referred to a subcommittee for hearings, and consequently no action could be taken on the request which was never brought before the House for consideration.

When the third deficiency bill was considered by the Senate Appropriations Committee an amendment to provide $3,000,000 was approved to provide for Coast Guard Reserve training. This amendment was removed in conference and once again the item did not reach the House for consideration. After the removal of the amendment in conference, strong statements concerning the vital necessity of providing funds for the Coast Guard Reserve training in port security were made by Members of this body.

The proposed budget for 1951, for the Coast Guard, included a request for $4,100,000 for the training of the Reserve. This amount would provide for the training of 1,900 officers and 6,000 enlisted men. The increased amount represents only the effects of the pay increase bills which were passed last session. The request for Coast Guard Reserve training funds was not approved by the Treasury-Post Office Subcommittee.

The importance of this request is borne out by Admiral Merlin O'Neill, Commandant of the Coast Guard, Secretary of Defense, and Admiral Forrest Sherman, Chief of Naval Operations.

Admiral O'Neill, testifying at the hearings, said:

> One of the most critical missions that we will have in time of national emergency is in regard to port security. And it is necessary in order to carry out that mission, that we have a force trained and ready for immediate mobilization and use to carry out that function.

The Secretary of Defense, in a letter of January 11, 1950, to the Secretary of the Treasury, said:

> The proposed reactivation of the Coast Guard Reserve is a matter of strong concern to the Department of Defense. Accordingly I desire to go on record as fully concurring with the request for the necessary funds for this purpose. * * * I am particularly perturbed about the security of our ports in the event of an emergency. It is vital to national defense that a modest but fully trained force be in being to detect sabotage, supervise explosives loading, prevent waterfront fires and explosions, control the identity of water front personnel, etc.

The Chief of Naval Operations, Admiral Sherman, in writing, stated:

> I feel that the interests of national defense will be well served by the establishment of a Coast Guard Reserve. That, of course, will require funds for the training of such a reserve at the present time. An annual appropriation of $4,100,000 is not excessive.
>
> In the event of mobilization it is contemplated that the Coast Guard will perform the following services: (1) Port security; (2) harbor-master duties at advance bases; (3) beach patrol duty; (4) reactivation and manning of high-frequency direction finding stations; and (5) harbor defense—inshore and offshore patrols in small craft.
>
> A reserve component of the Coast Guard should be trained to proficiency in the foregoing matters. Such training would not duplicate the training now being given the Naval Reserve.

It has been pointed out on several occasions that it is impossible to establish a balanced security system for the Nation as long as the Coast Guard Reserve remains inactive and without a training program. It is in no sense of the word economy to deny the Coast Guard Reserve the money necessary to train its reservists in their important duties, and if it is absolutely necessary to cut down the military expenditures it should be cut from somewhere else in the appropriations for the armed services, leaving the Coast Guard request for Reserve training funds intact.

The seriousness of failing to provide for the security of our ports by having trained personnel ready to step in immediately in the event of an emergency is attaining greater and greater recognition.

In view of the general lack of information in the past concerning the aspect of port security relative to our national defense, I have presented these facts. We have never had this matter before this House and, therefore, have not had the opportunity to learn of its importance or to express our opinions. Now that the facts are before us, I urge that we take immediate steps to appropriate funds for the training of the Coast Guard Reserve. Thus the gap in our national defense will be closed and our vital ports will have the protection against damage or destruction from sabotage, explosion or fire. The ports must be secured if we are to derive any benefit in time of emergency from the billions we are spending for other aspects of national defense for supplies and materials which must be funnelled through the ports.

Wisconsin Swiss Cheese Challenges Ohio Swiss

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, in a friendly spirit of rivalry the Ohio Swiss cheese industry has challenged that its product is superior to that of the Swiss cheese made in Wisconsin and in my congressional district. A very interesting article which appeared in the Monroe Evening Times of March 28 sets out the controversy better than I can do it. Under leave to extend my remarks, I am including the article in question:

MONROE ISSUES CHALLENGE—WISCONSIN CHEESE SNUB STIRS RUCKUS

The battle over the so-called merits of Ohio's Swiss cheese as compared with the better known Green County variety subsided this week, with deep silence from the Minneapolis end of the exchange.

It all started last month with receipt from Louis Orlove, Milwaukee, motion-picture firm representative, of a clipping from a column written by Will Jones in the Minneapolis Tribune.

Jones had made passing and slighting reference to Wisconsin cheese and before the ruckus quieted down this week, Minneapolis, Green County, Monroe, and Dover, Ohio, were all mixed up in claims and counter claims.

Jones, who had been vacationing in Dover at the time, published this reference in his column:

"Today I am thumbing my nose at Wisconsin and all its claims to cheesemaking fame.

"The best Swiss cheese available is made in Ohio."

There was more of the same, but that sample was sufficient to boost the blood pressures among the Cheese Day, Inc., board of directors and at the Evening Times which constantly spreads the word about Green County Swiss cheese to the world.

Jones—who is a native of Dover, it developed—commented on the short course in cheesemaking he had enjoyed and passed along tips on where Minneapolis cheese fans could find good Swiss—in Ohio, of course.

With 1950 Green County Cheese Day coming up September 9, the Times and the Cheese Day board decided to chide Jones a bit. After all, they felt that someone in the Twin Cities area might get the wrong impression about Swiss cheese and where to get it.

So a letter was written to Minneapolis. The reply bounced back immediately, from W. P. Steven, assistant executive editor, son of a New Glarus native and cousin of Arthur C. Benkert.

Columnist Jones also wrote a note, sticking to his guns and displaying none of the penitence for his sins which might be expected.

Anyhow, here's a portion of the Evening Times' letter, published on the editorial page of the Minneapolis Tribune (on St. Patrick's Day).

"We don't pretend to know what Jones' gripe is about Wisconsin but when he says 'the best Swiss * * * is made in Ohio' his gums were snapping like a rat trap.

"He certainly never stopped off in Green County where the only Swiss cheese in the world is made. He never was in Monroe nor did he ever sample Swiss cheese of the flavor and quality of Green County's Gold, which goes out of here by the trainload as compared with the few * * * wheels made in Tuscarawas County, Ohio.

"Jones tips his hand by drooling that he blistered the roof of his mouth eating that good Dover cheese. That must have been fine Swiss. That's the kind * * * we can for fish bait. We certainly don't feed it to our distinguished guests, or send it to the world's markets.

"If Jones, or anyone else in Minneapolis who thinks Wisconsin has lost the art of Swiss cheesemaking wants a little proof, they can come down here any time. Better still, they can show up September 9 at Monroe when the 1950 Cheese Day is held.

"We would appreciate hearing whether Will Jones' opinion of Wisconsin Swiss is shared by others in Minneapolis. If so, we invite them one and to come down for Cheese Day."

Jones' reply included this comment:

"I wasn't invited to your September 9 affair, but I may come down there anyway, under an assumed name. No sabotage intended. I'm a glutton when it comes to cheese, but Ohio is a long way to go for it.

So I'll maybe drop into Monroe to try some of your second-rate stuff."

Publication of the Monroe reply to Jones brought several letters from Minneapolis residents, applauding the verbal spanking and agreeing that Jones' opinions were strictly his own.

His boss also sent another missive this way, hinting that Jones' taste buds probably had been permanently damaged by an enforced diet during which he has lost 20 pounds.

Meanwhile, however, Jones has hinted that the Monroe letter was being rerouted to his hosts in Dover and that "I'm sure you'll hear plenty from that section of the country."

So far his prediction has not come true.

The silence from Dover has been a little disappointing.

Smear Artists Are Busy

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, the pinkish New Deal smear artists, who, especially here in Washington, are always busy smearing everyone who opposes measures advanced by the administration but which weaken America, are again on the job in an effort to cover up the dirt in the State Department, and the unsoundness in our foreign policy, which has lost all the advantages gained by those who fought, suffered, and many of whom died in World War II.

The answer to all their propaganda is found in today's piece by George Sokolsky, which reads as follows:

THESE DAYS

(By George Sokolsky)

Propaganda has been started and is gaining some momentum that the charges against Dean Acheson, Philip Jessup, Owen Lattimore, and the Communists and homosexuals in the State Department should be hushed because they undermine confidence in our public officials and make representation abroad difficult.

The propaganda is based upon a truth. Public confidence in the State Department has been shattered for many years. Long before Senator MCCARTHY made his charges, all but the most ardent supporters of the State Department, and particularly those who support British policy in the United States, wondered what has been going on in that department.

The Alger Hiss case, which President Truman called a "red herring," heightened the astonishment of a nation; the disclosure of the homosexual clique climaxed an unfortunate situation. The refusal to provide the Senate with such information as it is entitled to have, if it is to legislate adequately, surely challenges credulity.

To continue to be silent in the face not of charges, but of disclosures, already establishing scandal, is to serve America badly. In these times, there is always an emergency and a crisis and an international conference.

In fact, it was because of these and the war and the plea for unity that we now find ourselves in such a disgraceful situation, involving shameful accusations and no defense.

There must come a time of housecleaning, and that time might as well be now as ever. The trick of finding an obscure Republican ex-Senator, a one-termer, who often voted against his own party, to serve with the State Department in international conferences, does not reestablish a bipartisan foreign policy.

Even were a Republican more prominent than John Sherman Cooper appointed, it would not reestablish the bipartisan foreign policy.

That political apparatus was wrecked on the island of Formosa and it cannot be restored as long as the present top personnel remains in the State Department.

Actually, among the rank and file of the Republicans, any party leader who associates with Dean Acheson's entourage attracts suspicion to himself. It is unfortunate that it should be so, but the State Department created its own atmosphere.

In any other administration, men involved in such scandals would resign. This, too, is a new phenomenon, namely, that these officials feel that they have a vested interest in their job, and the White House supports the view that once a person is appointed to public office he is sacrosanct.

Naturally, any such conception is false and even impossible. It is a reflex to inferiority, coming down from the top. Only those who feel themselves inferior demand such recognition.

When Mr. Hoover was President of the United States, it was found that a young man in the State Department made free with its documents. He was dismissed, and devoted the ensuing years to smearing Mr. Hoover.

The Yardley law was passed because State Department data found their way out of the Department. Certainly Mr. Hoover could not be accused of harboring document thieves; but when he found them, he threw them out.

That is the point—bad appointments might be made, or good men might fall for temptation. What needs to be done is to throw them out whenever they are discovered.

When such men are protected, the protector, to whom they must be abhorrent, must have some ulterior motive. Certainly Harry Truman cannot like either Communists or homosexuals. Why does he protect them? Why does he fight for them?

The answer is in the record. During the New Deal and the war years, when the personnel of government was rapidly expanded, men and women were taken in on their specialized abilities. The FBI and the Civil Service made checks, but often they were made after the person was actually at work.

Those who found the atmosphere uncomfortable in one organ of government found a better berth elsewhere. The check never caught up with the worst of them.

Further, disloyalty involves a legally proved overt act, which makes any safeguards in advance almost impossible. Meanwhile, the subversive or doubtful wins a berth, does his work, and establishes a vested interest, which the President defends.

That is where the trouble lies—in the President's protection of the vested interest of anybody on the public pay roll.

Mr. Speaker, it is unfortunate that Mr. Truman, ever since he came to the Presidency, has all too often followed the methods of the corrupt Pendergast political machine of his native State.

Neither he nor the smear artists can convince the people that the State Department does not need a house cleaning.

All that American youth fought for has been given away by the Achesons, the Hisses, and their associates. Apparently, in an effort to save the present administration from political defeat, another war is in the making.

Let no one be deceived. The President is in control of the executive department of the Government. His party has an overwhelming majority in the Senate and in the House. They cannot shirk responsibility for the present situation—for the advancement of the Communists throughout the world, especially in China and the Far East.

Diversity and Union

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Review of Literature of April 1, 1950:

DIVERSITY AND UNION

The United States is in the midst of a struggle for peace. We are opposed by the efforts of a diabolically clever and well-organized Communist organization which is seeking to destroy our democracy. If we are to succeed in our struggle we must forego all partisanship and all political adventures.

If we are to succeed we must show to our friends in the free world that we are not divided in our counsels but that we are united in our determination to promote the cause of peace and to pursue the wisest policy which our united genius can devise.

There can be no gainsaying the force of the statements with which United States Ambassador-at-Large Philip Jessup repudiated the charge of Communist sympathy leveled against him by Senator MCCARTHY, nor any doubt that incalculable harm is done to America and the world by such irresponsible attacks. All the more reprehensible is the Senator's reckless conduct because at best the democratic process contains dangers inherent to itself in the front it exposes to other nations. In any land where speech is free and debate is open policy crystallizes through a series of often hotly contested exchanges of opinion, the stresses and strains of which can be misconstrued by those inclined to twist them to serve their own ill purposes. Day by day the Russian press and the press of the satellite nations so misrepresent American attitude and action, searching among the flotsam and jetsam of public discussion, seizing here upon a casual statement which falls in with its credo, there upon another which belies American professions, and drawing from minority or tentative or exploratory remarks a totally false picture of the mind of the Nation as a whole.

It is, to be sure, a danger, but it is also the essence of American democracy that it presents a diversity of outlook. The United States was born of diversity, of different peoples seeking new homes for different reasons, of diversity of climate and diversity of geographical nature and economic potentialities. Its culture was compounded of diversity, of the mingling of varied racial strains and variant traditions, of the superimposition of a civilization sprung of the frontier upon the accumulated habits and attitudes of mind of older countries. Its rugged individualism was diversity, its cracker-box philosophers airing his homespun philosophy before his fellows, who like as not howled him down when his generalizations were out of tune with their own independent views, its cowboys and railroad builders, and captains of industry. And

though the enormous mechanization of American civilization has seemed at times to threaten diversity, and the evolution of the radio and the motion picture to presage standardization, nonconformity is perhaps stronger in American today than at any time in its history.

Opinion has never been more fluid, party lines never less binding, social standards never less constricting than in the present. Two world wars and a major depression have shocked the American people into new standards of value. Though the United States has gone through no such social revolution and shift of fortunes as England, it, too, has changed its habits of living and its material outlook. High taxes have decreased great fortunes but high wages have expanded the standards of the working classes and widened the diversity of their interests. The greater latitude of opportunity for women has given them a voice not only in business, but in politics. The war experience of millions of young men has lent sanction to their expression of opinion on their world.

There is, indeed, an underlying sensitivity to conditions and problems of the time, frequently raucous when it is articulate, often floundering. It is this inchoate compound of feeling and opinion which seems so often at cross-purposes, which speaks with contradictory voices, whose meaning can so easily be misunderstood and distorted by the hostile. In it is all the diversity of America, and all of America. "Sweet are the uses of diversity," paraphrased Frederick Lewis Allen in a recent address. Yes, when properly channeled and directed. It is this direction which Mr. Jessup calls for when he says that if we are to succeed in our struggle for peace "we must show to the free world that we are not divided in our counsels, but that we are united in our determination * * * to pursue the wisest policy which our united genius can devise." To realize that direction, we need unpartisan leaders, not Senator McCarthys. We need men of imagination and vision, men of selflessness and courage. If we get them we may win the peace, for still the old slogans hold, "E Pluribus Unum," "In Union There Is Strength."

A. L.

Resolution of the Department of New York, Jewish War Veterans of the United States

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. MULTER. Mr. Speaker, the following resolution has just been adopted by the Department of New York, Jewish War Veterans of the United States of America:

Whereas Hans Schlange-Schoeninger has been appointed as the West German consul-general to New York City; and

Whereas under the occupation statute, the conduct of German foreign affairs is specifically reserved by and to the occupying powers; and

Whereas Hans Schlange-Schoeninger has a long record of hatred and vilification of the United States and helped pave the way for Nazi power during his leadership of the German National Party during the Weimar Republic; and

Whereas in his book, The Morning After, published in 1948, he expressed no regrets for Hitler's slave-labor measures and the slaughter of 6,000,000 Jews, but demanded a "forgive and forget" peace program with Europe dominated by German reaction: Now, therefore, be it

Resolved, That the Department of New York, Jewish War Veterans of the United States of America does herewith make strenuous protest to such appointment of this unrepentant pro-Nazi to such near-ambassadorial status and demands its immediate rescission; and be it further

Resolved, That copies of this resolution be sent to all Congressional and Senatorial representatives of the State of New York, to the Governor of the State and the mayor of New York City; and be it further

Resolved, That the national executive committee of Jewish War Veterans be requested to register this protest with the President of the United States, the Secreary of State, and the High Commissioner for Germany.

Mr. Speaker, I sincerely trust that our State Department will take action as recommended in this resolution.

The Insurance of Bank Deposits

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Insurance of Bank Deposits," which appeared in the American Metal Market, the market authority of the steel and metal industries, on Wednesday, March 22, 1950:

THE INSURANCE OF BANK DEPOSITS

Last week the Senate passed and sent to the House of Representatives a bill which, among other things, would increase insurance on individual bank deposits from $5,000 to $10,000 and reduce the amount of insurance premiums, paid by the insured banks, by an estimated 60 percent. The bill serves as a happy reminder of the valuable service which the Federal Deposit Insurance Corporation has rendered the Nation since it was created in the dark days of 1933 and of the still greater contribution to national stability which it is capable of rendering in the future.

The very efficiency with which the FDIC has functioned has served to obscure its operations from the public eye. The sensational makes the headlines. Quiet efficiency becomes taken for granted. But for the average man, the security of his bank deposits has been a very great stabilizing influence. He may go to bed filled with perplexity over the sad state of the post-war world, and even apprehensive over the chances of surviving some imaginary atomic attack but, unlike his compartiots of two decades and more ago, anxiety over the safety and liquidity of the money he has in the bank is not, fortunately for him, a current worry.

Of course, this has been so ever since his deposits became insured after the creation of FDIC back in 1933. But confidence did not come at once. The skepticism with which the insurance of bank deposits was viewed by many, including no small percentage of the banking fraternity, and the gloomy forebodings (now forgotten) as to the workability of the law, which preceded its enactment, caused many to accept the innovation with reserve. The legislation has proved to be one of the truly great advances made during the last 20 years and, from the manner in which the affairs of the Corporation have been administered, it has achieved what is probably the greatest measure of success that is attainable—it is now taken for granted.

The bill pending in Congress is the first piece of major legislation undertaken since the FDIC was established. A unique feature of this Government corporation is that it does not constitute a drain on the National Treasury. It is an insurance company, in the legitimate sense of the phrase, which has been sustained and achieved its financial success through premiums remitted by the institutions whose deposits it protects. In the beginning, it is true, the initial capital of approximately $289,000,000 was contributed partly by the Treasury and partly by the Federal Reserve banks. This, however, was cleared up with a final payment to the Treasury at the end of last August and as of the end of 1949 the Corporation had accumulated a surplus of over $1,200,000,000. The legislation now pending stipulates that, in addition to the repayment of the original capital, already completed, the Treasury and the Reserve banks shall be paid simple interest at 2 percent, for the funds they advanced. There was no provision for interest in the original legislation, and this feature of the bill will mean a payment of $42,872,862 to the Treasury and $37,691,966 to the banks. However, when such payments are made, it should no longer be possible, even for the most meticulous, to quibble over the point of whether the Corporation has, or has not, fully repaid the advances it received, and now stands on its own feet.

It is symptomatic of the change in conditions since 1933 that it should now be considered expedient to consider increasing the maximum coverage from $5,000 to $10,000. That funds are more abundant is evident in the figures for deposits and for money in circulation, but the added risk and burden which the increase will place upon the reserves of the Corporation seems likely to prove more apparent than real. Aside from the fact that the number of persons likely to maintain cash deposits in excess of $5,000 is comparatively few, there has been nothing in the past to hinder one from obtaining almost unlimited coverage through the duplication of accounts, especially wherever there is duplication of banking facilities. It seems probable that in practice the principal effect of this new provision will be to enable small and remote institutions to retain some funds which might otherwise have taken refuge in more distant centers, once local facilities up to $5,000 were fully utilized.

For several years, as the surplus of the FDIC has risen steadily to such great heights, there has been increasing demand for an abatement in the amount of premium assessed against the insured banks. Large and strong institutions, with exceptional holdings of cash and Government obligations and comparatively little need for protection have been, understandably, among the most insistent that something should be done. The pending bill provides relief in a rather ingenious way. The old premium of one-twelfth of 1 perment of deposits is retained, but the bill provides that each year 60 percent of the assessment income remaining after operating costs and losses would be refunded. This method will obviate the need of changing the rate of assessment with changes in conditions and, under prevailing conditions, it is said to result in a reduction of about 55 percent in the amount member banks will pay in assessments.

The ability of the FDIC to grant this relief without impairing its ability to make good on its guaranties is illustrated by its year-end figures. During 1949, the Corporation collected from assessments and other sources a total of $145,514,301. Its losses were $641,183, and its expenses $6,781,331. There was

therefore, a balance for surplus of $138,091,786 and, after completing the repayment of the original capital of $289,000,000, the surplus still stood, as stated above, at $1,203,952,687. In addition, the law already allows the Corporation to borrow from the Treasury up to $3,000,000,000 at one time. This borrowing power has never been utilized.

Through curious contradictory conditions, which one might expect to encounter only in officialdom, this insuring agency is denied access to the records of the institutions it insures except, in the majority of cases, with the consent of other agencies. Member banks, so-called, are subject to examination by the Federal Reserve, and National banks are subject to the Controller of the Currency. This leaves only nonmember insured State banks subject to direct examination by FIDC without possible intervention by an intermediate Federal authority. The Controller of the Currency is, it is true, an ex officio member of the Board of FDIC making, after a fashion, an interlocking of direction so far as National banks are concerned. But, as regards those institutions which are subject to the direct supervision of the Federal Reserve, there exists a measure of conflict of interest not dissimiliar to that which has existed in other matters between the Federal Reserve and the Treasury. Thanks to cooperation in the past, this overlapping of authority has caused no differences of importance, but there are many who consider it rather anomalous that an insuring agency should not enjoy, free from even possible technical impediment, the fullest access to the subject it is called upon to insure.

After the smooth sailing the pending measure has had in the Senate, it is expected to encounter no serious opposition in the House. The banks, we believe, are entitled to the relief that is now in prospect for them. And, whatever his other concerns, Mr. John Q. Public can see from the facts revealed by the hearings on the bill, that his ready money is well protected.

Do We Have to Vote for This? I Did Not!

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. WHITE of Idaho. Mr. Speaker, the statements made in the following press report is characteristic of the extravagance and waste of public funds appropriated for European relief organizations. Instead of appropriating money to that wonderful relief organization, the Red Cross, and broadening its power to succor the distressed people of Europe. We were induced to set up a new organization, the UNNRA and appropriated billions of dollars of the taxpayers' money to pay exorbitant salaries and employ incompetent and wasteful personnel. Now we are appropriating more of our taxpayers' money under similar conditions.

There is inserted herewith an illuminating article appearing in the April 2 edition of the New York Post:

ECA "FEUDAL BARONS" FEATHER THEIR NESTS IN VIENNA

(By Seymour Freidin)

VIENNA, April 1.—The cold war apparently has made no impression on Marshall plan officials here.

They have just spent $40,000 in counterpart funds refurnishing swank homes so they can rough it in an opulent roccoco style to which they have never been accustomed.

The three highest ECA executives in Austria contended today they had not exceeded the legal maximum Washington entitles them for allowances.

But the point they have overlooked in trying to act like feudal barons is that they are deep behind the iron curtain here, where the Marshall plan is subject to the closest scrutiny by the Russians.

Their insistence on gorgeous tapestries, oriental rugs, ornate swimming pools, and antique chairs certainly does not provide an effective reply locally to Communist charges that the Marshall plan is meant only to enhance American profits and comforts at the Europeans' expense.

John B. Wilson, trying to cover up for his superiors, declined to produce figures under administrative expenses which are drawn from counterpart funds. Wilson tried to slide out with "the figures are just like the loyalty files in Washington, they're secret."

The counterpart funds are derived from the local currencies which governments pay into a pool for Marshall plan goods. They are supposed to be used for reconstruction purposes, except for a small percentage allocated for Marshall plan administrative costs.

Under this, Deputy Administrator William Giblin spent the equivalent of $25,000 to redecorate a four-garage house. Top Administrator Clyde King used $9,000 for little end tables, and Mark Sanborn, another Deputy, took $6,000 for making his place a better cocktail rendezvous.

Giblin, whose previous service consisted of handing out Red Cross sandwiches to soldiers in Britain, said he intended to pay for the bedroom murals in his house. That's a nice gesture, but why he requires a swimming pool flanked by huge figures of water-spouting frogs to help his work should be examined by Congress.

For all this unnecessary expenditure the Marshall plan can only suffer. The funds could have been used for road building or for houses for crowded Austrian families.

Something should be done about such crass disregard of responsibility which is beginning to assume large proportions among many top Marshall plan echelons in Europe.

Role of Cooperatives in America—Address by Jerry Voorhis

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks, I am pleased to insert in the RECORD an address delivered by a former Member of this House, Jerry Voorhis, now executive secretary of the Cooperative League of the U. S. A., before the seventh annual meeting of the National Rural Electric Cooperative Association.

With characteristic ability, Mr. Voorhis has told of the role that cooperatives and cooperation play in our modern democracy. I agree wholeheartedly with my good friend that cooperatives are the most democratic way imaginable of conducting our business enterprises—for consumer is also owner, and he takes a direct interest in seeing that his business is run in his interest and in the interest of his community.

I commend this fine address to my colleagues:

SPEECH OF JERRY VOORHIS, EXECUTIVE SECRETARY, COOPERATIVE LEAGUE OF THE U. S. A., TO THE SEVENTH ANNUAL MEETING OF NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, MARCH 8, 1950

All through history the peoples of the earth have applied one basic method of meeting the problems and dangers that beset them. That method has been a joining together of many people to give mutual aid and assistance to one another. Upon that method were built the tribes, the clans, the city states of ancient times. Without it, no modern nation could exist, nor could civil peace be preserved. Mutual aid has always been the answer of the common people to oppression and exploitation by the few, to the danger of violence from those who would violate the law or break the peace, to the concentration of political, social, or economic power in mighty hands. Mutual aid runs through history like a golden thread. For it has been the greatest civilizing influence of all times.

By means of mutual aid the people have attempted to protect themselves against the worst ravages of war. By applying mutual aid broadly enough, courageously enough, and deeply enough, peace on earth could be made possible.

Another name for mutual aid is cooperation. Cooperatives as we know them, whether REA cooperatives or farm-supply cooperatives, or credit unions, or health or housing cooperatives, or cooperative stores—whatever particular kind they may be, cooperatives are simply the application in our times of the basic Christian principle of mutual aid to the everyday economic problems of the people.

The arm of the Lord was not shortened on the day that man dared to take the energy of the universe and fashion it into a weapon capable of wiping out human lives by the millions. Indeed we may be sure the moral law is as inexorable as it ever was. It is well that we remember these things.

For there are facts about our present situation that are more fraught with meaning for the future of man on this earth than we may like to realize.

The question before our generation is whether mankind will act in this crisis as lower forms of life have acted in ages past or whether man will prove that he is indeed God's greatest and highest work. Other forms of life have flourished mightily upon the earth only to disappear, leaving behind only fossil remains. Well, we have populated the earth; some say we are on the point of overpopulating it. And unless we can apply mutual aid to the organization of our life the world probably is overpopulated. Man has piled smartness on smartness, scientific discovery on scientific discovery until at last we stand on the threshold of the ultimate achievement of scientific smartness—the ability to destroy ourselves and the world as a place of habitation. Only a little way further down this road and man will have followed the dinosaurs, all-powerful rulers of the world in their day, down the way to oblivion.

But man need not do this, not if he uses the resources with which he has been blessed. For man was not born for self-destruction. He was given the insight and the knowledge of spiritual and moral powers which are sufficient to save himself and to harness his own powers and turn them to good. But this we shall not be able to do unless we use all of the best and deepest resources with which God has endowed us.

And by every bit of testimony of every great teacher humanity has ever known the basic resource man possesses to overcome his problems is the ability to work together, to apply mutual aid and cooperation to the dangers that beset us. Somehow, some way

we must organize the will to peace, the will to live of all the simple people around the world into institutions that will be powerful enough to control the atom bomb and the hydrogen bomb and direct them not to war but to the keeping of the peace—indeed to the enforcement of peace over the will to war of any nation.

What has all this to do with the business of this meeting? A very great deal.

Let us ask why these terrible weapons have been created. They have not been created because the people have wanted war. They have been created because the people in certain nations have lacked the strength within themselves to be masters of their own fate. The people, lacking strength in themselves, have permitted all-powerful dictators to rule over them. That is why the very life of man is threatened today.

And so we must seek the only answer there can be to man's danger. That answer lies in building the strength of the people. But it cannot be built from the top down. It has to be built beginning in the communities of the world, especially the rural communities; and then on the basis of strong communities we can build a structure of peace and plenty for all mankind. This is why this meeting and every other cooperative meeting is a matter of such tremendous importance right now.

Now the way the strength of the people is torn down is when they lack responsibility for their own fate—either their personal fate or their political fate or their economic fate. It makes little difference whether it is an all-powerful dictator government that takes away the peoples' responsibility or whether it is a giant economic or financial monopoly that does it.

On the other hand the way the strength of the people is built up is when they have the will and the means and the method and the tools to take command of their own welfare, beginning with their basic economic welfare.

What we are fighting for is the right of the people to own, to operate, to be responsible for their own businesses, and their own institutions of every sort to bring about their own welfare and salvation.

We have just got through defending that right before the Ways and Means Committee. We are trying to defend it in a thousand communities all over this country today. That's what you have met for here in this great annual meeting. It is what the Cooperative League exists to do.

But it is not enough just to defend. We have got to have a position program of building broader and broader the strength of the people. That's the basic answer to communism and to fascism all around the world.

Well, a lot of wonderful progress has been made. No less than 10,000,000 American families are members of one kind of cooperative or another in this country today. They have found the middle way for the United States of America between dependence on private monopoly on the one hand and dependence on all-powerful Government on the other.

Cooperative organization of the people's own businesses restores ownership to the people who have lost it. It spreads ownership—and with ownership responsibility—to millions of citizens who can have that experience in no other way. Cooperation is the restoration of vital, vigorous, democracy in the communities where the people live.

Cooperatives are formed by the people for one purpose and only one—to supply some need for goods or services. Therefore they automatically solve the problem that has plagued every so-called free economy in the world, the problem of keeping supply and demand in balance. Cooperatives produce and distribute to meet needs. They produce for a market that already is assured and measured. The more fully they satisfy that market the greater their success. They can never be afraid of full production and full employment—because their only purpose is to meet the needs of people.

Where cooperatives are strong in an industry that whole industry must produce abundantly—to meet coop competition. This is the reason they can save freedom for everyone, including their competitors. An economy in which cooperatives are strong—where they do 15 percent or so of the business can be proof against depression.

Cooperatives have brought the practice of thrift and an abundance of credit to 5,000,000 American families—credit union members—who did not have it before.

Cooperatives have brought an abundance of electricity to over 3,000,000 farmers—who didn't have it before. They have brought that electricity at costs the farmers can afford. They have made American farming a modern industry and they have done it by preserving and strengthening the family-sized owner-operated farm.

Cooperatives have brought petroleum products and ownership of their own petroleum supplies to 1,500,000 families who otherwise would have suffered shortages and exorbitant costs.

Cooperatives have fed our soil with fertilizer which farmers could not have afforded had not their own cooperative businesses been doing 15 to 20 percent of the business in this field.

Cooperatives have brought hospitals and health care to hundreds of thousands of people who could have them no other way.

Cooperatives have enabled the people to insure themselves through their own insurance companies, to build their own financial institutions, and thus to control their own savings and begin to build their own financial security.

These things cooperatives—the middle way—have already accomplished.

They can and must do more.

Cooperatives can build houses just because people need homes, and they can build and maintain those homes at costs the people can afford. But to do this on a substantial scale, we need equal access to low-interest financing such as legislation now before the Congress would provide.

Cooperatives can build health centers where people need health centers.

Cooperatives can stop both inflation and deflation and restore to the people economic power over the flow of the supplies of the goods and services they need.

By returning to the people as patrons all margins between costs and selling prices, cooperatives can keep buying power always in balance with production. This can render depressions impossible. Applied to trade between nations, the patronage refund can keep international trade balances always even—can lift the burden of unpayable debt from poorer nations and can stop the flow of useless gold to creditor nations.

Here is the "Middle Way for the U. S. A." Even for the world of 1950 it offers a way of abundance and peace by restoring control of their own destinies and responsibility for their own destinies to the people once again.

Here is hope.

But only the people themselves can make that hope real. No small cooperative movement can meet the present desperate situation. Our job is to build our cooperatives to 6 or 8 times their present size, for then we the people will be able by the impact of our people's businesses, to make freedom, security, and abundance—all 3—possible for all America.

I have not picked this figure of a 7-fold growth out of the air. It is based on the fact that co-ops today are doing about 1½ percent to 2 percent of the Nation's business. But we know that in the lines like fertilizer, for example, where co-ops do 15 percent of the business in certain states you get a fine satisfying influence on the whole industry. Well 7 times 2 percent would be 14 percent.

This is no time, then, for us to be wondering whether or not we can succeed in our cooperative endeavors and enterprises. We can succeed simply because we must do so. The very chance for life of our children and our children's children depend upon it. And if we have a spark of religious faith—and I am sure most of us have much more than that—we must know that God does not leave mankind helpless, but that we are given powers of mind and spirit equal to our tasks, however difficult they may be.

Now as long as the peoples' business in their co-ops is a small affair no one complains about it very much. But just as soon as the people begin to develop real economic strength, then there starts an attack upon them. This has always been so, all through history.

To be more specific, as long as REA co-ops are dependent for their supply of power on the big power companies there isn't much complaint. The complaint and the attacks start up with vigor and sometimes with viciousness just as soon as the REA co-ops begin to generate their own power and thus make sure they can supply their members needs all the time and fully. So this is the real fight right now, as I see it, and you may be sure the Cooperative League will back you to the very limit all the way and work with you in every manner you suggest. Not that I'm suggesting that REA co-ops should generate all or even a major part of the power they use. But they must have the right to generate, and they must actually own enough generating capacity here and there to provide security for their members and to give to all America a yardstick of what that power ought to cost.

In other words, the REA co-ops must always have enough generating capacity to prove, and to prove over and over again, that the people can supply themselves wherever necessary. There is enough experience already to show that as long as REA co-ops are completely dependent on outside sources for power supply they will from time to time be told that there isn't enough juice and that they'd better sell out the whole farmers' REA system to the power company. That's going to happen more and more as the co-ops pay off their debt to the Government and own their system free and clear. The first co-op or two that sells out may get a fancy price. But if the farmers fall for these propositions, the price is going to go down and down. It will go down because the strength of the people has gone down.

The same can be said about the materials you need—like aluminum—where you have shown the courage and the foresight to make a contract to break the monopoly to bring down the price and to increase the supply—not only for your own benefit but for the benefit of the whole United States.

This is cooperation and mutual aid at its best.

Today the Congress has given a green light for the development of a real telephone system for rural America. It will be, in some respects, a harder job than rural electrification. It will require a substantial equity payment of the members, because telephone systems are service systems pure and simple and do not generate cash savings like electric systems can do. But all this and much more effort will be worth it if we can develop telephone systems and central facilities belonging to the people who need and use them and providing a real area coverage for our farm people. State cooperative councils, cooperative regional wholesales and the Cooperative League are more than ready to help in any way we can. Rural electrification is one great forward step. Good rural communication should be, and can be the next one.

Every co-op and every American today has to be concerned with a conspiracy—it can only be called that—to smash any business conducted for the direct benefit of the people, rather than for its own profit.

For many years your organization has stood side by side with all other cooperatives in a successful fight to expose and turn back a sinister racket known as NTEA. This outfit, financed largely by really big business, including utilities, has preyed on legitimate small-business men in an effort to smash the best friend that small-town merchants have—the farmers' cooperatives. Its propaganda has been plastered by the millions of dollars worth across the Nation, trying to blacken the business reputations of farm people.

Its co-op "buck" has been exposed as phony and suppressed by Treasury agents; a spotlight of publicity has been turned on the efforts of one of its officers to offer a $10,000 campaign fund to a United States Senator if he would do NTEA's bidding. He refused. Recently the House Small Business Committee presented conclusive evidence that this so-called small-business organization is no more nor less than a front for some of the biggest businesses in the Nation.

Still, thousands of small-business men all across our land continue to be duped by this sinister and unremitting propaganda—simply because they do not know where their friends are. We have not told them often enough nor loud enough nor in a united way.

Money is no object to the NTEA backers and those allied with them. Nearly every day we get new evidence of the vast extent of the conspiracy against the plain people of America who have the audacity to go into business for themselves.

Last month the NTEA started a campaign of using bankers to try to raise funds all over the Midwest to attack not only the co-ops but all nonprofit businesses competing with the banks. These letters named credit unions and PCA's and farm loan associations and mutual savings banks and building and loan associations, if you please. These shake-down letters are addressed to the very same small-town bankers who depend for their very livelihood on the savings and investments of the farmers and townsfolk who belong to these nonprofit associations.

Last week in this very hall spokesmen for the real-estate lobby had the nerve to get up and cry "socialism" at the efforts of the middle-income families of this Nation to get decent housing at a fair price the co-op way. These were the very same real-estate interests that themselves have gratefully, for many years, accepted Government guaranties through the FHA for their mortgage-lending and home-building operations.

But when the unions and the veterans and the religious bodies of this country dare to try to speak for their members in an effort to organize co-ops to take advantage of this very same type of credit guaranties—no, that is socialism.

It appears to make an awful lot of difference for whose benefit the peoples credit is used. And always remember the credit of the United States belongs to all the people.

You folks in the electric co-ops have had to take a lot of this abuse, too. First it was socialism when farmers went into the business of stringing power lines out into the country, using their own good credit made available to them through their Government and getting a lot less of it at that than big business got through the RFC. Then the power companies found it wasn't socialism, but pretty good business, to build lines out to the farmers. So they did. They built many lines and electrified many farms for the first time in their history. But they still fought the REA.

But pretty soon the power companies ran short of power. So you farmers started to build your own generating plants and transmission lines. What happens? The power companies start their propaganda mill all over again. They hire a firm of hot-shot public-relations people to spread the scare headlines across the Nation and to try to say that if farmers own and run their own businesses that is somehow socialistic. Actually, of course, it is just the opposite. But the propaganda mill says liberty is threatened.

Do they mean the liberty of people to crowd into two-room apartments, or milk by hand, or talk over a spluttering old hand-crank telephone, or market their grain at the price set by the big millers, or buy their feed at the big feed merchants' prices?

That's not the kind of American liberty we're talking about here in this meeting or in other co-op meetings. We are working to establish the full liberty of the American people to have a share in ownership of American enterprise, to take responsibility for it, to work out their own problems.

We in the co-ops have never attacked profit business. In fact we would be very foolish if we did not want profit business to make a fair profit in the housing field, or in the field of rural power, rural telephones, or feed, or fertilizer or credit or insurance. This is a big country. There are plenty of needs to be served. There is room for business of all kinds to serve those needs. All we want is to have a fair percentage of the business in the ownership of the people themselves, freely and voluntarily joined together.

And we do say that just as we want businessmen, small and large, to make a fair profit, so do we demand the right of people—on the farm and in the city—to run whatever businesses they choose without profit if they so desire.

And just as we grant the right of any business to seek loans from our Government if it so desires, so do we demand the right of the people to have the same right to their own credit for their non-profit businesses.

Our eyes are open now. We see that the attack is aimed squarely at the people and that every business that depends on the peoples' prosperity and earning power for its success—and that's most business—is also under attack.

That's the attack that we cooperators—all of us—face in the America of the 1950's. It is an insidious attack—now secret, now open—always well-financed, always well-coordinated, planned and directed. And it will only stop when cooperatives in America are so well-established that no one can hope any longer to destroy them.

What can we do to combat it? Our ranks are not closed as are the ranks of our enemies. In the rural communities we have a major story to tell. We have not told it. We need to tell the places where we live—yes, and our own members—what we have done to cut costs of power and credit and insurance; what we have done to bring better quality farm products to the people. We need to tell what we are doing to improve and extend telephone service for farmers; how we are trying to lick the housing shortage for millions of veterans and other middle-income people and their wives and children. Through State and local cooperative councils, through joint action of all the co-ops in each community we can get together our stories of how co-ops have built and will go on building the strength of the people and the strength of their local communities.

We need to stand together, we co-ops, right in our home town, where we do business and where we save money for our members so they can buy at home. We need to tell this story up and down every Main Street in America, with a voice so clear and so united that no one can miss it.

We are attacked together. We must stand together to fight back and to do more than fight back—to tell our story of the co-ops as the middle way for a better America and a better world.

Another Hitchhiker

EXTENSION OF REMARKS
OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, in the Allegan Gazette, published at Allegan, Mich., on March 27, last, was a thought-provoking editorial which reads as follows:

ANOTHER HITCHHIKER

Settlement of the coal strike represents a victory for arson, dynamiting, kidnaping, assault and battery, political conspiracy, chicanery, and extortion.

While a timid and fearful Truman twiddled his thumbs in Washington, John L. Lewis and his coal miners stormed and captured the coal industry causing untold misery and damage to the public.

During the campaign against their own coal operators, the goon squads—with the aid of dynamite and the Molotov cocktail, threats and actual warfare—closed down the nonunion mine.

When Truman finally invoked the Taft-Hartley law Lewis blandly ordered the miners back to work. For the first time in history the union miners refused to follow Lewis, they refused to return to work and as a consequence the union was tried for contempt.

A New Deal judge listened to the evidence and it was held that the union was not in contempt and it is our conclusion that either a sympathetic Attorney General tried the case with his left hand and his tongue in his cheek or a sympathetic, politically minded judge decided the refusal of about 500,000 miners to return to work at the same time was 500,000 coincidences.

Then when the coal supply was reduced to about zero Lewis negotiated and delivered his ultimatum, either meet our terms or nationalize the coal industry.

The coal operators rather than surrender their mines to Truman, to be used by him and his bureaus as a vast social experiment, gave in.

Lewis and his union are destroying a free competitive coal industry. The are destroying employment in the coal industry. They are creating a situation where coal will be a drug on the market. Then our social planners will say that competitive, capitalistic system has failed and the Government will have to subsidize the coal industry and the miners.

It is a fight between those who work to earn their way through life and those who want to live without working.

Soon this country will have another parasite industry not pulling its share of the load, riding on the wagon instead of pulling in harness.

If the trend continues, everybody will be riding, but, gentlemen, we won't be going anywhere.

Mr. Speaker, if, in addition to regular wages, to a right to unemployment compensation, the employees of more and more industries are to enjoy pensions, those pensions must be paid for by adding the cost thereof to the price of each unit produced and sold by such industry.

The flaw in the plan is that the cost must always be added to the price of the article sold, and, ultimately, that price may get so high, as it has in coal, that fewer people buy, and ultimately

the sales drop off, the market is destroyed, unemployment follows.

The point is that no individual, no group of individuals, can for always enjoy special privileges, special benefits, at the cost of the public, without eventually destroying the economic balance.

Economic Cooperation Administration

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. VURSELL. Mr. Speaker, we are coming near the close of the debate on this ECA bill, which carries approximately $3,000,000,000 in aid, mostly to European countries, for the coming year. We expended during the first fiscal year almost $6,000,000,000, during the second year a little over $4,000,000,000, and this year it will be about $3,000,000,000.

From the beginning I have generally favored a program of giving the Marshall-plan countries a sufficient amount of help in this distress, but have advocated only giving them enough help to encourage them to extend their own efforts to the limit in rebuilding their countries. I have felt that if we were too liberal and give them too much they would depend upon us to too great an extent and would not put forth the individual effort required on their part.

In 1948 I offered an amendment to the bill to reduce it by $1,500,000,000. I felt at that time that we were appropriating too much. My amendment was voted down and the bill was finally passed. However, when we came to the end of the year and took up the 1949 bill we found that try as they would, we had appropriated so much money they could not spend the nearly $6,000,000,000 and they had left over almost $1,500,000,000. It appears that I was nearer right at that time than those who voted down the amendment thought.

In the 1949 bill many of us urged a greater reduction than was made. Again our amendments to reduce the bill were defeated.

Now again when we come to consider the 1950 bill we find that there is left over unspent from the 1949 appropriations, $150,000,000. That is a lot of money. I supported the motion to cover this $150,000,000 back into the Treasury but again we failed.

We have, however, made some progress in passing the Case amendment that has reduced the amount asked for by $250,000,000 and we have cut out of title III enough to reduce it to about $25,000,000.

Frankly, it is my opinion that the Vorys amendment offered by one of the ablest members of this committee to reduce the amount by $500,000,000 which was again defeated by the majority of the House should have been approved.

Mr. Speaker, my greatest opposition to this bill is title III, that bold new program suggested by the President in his inaugural speech on January 20, 1949. Title III in this bill should be stricken out. It has no place in this legislation. It seeks to get the foot in the door with a small appropriation that could, and likely will, develop into a never-ending world-wide WPA at the expense of the American Government and the American taxpayers.

It sets up a world-wide program of relief before we have finished the 4-year Marshall-plan program, which is the main purpose of this legislation. It appears that it is the initiation of another spending spree which can be developed in full force when the Marshall plan is discontinued. It is a dangerous undertaking. Why should we start another world-wide plan of relief to so-called backward nations until we have completed the Marshall-plan-relief 4-year program?

To give you some idea as to what is contemplated in this bold new plan to aid backward countries which is provided in title III, to which I object, let me read what the committee which drafted this bill states in its report to the House:

> A review of the Department of State's plans for the first-year program show the meaning of section 317 (2) more precisely. The plans include surveys, studies, scientific research, and joint management operations in the following fields: General economic development, agriculture and forestry, hydroelectric power and flood control, highways, transportation, health, social security, housing, communications, etc.

Mr. Speaker, we have spent over a billion dollars in building highways, roads, bridges, power plants, on irrigation and other projects in the European countries during the past 2 years. Now this new program would expand as you will note to any and all other backward nations of the world.

Our debt is so great now, and our budget is so out of balance that appropriations have been reduced for all flood control including power dams, et cetera, by 25 percent. The loss in my district alone from floods which, in high water, overflows hundreds of thousands of acres of land and causes damage to our farms, towns and cities along the Wabash River runs into millions of dollars. I have been urging that the Government spend about $6,000,000 in order to stop this annual waste and give the protection they need and desire to our own citizens. This is only one illustration of many throughout the Nation. I am opposed to adopting title III of this bill and to spending our taxpayers' money in foreign countries for the development of roads, hydroelectric power, flood control or other developments until our debt and taxes have been reduced to the point where we can take care of our own roads and flood-control projects in the interest of our own people.

Mr. Speaker, I shall vote to strike out this title with the hope that the amendment will carry. If title III remains in the bill I shall reluctantly vote against the legislation on final passage.

My vote against this bill if title III remains in it will be to express my opposition to starting this new world-wide program before we have finished the first Marshall plan, and is not to express my opposition to the other provisions of the bill. When this bill comes back to the appropriations committee of the House and that committee has reconsidered the amount and recommends it to the Congress for a vote, I shall then support the measure to provide the funds necessary for the ECA program.

We have been able to reduce this third-year cost to a considerable extent. Marshall plan aid has become the fixed policy of our Government. Now in its third year we are in the position of having made our pledge to, and a contract with these countries to run 4 years. The word of the Government is pledged before the world and must be carried out.

Needed by 1955: 12,000,000 Jobs—Growing Labor Force Offsets Business Rise

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. JACKSON of Washington. Mr. Speaker, in connection with the debate on the general appropriations bill, I pointed out the danger of our growing unemployment. In my opinion, its greatest threat lies in the fact that it does not hit us in the face all at once. It grows for a while, then contracts slightly, then creeps on again.

I am inserting in the RECORD an article that recently appeared in United States News and World Report, which points up the threat very clearly. Since this article appeared, we have learned that unemployment dropped over a half million from February to March. But this should not lull us into inaction—for we should not for a moment lose sight of the fact that at this very moment there are in our high schools 1,200,000 persons, and in our colleges and universities over 400,000 persons who will graduate in May and June and become job seekers. Economists are predicting that unemployment will hit the 5,000,000 mark in June.

As this excellent article points out, an expanding economy is the only answer to growing unemployment. In my opinion, it is the cardinal problem of our domestic policy today:

> NEEDED BY 1955: 12,000,000 JOBS—GROWING LABOR FORCE OFFSETS BUSINESS RISE
>
> Despite good times, nearly five million are out of work and the number is growing. Unemployment is beginning to look permanent.
>
> Trouble is growth of the labor force. Jobs cannot open up fast enough to keep abreast, at present business levels.
>
> How to meet the future is the problem. Public works, earlier and bigger pensions, shorter work week, all are suggested remedies.
>
> Five years from now, unless business activity rises steadily from the present high level, there may be 12,000,000 unemployed in this country. If business should fail to

hold as high as it is now, the number of unemployed will go above the 12,000,000 mark.

The returning problem of unemployment may be here to stay. It is coming back because of two main factors: (1) the steady flow of new workers into the ranks of job seekers; and (2) the year-by-year gain in man-hour output as industry's huge postwar investment in new and more efficient plant and equipment pays off.

The resulting problem, essentially, is this:

Out of jobs and seeking jobs today are about 4,700,000 individuals. That is about 1,500,000 more than the number of unemployed a year ago. Number of unemployed will shrink seasonally in the period just ahead, but will be greater a year from now unless the general level of business activity rises.

New workers will add 2,900,000 people to the labor force in the years 1950 through 1954. That is the net increase to be expected after allowing for older workers who will drop out of the labor force. The rise in the labor force in this year alone will approach 700,000.

Jobs to be affected by more efficient use of labor total about 4,400,000 from 1950 through 1954. That assumes an annual increase of 2 to 2.5 percent in man-hour output—a gain that is in line with normal experience. Rising hourly wage rates add to pressure on management to find ways to reduce the use of labor.

Added up, as the chart on page 39 shows, the prospect is: 4,700,000 unemployed now, plus 2,900,000 to be added to the labor force, plus 4,400,000 to be displaced by improved efficiency—a total of 12,000,000. This number will be unable to find jobs in 1954 if business activity fails to rise above the present level and if efficiency in use of labor increases at the normal rate.

The 5-year solution to the problem of growing unemployment, if there is to be one, is this:

Total employment will have to climb from the present 57,000,000 civilian jobs to 67,000,000 jobs, if unemployment is to be held below 3,000,000.

Business activity—total spending, called gross product—will have to expand from the present level of $260,000,000,000 a year to $300,000,000,000 in 1954 to provide the needed additional jobs.

This is the total amount that will have to be spent for goods and services to keep the population fully employed. The $300,000,000,000 figure assumes that prices will stay where they are today. In that figure are the total outlays of consumers, home builders, business investors in plant and equipment, and Government spending at all levels, Federal, State and local.

This need for expansion is beginning to worry officials even now. Recent increases in unemployment are not due to a slackening of business activity but to a growth in the labor force. The number of people wanting jobs is increasing faster than the economy is expanding to provide those jobs. At the same time, output per hour is starting to rise again.

The experience of the last year shows what is happening. Total output today is almost as large as it was a year ago. Total civilian employment also is almost as large. The labor force, however, is larger by almost 1,500,000. Result is that unemployment increased by the amount that the labor force increased. At 4,700,000 unemployment is at a postwar high.

If this trend continues, unemployment will exceed 5,000,000 within a year. And unemployment at above 5,000,000 is recognized as a political problem.

Actually, there are only two developments that can prevent a rise in unemployment. Either private industry must expand, providing more jobs in factories, in construction, in trade and services, or the Government must move in.

Business expansion at the rate necessary to provide full employment appears to be a difficult task. High employment in all past periods has been sparked by a high level of investment in plant and equipment and in construction. At present, investment in new plant is falling off, although orders for new equipment recently have increased. The construction industry has been in a boom for 2 years and is headed for a third year of boom in 1950. It seems unlikely that this industry will expand much more.

Most other industries appear to be able to produce as much as people want. The automobile industry expects to meet most of the demand for new cars by the end of this year. There appears to be no urgent demand to expand output of such things as refrigerators, household appliances, or other hard goods. The soft-goods industries already have been producing surpluses. The steel industry apparently is able to satisfy all customers and the coal industry is plagued with too much capacity.

Moderate expansion can be expected through population growth and family growth. The population is likely to increase by 7,000,000 by 1954 and the number of families probably will grow by about 4,000,000. That will add to the demand for the products of industry, but, even with the probable growth ahead, the increase in job seekers may readily out pace that expansion. Any recession in business activity would result in rapid expansion in the number of unemployed.

To provide employment for ten to twelve million more workers by 1955—to reach a $300,000,000,000 output by that time—means that private business investment must continue at a higher rate than in 1949. That expansion also must be steady. In past periods, business expansion never has been steadily upward; its rise has been marked by periodic spurts and set-backs.

However, if private business expansion fails to check the rise in unemployment, political pressure will grow for a Government program to accomplish the same result. In fact, agitation for Government action can be expected if unemployment exceeds five million by this time next year.

The outline of a Government program already is beginning to take shape in official planning.

Public works expansion is under study now. The Federal Government is aiding States and cities with public works planning. On the shelf are Federal projects for river-valley developments, public-power expansion and land reclamation. President Truman's proposal for a New England power program is an example. New England is one of the areas hardest hit by current unemployment.

The experience of the New Deal suggests, however, that public works cannot provide the complete answer to the employment problem. It is unlikely that Mr. Truman's Fair Deal will be content with public works alone.

Higher old-age pensions are being offered as one way to draw older workers out of the labor force to make way for newcomers. Experience suggests, however, that, as jobs become harder to find, persons with jobs are reluctant to give them up. Union contracts, moreover, usually stress seniority that gives older workers a first claim on the jobs that are available.

A shorter workweek is another suggestion that is stirring in Government and union circles as a solution for unemployment. Agitation for a 30-hour week was intense in the early days of the New Deal, and a 40-hour week finally was established through the wage-and-hour law. A shorter workweek could be established by an amendment to the present law. That law already has been amended to push the minimum wage to 75 cents an hour.

Reduction of the standard workweek from 40 to 35 hours would mean a cutback of one-eighth in total hours of labor for one worker. Applied to a working force of 40,000,000, a 35-hour week would mean an additional 5,000,000 jobs to produce the same volume of output. The appeal of such a device could become important in a period of rising unemployment.

At present, proposals for treating unemployment are still in the discussion stage. The official hope is that the rising trend will be reversed in the months ahead and the problem may solve itself. But, if unemployment is higher a year from now, proposals for a shorter workweek promise to become a political issue.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. ADDONIZIO. Mr. Speaker, Mr. Otto W. Glade, the alert editor of the East Orange (N. J.) Record, has made a thorough survey of the housing situation in that city. In the second of this most timely series of articles on the subject, appearing in the March 30 issue, Mr. Glade states there is no lack of apartments in the $75 to $180 a month bracket for two to five rooms, but that the shortage is still most acute for the great majority of tenants in need of four- or five-room apartments renting for between $55 to $65 a month. The pattern in East Orange is, of course, duplicated in other cities throughout the country, and I believe the editorial on the subject in the March 30 Record is deserving of the attention of all Members:

THE HOUSING SHORTAGE

How bad is the housing shortage in East Orange? Articles in the Record this week and last seem to point out that it isn't bad at all if you've got the money to pay more than $75 a month for an apartment. But if you haven't, you may have to live in a cellar somewhere.

George Seiler of East Orange, president of the New Jersey Association of Real Estate Boards, aptly describes the situation when he says "There's no shortage of roofs." He's right. If you have the money, there's no housing shortage. If you don't you're just another name on the long list at City Hall trying to get into one of the city-owned barracks. What's the answer?

One school of economics says it is up to the Federal, State, or city government to take care of the low-income families and provide housing for them. Another school says leave it up to private capital. They'll build enough homes and apartments. Most of them will be for upper-income families but as the upper-income group moves to new apartments their old housing will become available for those looking for homes at lower prices. In this way, they say, residents now living in East Orange's older apartments will move into newer structures, the people living in lower-priced apartments will move into the apartments just vacated, and the veterans now living in temporary barracks will move into that housing.

It sounds good on paper. But does it work that way? The answer is evidently

"No" here in East Orange. New apartments have been building at a rapid rate since the war, most of them in the high-rent brackets and they've been rented almost as fast as they've been built. But the housing shortage still exists. Most of the families moving into the new developments are from places other than East Orange, or if they are from the city, they formerly lived with in-laws or are just married and had no previous home. They aren't vacating premises that can be used by someone else. Those living in older apartments aren't moving into new developments because of the huge difference in rent between the Government-controlled figure they're paying and the noncontrolled figure 25 percent or more higher.

Those apartments which do become available in the lower brackets (and in East Orange that means $50 to $70) come as the result of families moving from apartments to homes that they have bought, usually farther out in the suburbs. Thus, all the new building means little relief for the person looking for lower-rent housing.

Rents seem likely to go up before they come down and if the day comes when rents do drop, incomes will probably drop along with them.

Private builders say they can't put up apartments in East Orange that will rent for less than about $25 a room. And they say in the same breath that the Government should stay out of the housing business and should not subsidize home building.

But the truth is that unless the city, or State, or the Federal Government provides homes for persons in the low- or lower-middle income groups, they won't be able to live in East Orange and the city will become a restricted community of upper-income families.

There's no question that the housing shortage still exists. It may not be as bad now as it was in the years just after the war but it is still with us. Families are still living in cellars and in crowded quarters with relatives, right here in East Orange. That shortage will end only when enough homes are provided for persons who need them and at a price they can afford to pay.

Common Sense

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. HOFFMAN of Michigan. A pen and ink letter which a statesman might use for a dozen speeches comes from two of my constituents who hold no college degrees.

Let the wise planners, who know all about everything except hard work and thrift, read and profit.

The letter reads as follows:

PAW PAW, MICH., *March 9, 1950.*
Representative CLARE E. HOFFMAN,
Washington, D. C.

DEAR SIR: We would like to have Hoover Commission recommendations adopted.

We as taxpayers are wanting end of waste as we know you are by your letters to us. And we know you are doing all you can to help us, but feel you need to know how much we appreciate your work.

We do not want socialized medicine. There are claims made that people earning less than $3,000 cannot pay for proper medical care. We never had income that high, but have always paid our doctor, dentist, and hospital bills. We own our farm and have no debts. We do not want any type subsidies or plan to help farmers. When farmers are left to run their own business they do not produce to be destroyed then paid for by taxpayers.

If any individual run their business as bad as Government runs things, everyone would soon starve. Government seems to enjoy wasting everything and has, since 1932.

We never thought social security plan to help anyone but just a device to allow Government to snoop into everyone's business.

Most people getting old-age pension do not really need it and lie and cheat to get it.

We do not want DP's to come to the United States of America as we have many unemployed and needing homes.

Our worst trusts are labor unions, not A. & P. Grocery or Drug Co., and unions should pay tax on income same as any corporation. Also, co-ops should pay tax.

Hope no more money is sent to foreign countries either as gifts or loans.

Thank you.

Mr. and Mrs. JOHN OTTEN.

Ireland

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid speech made by Joseph C. Duggan, of New Bedford, Mass., formerly special assistant to the Attorney General, and former first assistant United States attorney in Massachusetts, the evening of March 16, 1950, before the Robert Emmet Club, of New Bedford, Mass.:

It has been the custom, on occasions like the present to dwell at length on the glories and the miseries of Ireland in times past. Tales of saints and scholars have been embroidered with oratorical artistry—heroes have been orated into legends—and the beautiful isle of the west has been delineated beyond the point of exaggeration as an earthly paradise.

Fitting, indeed, have been these encomiums of Ireland and all things Irish. But as the Irish stock has been assimilated into the warp and woof of America, the tendency has been to look with nostalgia to the past, and to overlook entirely the emergence of the strong and vibrant democracy that is modern Ireland as a full-fledged member of the commonwealth of nations.

It is modern Ireland and her last problem that I would talk of with you tonight.

Recent events concerning Ireland and our own great Nation have emphasized Ireland's coming of age internationally. The raising of our mutual legations in Dublin and Washington to ambassadorial rank signifies the recognition of Ireland as an equal with other great powers in the eyes of our statesmen and diplomats. The successful negotiation of a treaty of friendship, commerce, and navigation between the United States and the Republic of Ireland clearly indicates that Ireland has cut the last tie with the British crown, and that hereafter she shall conduct her own foreign relations as a fully independent sovereignty.

The fact which made these events possible was the effective promulgation of the Republic of Ireland Act on Easter Monday of 1949. To those whose memory goes back to 1916, I need not dwell upon the reason why that date was chosen for launching the Republic into international waters. The date last year does not signify the declaration of the Republic or its independence, for these had been most effectively taken care of on previous historic occasions.

An Irish Republic was first proclaimed as far back as 1798 by the united Irishmen. This first republican uprising, symbolically enough, originated in Belfast and was led mainly by Irish Presbyterians. That effort was not only the first republican movement, but it marked the clarion call for Catholic emancipation and freedom of conscience, thus laying the foundation for the absolute toleration which characterizes the present Irish Constitution.

On Easter Monday in 1916, the republic was again proclaimed and subsequently ratified by the will of the Irish people. It remained, however, for the recurrence of that date in 1949 for the Republic of Ireland to be internationally recognized as such.

Between these two dates, the voice of Ireland was not unheard in the council of world affairs. And it is safe to assert that if that voice had been heeded the world might have been spared the blood bath of the Second World War. For it was the Premier of Ireland, presiding over the old League of Nations, who cried out in vain for effective sanctions against Italian aggression in Ethiopia and Japanese barbarism in Manchuria.

De Valera then spoke from a bitter knowledge of the trials of a small nation. His words fell on deaf ears. America sat on the sidelines—and the Italian and Japanese delegates walked out. The testing grounds for a second world conflict had been chosen.

Ironically, Ireland is in a position today where her voice may not even be raised.

The veto of Godless Soviet Russia in the United Nations Organization bars Christian Ireland from the world parliament. And while that Assembly, without even the common sense to seek divine guidance, fumbles along in the icy heat of a cold war, the honor of Ireland prevents her inclusion into the Atlantic Pact because of the stupid perpetuation of a policy of partition by Great Britain in Northern Ireland.

It is this partition which is the last problem in Ireland. It cannot be viewed through other than Irish eyes.

The modern Irish Constitution, adopted in 1938, contains two significant phrases. It declares, first, that Ireland is a sovereign, independent, democratic state, and secondly, that the national territory consists of the whole island of Ireland, its islands, and the territorial seas.

Yet, within a month after the Republic of Ireland severed its last ties with British External Relations Office, in May of 1949, the British Parliament perpetrated its latest act of intrusion into the internal affairs of Ireland by passing the so-called "Ireland bill." It presumed to declare that "Northern Ireland remains part of His Majesty's dominion and of the United Kingdom and affirms that in no event will Northern Ireland cease to be a part of His Majesty's dominion and of the United Kingdom without the consent of the Parliament of Northern Ireland."

Thus, by solemn legislative act, Great Britain upholds the hand of its own creature which it foisted upon Ireland by the iniquitous Partition Act of 1920. A glance at any map of Ireland before that date 30 years ago will not disclose the division which exists today.

An artificial border was created, effected, and is now maintained by Great Britain. British customs operate that border. British troops occupy the area that has been cut

away. And British finances maintain the Belfast government. These are the realities of the situation—and no specious argument can rationalize them away.

After 12 generations of successive programs of confiscation, degradation, exile, and death the freedom and national integrity of the Irish people today extends to only 26 of the 32 counties of Ireland.

This partition has severed from the Irish Nation some of the most hallowed and cherished shrines erected during her age-long history:

The archbishopric of Armagh—the see of St. Patrick;

Downpatrick, where the great bishop and confessor is buried and where rests the remains of Brian, who drove the invader from Ireland at Clontarf;

Bangor, the site of one of Ireland's most famous and ancient schools;

The Derry of St. Columkille;

The Tyrone of the O'Neills;

Belfast itself, the birthplace of the united Irishmen;

MacArt's Fort, where Wolfe Tone took his oath never to cease his efforts for Irish independence.

These and a thousand other storied spots today do not and cannot fly the flag of the Republic of Ireland.

And to realize the loss, I ask you to try to imagine a United States of America without Philadelphia, Lexington, or Concord—and American catholicism without the primatial see of Baltimore.

There are those who argue that this division is both desired by the people and justifiable.

The facts indisputably prove the contrary to be true.

Long before the First World War the problem of national integrity for Ireland was well on the way to solution under the enlightened "home rule" policy of the Gladstone and Asquith governments. The "Unionist" faction of the Tory Party frustrated that policy, and then the war intervened.

The Irish attempt to solve the problem by the uprising of 1916 was abortive, but the national plebiscite of 1918 left no doubt as to the mind of the people. Before the elected representatives of those people could consolidate the program of unification, however, Lloyd George succeeded in passing the Partition Act through Parliament with the promise that it was a temporary expedient. The true attitude of his party, however, was clearly revealed in a letter to Sir Edward Carson, the Tory leader in Belfast, wherein he stated that: "We must make it clear that Ulster does not, whether she wills it or not, merge in the rest of Ireland."

Incidentally, it will be noted that the severed portion of Ireland is referred to as Ulster, and the impression is intended to be left that it corresponds to the ancient Irish province of that name.

The fact is, however, that the British Parliament and its puppet government in Belfast could not maintain its rigged majority if it included all of Ulster in the severance.

Only six of the counties in historic Ulster were cut off.

Three of Ulster's nine counties—Donegal, Cavan, and Monaghan—had to be excluded from the operation of the act of partition so as not to endanger the dominant electoral position of the Unionist majority around Belfast.

Ironically, then, not only Ireland but Ulster itself was partitioned to constitute northeastern Ireland as a foreign outpost of England across the Irish Sea.

In addition, the six severed counties are so gerrymandered that Unionist majorities are guaranteed. I shall cite only three instances:

In County Tyrone, 60,000 Unionist voters can elect 16 members to the Parliament of Northern Ireland, while 74,000 Nationalist voters can elect only 11 members.

In County Fermanagh, 26,000 Unionist voters elect 13 members, while 33,000 Nationalist voters can return only 7 representatives.

In Derry City, the second largest municipality in the 6 counties, 27,000 Nationalist voters can elect only 8 members to the city council, while 18,000 Unionist voters can chose 12 members.

Over 22 instances of such electoral imbalance can be cited; yet, in spite of the rigged constituencies, Belfast itself elected 2 antipartitionist members and Queens University in that city elected 1.

If the Nationalist minority were allowed a true plebiscite in which the weight of its numbers was honestly counted, its total vote in 4 of the 6 partitioned counties would actually constitute a majority for reunion with the 26 counties of the Republic.

If the reason, therefore, for cutting off the 6 counties from the total of 32 is that a Unionist majority can be assured, then by the same logic, the four counties in which a Nationalist majority is possible should be cut off from the six.

Such reasoning and logic, of course, requires acceptance of the proposition that an actual minority in a whole nation has the right of secession when it happens to be a majority in a small area of that nation. In our own country, a tragic fratricidal war disproved that proposition as a political principle. It is the prayerful hope of the friends of Ireland and Great Britain alike that its fallacy will be realized by the Parliaments of Northern Ireland and Great Britain without resort to such a calamitous extremity.

If the democratic right to self-determination is to apply to any country, there is no country which fulfills the requisite conditions more clearly than Ireland. There are three well established tests:

1. The natural boundaries of the country. No country in the world can claim more absolutely defined natural boundaries than those marked by the seas surrounding Ireland.

2. A distinct national history. Few indeed are the nations which can claim a more clearly defined and age-long national history, dating back long before the days of St. Patrick.

3. A homogeneous people. The inhabitants of the whole island are of the same race, the same color, and speak the same language. True, there is disparity of religion, but if this is ground for partition, then Christian amity would be impossible, and every nation would be split into an infinite number of fragments.

Ireland complies with the three tests more completely than any nation on earth. She has the right, therefore, to be one solidified and integrated nation. Partition, then, is unnatural, unhistoric, and, particularly when imposed from without, completely unjustified.

No realist will dispute the fact that, from time immemorial, the primary concern of Britain with Ireland has been principally a matter of defense.

England has tenaciously clung to Irish territory as a western bastion of her own perimeter of defense.

By insisting upon the continuation of partition, Great Britain undoubtedly serves her own interest in this vital matter, but unfortunately, she also deprives all of the other Atlantic nations of the inestimable boon of a united and integrated Republic of Ireland as a full-fledged signatory to the Atlantic Pact.

The national honor of Ireland prohibits her inclusion while a part of her soil is garrisoned by foreign troops.

A truncated Ireland cannot consistently join in an agreement in which one of the principal pledges is the preservation of the national and territorial integrity of the agreeing parties.

The United States rejoices in her alliance with Great Britain in the noble attempt to achieve the reality of the defense of western civilization by means of the Atlantic Pact.

Our people, however, regret that the short-sighted Irish partition policy of that same ally also prevents the inclusion in the pact of the one country which both England and the United States concede to be of utmost strategic importance to the whole scheme of Atlantic defenses.

And most regrettable, is the fact that such policy blinds the British Government to the obvious conclusion that it would be far better to have the whole of Ireland as a cordial, cooperative partner rather than to hold a small segment of that nation in the face of the righteous resentment of the vast majority of her people.

Great Britain, who owes so much to both Ireland and the United States, now has the opportunity to display the greatest statesmanship of which the genius of her polity is capable.

The Ireland Act of 1949 should be repealed.

All of the people of Northern Ireland—without any electoral tampering—should be given an opportunity, under a neutral arbitration commission if necessary, to express their free choice on the question of national integrity by area-wide plebiscite instead of by gerrymandered districts.

The homogeneity of the Republic of Ireland should be permitted to become a political and territorial fact.

The principle of self-determination should be advocated for Ireland with the same vigor as it is claimed for the countries behind the iron curtain.

Britain's preachment of democracy should find its first practice in Ireland.

Partition in the Emerald Isle should be abolished forthwith so that the republic of a united Ireland may be voluntarily forged as a link of steel in the chain of free nations dedicated to the preservation of western culture and Christian civilization.

The concluding words of Robert Emmet's last public utterance were these:

"When my country takes her place among the nations of the earth, then, and not till then, let my epitaph be written. I have done."

The country of which Emmet spoke was the historic Irish Nation and not merely a portion of it. The Ireland of his day knew no partition.

When the unnatural and artificial border erected by that partition is obliterated, his epitaph may be inscribed in few, simple, but glowing words:

"He died for a free and united Ireland."

The Cost of the Central Arizona Irrigation Project to the Taxpayers of Each State

---

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. ENGLE of California. Mr. Speaker, the construction cost of the central Arizona project, as authorized by the

Senate—S. 75, Eighty-first Congress—is $1,258,780,000. This is made up of the initial project, $708,780,000, plus tunnels, authorized by section 1 of the act to be built at the discretion of the appropriation committees, to cost, with connecting aqueduct, $550,000,000 more.

Even if sales of power provide revenues to repay all this invested capital, the project provides no revenues which the Treasury may use to pay interest upon the national debt that the project creates; all interest money, paid by the power users, is dedicated to pay for irrigation works, as a subsidy to the irrigators. The result is that all interest upon the national debt represented by the construction cost of the project must be met by the Federal taxpayer for about a century, including the period of construction and development, as a concealed subsidy. The total amount of the subsidy to be paid by Federal taxpayers, including the nonreimbursable capital items in addition to this interest burden, is $1,173,000,000.

This national total is broken down by States, according to a standard formula used by tax experts, based on a pro rata of income and other Federal taxes, as follows:

Cost to Nation's taxpayers of central Arizona irrigation project by States

	Percent of total	Cost to taxpayers in interest and nonreimbursable subsidies [1]
Alabama	1.17	$13,724,000
Arizona	.37	4,340,000
Arkansas	.72	8,446,000
California	8.32	97,504,000
Colorado	.80	9,384,000
Connecticut	1.67	19,589,000
Delaware	.40	4,692,000
Florida	1.29	15,132,000
Georgia	1.40	16,422,000
Idaho	.32	3,754,000
Illinois	7.59	89,031,000
Indiana	2.29	26,862,000
Iowa	1.58	18,533,000
Kansas	1.15	13,490,000
Kentucky	1.20	14,076,000
Louisiana	1.22	14,311,000
Maine	.44	5,161,000
Maryland	1.68	19,706,000
Massachusetts	3.40	39,882,000
Michigan	4.71	55,248,000
Minnesota	1.86	21,818,000
Mississippi	.71	8,328,000
Missouri	2.53	29,677,000
Montana	.35	4,106,000
Nebraska	.86	10,088,000
Nevada	.13	1,525,000
New Hampshire	.29	3,402,000
New Jersey	3.29	38,592,000
New Mexico	.28	3,284,000
New York	14.67	172,079,000
North Carolina	1.59	18,651,000
North Dakota	.34	3,988,000
Ohio	5.78	67,799,000
Oklahoma	1.17	13,724,000
Oregon	1.04	12,199,000
Pennsylvania	7.62	89,382,000
Rhode Island	.56	6,569,000
South Carolina	.76	8,915,000
South Dakota	.36	4,223,000
Tennessee	1.37	16,070,000
Texas	4.38	51,377,000
Utah	.34	3,988,000
Vermont	.18	2,111,000
Virginia	1.49	17,478,000
Washington	1.65	19,354,000
West Virginia	.92	10,792,000
Wisconsin	2.10	24,633,000
Wyoming	.18	2,111,000
District of Columbia, Hawaii, and Alaska	1.48	17,360,000
United States total	100.00	1,173,000,000

[1] Even if construction cost of $1,258,780,000 were repaid to Federal Treasury from power revenues.

Silent Meditation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. LANE. Mr. Speaker, I wish to include the following remarks, which I delivered over the facilities of Station WARL, on Sunday, April 2, 1950, in behalf of the Good Friday Observance Committee of the Greater Washington Area:

"We preach Christ and Him crucified" (First Corinthians 1:23).

Passion is a word of different meanings. The first meaning given in the dictionary is "to suffer." And everyone of us has experienced this type of passion in some form or other. To some it designates pain of body; and, for them, passion is a reminder of physical torture. Experience has taught them to cringe from bodily harm. If they still bear this suffering, then they must cultivate patience, which is the endurance of their torture. Still others are disturbed mentally. Their passion affects the mind; and oftentimes there is danger of mental derangement, because of the acuteness of the agony. They have difficulty in focusing their thought processes because their minds do not function properly.

In either of these cases of bodily or mental passion, there is real suffering. Hence the true meaning of the word is born out: "to suffer." The dictionary next tells us that passion is an intense or overpowering feeling, such as of love or of hate. This passion affects the mind, insofar as the emotion is so strong as to sway the one disturbed. The person undergoing this passion, swerving unsteadily from the path of right reason, often loses common sense. Self-control departs from the individual and passion reigns supreme.

Just a step away from the last kind of passion comes the third meaning of the word. Here passion means a strong impulse to give way to physical indulgence. This type of passion resides primarily in our lower or animal nature; it makes itself felt chiefly in the uprisings of the flesh. Like an untamed, wild and unruly beast, once this passion is unleashed it wreaks havoc upon the person who falls prey to its attack. And when this passion takes over to form an evil habit, then the unfortunate sufferer must endure the terrible physical toll taken by its demands. St. Paul rightly terms this passion as a terrifying "tribulation of the flesh."

Passion, meaning to suffer, is a common human lot. We all endure its pain. Every one of us must undergo its fearful demands. Hence, it behooves us to seek out a balm for our trials. The greatest consolation for our affliction is the passion that Jesus Christ endured for us. The saints, in their trials, took refuge in the wounds of Christ. When temptations of unruly passion assailed them, they had immediate recourse to the crucifix or to the sign of the cross. We make our mistake in not imitating them. We seek outlet from suffering and passion in every soothing sedative of distraction or even recreation. Yet we know that this course only postpones but does not solve our problem. If we would bear up under our passion, ultimately we must recur to the cross.

Good Friday, anniversary day of our Lord's suffering, is fast approaching. The 3 hours' agony will be commemorated in every church. Everyone of us must spend part of our time in prayer during those hours. Preferably, this should be in church. There the priest or minister will bring home to our minds the facts of Christ's passion. There we will find the solution to the mystery of our own passion. If the flesh beckons you on, the wounds of Christ will strengthen you against temptation. If sickness weighs you down, the blood-stained and pain-racked body of Christ will give you new courage. If mental trials beset you, the thorn-crowned head of Christ will lessen your own pain by comparison. This Friday will indeed be good for you if you spend it as you should, on your knees in church. If you are unable, then take your crucifix and study the lesson of patience in passion. He is the Master; you are the servant. The Master suffered; you must suffer. For: "The servant is not above the Master." On His Good Friday, pray Him to help you with the cross of your passion. He will then come to your assistance and take the greater part of your suffering. Go to church this Good Friday; take part in the Passion of Jesus Christ.

May the Lord bless thee, keep thee, and give thee peace.

Year After Tragic Hospital Fire, Effingham Ready To Erect New and Larger St. Anthony's Memorial Hospital

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. JENISON. Mr. Speaker, just a year ago today, the Nation was shocked by a disaster at Effingham, Ill., in the congressional district I have the honor to represent. On that fateful day, the lives of 74 persons were taken as flames swept through St. Anthony's hospital with such devastating rapidity that the rescue of any was the result of the most extreme personal heroism.

Just 1 year later, the city of Effingham has accomplished the gigantic task of raising funds, drafting plans, and completing preparation to build a new and larger hospital, to be known as St. Anthony's Memorial in everlasting honor to those who lost their lives on that tragic morning just a year ago.

Mr. Speaker, there is courage in communities, as there is in individuals. The people of Effingham have shown courage, as well as great devotion to their community in laboring to overcome the countless obstacles in the path of an undertaking as large as the erection of a modern hospital. But they have overcome every obstacle and now the results are about to materialize in steel and stone. It is a source of satisfaction to know that the Federal Government itself is sharing in the program through the contribution of Federal funds, and the State of Illinois is doing likewise.

One of the newspapermen who went to the scene a year ago revisited it a few days before the first anniversary. He is

Bob Wright, of the editorial department of the Danville Commercial-News. His impression of the scene, 1 year later, is worthy of reading by all who recall the shock of the tragedy. Under permission granted, I am including his article as follows:

PEOPLE STOOD SILENT BESIDE SMOKING RUINS 1 YEAR AGO

(By Bob Wright)

It is doubtful if any resident of Effingham, Ill., noticed that capricious Nature was in one of her moods. Behind the smile of green grass and budding trees, ready to burst into leaf, was the cold, damp breath of winter.

But most of Effingham's 7,000 population stood silent and unmindful of the weather that spring day a year ago. For there was a deeper chill in their hearts that had nothing to do with the time of the year.

The day was April 5, 1949, more tragic in its personal implications for the little southern Illinois town than December 7, 1941.

Before midnight, a spark had flared within the darkened interior of St. Anthony's hospital. With terrifying speed, the spark became a flame, a roaring blaze that swept down corridors of the old, three-story building. And the night, which had begun quietly, became a hideous welter of sights and sounds—an inferno of fire whose yellow light sharply silhouetted the figures of those trapped within as they poised on window sills before leaping for their lives * * * or to their deaths.

By dawn, the strident clamor of the holocaust was stilled. Tired firemen from six departments in as many neighboring cities still played streams of water on stubborn pockets of flame. The blackened walls stood windowless and roofless and a grimmer work—that of removing the dead—was about to begin.

It was on this scene that I arrived later in the morning. National Guardsmen from Mattoon—part of Deanville's own One Hundred and Thirtieth Regiment—patrolled the grounds. The Red Cross with customary speed and efficiency, had flown in emergency medical supplies and was ministering to those who had escaped the fire. Every major press association and news photographic service was represented and a newsreel company crew set up a camera in the middle of the street fronting the hospital.

One of the favorite subjects of the cameramen was a niche in the second story wall, a niche containing a statue of St. Anthony. All around, the brick masonry was scarred and blackened by the flames. The figure of the saint was untouched.

Another much-photographed scene was the very center of the building. There, amidst a jumble of brick and wreckage from the fallen-in roof, was a large metal cylinder, an escape tower, still standing. Ironically, the doors to each floor were closed. In the panic of that awful night, was this comparatively recent safety device forgotton? Or did the flames move too fast, forming a fiery barrier?

At the rear of the hospital is a low, modern brick building, known as St. Joseph's Villa. In happier times, it was used as a recreation center. On that day, it had become a morgue. Before leaving, I counted 22 blanket-shrouded stretchers being carried within.

Later, when rescuers ceased poking amid the ruins, the list of dead was placed officially at 74. Between 30 and 40 had been saved.

I shall never forget the desolation of that scene nor the unnatural stillness of the people affected the most. I shall never forget, too that this tragedy, America's second most costly hospital fire touched off a Nation-wide campaign to strengthen fire precautions in institutions devoted to caring for the sick.

Seeds of Treason

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the editorial included in my remarks should be read by all Members. It appeared in the Washington News on yesterday.

SEEDS OF TREASON

More than 3,000,000 words of testimony were taken in the Alger Hiss case.

They were rushed into print on a day-to-day basis during the two trials and the congressional committee hearings at such a tempo and with such a conflict of interpretation and emphasis as to leave the public gasping.

Out of this welter of words—and smears—has come a book titled "Seeds of Treason," by two industrious reporters, Ralph de Toledano of Newsweek and Victor Lasky of the New York World-Telegram and the Sun, a Scripps-Howard newspaper.

The frightening thing about this book, beside which the paradox of Alger Hiss fades into insignificance, is the picture it presents of a government which so consistently rejected or tried to suppress evidence of the great Communist conspiracy against our way of life.

"Who is more guilty," the authors ask, "the man who passes documents to a Soviet spy ring, or the man who, for whatever reason, sponsors the culprit?"

Uncritical acceptance of Russia and the consequent immunity of Communists in our Government has been a cancerous growth in White House administrations since 1933. Just to cite one case, there is the Russian-born Nathan Gregory Silvermaster.

A Civil Service Commission report about him was quoted as saying that an "overwhelming amount of testimony indicates beyond reasonable doubt [he had] for years been a member and a leader of the Communist Party and very probably a secret agent for the OGPU."

Yet, from August 1935 until March 1946, he moved steadily up in Government service. Why? For one thing, he had a staunch friend in Lauchlin Currie, adviser to President Roosevelt. Silvermaster was never transferred from one job to another, which would have given the Civil Service Commission a chance to refuse him clearance, but was loaned instead.

The primary aim of Communists in those early days was infiltration and the influencing of public policy. Yet the Roosevelt and Truman administration persistently closed their eyes and showed no real determination to root the Communist elements out of the Government. Then when the Reds altered their objective to espionage for Russia they were entrenched.

The Amerasia stolen-documents affair was another case in point. The Justice Department seemed to drag its feet and there was never any public trial of the six persons arrested. And pro-Communist influence in the State Department's Far Eastern Division was never uprooted. Our subsequent China policy succeeded in turning over half of Asia to the Communists.

Such things, we agree, are the real meaning and message of the Hiss case.

And, as the authors summarize:

"Hiss is one man caught in a tragedy of arrogance and self-deception. But there are those who aided and abetted him in their blindness; and their name is legion. Instead of crushing the seeds of treason, they scattered them in the good American earth.

"The Hiss-Chambers drama can be a curtain-raiser of a new steadfastness. Or it can be the last whimper of a tired and demoralized world."

Jefferson Soil Conservation District Annual Report, 1949

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include the annual report of the Jefferson County (Ohio) Soil Conservation District for 1949. The soil-conservation district of Jefferson County, one of the counties in my congressional district, is doing an excellent job of conserving the greatest natural resource in the United States, the topsoil.

The report follows:

JEFFERSON SOIL CONSERVATION DISTRICT ANNUAL REPORT, 1949

The board of supervisors held 10 meetings during the year. The average attendance of supervisors was 4.1 out of 5. This figure does not include the attendance of the county agent and Soil Conservation Service personnel, which exceeded the preceding figure a few points. Assistance from the Soil Conservation Service and Extension Service personnel was and always has been helpful in every way possible.

Work accomplished this year was as follows:

Farm plans, 30; acreage included 5,734.

Farm plans to date, 199; acreage 29,451.

Farm plan applications, 32 during the year.

A large amount of this acreage is now in use under regular strip cropping, rotations, with full required use of lime, fertilizer, and trees. A separate report of this acreage according to farm practice is attached to this general report.

With the resignation of our regular conservation aide, we sought and found Gabriel Rozsa from local applicants to assist our regular conservationist in the work.

In January, Robert Gray and W. R. Scott were our representatives at the Ohio Federation of District Supervisors' meeting at Columbus, Ohio. Also arrangements were made for the Jefferson soil-conservation district annual meeting in March.

In February, the board completed arrangements for the annual meeting in March. Mr. T. C. Kennard, of the Soil Conservation Service, was the speaker at that meeting. Plans were made for the election of supervisors. At this meeting full support for group planning was agreed upon by the board of supervisors.

The annual meeting in March was one of great interest and success as an audience of 150 listened to Mr. T. C. Kennard's address and to the reports of the Jefferson soil-conservation district officers. At this meeting votes for two supervisors were counted and Robert Gray and Taylor Floyd were declared elected.

The meeting in June continued the planning of the supervisors for an investigation of the group plan. One group already in operation was declared very successful. Also, the air tour was reported very successful. We assisted the county agent in this. Eighty people were carried over the land that had been laid out under farm plans in part of the district.

Two entries were made in the B. & O. contest; one in each class. They were Flenniken and Charles Kirk & Son.

Delegates were sent to Mississippi Valley Association training session at Defiance, and to the State Federation of Soil Conservation Districts. Our chairman, Robert Gray, Jr., is chairman of the strip-mine committee of the State federation.

Our farm planner, Kenneth Thomas, became ill and was not able to carry on the work, and another man, Robert Jones, was provided by the Soil Conservation Service to replace him. With this change we started with all new personnel for the balance of the year.

In October we assisted the county agent with farm tours. Two trips of 1 day each were made. Attendance was excellent, and many farms were visited where farm plans were being carried out.

The Soil Conservation Service furnished a full-time farm planner and aide for the year. Also, 21,000 forest trees were furnished, together with part-time service of an engineer and forester.

Group farm planning was made, which was one of the chief aims of the District. The Soil Conservation Service furnished a man to assist in locating groups. Interest meetings were held with several groups, and one group was carried through a series of farm-planning meetings. Others are to follow at a later date.

The purchase of a large cut-out disk was considered, but was put off to a later date until similar tools were investigated.

In connection with the Extension Service and the agricultural committee of the chamber of commerce, plans were discussed for an educational program. A detailed review of this is to be made at the meeting in February 1950.

Much of the success of the district is due to the splendid aid and cooperation of the Soil Conservation Service and the extension service of the State, and the thanks due them are hereby expressed.

We have experienced difficulties during this year, but as has been said, "Difficulties are but opportunities to test our abilities."

So we close the year with full belief in the soil-conservation district program and its lasting benefit to the farmer and consumer. We are looking forward to new and better things for the coming year.

The Soil Conservation Service granted to the district a 6-foot terracer and rotary scraper. These will be very useful in the work in our territory.

ROBERT M. GRAY, JR.,
Jefferson Soil Conservation District.
STEUBENVILLE, OHIO.

Other members of the board: Harold McCullough, Taylor W. Floyd, Charles Kirk, Reed Scott.

Questions and Answers on Brannan Plan

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. BIEMILLER. Mr. Speaker, farmers in Wisconsin are very interested in the Brannan plan. They want to know more about how it would work, and what it would mean to our important dairy industry in Wisconsin. Their questions often indicate that they like what they have heard about the Brannan plan, but that there is a great deal they do not understand about it.

I have sorted out the questions most frequently asked in Wisconsin about the Brannan plan, and sent them to Secretary of Agriculture Charles F. Brannan for first-hand answers. It is my thought that Secretary Brannan himself can best inform the farmers of Wisconsin and other dairy States about the Brannan plan and what it means to farmers.

My questions and his answers follow:

Question. What is the Brannan plan?

Answer. It is the name which has been given to the administration's farm-price-support proposals. These proposals do not really constitute a "plan" at all, but in reality are a series of suggested improvements in existing price-support legislation. Acting as spokesman of the administration, I presented these recommendations to the appropriate congressional committees on April 7, 1949. It would be more accurate to refer to these recommended changes as "the administration's farm-price-support proposals."

Question. What are the aims of the proposals?

Answer. If all the proposals were enacted, they would do two things for farmers: (1) Stop disastrous plunges in farm prices which have so often in the past caused so much suffering and hardship and (2) offer farmers a chance to earn a farm income with adequate purchasing power.

By doing these things the plan would offer the Nation protection against depression in a vital soft spot. Our depressions have often been farm-led and farm-fed; when farm prices hit the skids, unemployment soon shows up in cities and towns, and soon the whole economy is in trouble.

Question. Why do farmers need a price-support program?

Answer. Because farmers, unlike industry, cannot voluntarily adjust their production to the demand for their products. When more is produced than consumers can buy at fair prices, crop surpluses start piling up and farm prices are driven down. The prices of things farmers have to buy, however, stay about the same.

Question. What does the administration recommend that we do about farm income?

Answer. We start with this idea: There is a level below which it is not in the national interest to allow farm income to fall.

The administration recommends the average farm income of 1939–48—in real dollars—as the basic income standard for figuring support prices. This base, the first 10 of the last 12 years, would move forward each year, with an old year dropping out and a new year being added. This would keep the program modern and up to date, instead of chaining farm prices to the obsolete conditions of 40 years ago.

This income standard should provide farmers with the purchasing power they need to operate their farms, to care for their families, and to keep their land in shape. This income standard would be used as the basis for calculating price-support standards for different commodities.

Question. How does the administration's income standard compare with farm income in recent years?

Answer. If the income-support standard were in use this year, the income standard for 1950 would work out at about the farm income of 1942. Net farm income, now in its third year of decline, is expected to run about 10 percent less than in 1942. In other words, the income target would be about 10 percent higher than farm income is expected to be in 1950.

Question. What advantages do the administration's proposals offer Wisconsin farmers?

Answer. Any program supporting farm income is meaningless unless it supports the farm commodities which earn most or all of the Nation's farm income. The administration proposal meets this problem—first, by tying price supports to the income standard, and, second, by requiring the use of price supports for those commodities which earn most of the farm income.

The Agricultural Act of 1949 authorizes mandatory supports for products bringing in about 40 percent of the total farm income. This is an improvement over the provisions of the 1948 act that would have gone into effect if the act of 1949 had not been enacted.

The list of commodities getting mandatory support under the plan recommended by the administration includes products returning about 75 percent of the farm income. Among these commodities are meat, milk, poultry, and eggs, which are leading income producers in Wisconsin. The plan likewise could be extended, with the approval of Congress, to the leading fruits and vegetables.

The table below compares the commodities which are required to be supported by the Agricultural Act of 1949 with those which would be required to be supported under the new proposals.

Commodity	Percentage of total amount, United States farm income, 1948	Agricultural Act of 1949	Administration recommendation
Cotton lint	7.0	Yes	Yes.
Corn	3.7	Yes	Yes.
Wheat	7.8	Yes	Yes.
Tobacco	3.2	Yes	Yes.
Butterfat	14.5	Yes	Yes.
Milk		Yes	Yes.
Hogs	12.2	No	Yes.
Eggs	6.1	No	Yes.
Chickens, excluding broilers	1.8	No	Yes.
Cattle and calves	17.1	No	Yes.
Lambs (and sheep)	1.3	No	Yes.
Rice	.6	Yes	No.
Peanuts	.7	Yes	No.
Potatoes	1.9	Yes	No.
Wool [2]	(1)	Yes	No.
Tung nuts	(1)	Yes	No.
Mohair	(1)	Yes	No.
Honey	(1)	Yes	No.

[1] Less than 1/10 of 1 percent.
[2] Including pulled wool.

Question. How do the support prices proposed by the administration compare with what we have?

Answer. The best answer is to be found in the facts.

The following table compares in dollars and cents mandatory minimum support levels recommended by the administration, with those provided by the Agricultural Act of 1949, for important Wisconsin products:

Commodity	Unit	Agricultural Act of 1949 [1]	Recommended by Administration [2]
		Dollars	*Dollars*
Butterfat	Pounds	0.518	0.553
Milk	Hundredweight	3.23	3.48
Hogs	do	(3)	15.70
Eggs	Dozen	(3)	.380
Chickens	Pounds	(3)	.240
Corn	Bushels	1.40	1.42
Potatoes	do	1.00	(3)
Beef cattle	Hundredweight	(3)	14.20
Lambs	do	(3)	15.50

[1] Including consideration of transitional parity calculation.
[2] Support prices shown are bottom of discretionary range provided to allow adjustment to maintain desirable feed ratios.
[3] Support not mandatory.

Question. What will farmers have to do to qualify for price support under the administration's proposal?

Answer. The successful operation of any kind of price-support program, the present legislation and the administration's proposals included, requires the acceptance by farmers of responsibility for cooperating with each other to make whatever production adjustments that may be required. There is nothing new about the administration's proposals in this respect. The price-support program for farmers that has been developed over the past 17 years includes provision for democratically adopted (by a two-thirds favorable vote) production adjustment measures—acreage allotments and marketing quotas—as a means of keeping supplies in balance with genuine demand. The administration has recommended that authority for farmers to use acreage allotments and marketing quotas, as well as marketing agreements and marketing orders, be extended to all commodities, when needed. Used in conjunction with production payments, these production-adjustment measures would actually be needed less frequently. The production-payment system would operate to keep a larger volume of perishables moving through the market stream and into the hands of consumers, thus requiring less dependence upon production-adjustment measures.

The administration has also recommended that our soil-conservation efforts and expenditures should be more closely integrated with our price-support operations. The carrying out of a minimum of sound soil-conserving practives would be required as a condition of eligibility for price support.

Question. How will the administration proposals support perishable products?

Answer. The plan proposes to use production payments to support perishable commodities which can be stored only at heavy expense. These include milk, butterfat, poltry and eggs, meat animals, fruits and vegetables.

The term production payment, means exactly what it says—a payment to the farmer to go on producing to meet genuine consumer needs, rather than restricting output short of that need. Under this system, the farmer would be paid the difference between the support standard price for commodities which he sold and the average market price of such commodities. The payments would be made, of course, only when the market averaged below the support price for a given period.

Question. What are the advantages of the production payments recommended by the administration?

Answer. The payments would go directly to the farmer. It would be an efficient support operation, with every cent used to support farm prices, directly benefiting farmers. In a Government purchase operation, a considerable part of the cost is eaten up by processing and storage.

The production-payment method would eliminate these costs as well as any waste and spoilage which might occur in piling up unmarketable stocks of food. The entire volume of marketings would flow through regular channels of trade to the ultimate consumers to be used in improving their diets.

Farmers likewise could benefit to the extent that their own selling prices were higher than the market average. This means that farmers would have an incentive in dollars and cents to produce and market quality products and do a good job of bargaining.

Question. How much support will the administration proposals offer each farmer?

Answer. The program proposals recommend support protection for the quantity marketed, but no more than 1,800 units of price supported farm products. The maximum eligibility for any one farm would be 18,000 bushels of corn or its equivalent in other commodities. This amount is ample to cover the total marketings of all of the Nation's family farms, including those of our largest, most efficient family farms. Our national policy has long been designed to encourage, improve, and safeguard family farms. This principle has its rightful place in our support programs. If the proposed high point is not correctly placed for our largest and most efficient family farms, it should be reviewed. However, the topmost limit, in itself, is not designed to prohibit higher production.

Question. How much will the administration's price-support proposals cost?

Answer. The Government cost will be no more, and probably less, than present methods.

With high level employment and measures to maintain stable farm income, this cost can be kept at a minimum. If farm income is not maintained through some kind of support program, the full cost of economic maladjustment falls on farmers.

The purchase type programs authorized by the present price-support legislation involve two costs: Government expenditures and artificially high retail prices to consumers. The Government cost is dependent upon how far below support prices the accumulated inventories must be sold by the Government, and, for perishables, desirable outlets are increasingly difficult to find. These purchase programs also require the Government to pay buying, selling, grading, storage, processing, and transportation costs. An additional cost is paid by consumers who are required to pay retail prices reflecting the level of support prices.

Under the production payment method of support recommended by the administration, retail prices to consumers would be the same supply and demand price that would prevail if no support program were in operation. And the Government cost of making the production payments would be no more, and probably less, than the costs of direct Government purchases and the processing and handling charges involved.

The purchase type programs authorized by present legislation require nonfarmers to pay twice—once in taxes and again in higher retail prices. If production payments are used, the cost is assessed only once.

Valladolid Council, No. 70, Knights of Columbus

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include my remarks which I delivered at the annual communion and breakfast of Valladolid Council, No. 70, Knights of Columbus, of Lynn, Mass., which was held in the Lynn English High School on Sunday, April 2, 1950:

I want to begin by stating an obvious fact. You and I are human beings.

From this fundamental, it is but natural that we should be concerned primarily with our individual selves. Jobs, income, homes, children, progress—these are most important to us.

In living our lives in the company of others, however, we must think of them as well as ourselves. Even a recluse cannot live in an

absolute vacuum. He is still accountable to God.

But we are not hermits, or we wouldn't be here at this communion breakfast.

By virtue of a sacrament, we have just passed through a mystical experience that purifies and inspires. Once more, we are clean of heart, and are prepared to face the confusions of life with renewed strength, and devotion to the will of God who is the source of our being.

In this Catholic fraternity, we are properly concerned with what is going on outside our ranks in the different groupings that make up this world.

Action and reaction, this is the law of life. What we do is one thing. What others do has a bearing on us also, and we can ignore the latter only at our peril.

What is the state of our Nation then, and how does it fare in its relations with other national communities?

These are vast and complicated questions, which I can only touch on briefly.

With certain exceptions, conditions in the United States are generally good. There are more people employed and at higher purchasing-power wages than ever before.

Savings accounts and insurance policies in force are at an all-time high. Construction is booming. The Federal public housing program is eliminating our slums. One disconcerting note is the road block which the coalition in Congress placed in the way of stimulating the building of housing accommodations for middle-income families. This may well become an issue with the American people, for the industrious and thrifty middle class has heretofore been the very core of our strength. Doctors, lawyers, dentists, and school teachers, farmers, grocers, and every person who is trying to make a living from a small business, these are the people who have been neglected in our preoccupation with the rival claims of industry and organized labor.

It is significant that the Communists first try to destroy the middle class, knowing that it is the balance wheel of a free society. We must not permit this to happen in the United States. Legislation designed to extend and insure loans for small business enterprises is necessary to save us from the concentrated power of monopoly in any form. Competition and freedom go together. We must guard against the possibility that some day, a few men in Government or elsewhere, shall decide what commodities we shall produce and how much, and at what price. Tens of millions of Americans are now making the individual decisions which guide production and consumption of goods. We want to keep it that way.

One dark spot in the present picture is the number of unemployed, particularly in New England. To meet this challenge, the President is recommending that unemployment insurance compensation be extended and increased. We, in the Congress, are working for a program whereby Government contracts shall be channeled to distressed areas in order to pick up the slack in production and employment.

Inasmuch as the Federal Government spends billions of dollars each year for goods and services, it has the power and the responsibility to place these orders in labor-surplus areas.

At best, however, this provides temporary relief. In line with our traditions of independence and self-sufficiency, it is necessary that we do everything possible to help ourselves, rather than depend upon the Federal Government to bail us out of every difficulty. The line must be drawn somewhere, by ourselves, and as mature men who do not easily forfeit all sense of personal responsibility. The road to tyranny is opened up by ever-increasing reliance upon others. It is so easy to shift the burden, not realizing that with it we also surrender the right to control.

I am reminded of this by a statement from the Federal Reserve Bank of Boston, pointing out the growth trends in the New England economy. Its message is that New England has been and continues to be an area which shows substantial and encouraging economic progress. Population, labor force, income, retail sales, and bank deposits are increasing. The three leading industries, in terms of growth, are electrical machinery, apparel and related products, printing and publishing.

But I also noticed that the three declining industries are textile-mill products, leather and leather products, lumber and timber products.

Some of our cities and towns are one-industry communities, and if that industry happens to be textiles or leather, the locality is faced with a serious problem.

This happened to Manchester and Nashua, N. H. At this critical pass public-spirited citizens of each community were forced to band together, form a municipal corporation, buy the vacated factories, and work with might and main to attract small industries that would provide diversification. Manchester and Nashua succeeded in making this adjustment after heroic efforts by local action. Other cities in the same category may have to do likewise in the future. Forewarned is forearmed, they say. But in how many of our one-industry communities do we find full-employment committees, working not only in conjunction with the United States Department of Commerce, but on their own, planning and working for the economic future of their home towns? Voluntary group action ahead of time is not only the way to save but to stimulate the well-being of our municipalities. This is where government of the people began. This is where it must continue to show imagination and leadership in order to cope with present problems, instead of depending in ever-greater measure upon the State and the National Governments.

Indeed, the resourcefulness which characterized other generations of Americans and which helped to build this great country is not dead. It is simply not being used to the fullest extent.

We know that there are certain functions which only the Federal Government can perform, but this cannot and must not be cited as an excuse to rely upon the Government at Washington for everything.

It is just like our approach to the menace of communism. While we must keep a strong Military Establishment to defend us, in view of the precarious world situation, this alone is not enough. Even military and economic aid to other free nations is not sufficient.

It is what we do within our Nation that will rally others to our side and convince Russia that democracy not only provides the material comforts of life in larger measure than other systems, but has the spirit to find a workable Christian solution to any problem.

I think that most Americans are unaware of the way in which the peoples of other nations keenly scrutinize everything that we do. We put everything into headlines which we take in stride. But just try to put yourselves into the shoes of a foreigner who reads of the sensational happenings in the United States. Very probably he gets the impression that we are hopelessly divided, and constantly fighting among ourselves on a score of social, political, and economic issues. And he is apt to lose faith in this Nation as a world leader because it cannot solve its own problems first.

If we face up to the fact that we are being watched and judged, we will become more responsible in what we say and do.

Out of our bounty we are spending much money to stem the tide of communism and bring peace to the world. But money alone will not do the trick, even if we could go on spending it lavishly, which we can't.

This is a contest for the minds of men.

To win the victory for freedom we must evidence moral leadership and prove that voluntary associations of our people cooperating with similar groups can build a better society without the heavy hand of government.

This puts the issue squarely up to us, as grown-up men, and not as those who would retreat into childhood and lean completely upon the paternalism of government.

This is the supreme challenge of the age in which we were born.

As Catholics we have faith in God and are obedient to His will.

As Americans, have we the steadfast purpose, in company with our fellow Americans, to further God's kingdom on earth?

I believe that we have; and that, animated by His spiritual grace, we shall go forth to work for a society composed, not of robots, but of men.

For a way of life in which He will be well pleased with the progress we make in His name.

Exportation of French Calfskins to the United States

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

APRIL 3, 1950.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: With further reference to our letter of March 24, in regard to the export of French calfskins to the United States, word has been received from Paris that the quota for the United States has been increased from 900 tons to 1,000 tons; 500 tons to be allocated during the first semester, and 500 tons during the second semester, in order to permit early buying without shock to the market.

For your information, we are enclosing a table prepared by the Department of Commerce showing the prewar exports of French calfskins for the years 1929 to 1939, inclusive. You will note that the calfskins shipped to the United States in the 11 prewar years average less than 12 percent of the total French exports. Under the quota of 1,000 tons, the United States would receive more than 30 percent of the contemplated exports.

Both the Departments of Commerce and State, as well as our ECA mission in Paris, are continuing their efforts to increase the United States quota still further on a basis of enabling France to earn more dollars.

In regard to allocations, it is our understanding that a meeting was held in Paris on March 29 by French Government officials with hide and skin exporters of that country. The purpose of the meeting was to discuss the quantitative distribution to the United States by recipient firms and by licensing arrangements. Opportunity was to be given to the French exporters, most of whom act as representatives of American firms, to make suggestions and recommendations regarding the licensing procedures. At the moment we do not know the outcome of these discussions.

Sincerely yours,

WILLIAM FOSTER,
Deputy Administrator.

France: Exports of raw calfskins to foreign countries, 1929–39 (in metric tons)

Increasing Antitrust Fines to $50,000—H. R. 7827 Carries Out Recommendations of House Small Business Committee—Increase to $50,000 Is Worthwhile Complement to Recent Amendment Enlarging Civil Penalties

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. PATMAN. Mr. Speaker, the House Judiciary Committee has ordered reported H. R. 7827, increasing antitrust fines to $50,000. This bill is virtually the same as H. R. 5139, introduced by me last year and unanimously approved by the Select Committee on Small Business, of which I have the honor to be chairman.

I hope and trust that the Members of this House will act favorably on this bill.

It is not claimed that increasing antitrust fines will solve the greatest difficulties in antitrust enforcement, but it would help, and it will be a worth-while complement to the recent amendment making the maximum civil penalty of $5,000 applicable for each day of violation.

For the further information of the Members it is appropriate to include here pages 73 and 74 of the Progress Report—First Session, of the Select Committee on Small Business. These pages bear on the problem confronting our Federal judges when faced with the assessing adequate penalties upon persons and corporations convicted of violating the antitrust laws.

[Excerpts from Progress Report—First Session, Select Committee on Small Business]

The present fine of $5,000 is completely inconsequential in amount. The amount need only be compared with the vast profits which are made by violating the antitrust laws. This fine is prescribed for in the 60-year-old provision of the Sherman Act. The provision also permits imprisonment for not more than 1 year, in addition to the fine. However, to date, no businessman has been imprisoned for violating the antitrust laws. Therefore, the only punishment is a $5,000 fine—perhaps a few weeks' salary of a corporation official or 1 hour's profit of a corporation.

Firms engaged in violation of the antitrust laws are in a position to rob the public of millions and even billions of dollars. In 1948, to cite one year, 247 firms were charged with price fixing, and the products involved ranged from abrasives to milk, so that the pocketbooks of the entire public were affected. Yet, while the public forfeits huge sums to these price conspirators, what happens if they are convicted? They are fined $5,000 per count—little more than a slap on the wrist even to a medium-sized corporation, let alone one of our giant corporations.

The total inadequacy of the fine permissible under present law has been pointed out by judges of various courts and by Department of Justice representatives. What could be more frustrating to a prosecutor who has proved facts showing flagrant violations perpetrated by a corporation possessing incalculable resources than to have the corporation punished by a $5,000 fine? Federal Judge Simon Rifkind, of New York, stated on March 1, 1949, in imposing fines on six defendants, in *U. S.* v. *National Lead Company:*

"I cannot even go through the formula of looking the defendant in the eye and saying, 'Is there anything you wish to say before I pronounce sentence?' But I must confess that, these amounts being substantially the maximum allowed by the statute, there is very little I can do or very little reflection that I can give this matter except perhaps to make the inevitable comment, that a violation of the antitrust laws which persisted from some time in the early twenties to the 1940's, with respect to which the criminal liability is discharged by the payment of $5,000 a count, hardly seems to me to be the nature of penalty which is likely to discourage violations of the antitrust laws as far as the criminal laws are concerned, but that is a problem for the Congress."

This committee agrees with the jurist. The meager fines which can now be imposed present a problem for the Congress. H. R. 5139 proposes that Congress authorize fines which will more adequately fit the magnitude of the offense.

The Assistant Attorney General in charge of the Antitrust Division, in testifying before the House Committee on Appropriations in January 1949, had this to say about the attitude of many concerns in regard to present fines:

"I think some of them just consider them license fees for doing business in an illegal way."

The inadequacy of the fines permitted by the present law is demonstrated by fines imposed upon some of the largest companies in the United States for violation of the antitrust laws during the last few years. A sample list is as follows:

Name of defendant	Amount of fine	Total fines of all defendants
Aluminum Co. of America	$15,000	$104,993
American Can Co.	5,000	45,000
American Tobacco Co.	15,000	312,000
E. I. du Pont de Nemours (3 different cases, 1943–45)	5,000	20,000
	7,500	22,500
	5,000	33,000
General Electric Co.	20,000	56,000
General Motors Corp.	5,000	40,000
Great Atlantic & Pacific Tea Co. (3 different cases, 1941–46)	5,000	32,500
	5,000	16,000
	(1)	175,000
Kroger Grocery & Baking Co.	5,000	20,000
Safeway Stores, Inc. (Md.)	10,000	40,000
Standard Oil Co. of New Jersey	5,000	50,000

[1] Fines of $5,000 or $10,000 were imposed on various A. & P. affiliates and on officers or principals.

The Congress has the problem of preserving small business in an era that not only has big business but needs the services of big business. To accomplish this purpose, Congress must set up laws which will deter management of big business from engaging in monopolistic enterprises which destroy competition. Punishment for violations of the antitrust laws must be stringent enough to serve as a real deterrent.

Enemy Under the Bed

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD and include extraneous material, I insert a speech made to various service clubs in Washington State by Frank H. Lamb, author, of Hoquiam, Wash.:

THE ENEMY UNDER THE BED

(By Frank H. Lamb)

We are so conditioned by a fear campaign that every night before retiring we look under

the bed to see if a commie is lurking there. We breathlessly listen to the radio and scan the press to learn the latest developments in the cold war. We are informed that the Russians now have the atom bomb, which since Hiroshima we hoped guaranteed a quick victory in the next war. The war experts now say that the Communists have guided missiles, supersonic jet planes, super U-boats, and other war machines superior to ours. We certainly cannot match the fighting men that the 300,000,000 people of the communistic nations now have under arms or could place in the field. It is significant that many of these disclosures of what is being done behind the iron curtain are timed to influence congressional action on appropriations and other legislation. When we recall that in the last war it was mainly American tanks, trucks, planes, munitions, and other matériel supplied to Russia that equipped her armies, we marvel that in four short years they have made such phenomenal technical and industrial progress.

War alarms and saber rattling is deliberately fostered by the astute masters of the Kremlin for two purposes. First, to keep their own people satisfied to resign their liberties, forego the benefits of their labors, and endure poverty and privation, while devoting their entire resources to arming for world conquest. Second, Stalin knows that more of the resources of his opponents are dissipated in preparation, the more financial and political chaos that can be created in enemy countries, less can be marshalled against the Red army in any armed conflict.

More immediate and more dangerous than the atom bomb or Red army is the political revolution foisted on us insidiously under such disguises as cooperation, security, socialism, centralization, statism, sovietism, fascism, collectivism, all only stepping stones to the goal of Marxian communism, the destruction of liberty and American institutions. This ideological invasion of foreign isms is no cold war. It is hot and is being waged on a thousand economic, political, and social fronts.

To promise prosperity, security, and everything wanted by everyone, many alluring baits are dangled before the voter. One of the most entrancing is unlimited Government spending. Despite a Federal debt of over $250,000,000,000 we blithely face a deficit of from five to ten billion dollars in the current year. From George Washington through 8 years of Franklin D. Roosevelt the Nation spent $179,620,113,645. In less than these last 5 years it has spent $191,081,394,191, over $11,000,000,000 more. The $46,500,000,000 of Federal expenditure, added to the $22,200,000,000 for the States and other local governments in the current year adds up to about a third of the national income. Benjamin Franklin in Poor Richard's Almanac said "It would be thought a hard government that should tax its people one-tenth part of their time, to be employed in its service." What would Poor Richard think of our tax today of one out of every three?

When taxation through graduated rates is used for a redistribution of wealth and earnings for the benefit of certain classes, freedom is endangered. The same tax power that can take over 80 percent of one's earnings can claim the whole, and higher taxes can socialize the taxpayer's two remaining free days out of three. All intangible wealth can be confiscated by debt, taxation, and debasement of the currency.

When a class numerous enough to swing elections through subsidies can benefit at the expense of the general welfare then democracy will no longer function. California old agers voted out the State constitution, appointed an administrator independent of legislature or governor and made the $200,000,000 annual cost for pensions a first lien on all State funds. We in Washington are struggling with initiative 172.

The blight of excessive taxation is more severe on the little man, the local merchant, the beginner in business or industry, than on the big corporation with the large capital and an organization that can pass the costs to the consumer. Monopolies are the half-breed offspring of high taxes and excessive regulation.

The nearly 26,000,000 persons now receiving annually $27,500,000,000 in Government benefits, subsidies, and salaries, with their dependent families, comprise nearly a third of the Nation's population. Among them are 3,000,000 farmers now obtaining price support and millions of more farmers' votes can be bought with promises of a subsidy for their products. Another nearly 10,000,000 of old age and welfare recipients will naturally support the party or candidate that promises larger and more liberal pensions. The 3,700,000 Government employees drawing salaries totaling $10,200,000,000 will vote for the salary increaser. Nearly 5,000,000 veterans will oppose any legislator that even hints there is a financial limit to the gratitude of the Nation. How can a sane fiscal policy be expected under such a wholesale purchase of votes? The check receivers will support the candidate or party that promises to increase the Government handout regardless of the general welfare.

The division of authority among 48 States and other local government units has been a serious handicap to the promoters of centralization. The gradual usurpation of State autonomy by the Federal Government through legislation and Supreme Court decisions is too slow for the plotters. More direct measures are proposed. The whole country would be divided into nine authorities similar to the Tennessee Valley experiment, each governed by three appointed directors with unlimited power over most of the economic and political rights of the people. Nine principalities with 27 czars would bypass the States and put the entire United States economy under socialistic government corporations, independent of Congress, amenable only to the President. The next step would be a single authority, then a dictator. In the Pacific Northwest three political appointees would have absolute control over power, irrigation, water, lands, forests, wildlife; practically the entire economy of the region.

Nineteen forested States have enacted progressive laws for the perpetuation of their forests. Washington forest land can be cut only under State permit and in accordance with State regulations to insure reproduction. We are doing a wonderful job in protecting our forests from fire and securing reforestation. Control of the privately owned forests has long been coveted by the Forest Service. A pending bill would give the Federal bureaucrats power to take over such regulation in any State where they decided State control was not satisfactory. To bait the State to sell its forest freedom the Government would pay half the cost of the forest administration. To browbeat the State hesitant to come under the Federal heel, many Federal appropriations could be withheld from that State.

Farmers are awakening to the fact that along with their crop support and subsidy checks will come the mailed fist of crop control. Without such controls the Commodity Credit Corporation borrowing capacity of $4,750,000,000 will be insufficient to buy up the excess 1950 production of United States basic crops. Storage facilities are inadequate; expensive conversion schemes, foreign gifts, and actual destruction fail to reduce the mountains of grains, potatoes, cotton, tobacco, from price-supported farms. Eighty-five million dollars worth of dried eggs that even hungry Greeks will not eat, are stored in a Kansas cavern. The taxpayers pay twice. Once for the subsidy, and again in higher cost of living.

Business cannot survive part free enterprise and part socialistic. The Government ventures are a growing cancer that will consume the free economy. The Britisher can obtain all the store teeth he wants but has difficulty finding something to use them on. France has long controlled rents and socialized the housing industry with the result that there has been no home building for decades. In both these socialistic countries private enterprise is dying a slow death. Out of despair the people are made ripe for communism.

From colonial days we have jealously retained local control of our schools. Academic freedom and home rule of education have been bulwarks of democracy. The collectivists are planning to get a foot inside the schoolhouse door by the bait of a few hundred millions of Federal aid, which would penalize the States with a high standard to build up those that are below the desired rating. With increasing subsidy will inevitably come greater control until local school boards will be little more than rubber stamps.

The railroads have been controlled so long and thoroughly that they are generally 20 years obsolete and unable to meet the competition of highway vehicles and air transportation. A proposed communication body would take over control of all transport by air, truck, stage, rail, and water, eliminate competition, and lay its blighting hand over further transportation progress.

There are now 50,000 Federal employees in the State of Washington. If these and other centralization plans now before Congress are enacted, Federal police and snoopers in the State will be increased several fold.

Three czars of 10,000,000 union members practically control all American industry through legislation which gives them the power to say who shall work, when and on what conditions. John L. Lewis, by merely frowning, can cut off the country's coal supply. A candidate can buy the labor vote at the cost of his independence and his oath to support the public welfare. Out of the taking over of an industry to stop a strike when other measures fail will come the socialization of the industry with the workers becoming Government employees prohibited from striking, and eventually as in all Communist countries losing the rights of free men.

Control credit, the foundation of business, and you control all. The manipulation of Federal finance now determines availability and quantity of private investment funds, credit, and the interest rate. Twenty-nine Federal agencies are directly engaged in loaning money and 12 in Government finance and credit. No one knows the enormous total of your money loaned to Tom, Dick, or Harry for this or that purpose. Why should the Government loan to a favorite $196,000,000, nearly a third of the RFC funds loaned to all business, mainly to engage in the highly competitive steel and auto industries? Another promoter with $1,000 personal investment controls a corporation that has been loaned $37,500,000, with $12,500,000 more required to attempt to build porcelain enamel steel houses.

More serious, however, is the progressive break-down of traditional American ideals. A church was one of the first provisions of every frontier settlement, and church attendance was enforced by custom and local opinion. Today the church is resigned to the kindergarten and women. The average man is indifferent, a nonbeliever, or a derider of religion. You men who shirk your church duties and attendance are contributing directly to the destruction of a bulwark of freedom which from the time of Nero to today in Czechoslovakia has been purchased at an enormous cost of lives and suffering.

Communism recognized the youth as the most fertile field for propaganda. We want our students to learn the facts regarding

communism and other social and political movements, but we have the right to insist that the instruction shall be objective and not the propaganda of supporters of any theory. No Communist or fellow traveler should be tolerated in the training of youth.

Communists have bored within several great industry-wide unions so successfully that they are now in absolute control. One great branch of unionism is now expelling its Red and leftist groups. Unionism and communism are antithical. Behind the iron curtain unions are only empty-shell satellites of the Communist Politburo. Russian labor has never known freedom or a living wage. The American unionist is enticed to give up his bargaining power, his rights to home and comforts, his freedom for a mess of British socialism that will end in the Russian brand of despotism.

The heaviest guns of all subversive elements are directed against business and profits. America cannot be socialized until its economy is wrecked. Under competitive free enterprise American business in a century and a half has transformed 4,000,000 into a Nation of a 150,000,000 with a higher standard of living, greater freedom and more security than is enjoyed by any other people. Business through taxation has supplied youth with more educational facilities, the people generally with more security against disease and want than the world has ever known. Out of its profits it has built great institutions of learning, churches, libraries, museums and parks for the enjoyment of a higher life. In two World Wars it has marshalled the marvelous production of food, ships, planes, munitions, that enabled our troops to conquer. In the last 10 years it has supplied $72,000,000,000 as gifts and aid overseas to help support many of the very people who are most loudly condemning business and impugning profits. We are paying the bill to enable socialized governments to abolish private business and profit.

Communism is a religion of immorality, Marx declared: "We must be ready to employ trickery, deceit, lawbreaking, withholding and concealing truth, we must and can unite in a language that sows among the masses hate, revolution, scorn and the like." The blighting immoral effects of subversive movements are felt in every club, church, school, lodge, party, union, and society.

The pollution has reached Rotary. You are lulled into forgetting that you are businessmen, selected representativs of your vocation, with obligations to advance its interest, influence and conduct. You are told that the object of business is some sort of fuzzy wuzzy service, that profits are immoral, and the stigma can only be removed by welfare work. A book by Rotary International costing $1 entitled "Service Is My Business," outlines a hazy conception of service to society as an antidote for the pollution of profits. Little in it inspires the businessman to sing with the poet:

"This is my work, my blessing, not my doom.
Of all who live, I am the one by whom
This work can best be done in the right way."

Not a word about the businessman's first duty whether:

"In field or forest, at the desk or loom,
In warring market place, or tranquil room."
—*Henry Van Dyke.*

to more efficiently supply society with its material and cultural needs.

Rotary has had the slogan, "He profits most who serves best," since 1911. It has walked the plank. The international directors with an ear to Rotarians in the socialist-governed countries seeking to abolish profits, have recently decided that the word "profit" might be misconstrued and the slogan was hard to translate. New members no longer receive a pretty copy of the code of ethics for framing on their office walls. Yes, the Rotary organization is apologetic of business and ashamed of profits.

It is not the avowed Communists that are dangerous. They are a noisy nuisance. It is the confused fuzzy-minded shallow thinkers and opportunists who fail to detect the subversive features in the schemes of the social revolutionists and the self-interest of those who are receiving the Government doles that have started as well on a toboggan slide to a fancied utopia. Bought by Government hand-outs, lured by the opiate of inflation, implemented by the destructive power of unlimited taxation, impelled by a gospel of defeatism, we are sacrificing one by one our liberties. A little farther down the road we will come to a fork leading to two despotisms, the right to fascism, the left to communism. Both are equally odious and destructive of all that has been gained in the upward progress of man.

This onrushing subversive invasion cannot be stemmed by a frontal attack, stopped by a Maginot line or bought off with dollars. The defense must come from the grass-root action of loyal Americans. The issues transcend all partisan considerations; they concern the very web and woof of the historic American way of life. No compromise with these enemies under our beds should guide our voting, prompt us to fulfill our duty to religion, clean the pinks and Reds out of our schools, purge our unions, control the conduct of our clubs, lodges, unions, and societies, and support all still uncorrupted servants and measures, if human freedom, integrity and moral standards are to survive in this country.

Resolution of Town of Watertown, Mass.

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

WATERTOWN, MASS., *April 3, 1950.*
Hon. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

MY DEAR MRS. ROGERS: The town of Watertown, Mass., is fully cognizant of the impending danger represented in a bill pending in Congress entitled "Bill to revise administrative procedures of the Bureau of Customs."

The Hood Rubber Co., the largest industrial organization located in this community and one of the largest rubber-footwear manufacturers, is vitally concerned.

Any action that will tend to destroy and deteriorate this industry will materially affect the future of Watertown. Watertown cannot afford to have any damage done to its largest taxpayer.

In traditional New England style, the town of Watertown, in town meeting assembled on March 27, 1950, recognized the impending danger and adopted a resolution, which I herewith enclose at the direction of said meeting.

Very truly yours,
GEORGE B. WELLMAN,
Town Clerk.

Whereas a bill is pending in Congress entitled "Bill to revise administrative procedures of the Bureau of Customs," which would eliminate what is known as the American selling price principle, specifically as it applies to canvas and waterproof rubber footwear; and

Whereas the State Department has under consideration negotiations which would result in reciprocal trade agreements lowering present tariffs on canvas and waterproof rubber footwear imported from foreign countries; and

Whereas any further reduction in the tariff rates applying to imports of canvas and waterproof rubber footwear would constitute a serious threat to the major industry of our community and to other local business firms and would result in the loss of jobs, widespread distress, increase of relief rolls and increase of the tax burden of our citizens: Therefore be it

Resolved, That the town of Watertown at its annual town meeting held on March 27, 1950, does hereby memorialize and petition the President of the United States, Harry S. Truman; United States Senator Leverett, Saltonstall, United States Senator Henry Cabot Lodge, Jr., and United States Congresswoman, Mrs. Edith Nourse Rogers to take necessary action to prevent any reduction in the tariff on imports of canvas and waterproof rubber footwear whether it be by legislative enactment abrogating the American Selling Price Principle, by negotiation under the general agreement on tariffs and trade, or otherwise; and be it further

Resolved, That copies of these resolutions be sent to the President of the United States, Harry S. Truman; United States Senator Leverett Saltonstall, United States Senator Henry Cabot Lodge, Jr., and all the New England Congressmen and that these resolutions be spread on the records of the town of Watertown, Mass.

H. HERBERT APPLIN,
WILFRED J. PAQUET,
ROY C. PAPALIA,
Board of Selectmen.

I, George B. Wellman, town clerk of Watertown, Mass., hereby certify that the foregoing is a true copy of resolution adopted by Town Meeting, duly called and held on March 27, 1950.

Attest:
GEORGE B. WELLMAN, *Town Clerk.*

Nuts From Russia

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. MACK of Washington. Mr. Speaker, on several recent occasions I have called the attention of the House to the fact that 59,000 cases of Russian canned crab, valued at $3,000,000, recently were imported into the United States from Russia.

Now, I find that canned crab is not the only Russian product being landed in the United States and sold to American consumers.

San Francisco newspapers recently carried a news item that 110,000 pounds of shelled Manchurian walnuts recently were landed in San Francisco. Manchuria is controlled by Russia.

The Manchurian nuts, although a 7½-cent-a-pound duty was paid on them, were offered for sale at 42 cents a pound, which was 20 cents a pound under the prevailing price for American nuts. The

news article stated that future shipments were being offered at 40 cents a pound, or 22 cents under the prevailing price for American walnuts.

At the same time these walnuts were being imported from Russian-controlled Manchuria the domestic supply of these nuts was so huge that, according to the San Francisco press dispatch, the United States Department of Agriculture was paying Pacific Coast nut producers 10 cents a pound to divert 5,000,000 pounds of their surplus supples of nuts from consumer markets to crushing plants.

Continued importation of walnuts from Soviet-controlled Manchuria will depress and create a chaotic price condition in the market for all nuts, almonds, filberts, pecans, and others that are sold in competition with walnuts.

Ruination of the nut-raising business of the United States by competition from products of Russia or Soviet-controlled countries would be a tragedy. It requires years to raise a nut orchard to a bearing stage.

Anything that injures the nut industry will injure the entire Pacific Coast, since all three States of Oregon, Washington, and California are heavy producers of nuts.

It does not make sense that we should be importing nuts from a Russian-controlled country while our own surplus is so huge that we are paying orchardists a subsidy to divert their nuts from the open market to crushing plants.

Emergency Cotton Allotments in Areas Infested by Green Bugs

EXTENSION OF REMARKS
OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. WICKERSHAM. Mr. Speaker, there are 2,600,000 acres of wheat planted in Sixth and Seventh Districts of Oklahoma. There are 1,900,000 acres of wheat in Seventh District of Oklahoma alone. Forty percent of this acreage has been destroyed by green bugs and the drought and green-bug infestation is becoming increasingly worse.

I have today introduced the following bill:

A bill to provide emergency cotton allotments in areas which have been infested by green bugs

Be it enacted, etc., That notwithstanding any other provision of law, the Secretary shall use not more than 500,000 acres (which shall be in addition to the national acreage allotment) for the purpose of making emergency cotton-acreage allotments to producers of farm commodities whose 1950 crops have been substantially destroyed by the insects known as green bugs. Such acreage shall be allocated under regulations promulgated by the Secretary, shall provide for a cotton allocation and marketing quota for the 1950 crop only, and shall not be considered as giving to any farm, county, or State any credit or history for the purposes of cotton allocations in any subsequent year: *Provided*, That in no event shall any farm be allotted more than 1 acre of cotton under the provisions of this section for each 1 acre of other crops which have been destroyed.

Mr. Speaker, I have requested aid for the area from the Disaster Loan Corporation and other agencies.

Mr. Speaker, I have contacted the House Committee on Agriculture and its members, also the Senate Committee on Agriculture and Forestry and its members urging an immediate hearing and adoption of my bill.

I have also urged the Secretary of Agriculture to immediately report favorably on this measure.

I wish to read letters from representative counties in my district:

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Cordell, Okla., March 23, 1950.

Hon. VICTOR WICKERSHAM,
House Office Building,
Washington, D. C.

DEAR SIR: Reference is made to your letter of March 18, 1950, in which you requested information in regard to the greenbug infestation in Washita County.

We had a meeting of community committeemen yesterday in which all sections of the county were represented, and it was estimated, as of that date, that a minimum of 50 percent of the wheat in Washita County was damaged and would result in a loss of approximately 50,000 acres. If rain is not received in the next 10 days, the committeemen anticipated that from 60 percent to 80 percent of the entire crop would be lost.

If further information is needed, please call for same.

Very truly yours,

DON HARBESTON,
County Administrative Officer.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Altus, Okla., March 21, 1950.

Hon. VICTOR WICKERSHAM,
House of Representatives,
Washington, D. C.

DEAR VICTOR: In complying with your letter of March 18, 1950, in reference to the greenbug infestation here in Jackson County as well as surrounding counties.

I was able to contact a farmer friend of yours by the name of Ben F. Murphy and I ask Ben to help me answer your letter pertaining to the increase in cotton acreage for the areas that have been substantially destroyed by the green bug.

I am quoting Mr. Murphy at this time: "The green-bug damage already done has been, I would say, 40 percent, but the total damage to be done is beyond anybody's guess. In my opinion, unless heavy rains occur, the damage in the next 2 or 3 weeks will be 90 percent. At the rate of the destruction to fields that were observed 3 or 4 days ago is now almost totally destroyed; yet it is hard to tell just what the destruction will be in the next 2 or 3 weeks.

"A lot of farmers at this time are harrowing their wheat as well as spraying, but with very little results with either. It is estimated that approximately 2,000 acres already or will be in the near future plowed and the ground prepared for other crops or summer fallowed."

Victor, I thought by contacting Mr. Murphy and getting his viewpoints, which is about the same as the other farmers, would be worth more to you than for me to write what I know about the green bugs.

Thank you very much for the conference report House Joint Resolution 398.

We wish you the best of luck in obtaining our full quota of these additional acres.

Yours very truly,

E. E. HAGAR,
Administrative Officer, PMA, Jackson County.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Sayre, Okla., March 22, 1950.

Subject: 1950 cotton allotments and insects

Hon. VICTOR WICKERSHAM,
Congressman, Seventh District of Oklahoma, Washington, D. C.

DEAR SIR: In reply to your letter of March 18, 1950, concerning additional cotton acreage and green-bug damage, I wish to advise you as follows:

At present time in southwestern Oklahoma there is an extreme drought on, especially in Beckham County. The wheat crop is in a very poor condition. Green bugs have been and are still increasing in great numbers among the wheat fields. I am of the opinion that if present conditions among the wheat does not change in the next 3 weeks that there will be very little wheat left for harvest. At the present time if we could obtain a good rain and warmer weather I think we would loose very little wheat. All indications point to fair and dry weather.

In regard to damage and the present condition of wheat, I would say that Beckham County wheat is probably damaged slightly more than in other southwestern counties due to the fact that we have received less moisture the past 5 months than surrounding counties.

I hope this gives you some idea of the situation here. I am sure that if wheat is totally destroyed that the producers would certainly appreciate any favors granted them in regard to cotton allotments since all land here is adapted to cotton.

We appreciate your interest and efforts devoted to agriculture.

Any time I can be of assistance to you, please advise me of such.

Very truly yours,

J. E. WILD,
County Administrative Officer, Beckham County PMA.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Frederick, Okla., March 23, 1950.

Hon. VICTOR WICKERSHAM,
House Office Building,
Washington, D. C.

DEAR MR. WICKERSHAM: It appears, at the present time, that Tillman County's prospect for a wheat crop has been reduced 60 percent due to green-bug damage.

We estimate that 2,000 acres of wheat has been plowed under and if we do not receive rain and warm weather within the next 10 days 20,000 more acres of wheat will be abandoned. Approximately one-third of this acreage would be put to cotton if permitted.

Wheat farmers of this county would appreciate any amount of cotton acreage to replace their destroyed wheat.

Yours very truly,

VERNON T. DUNCAN,
Administrative Officer, Tillman County.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Hobart, Okla., March 21, 1950.

Hon. VICTOR WICKERSHAM,
House of Representatives,
Washington, D. C.

DEAR VICTOR: This is in reply to your letter of March 18, 1950, which I read regarding the green-bug infestation in this county.

I, along with two members of our county committee made a tour of this county, covering some 60 or 70 miles in the eastern part, also Mr. LeBerge has been over most of the south part of the county, and Mr. Harris the northwest part. I have also talked to a number of grain men, including personnel of the Farmers Co-op of Hobart, Mountain View, and Roosevelt.

This is a summary of what we believe to be the condition of the wheat at this time.

There is approximately 230,000 acres of wheat seeded in Kiowa County. Of this acreage 20 percent is a total loss today. It appears at this time that it would be impossible to make more than 60 or 65 percent of a normal crop. Almost 100 percent of the wheat in the county is infested with green bugs at this time, and conditions can become more serious if the green bugs do not stop or if we do not receive much needed moisture.

I am sure anything that you can do to assist the farmers in any way will be greatly appreciated by them.

We will be glad to assist you in any way possible.

Very truly yours,

W. I. GEORGE,
County Administrative Officer,
Kiowa County.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Arapaho, Okla., March 23, 1950.

Hon. VICTOR WICKERSHAM,
House of Representatives,
Washington, D. C.

HONORABLE WICKERSHAM: Your letter of March 18 enclosing the conference report on House Joint Resolution 398, has been received. First, on behalf of the farmers of Custer County, we wish to thank you for your efforts in obtaining approval of this amendment and also for the additional cotton acreage to be allocated to wheat farms where the grain is destroyed by green bugs.

With reference to green-bug infestation in Custer County, I will say that at the present time only a few acres has been completely destroyed, but we have green bugs in all of our wheat and in large numbers, and unless something happens to check them such as warmer weather, hard rain, etc., there will be in the next 10 days or 2 weeks, hundreds of acres completely destroyed by this insect. The drought is helping the situation along since it retards the growth of the wheat which gives the green bugs time to complete the job. The weather at the present time is cool and ideal for green bugs and at the best, if it should start warming up now, we would have several hundred acres completely destroyed before the ladybugs and parasites could check them.

If the picture does not change soon, I am sure that we could use a sizable amount of this acreage.

Very truly yours,

RUSSELL E. DILL,
County Administrative Officer.

Abduction of Greek Children

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a memorandum which has been prepared for me by Mr. A. Sarkissian of the Legislative Reference Service of the Library of Congress on the important subject of the abduction of Greek children by the Communists. This memorandum contains information that might be of deep interest to many persons:

ABDUCTED GREEK CHILDREN IN IRON-CURTAIN COUNTRIES

In October of 1944 Greece was liberated, but there was no legal government to govern the country. The government-in-exile had just returned, but its authority was over a very limited area—only over a part of metropolitan Athens. The actual control of the country, the towns, the villages and the provinces, was in the hands of a resistance group known as EAM/ELAS. This group was led and remained under rigid Communist control. No sooner had the government-in-exile returned, than its authority and legality were challenged by the EAM/ELAS leaders. Thus a very embarrassing situation was created, but it was hoped that a satisfactory solution could be had by the union of the Government and the EAM/ELAS leaders. Negotiations lasting more than a month, however, convinced the Government (and also the British representatives) that a union with the resistance leaders was, short of complete submission to their wishes, impossible. British efforts at mediation also proved to be ineffective. Early in December civil war broke out. Fighting in and around Athens lasted more than a month. Then on January 11 of 1945 a truce was effected. EAM/ELAS forces were cleared out of Athens and its environs, and the first serious attempts of the Communists to seize power in Greece were frustrated.

Before and after the truce, while the EAM/ELAS forces were withdrawing from the Athens area, they carried some noncombatant inhabitants with them. How many innocent Greeks were thus driven away from their homes and taken to the mountain fastnesses of northern Greece, it would be impossible to say; and an estimate would probably be a poor guess. At the end of almost 5 years (December 1944–October 16, 1949) of civil war, it was reported that there were more than 700,000 homeless refugees in Greece,[1] and it is probable that many, if not most of these refugees, were held as hostages at one time or another by the Communist guerrillas. It is known that some hostages were treacherously murdered. Even during the first few weeks of fighting gangs of the EAM/ELAS group carried out mass executions, thereby shocking many of their sympathizers.[2] More shocking, however, was the abduction of children from their homes and their removal to iron-curtain countries.

This abominable and barbarous practice was not widespread at first, but by 1947 it had become a major objective of Communist guerrillas. It is reported that at a meeting held on February 10 of that year, in their mountain headquarters, the guerrilla leaders decided to make a registration of all children between the ages of 3 and 14 years in the area then under their control, in order to collect these children and send them into the neighboring Albania, Bulgaria, and Yugoslavia.[3] These countries promised to bring up these children and indoctrinate them in Communist ideology. For many months children were abducted and carried off, but in 1948 abductions took place on a large scale and in a systematic manner.

From then on guerrillas would take away children from their parents in many northern provinces. At the same time broadcasts from Albania, Bulgaria and Yugoslavia declared that parents were happily yielding their children to the care of democratic governments. According to the findings of the United Nations special committee on the Balkans there was no truth in these declarations. Actually the children were being abducted without the consent of their parents. To achieve their ends the Communists were obliged to imprison, to torture and to threaten the parents that they would continue this treatment until the children were handed over to them. Other means were also used to force the parents hands, such as burning the stock of food for the village, giving out false news such as that the National Army was preparing to bomb from the air with atomic bombs. In some cases the Communists obtained by such means written depositions from parents handing over the children to their care. Sometimes all the inhabitants of the village were removed with the children, but later the children were forcibly separated from the parents after they got to Albania, and never saw them again.[4]

The fate of these children was first brought to the attention of the United Nations Assembly by the Greek Government on February 27, 1948. Then the Greek Government charged that the guerrillas had earmarked about 60,000 children for abduction from Greece to be distributed in the following countries: Albania, Bulgaria, and Yugoslavia were to receive 10,000 each, while the remaining 30,000 children were to go to Rumania, Hungary and Poland.[5] The Assembly asked the special committee to investigate these charges. In the course of its investigation the committee found that Greek children had been taken into Albania, Bulgaria, Yugoslavia, Czechoslovakia, Hungary, and Poland in March and April of 1948. A broadcast by the Free Greece radio on March 14, 1948 reported that 4,400 Greek children had been transferred from 59 villages in Greece to the northern countries. On April 9, 1948 Belgrade radio said that 7,000 Greek children had arrived in that city, and on April 12, 1948, it broadcast that 12,000 Greek children were expected to be divided among Albania, Yugoslavia, Czechoslovakia and Hungary.[6] The committee also learned that this program of abduction was being carried out with the connivance and approval, and even with the assistance of the governments of these countries. The committee recommended that the Greek Government communicate concerning this matter with the governments of these countries. It also recommended that the Secretary-General dispatch copies of its report to the same governments, and urge them to discourage any further removal of children from Greek territory and to arrange for the prompt return to Greece of these children.[7] By this process of abduction northern Greece was being thinned out of its children, for the abduction of 60,000 or even 25,000 children constituted a large proportion of children in that thinly-populated area.

Early in June the Greek Government telegraphed communications to the Governments of Bulgaria, Czechoslovakia, Hungary, Poland, Rumania, and Yugoslavia. The Polish Government categorically denied the presence of any Greek children in Poland. The Hungarian Government in a dispatch to the Secretary-General "acknowledged receiving Greek children on humanitarian grounds, stating that they had lost their parents as a result of military operations in Greece, and had not been torn from their families."[8] On July 19 the Albanian Government replied

that there were no Greek children in Albania "who have been removed by force," adding that assistance given to Greek children was a "humanitarian act entirely in keeping with the principles of all civilized and peace-loving nations."[9] No other replies were received.

Then the UN Assembly tried to deal with this matter through the International Red Cross organizations. On November 27, 1948, the Assembly voted unanimously "for the return to their homeland of all such children who themselves ask to be returned or whose parents or close relatives, request their return (to Greece)."[10] This resolution also called for the cooperation of the National Red Cross organizations and the Red Crescent (of Turkey) "to assist in such repatriation measures." In January 1949 the Secretary-General of the United Nations, in a letter to Albania, Bulgaria, Czechoslovakia, Hungary, Rumania, Yugoslavia, and Greece, called their attention to the resolution.

On April 20 the International Red Cross announced that Yugoslavia was ready to permit a joint international committee of the Red Cross and League of Red Cross and Red Crescent Societies Mission to visit Yugoslavia "with respect to the repatriation of Greek children."[11] Bulgaria and Czechoslovakia had also indicated their willingness to cooperate with the International Red Cross organizations.

The International Red Cross organizations did better as far as investigation was concerned. They were permitted to visit three countries—Bulgaria, Czechoslovakia, and Yugoslavia in carrying on their investigations. In Bulgaria they found 1,972 Greek children distributed in seven reception centers. These were cared for by the Bulgarian Red Cross. In Prague the work of the investigators was limited to a few meetings with the Czech authorities. The Czechs would not even admit the presence of Greek children in their country. However, in reply to a note addressed to the International Red Cross the Czech Red Cross admitted that there were 138 Greek children in the country. The investigators had better response in Yugoslavia. They found that there were 1,845 Greek children who were in homes of the Yugoslav Red Cross, "and 3,347 children who were living with their parents, or with refugee Greek families."[12] Greek Red Cross also carried on its own work of investigating and reported that in July of 1949, the total number of abducted Greek children was 24,701, distributed as follows:[13]

Albania	2,000
Bulgaria	2,660
Hungary	3,000
Rumania	3,801
Czechoslovakia	2,240
Yugoslavia	11,000

When the report of the International Red Cross Organization was submitted to the Assembly (in October of 1949), the Assembly again instructed the Secretary-General to pursue the matter further. In a resolution of November 3 the Assembly observed that the Greek children have not yet returned to their homes. The Assembly declared that the resolution—

"1. Instructs the Secretary-General to request the International Committee of the Red Cross and the League of Red Cross Societies to continue their efforts in this humanitarian cause.

"2. Urges all the members of the United Nations and other states harboring the Greek children to make all necessary arrangements, in consultation and cooperation with the International Red Cross organizations, for the early return to their homes.

"3. Invites the International Red Cross organizations to report to the Secretary-General for the information of the members of the United Nations, on the progress being made in the implementation of the present resolution."[14]

But the early return (of abducted Greek children) to their homes is being delayed despite the almost united efforts of the entire civilized world. In a radio address on December 28 last, Queen Frederica of Greece made an appeal for the return of the 28,000 abducted Greek children. In her impassioned appeal she declared that she was pleading on behalf of the mothers of the abducted children, many of whom journeyed to Athens during this Christmas season of good-will to solicit her aid. * * * She asked that something be done to rouse the conscience of the world.[15] On the same day the Archbishop of Canterbury echoed the feelings of Queen Frederica and denounced the perpetrators of these abductions. He declared that by the hateful and deliberate practice of the Communist forces, many thousands of Greek children have been abducted from their homes, their villages, and their country, to an unknown fate.[16]

In January the Archbishop of the Greek Orthodox Church in this country appealed to President Truman. In reply to this appeal the President telegraphed as follows: "We pray that the governments of those countries harboring these children will be moved in a spirit of broad humanitarianism to cooperate in fulfilling the unanimous desire of the United Nations General Assembly that these children be promptly restored to their homes."[17] A report received on March 13 at Lake Success from the United Nations special committee on the Balkans stated that a survey group made a 600-mile tour of Greece's northern frontier and heard numerous pleas for the return of Greek children who had been removed to neighboring Communist countries.[18] A dispatch from the chairman of the committee, Mr. Samuel Atyeo, filed from Athens on March 14, stated that there is one thing that can be singled out as an obstacle to normal relations between Greece and her neighbors—it is the vexatious and terrible question of abducted children.[19]

In brief this is the story of Greek children abducted and forcibly kept by the new democratic governments in iron-curtain countries. Incidentally, this barbarous practice of abducting children is not new in the Balkans and in all parts of the former Ottoman Empire. The cream of the Ottoman armies, the fearless janissaries, were recruited in this manner; these were composed of abducted children from Christian families, brought up in Ottoman manners and in the Mohammedan religion. Many of these must have been Greek children; and in this sense the story of the abducted Greek children goes back to at least early sixteenth century. But in the days gone by these children were abducted by the enemies and conquerors of Greece, while in the present instance the abduction of 24,000, or 28,000, or 60,000 children was carried out by Greeks preaching another gospel—communism—and taking orders from the Kremlin in Moscow. Relations Between Puerto Rico and the United States

EXTENSION OF REMARKS
OF
HON. A. FERNÓS-ISERN
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. FERNÓS-ISERN. Mr. Speaker, the Honorable Senator from Wyoming, Mr. O'MAHONEY, and the Honorable Senator from Nebraska, Mr. BUTLER, have introduced into the Senate on March 31 a bill, S. 3336, a companion bill to H. R. 7674 which I introduced in the House March 13.

There are slight differences between the two bills but they are fundamentally aimed at the same objectives. Their provisions are almost identical.

I am grateful to both Senators for having so cordially received and sponsored legislation on what constitutes the present wishes of the people of Puerto Rico.

In connection with the Senate and House bills, I would like at this time to take up some pertinent considerations.

In 1900, soon after acquiring sovereignty over Puerto Rico through the Treaty of Paris, the United States Congress enacted the first Organic Act of Puerto Rico. It provided that "on and after the passage of this act, the same tariffs, customs, and duties shall be levied, collected, and paid upon all articles imported into Puerto Rico from ports other than those of the United States which are required by law to be collected upon articles imported into the United States from foreign countries." It further provided that "in no event shall any duty be collected after the 1st day of March 1902 on merchandise and articles going into Puerto Rico from the United States or coming into the United States from Puerto Rico."

In other words, Congress established what might be described as a customs union between the United States and Puerto Rico. Other provisions concerning the retirement of Puerto Rico coins then in circulation and substituting the coins of the United States, and concerning the application of Federal laws in Puerto Rico, created not only a customs, but an economic and political, union.

The Puerto Rican community had been founded four centuries earlier. It had developed with the Spanish political and economic empire. The new pattern of political and economic relationships made it inescapable for Puerto Rico to reorient its economy. During the past 50 years we have created a new economy. The present economic relationships between Puerto Rico and the mainland are now the core of the economic life of Puerto Rico. Consequently, it is only natural and logical that while seeking democratic political advancement within the Union, we in Puerto Rico may be mindful of our basic economic and political relationships. We do not want to dissolve them, we do not want to disturb them, albeit we strive to perfect them.

In 1917, the people of Puerto Rico were declared to be citizens of the United States. In a republican system of gov-

ernment, we may not find the person of the king to symbolize a common loyalty. But we do find and cherish a great ideological and political symbol, common citizenship to which all owe loyalty. The extension of United States citizenship to the people of Puerto Rico unquestionably added great dignity to our union with the United States. Common citizenship symbolizes the common loyalty of free peoples engaged in a common way of life devoted to upholding their republican democratic institutions. Allow me then to say, as emphatically as I can that, unless the people of Puerto Rico should unmistakably express their desires and reasons for dissolving their union with the United States, which they have never done, it is unrepresentative and unfair, whatever the motives may be, to present before this body and in their behalf any proposition to the end that the people of Puerto Rico be thrown out of this Union. Neither the House bill nor the Senate bill would entertain any such proposition.

Mr. Speaker, I have the honor and the duty to represent the people of Puerto Rico in this august body. In the 1948 Puerto Rican elections, candidates were nominated for Resident Commissioner of Puerto Rico by the Popular Democratic Party, the Statehood and Socialist Parties (in coalition), and the Independentist Party. As the candidate of the Popular Democratic Party, I polled 392,000 votes. I am speaking in rounded numbers. The candidate for the combined Statehood and Socialist Parties polled 180,000 votes. The candidate for the Independentist Party got 66,000 votes. In other words, Mr. Speaker, the combined opposition polled 246,000 votes as compared to the 392,000 votes I received. I had an absolute majority of 146,000 votes over all opposition.

In that same election the Honorable Luis Muñoz-Marín ran for Governor on the same party ticket I did and he was elected by about the same majority I was. I believe a clearer mandate from the people for him or me could not anywhere be found. H. R. 7674 is an expression of that mandate.

The Statehood and Socialist coalition candidates campaigned on a platform of statehood for Puerto Rico; the Independentist Party campaigned on a platform of independence for Puerto Rico; the Popular Democratic Party stood on a platform calling for the preservation of present relations between Puerto Rico and the United States and, within such framework, for the adoption by the people of Puerto Rico of a constitution for the organization of our local government. This is not statehood, Mr. Speaker; nor is it independence. But it is American democracy on American soil.

You see, Mr. Speaker, it is in absolute accord with the expressed wishes of the people of Puerto Rico that I have introduced H. R. 7674. It is in accordance with the wish of the people of Puerto Rico that the Senate bill has been introduced. Under these bills, the people of Puerto Rico will adopt their own constitution for their own local government within the existing pattern of political and economic relationships with the Federal Government.

The people of Puerto Rico today have a local government served by officials of their own selection. Under the present organic act, the officials of our government, including the governor, are chosen in free elections by popular vote. The people of Puerto Rico have a good government. May I point out that in his first message to the Legislature of Puerto Rico, Gov. Muñoz Marín, the first elected governor, specifically requested from the legislature authority to proceed with reorganization and streamlining of the government much in line with the procedure followed by the Federal Government. This reorganization which is now taking place is parallel to that now being undertaken by the Federal Government in accordance with the Hoover Commission recommendations. May I also point out that in his second annual message to the legislature the governor recently expressed views on government and economy and organization which have been widely praised by many distinguished students of government, including the Honorable FRED L. CRAWFORD, of Michigan, who recently addressed this House on the subject.

From an article by Mr. Beardsley Ruml, I should like to quote briefly. It was an address which he made before the board of trustees of the Committee for Economic Development last May. He said:

> Muñoz is, without doubt, a remarkable man and a distinguished political leader. Some keen observers are of the opinion that he may emerge as one of the very great world political leaders of our times. A recent issue of Time (May 2, 1949) carried an informative biographical sketch of Muñoz, and his state papers give a clear impression of the depth and penetration of his statesmanship.

He further stated:

> Rule in Puerto Rico is rule by consent, rule after the votes are freely cast. It is the hard way to achieve order in the processes of government, but the result gives confidence in resiliency and toughness. The Government of Puerto Rico under Muñoz will not be characterized by brittleness and caprice.

Mr. Ruml had this to say about honesty in Puerto Rico's Government:

> One further observation about the Government of Puerto Rico. I have taken particular pains to talk to American businessmen and newspapermen to determine whether corruption and graft played any significant part in getting things done in Puerto Rico. The testimony was unanimous that they had found neither "squeeze" nor "bite." I am not so unimaginative as to believe that some deals are not made with some people at some times under some circumstances that are expressions of special privilege for special consideration. But I do believe that there is no system of paying off or of buying rulings and immunities. The higher officials of the Puerto Rican Government are well aware that the program of the Government would be destroyed by corruption or by even the suspicion of corruption.

Puerto Rico is struggling to raise itself out of its present economic difficulties by its own efforts. In our endeavors to industrialize and create new jobs we are having the most helpful cooperation by the Federal Government.

I have said that as a counterpart to what we call our Operation Bootstrap we have an Operation Boost on the part of the Congress. I have included in such proposed Operation Boost the extension to Puerto Rico of public housing, social security, aid to education, coffee rehabilitation, increase of the sugar quota, and so forth. Public housing is already in Puerto Rico under a law passed by this Congress in its first session. Social security for Puerto Rico has already passed this body and is before the Senate. Aid to education has passed the Senate and is pending before the corresponding committee of this House, and I hope some form of agreement can be reached. A coordinated program of action has already been agreed upon by the United States Department of Agriculture and the Puerto Rico Department of Agriculture. Operation Bootstrap is developing well in Puerto Rico. Operation Boost is developing well in this Congress.

Mr. Speaker, I say we are not going to be deflected from this constructive course. We are not going to aim for objectives which would result in our undoing. We are not going to run after will-o'-the-wisp ideas however charitable the intentions of those who may dangle them before us. We will not jeopardize the whole basis of our economic life and freedom.

In the political sense, H. R. 7674 and S. 3336 are expressions of the same program of advancement which in an economic sense is embodied in our local industrialization program, Operation Bootstrap, and in the congressional counterpart, Operation Boost. H. R. 7674 and S. 3336 would perfect our democratic status within the framework of our union within the United States, in accordance with Puerto Rico's circumstances. I thank the Eightieth Congress for having recognized Puerto Rico's political maturity and having permitted us to elect our governor. I praise the people of Puerto Rico for the wise judgment they showed in electing their present governor. I praise the people of Puerto Rico for supporting our Governor in his present endeavors to streamline our government and industrialize the island. I thank this Congress for the generous consideration it has been giving to our problems and for the helping hand it is extending.

We are an old people with an old culture. San Juan, our capital, and San German, on the southern part of the island, are the two oldest cities under the American flag. San Juan was founded in 1508 and San German in 1511. Under the dome of the old San Juan Cathedral, to the left of the central nave, repose the remains of the first Christian bishop to set foot on New World soil. To the other side of the central nave repose the remains of Juan Ponce de Leon, the founder of San Juan and later the discoverer of Florida.

Ponce de Leon came to the New World from old Castile. He brought with him the pattern of organization of a Spanish medieval city of those days. Thus were San Juan and San German organized. He did not bring with him later-day absolutist Hapsburg or Bourbon ideas of government, as unfortunately befell Spain and consequently befell us in Puerto Rico with the subsequent installation in the Spanish throne of the Hapsburg and Bourbon dynasties. Ponce de Leon represented the old Castillian

ideas of individual freedom. He belonged to that type of sixteenth-century Spaniards whose motto was "To the King my life and tribute, but my honor is of the soul, and my soul belongs to God."

Alonso Manso, the first bishop in the New World, the first bishop of Puerto Rico, represented the Christian faith of the settlers, a faith we have maintained and will always maintain.

There in that cathedral is a symbol which allows us to understand two fundamental characteristics of the Puerto Rican people—the love of individual freedom and the practice of good Christian faith. This explains the fraternal attitude which the Puerto Ricans had for the United States Armies when they arrived in Puerto Rico in 1898. In the flag which they saw the soldiers carry they could see the symbol of that individual freedom with which they had started and which they lost through the three centuries of Hapsburg and Bourbon absolutism, a freedom they yearned to have again. And they knew that in that freedom their faith could flourish. The United States troops marched along a path of flowers through the streets of Ponce, flowers that were thrown by the people.

Because we are Christian we are hospitable; because we love freedom we are Americans. This explains our hospitality to our visitors. For those reasons we will never allow our love for freedom nor our Christian faith to diminish. Our belief in the dignity of man and our Christian faith will always become evident in the way we practice hospitality. We will always break our bread with those that come to visit us as envoys of good will.

On Thursday, March 30, a joint resolution endorsing H. R. 7674 was passed by the Legislature of Puerto Rico. It had the endorsement of 18 votes out of 19 in the senate, with the 1 member not voting. In the house, where there are 39 members, 1 member abstained from voting. The other 38 members endorsed H. R. 7674.

Mr. Speaker, if there ever was a more eloquent expression of the wishes of the people, I am not aware of it.

I hope that H. R. 7674 may promptly be considered by this Congress and speedily, but with thorough consideration, be sent through the legislative machinery to early enactment into law.

Times on the TVA

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I include an editorial, "Times on the TVA," which appeared in the Decatur Daily on Monday, April 3, 1950:

TIMES ON THE TVA

Recently when the sixteenth annual report of the Tennessee Valley Authority was made, it occasioned much comment up and down the country.

The report drew this comment from the New York Times, a great newspaper:

"By every measurable test the Tennessee Valley Authority continues to be a success. Its sixteenth annual report shows an annual production of nearly 16,000,000,000 kilowatt-hours, or about 10 times as much electricity as was available in its area in 1933. In 1933, 3 percent of the farms in the area were electrified; now the proportion is 66 percent and growing. The improved Tennessee last year carried 427,000,000 tons of freight, or 13 times the load it did in 1933. The TVA has taken the lead in conservation measures to protect soil, forests, and wild life; it has had a large share in the nearly complete elimination of malaria. Private business has flourished. The per capita income in TVA territory has gone up from $148 to $797 this year—still below the national average but increasing much more rapidly than the national average.

"TVA's great building period is nearly over. It has constructed 17 dams and operates a system of 27 major dams and reservoirs. To the installations on the Tennessee and its tributaries will be added dams being built by the Army on the Cumberland power from which will be distributed by TVA. By 1952 TVA expects to be turning out 22,000,000,000 kilowatt-hours annually, for which a ready market will be found. All this has been done with much less mandatory legal power than most people outside of the Tennessee Valley suppose.

"The argument as to whether TVA is in unfair competition with the privately owned electrical industry may long continue. On the face of this report and other official documents it seems likely that TVA is paying sums in lieu of taxes and sums to the Federal Government out of its net profits that come close to being equivalent to the taxes it would have to pay if it were a private enterprise. In addition to these payments, municipalities which operate their own distribution plants are earning net incomes which, in effect, are a species of tax on the ultimate consumer. The real argument for the TVA principle remains substantially what it has always been; that the multiple-purpose development of a great river is too huge an enterprise to be entrusted to a private monopoly. What we can hope to get out of such enterprises, publicly owned and managed, is decentralized and democratic management and the least possible amount of interference with local communities and private businesses. We think that in these objectives TVA has set an admirable example."

Dupes of Soviet Propaganda

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of April 1, 1950:

BULLITT SAYS DUPES IN STATE DEPARTMENT DO SOVIET AGENT JOB

A former ambassador to Russia charged last night that dupes of Soviet propaganda are doing the work of Russian agents in the State Department.

The critic was William C. Bullitt, who told a Georgetown University audience in Gaston Hall that the United States cannot expect to win its struggle for survival against Russia until the State Department rids itself of Communist sympathizers.

These naive Government officials entered the Department through improper screening during the war, Mr. Bullitt asserted. They remain there now, he said, because Secretary Acheson and his closest associates and friends have a vested interest in their own mistakes.

The former diplomat declared that the Secretary had been persuaded by his counselors, befuddled by Soviet psychological warfare, to cease economic and military aid to China. In any European parliamentary democracy, a minister of foreign affairs who had tossed a great ally like China into the hands of Stalin, would have been dismissed from his post, he added.

He said he regards Indochina as the most critical area in southeast Asia and urged the immediate dispatch of arms aid to that country. He also proposed increased American support of a western European federation and of resistance forces in satellite countries.

Turning his fire on President Truman, Mr. Bullitt said:

"Our President has not understood that an over-all plan for defense, not only of our own country, but also of those countries which still remain outside Stalin's domain, is essential. The President has not yet found within himself the intelligence and spirit to take the offensive effectively against Soviet expansionism."

Rent Controls

REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. YATES. Mr. Speaker, approximately a week ago I pointed out when the deficiency appropriation bill was before the House that the $4,000,000 appropriation looked ultimately to the discontinuance of rent control for the future. I pointed out, also, at that time that the new appropriations bill contained no appropriation for the Office of Housing Expediter for the next year, which is as it should be, because there is no authorization. I requested at that time that the chairman of the Committee on Banking and Currency hold hearings soon looking to the continuation of rent control.

The Bureau of Labor Statistics in the Monthly Labor Review has just issued an article entitled "Rent Increases After Decontrol Actions," which is the result of a seven city survey of cities which have been decontrolled, and which shows that between one-third and three-fifths of all rental dwellings in those cities have been affected by rent increases in those dwelling units, and that the rents have been raised, ranging from 16 percent in Salt Lake City to 40 percent in Houston.

The article reads as follows:

RENT INCREASES AFTER DECONTROL ACTIONS[1]

In an effort to find out what happened to rents in decontrolled areas, seven large cities—Knoxville, Dallas, Spokane, Salt Lake City, Jacksonville, Topeka, and Houston—where rents had been decontrolled from 1 to

[1] By Regina Beckhardt of the Bureau's Division of Prices and Cost of Living; and Torleif Meloe of the Office of Publications.

5 months, were recently surveyed. The survey was conducted by the United States Labor Department's Bureau of Labor Statistics, at the request of the Office of the Housing Expediter. Between a third and three-fifths of all rental dwelling units in these cities had been affected by rent increases. For those dwelling units for which rents had been raised, the increases ranged from 16 percent in Salt Lake City to 40 percent in Houston. For all rental dwellings (i. e., including those which had no change in rent) rents on the average had increased from 6.6 to 16.7 percent.

In four of the cities for which family income data were also obtained, the greatest percentage rent increases were reported by families earning under $2,000 a year. Their rent increases ranged from about 8 percent in Salt Lake City and Topeka to 31 percent in Dallas. For families in the $4,000–$5,000 and over income group, the increases ranged from 4 to 9 percent.

The 34-city rent component of the Consumer's Price Index, which includes information for two cities recently decontrolled, increased only 1.3 percent from May to November, the approximate period of the survey.

FINDINGS IN SEVEN CITIES

Rents in the seven cities were all decontrolled between June 14, 1949, and October 19, 1949, under the decontrol provisions of the Housing and Rent Act of 1949. Although the cities covered by the survey were chosen by the Expediter from among the largest cities where rents were decontrolled, they are not necessarily representative of all decontrolled areas throughout the country. In 1940, these cities had populations ranging from 68,000 to 385,000, although current estimates indicate considerable expansion.

Survey periods extended from about 2 months prior to the decontrol date to November 15, 1949. Rental data were obtained for each city from a sample of residential units, carefully selected to represent all sections and all types of structures in each of the 7 areas. Particular attention was given to adequate representation of both white and nonwhite neighborhoods and both heavily and sparsely populated blocks. Commercial rooming houses, hotels, trailers, and tourist courts were excluded.

In Dallas, Spokane, and Topeka, the surveys were conducted by personal visits to each of the sample units; in Houston, Jacksonville, Knoxville, and Salt Lake City, where the Bureau's regular samples were available, mail questionnaires were sent out in accordance with usual Bureau of Labor Statistics procedures.[2]

Rent increases for all units (including those reporting no change) ranged from 6.6 percent in Salt Lake City to 16.7 percent in Dallas. However, rents in dwelling units free to rise, which excludes units under lease and those decontrolled before general city decontrol, increased by 7.1 percent in Salt Lake City and by as much as 20.5 percent in Dallas, as shown in the following tabulation.

[2] For discussion, see Monthly Labor Review, January 1940 (p. 60).

City and percent increase for units free to rise

Knoxville	15.8
Dallas	20.5
Spokane	8.2
Salt Lake City	7.1
Jacksonville	12.3
Topeka	10.5
Houston	10.7

If only those units reporting a change are considered, the percentage increase in their rents was much higher, ranging from 16 percent in Salt Lake City to 40 percent in Houston (see table 1).

Dwelling units renting for under $30 a month before decontrol, received the largest percent increase in each of the 7 cities. With the exception of Spokane, the largest proportion of units reporting increases was also concentrated in this group. Family income data obtained in four of the cities covered—Spokane, Dallas, Topeka, and Salt Lake City—showed that a greater proportion of the low-income families reported rent increases than higher income groups. Among the families with incomes under $2,000, from 48 to 71 percent reported rent increases. The rent increases for this income group ranged from 8 percent in Salt Lake City to 31.3 percent in Dallas. At the upper end of the income scale ($4,000 and over bracket), the number of dwelling units receiving increases ranged from 22 percent in Topeka to 37 percent in Dallas with the increase remaining below 9 percent.

TABLE 1.—*Changes in residential rents, by rent and income group, all units, by city, 1949* [1]

[Rental dwellings with kitchen facilities]

Rent group	Percent increase for all rental units	Units reporting rent increases			Income group	Percent increase for all rental units	Units reporting rent increases

[8] Decontrolled Oct. 19, 1949, by State-wide action; surveyed Aug. 15–Nov. 15, 1949.

HOUSING NEED IN SEVEN CITIES

In all seven cities surveyed, the demand for available housing has been intensified by an extensive growth in population since 1940. Recent public and private estimates indicate that the population has increased by about 60 percent in Houston and has risen by about a fourth in Salt Lake City and Dallas. The average growth for the other cities is estimated at 30 to 50 percent.

Vacancy rates in these areas have remained low, according to available information. In Knoxville, a recent local survey indicates that vacancies had dropped below the 0.9-percent rate found in the November 1945 survey made by the Bureau of Labor Statistics. Dallas' vacancy rate for dwellings available for rent or sales dropped from about 6 percent in 1940 to 1.3 percent in 1949, according to a Bureau survey. In January 1949, only 0.8 percent of the dwellings were vacant and available for rent.[3] The rental vacancy rate in Spokane dropped from 13.2 percent in April 1940 to 1 percent in August 1946, according to the Bureau of the Census, but estimates at the end of 1949 indicate that this rate may have risen slightly.[4] In the Salt Lake City metropolitan district, the rental vacancy rate remained somewhat higher than in most cities. In 1940, the census showed that it was 6.4 percent for rental dwellings and, in 1947, it was still 2.8 percent. However, a recent local survey indicates a decline since 1947. Recent surveys show only a slight rise in the vacancy rate in Houston, since April 1947. At that time, according to Bureau of Census estimates, it was 1.8 percent; currently it is about 2 percent.

Over-all vacancy data are not available for Topeka and Houston. However, vacancies in FHA rental housing in Topeka which were created by the closing of the air base were filled within a few weeks, with no rent reductions.

Evidence of a continuing demand for low rental housing is available for four of the areas. The local public housing authority in each of these areas in its application for program reservation,[5] which it filed with the Public Housing Administration in Washington, listed the number of applications on file for low rental housing currently available as follows: Knoxville, 1,284; Dallas, 5,280; Jacksonville, 922; and Houston, 1,218.

RENT ACT OF 1949 [6]

The Housing and Rent Act of 1949, effective on April 1, 1949, placed primary responsibility for the decontrol of Federal rental areas upon the States and local municipal councils. Under its terms, an entire State or any portion thereof may be decontrolled either by legislative action or State control may be substituted for Federal control if the Governor certifies to the Housing Expediter that the State legislature has passed adequate rent-control measures to replace the Federal law. Furthermore, the governing bodies of any incorporated city, town, or village may, with the Governor's approval, terminate rent control within their jurisdiction. The Housing Expediter must then decontrol adjacent unincorporated areas if the incorporated place is a major portion of the rental area.

The general authority of the Housing Expediter to decontrol areas in which the demand for rental housing has been reasonably met is continued. Local rent advisory boards may, as under the 1947 and 1948 acts, recommend decontrol of the area under its authority. Unless adequately substantiated, the Housing Expediter can disapprove such recommendations. In appeals by the local board or interested parties, the final arbiter is the Emergency Court of Appeals.

Areas removed from rent control by the Housing Expediter after April 1, 1949, may be recontrolled by him under the provisions of the existing act. The recontrol of areas decontrolled prior to that date and areas never under control must first be recommended by the local board. These recontrol provisions cannot be invoked in areas decontrolled by local or State option.

No general rent adjustment is written into the existing act, but the Housing Expediter is authorized to increase rents individually to provide landlords with a fair net operating income. Under this formula, it was the intent of Congress that landlords should receive an income that is above their expenses by a fair amount. Under the 1947 and 1948 acts, rent ceilings were increased only if the landlord showed that he incurred a financial loss or hardship in the operation of his rental units. Under these earlier acts, increases up to 15 percent were permitted under certain conditions.

The control of evictions was taken away from the local courts and given to the Housing Expediter by the 1949 legislation. He has also been authorized to apply for injunctions to force compliance with the law and to institute a treble damage suit against any person demanding or receiving rent in excess of that established by his office. As under the two earlier laws, the 1949 act continued the exemption of new construction from rent control.

EXTENT OF NATIONAL DECONTROL

About 3,000,000 registered dwelling units were removed from Federal rent control from July 1, 1947, through January 15, 1950, under the various decontrol provisions of the postwar housing and rent acts (see table 2). Some 11,700,000 units remained under control in 365 rental areas. More than 97 percent of the 3,000,000 units were decontrolled after April 1, 1949, under the liberalized decontrol provisions of the Housing and Rent Act of 1949.

Total decontrol actions under the 1947 and 1948 acts affected only an estimated 80,111 dwelling units. These actions were, of course, all taken by the Housing Expediter, either upon his own initiative or upon recommendation of the local advisory boards, since the State- and local-option clauses were not included in any act previous to 1949.

TABLE 2.—*Area decontrol and decontrol actions by type of authority July 1, 1947–Jan. 15, 1950*

Item	Total number	Apr. 1, 1949, to Jan. 15, 1950	Apr. 1, 1948, to Mar. 31, 1949	July 1, 1947, to Mar. 31, 1948
Number of rental areas completely decontrolled [1]	250	234	7	9
Total 1940 population in decontrolled areas	24,289,967	23,381,962	555,039	352,966
Total decontrol actions [2]	749	[3] 681	44	24
Estimated registered dwelling units in decontrolled areas	2,886,873	[3] 2,806,762	42,234	37,877
Housing Expediter—actions	514	469	39	6
Estimated units decontrolled	1,194,704	1,156,474	29,275	8,955
Local board recommendations—actions	28	5	5	18
Estimated units decontrolled	115,840	73,959	12,959	28,922
Local option—actions	201	201		
Estimated units decontrolled	738,815	738,815		
State option—actions [4]	6	6		
Estimated units decontrolled	837,514	837,514		

[1] The number of areas still under control is 365.
[2] Some decontrol actions affect only portions of areas.
[3] In 3 cases (Americus, Ga., Altoona-Johnstown, Pa., and Harrodsburg, Ky.) recontrol actions were taken involving 7,120 units.
[4] 4 States completely decontrolled and 1 placed under State rent control.

The importance of these local-option provisions in the 1949 law was great. For more than 56 percent of the total dwelling units decontrolled after April 1, 1949, the action was taken under State or local option. Two States (Texas and Nebraska) removed rent controls entirely by State option, while in Utah and Arizona they were removed completely by a combination of Expediter and local board actions. Wisconsin substituted a State law, which, in effect, allowed rents to be increased 15 percent for those tenants who had previously agreed to a 15-percent voluntary rise under the 1947 and 1948 Federal acts and 30 percent for those who had not signed such agreements. The Alabama Legislature voted to end controls on May 10, 1950.

Although 69 percent of the total decontrol actions from July 1, 1947, were taken by the Housing Expediter upon his own initiative, they were primarily in rural or sparsely populated places and involved only about 41 percent of the dwelling units decontrolled. Many of the actions after April 1, 1949, resulted from the decontrol of surrounding areas after a central city had been decontrolled by local option.

The number of rental units decontrolled by the Housing Expediter upon recommendation of the local advisory boards represents less than 4 percent of the total for the period ending January 15.

Insofar as rents have been decontrolled in cities included in the rent component of the Consumers' Price Index (1935–39=100), the effect is shown in the following tabulation.

Period and percent of increase (34 large cities) [1]

December 1942–June 1947	1.1
June 1947–April 1948	6.5
April 1948–April 1949	3.4
April 1949–December 1949	1.6

[1] Houston and Jacksonville are among the cities regularly included in the index.

Marked increases followed the enactment of the Housing and Rent Act of 1947 on July 1, 1947. The 15-percent increases, permitted under lease agreements between landlords and tenants, accounted for a large part of the 10-percent rise in the index between June 1947 and April 1949. In contrast, the rise after the 1949 legislation took effect was relatively small due to the removal of the 15-percent increase provisions.

[3] The median monthly rental asked was $90 and most of the units were built in the last 6 months of 1948.

[4] Some of the projects constructed in Spokane under sec. 608 of the Veterans' Emergency Housing Act have found it necessary to reduce rents in order to maintain marketability.

[5] The first step in the procedure whereby a city, through its local housing authority, participates in the low-rent public-housing program.

[6] The Housing and Rent Act of 1949 (Public Law 31, 81st Cong., 1st sess.), approved March 30, 1949.

We'll Never Make Them Do It Our Way

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. BOYKIN. Mr. Speaker, I am going to ask unanimous consent to revise and extend my remarks and include therein several telegrams from my great friend, H. R. (Roy) Cullen of Houston, Tex. Also to include therein, an article by Ernest O. Hauser in the March 4, 1950, Saturday Evening Post, entitled "We Will Never Make Them Do It Our Way."

Mr. Speaker, I wish every Member of this House, and we have 435 of them, they represent every human being from every district in the United States, 150,000,000 great Americans, knew Roy Cullen of Houston, Tex., and his great work as I do. There is no way to properly describe him, but to me he is one of the finest and one of the most unusual men I have ever known. I have never known such an unselfish human being in my life. When I think about all of the many things he has done to help humanity, to help our churches, our schools, white and colored—when I think about his great brain, his wonderful ability, his unlimited energy and his great understanding heart, I just want to get down on my knees and thank The Great, Good One for giving this Nation a man with the ability and foresight of Texas' own H. R. (Roy) Cullen. He not only does good in Texas, but he does good in every State in this Union, wherever he goes, he and his wonderful wife, who are such pals and who have raised such a wonderful family and who has done so much good in helping to develop one of the greatest cities on this earth, Houston, Tex., and who has visited us down in our great State of Alabama, where he visited all over my district, especially the beautiful Bellingrath Gardens at Mobile, Ala., where he went over our beautiful Mobile Bay, our Dauphin Island and where he is coming back this summer to have another visit with us, where he visited that great Grand Hotel at Point Clear—one of the unforgettable spots of this earth, an unforgettable spot that will never be forgotten by an unforgettable man. To know Roy Cullen and Mrs. Cullen is to love them—they have both just dedicated their lives to help Houston, to help Texas, and to help this Nation, and to do good everywhere they go, and to help keep our way of life.

The matter referred to above follows:

HOUSTON, TEX., *March 22, 1950.*

Hon. FRANK BOYKIN,
Representative from Alabama,
House Office Building.

I sent the following telegram to Robert Fuoss, managing editor of the Saturday Evening Post:

"Mr. ROBERT FUOSS,
Managing Editor, the Saturday Evening Post, Independence Square, Philadelphia, Pa.:

"The most enlightening article in the Post March 4 issue entitled 'We'll Never Make Them Do It Our Way,' by Ernest O. Hauser, should be sent to all of our Representatives in Congress so they will be able to cast an intelligent vote on foreign matters. The article also is a denial to the arguments used by Will Clayton's world union. I will be glad to pay all expenses that may be incurred.

"H. R. CULLEN,
"1710 City National Bank Building."

I received the following telegram in reply from the Saturday Evening Post:

PHILADELPHIA, PA., *March 10.*

H. R. CULLEN:

Thanks for wire on Hauser article. We don't plan to circularize it but are glad to give you permission to reprint it intact with credit by special permission Saturday Evening Post copyright 1950 Curtis Publishing Co., for purpose you describe.

W. J. STEVENS., Jr.,
Assistant Managing Editor.

This is permission for you to reproduce article by Ernest O. Hauser in the CONGRESSIONAL RECORD. This article absolutely explodes the theory of Will Clayton's world union.

H. R. CULLEN.

HOUSTON, TEX., *March 24, 1950.*

Hon. FRANK BOYKIN,
Representative from Alabama,
House Office Building,
Washington, D. C.:

Please consider this telegram carefully in conjunction with Kerr-Thomas bill that is now pending. Figures quoted are those used in making our income-tax returns and relate to gas field in Calhoun County, Tex., where first-drilling operations were commenced in 1947.

My associates and I drilled two wildcat dry holes on an anticlinical nose at a total cost of $316,659.40. The third well which was drilled is capable of producing gas. A total of seven wells has been drilled, four being producers and three being dry holes. Total cost of all the wells is $932,275.75, resulting in average cost for each well of $133,182.25, or a cost of $233,068.94 for each productive well.

No gas has yet been sold, but negotiations have been consummated on a 10-year contract under which we are to receive an average of 8 cents per thousand cubic feet of gas.

Texas gas is now being sold in cities throughout the country to housewives at prices ranging from $1 to $1.50 per thousand cubic feet; so 92 cents to $1.42 per thousand cubic feet charged to the housewives is taken up by transportation and distribution charges. The gas producers are receiving at the well only 5 to 7 percent of the amount paid by the housewives.

Before deliveries are commenced under the contract previously referred to it will be necessary to expend additional sums for equipment. A gasoline extraction plant may be required at a possible cost in excess of $2,000,000. Under present conditions such plants are being operated at a loss. We are interested in such plant in Refugio County, Tex., which at present loses approximately $6,000 per month.

I have given you a true economic picture of a gas field and I am in position to know that other gas fields in this area have required similar expenditures for discovery and development.

It takes courage to risk such sums on so hazardous an investment under present conditions, but no one but a crazy man would take such risks unless the Kerr-Thomas bill is enacted.

A copy of this telegram is being air-mailed to each Member of the Senate.

H. R. CULLEN.

HOUSTON, TEX., *March 27, 1950.*

Hon. FRANK BOYKIN,
Representative from Alabama,
House Office Building:

Supplementing my telegram of March 24, wish to explain why the gas wells mentioned cost so much. Gas fields in this area that are now being found are usually very deep; from 9,000 to 12,000 feet with very high gas pressures and much faulting in the fields, so each well drilled within the field must be drilled as wildcat where much coring and testing is done and high-pressure casing and equipment must be used which alone on one well costs between forty and fifty thousand dollars. The Russian Government would give many billions of rubles to stop the exploration of oil in this country. To defeat the Kerr-Thomas bill which is now before your Senate would make Joe Stalin very happy.

H. R. CULLEN.

HOUSTON, TEX., *March 27, 1950.*

Hon. FRANK BOYKIN,
Representative from Alabama,
House Office Building,
Washington, D. C.:

Supplementing my telegrams March 24 and 27. I hope I am not boring you with my telegrams, but I realize that much pressure is brought to bear on the Senate by pressure groups furnishing data of doubtful nature, and that you might like to have evidence that is supported by income-tax returns.

I have already given you a brief report on a gas field that my associates and I discovered in Calhoun County.

Now, I would like to give you the facts about a gas field that my associates and I discovered in Atascosa County in 1946. We drilled six wells at a total cost of $799,487.82, or an average cost of $133,247.97 per well. Three wells were producers and three wells were dry; thus, cost per productive well was $266,495.94. The producing wells have a pressure of 3,300 pounds on the Christmas tree, but sulfur and carbon-dioxide content is so high gas cannot be sold to the pipe line without being washed. Cost of building and operating a plant to wash the limited quantity of gas discovered is so great that it is not economically feasible at the present price of gas. We now have a large capital investment with slight chance of recovery.

This is another example of the great risk involved in exploring for gas. We can stay in business only if the returns from the good fields can offset the losses of poor ones. Government regulation coupled with the risks of discovery would make exploration impracticable. Passage of the Kerr-Thomas bill would assure availability of gas reserves in the event of a national emergency.

A copy of this telegram is being air mailed to each Member of the Senate.

H. R. CULLEN.

HOUSTON, TEX., *April 3, 1950.*

Hon. FRANK BOYKIN,
Representative from Alabama:

The commentator, Drew Pearson, whom both Roosevelt and Truman have termed a "liar," is again at his dirty work of asking the housewives to write President Truman not to sign the gas bill.

All those who are acquainted with the gas situation in the gas fields know that not to pass the gas bill would mean the stopping of drilling of gas wells wherever they may be and would result in terribly high gas prices all over the country. If our Congress and President do not protect the gas producer at the well from Government interference and taxation, then it is time for all of our Senators and Congressmen from the State of Texas to offer bills to tax every commodity at its source from a peanut in the field to a caterpillar in the factory. If you would offer bills to tax every commodity at its source in those States where their Congressmen and Senators are voting against the gas bill, we would get relief from persecution by those States.

This telegram is being sent to Senators CONNALLY, JOHNSON, Speaker SAM RAYBURN, Representatives ALBERT THOMAS and FRANK BOYKIN, with copy to President Truman.

H. R. CULLEN.

WE'LL NEVER MAKE THEM DO IT OUR WAY

(By Ernest O. Hauser)

PARIS.—American planners in Europe are up a tree. If the immediate aim of ERP was to give this war-struck Continent first aid, we're not doing badly. Throughout western Europe trains are running, currencies are stabilized, and the political situation is solid to the point where communism is no day-to-day menace. With this accomplished, the givers of aid suddenly find themselves confronted with the chronic ills of Europe.

Is it our job to cure these ills? Our planners, seeing that their time by Europe's bedside is nearly up, have begun to talk with greater urgency. Their objective, on the face of it, sound simple enough: Freer trade among European nations, abolition of import quotas and customs barriers, convertibility of Europe's many currencies—in short, the economic integration of Marshall-plan Europe. The word, it was noted, appeared 16 times in the hurry-up speech made by ECA Administrator Paul G. Hoffman in Paris on October 31, 1949.

Translated into action, this means trouble. Already Marshall planning has slipped into a second critical stage, not limited to giving aid. No longer sticking to our original purpose of curing Europe of the war, we're trying to cure her of * * * Europe. Watching this amazing effort from the vantage point of one who has seen this Continent come back, I feel that we've maneuvered ourselves astride a tiger.

For in analyzing some of the implications of Mr. Hoffman's objective, one finds that western Europe would have to undergo a full-blown revolution—technological, psychological, and social—in order to comply. She would have to take the butcher knife to a lot of ingrown habits and hallowed traditions. She would have to turn herself inside out.

And what if she won't? Making satellites is not an American custom—we have no Rokossovskys, no commissars to install in European capitals. Behind the tall windows of the Rothschild palace in Paris, ECA headquarters for Europe, Ambassador W. Averell Harriman is still trying to make Europeans do our bidding with a smile. "Soviet policy," he told me, "is to dominate others. American policy is to help others." Ask his associates what methods they're using, and they'll rattle off the known variations on the theme persuade: needle, wheedle, coax, suggest, urge, prevail upon, cajole, inveigle. The one verb not in their vocabulary is "compel."

Mere persuasion, from here on, just won't make it stick. Take a seemingly innocuous little nostrum—efficiency. To close her dollar gap at a reasonably high level of trade by 1952—the goal of ERP—Europe must export. To export, she must step up production; to step up production, she must produce more efficiently. Yet, in advising Europe's industrialists on what they should do, few Americans are aware of the fact that the word "efficiency" cannot be rendered accurately into European languages. And the trouble in getting it translated is as nothing compared to the trouble in getting it across.

A simple case: an ECA official in Rome used to tell Italian cotton manufacturers that once they stopped making several types of cloth in each plant and concentrated, instead, on one line—like we do at home—the result would be higher efficiency and higher profits.

"Just think," one Italian textile man said to me, "what would have happened if I'd taken his advice. We've always turned out 20 or 30 lines because we never had one large, solid market. If a customer said he liked this pattern, but he'd prefer it in blue, we made it in blue for him. Came the sterling devaluation, knocking out the best market we had for cotton goods. Why did I survive? Only because I was flexible enough to offer this type of cloth to the French, that to the Indians, and yet another to the Swedes—by now, I've opened up new markets and absorbed the shock."

An ECA man in Paris who had been looking at one of the largest French automobile plants came back scratching his head. "A workman finishes his castings—door hinges, say—puts them into a tote box and drags the box to the next machine. If it's a large piece, he drags the piece itself across the floor. Back home we use conveyors for that sort of thing. 'You could make more cars,' I say to the manufacturer, 'if you installed a chain hoist or something.' Says he, 'Why make more cars?' He isn't thinking about an ever-expanding market—first a car for the rich, then a car for the workers. All he's thinking of is how to retire at 60. 'Besides,' he tells me, 'if I gave my men a machine that does things faster, they wouldn't use it. Work themselves out of their jobs?' "

To make European managers and workers fall in love with American production methods, ECA is taking groups of them to the United States for a look-see. I talked with a French electrical engineer who had been a member of a group visiting, among other things, the Baldwin Locomotive Works near Philadelphia and the General Electric plant in Schenectady. The experience wasn't lost on him. "Yes, there are a number of things we'd do well to duplicate. For instance, standardization of design—you push the customer toward the standard product by charging him extra for special fixtures or a slight variation in style. Nothing wrong with that. And, another thing, you always worry about increasing your output. In the plants we saw, both managers and workers are encouraged to make suggestions, and they do—all the time. Everyone is constantly moving forward in the States." A trivial thing that had struck him: machine-mounted files were used in making the cutting edges of certain machine tools in Schenectady. "We have them here, too, but our workers won't touch them. They still prefer the slow, old-fashioned hand file, and, for that last polish, a stone." Smoother results? "No," he grinned, "but tell that to one of our old-timers."

Change, so desirable to the average American who firmly believes in progress, is something to be afraid of over here. Europeans are security-minded. The industrialist rocking along nicely with the machinery he installed 30 years ago will think twice before investing in new equipment. What if another war breaks out? What if the Russians are coming, after all? Won't cash be safer? And, if he mail-orders new equipment and doubles production, won't he work himself, quickly, first through his stock pile of raw materials, then through his stock pile of orders?

Likewise, a French workman, producing only one-fourth as much per man-hour as his American cousin and paid half the American wage, is easily convinced that higher living standards are waiting at the end of Efficiency Street. Yet he hesitates to go that way. Heir to tradition of craftsmanship, the European worker tends to think of himself as starting with a clump of clay and ending up with a graceful vase. Even when working in a steel mill, he still prides himself on being a craftsman. He has an investment in years of painful apprenticeship which he must protect. He's a little afraid of becoming a Stakhanovite at the assembly line. And he's much afraid of finishing any given job in half the time now used—meaning that either he or the fellow next to him will be fired come Friday. These are some deep-rooted attitudes our planners would have to change to make Europe more efficient. What seems a mere face-lifting job turns out to be a complete revamping of the old personality.

So much for efficiency. Now for the slightly larger order, economic integration. Said Mr. Hoffman in his hurry up speech: "The fact that we have in the United States a single market of 150,000,000 consumers has been indispensable to the strength and efficiency of our economy. The creation of a permanent, freely trading area comprising 270,000,000 consumers in western Europe would * * * set in motion a rapid growth in productivity. This would make it possible for Europe to improve its competitive position in the world and thus more nearly satisfy the * * * needs of its people. This is a vital objective."

"Get together, boys," snickered a Frenchman, "or you'll go to bed without supper." While many thinking people west of the iron curtain agree that Europeans must hang together if they don't want to hang separately, century-old traditions still make the concept of integration revolutionary. Whatever European country you visit today, the principal landmarks and sight-seeing objects bring to mind a militant nationalism, Europe's scourge for the last 150 years. Nelson atop a column in Trafalgar Square; Napolean atop a column in the Place Vendôme; Victory atop a column in Berlin; half the street names in every capital, and soldiers' graves lining the highways—echoes, everywhere, of neighbor A's victory over neighbor B in the not forgotten past.

How could it be otherwise? Crammed together, speaking different languages, and following traditions of their own, the people of Europe have always found quarreling the most natural pastime there was. Gradually, the economic structure was made to fit the map. Used to the idea of fighting one another every few years, everyone simply kept watering his plot, trying to raise his own crop of steel castings, biscuits, and uniform buttons. Hoping to change this system by persuasion is obviously unrealistic. Yet we're prodding Europeans to get together overnight.

"What I want to see over here," said one high-minded American, "is the kind of assembly-line economy we have in the United States—everybody makes what he's best at."

In Milan, the other day, I talked with the head of one of Italy's largest industrial concerns, employing 12,000 workers and turning out railroad cars, locomotives, and heavy machinery. What, I asked, would happen if customs barriers throughout western Europe were pulled up? The industrialist's parchment face began to glow. He had always been a rooter for the United States of Europe, and the sooner the better. What about his engineering works? The glow vanished. "Industries like ours were established merely because we didn't wish to depend on others. We have almost no iron ore or coal in this country. Without protective tariffs we'd be out of business overnight."

The entire industrial structure of Italy's Po Valley, one of Europe's great nerve centers, would collapse the minute Europe became one freely trading area. French, British, and German steel, Swedish and German paper, Dutch radios, Belgian glassware, all cheaper than Italians can make them, would pour across the Alps, wrecking industries now giving employment to several million workers. "We still could manufacture things * * * such as precision instruments or something."

The whole idea of this system is to protect the inefficient, high-cost producer against the efficient, low-cost producer across the border. In Italy today a standard typewriter costs $200 and a four-door sedan sets you back $2,350. Both are Italian-made and poor compared to the American equivalent, which would cost you $150 and $1,567, respectively, and which the law keeps you from bringing in. Everywhere trusts and monopoly concerns sit pat on articles whose

production they've been able to corner, refusing to improve the product, refusing to lower the price. "Go ahead with integration," they say, "and you'll get a Europe studded with ghost towns." Some 40,000 Norwegian textile workers, for example, would be out of job and home the minute cheap Swedish textiles came in across the border. Even the French wine growers have come crying to Mr. Harriman's office because the proposed French-Italian customs union would "throw them out of business."

"You mean to say," an incredulous American asked them, "your great French wines couldn't hold their own against Italian ones?"

"Certainly," smiled the French through their tears, "but it would force our prices down."

The resistance of protected groups whose survival in comfort is threatened by integration doesn't worry ECA men half as much as the recalcitrance of one essential partner—Great Britain. In urging Europeans from the start to get together and help themselves, we were quietly assuming that Britain would take the lead. There was reason for hope. It was Foreign Secretary Ernest Bevin who first grabbed the ball tossed over the fence by Secretary of State George Marshall in his Harvard speech of June 5, 1947. Since then, however, those early hopes have wilted. You cannot talk with our planners here for more than 10 minutes without hearing them voice their bafflement at British aloofness.

American as well as continental critics, no longer concealing their disappointment, now openly accuse the British of dragging their feet. Already the impression that Britain is willfully holding back the economic unification of Europe has sent British prestige to an all-time low. "It makes you think that just as the veto in the United Nations comes from Russia," a middle-of-the-road Italian newspaper wrote the other day, "so it is Britain's exclusive role to exercise the veto in Europe, at least as things favorable to the Continent are concerned." Said a Frenchman, "They're going down themselves, and they want to pull the house down with them." Said an American, "Whenever the British attend a European recovery meeting, they come with sour faces. They simply do not want to see recovery on the Continent as long as they themselves are faced with economic catastrophe."

Here again it's tradition our impatient planners are up against—a tradition which it would take a sledge hammer to crush. As the inventors of an old game called the balance of power, the British have always been afraid of a united Continent facing them across the Channel, and they've fought a couple of wars to prevent such unity. It isn't easy for them to turn around and forget what amounts to a national attitude. Even today, in surrendering part of their individuality to European union, Britons are afraid they'd be losers—their own tradition of political continuity still seems preferable to the rapid succession of weak governments with which the Continent is cursed.

As Europe's leading nation for so long, is it hard to understand that Britain now finds it difficult to take her place in the queue? The very idea is intolerable. To fathom the British trauma you merely have to travel between London and Paris today. While the Continent faces forward, the British public remains imprisoned by memories of World War II, and the phrase, "when we stood alone," still echoes from every wall. The Continent bustles with a new life—Britain is held down by a cumbersome system of restrictions whose sum total spells poverty.

The resentment of the British tourist who crosses the Channel to find full shelves for those who can buy, ample meals for those who can pay, and an air of pulsating activity all the way from Dover to Naples, is the resentment of the uninvited looking in through the window and seeing the party in full swing. Out of tune with the rest of Europe, he goes back home to his misery, where, once again, he stands alone.

"We don't belong to Europe, we belong to the world," British ECA delegates insist, countering talk about European integration with talk about the British Commonwealth—the world's largest low-tariff area—with which the United Kingdom is doing more business than with the whole of western Europe. Unfortunately, from the ECA point of view, there's little difference between a Conservative and a Laborite when it comes to integration; while Tories are apt to chase the phantom ricksha of their evanescent Empire, Socialists worry about what would happen to their planned economy once Britain traded freely with her neighbors. A Frenchman told me of discussing integration with two British delegates to the 1949 Council of Europe meeting at Strasbourg.

"If I had to choose between the Commonwealth and Europe, I'd take the former," said the Conservative.

"If freer trade with the Continent would throw a single British worker out of his job, I'm against it," said the Laborite.

Not satisfied with the Labor Government's recent gesture in exempting one-half of Britain's private imports from the quota system without liberalizing foreign trade carried on by the Government itself, Marshall planners have frankly given up hoping for British leadership. "We can't hold up the whole convoy just because one of the ships refuses to get up speed," one ECA man said.

Many responsible Europeans feel the same way. "We've got to make a start, regardless," I was told by the French Premier, Georges Bidault.

Here, however, the question pops up at once: Without England, what have you got? Few people on this shrunken Continent are willing to go ahead and integrate without the British, for fear that such a solution would leave western Europe once again dominated by Germany, in more than just the economic sense. Consequently, the various regional integration schemes now half-heartedly sponsored by ECA for want of something better all leave a door open for the British to come on in. Some progress has been made in recent customs-union talks among the Fritalux nations—France, Italy, Belgium, Holland, and Luxemburg. Taking it from there, the British themselves—"to please Mr. Hoffman"—have initiated talks for a British-Scandinavian economic union. At this moment, Fritalux as well as Uniscan is a long way from actual operation. It takes more than good will, more than persuasion, to level the walls built by narrow-minded generations.

No longer squeamish about Mr. Marshall's original warning, "The initiative, I think, must come from Europe," we have assumed a leadership no European nation was willing to assume. But though we now have the initiative, what can we do with it?

From the start, our aid was conditioned on performance. Having offered to help Europe if Europe was willing to help herself, we can remind the 17 recipients of our aid that performance is what we want to see, and we constantly do. Beyond that, there's little we can do to enforce our demands. The only instrument of coercion is provided in our bilateral agreements with the recipient governments, and it is a gentle instrument, at that. In selling ERP supplies, from coal to tractors, to the public, each government has agreed to place the proceeds from these sales in a special fund, known as the counterpart fund. Before spending any of the shillings, lire and francs in this fund, it must wait for Uncle Sam's nod. In as much as the counterpart fund makes up a large part of each government's budget, it is naturally anxious to get that nod in order to invest the money in such things as a new bridge or a new power plant. Just by not nodding, we can get a lot of cooperation.

It isn't blackmail exactly, but, combined with a casual reference to the patience of the American taxpayer, it does put a little starch into our suggestions. Nor does even this bashful effort to enforce our will always go down very smoothly.

"Some of the stuff I find on my desk in the morning," the head of one European government told me recently, "is so touchy, if the Communists ever got a peek at it, they'd splash it over the front page of every Red paper in Europe." He was referring to official communications—all in the "persuasion" class—addressed to him by the ECA administration in his capital. "Even so," he added, "the Americans are only trying to be helpful, and I oblige, I oblige."

A small example of what ECA can achieve with this technique is the French tax-reform measure which, with United States blessing, went into effect on January 1, 1949. Europe's archaic tax laws, Americans argue, are among the worst stumbling blocks to recovery. Roughly, Marshall-plan Europe can be divided into two parts—countries such as Britain, Holland, and Germany, where the tax collector gets his due; and countries such as France and Italy, where, for many years past, only fools have paid up. Rare indeed is the French or Italian businessmen who doesn't keep two sets of books.

Finding only poor men at home wherever it dropped in to collect, the French Government has long been trying to get its money by making manufacturers pay heavy taxes on the value of their production, and shopkeepers on their sales. It wasn't democratic—burdening the poor consumer with an enormous hidden tax bill included in the high price of things—but it left fewer loopholes. Even today, after the American-induced reform, a mere 15 percent of France's total tax income represents direct, or income, taxes—as against 75 percent in the United States. Nevertheless, a beginning has been made, and ECA men hope that little by little the burden will shift to the rich, and the easygoing Latins will move toward an American-type income tax. At this moment, tax collectors both here and in Italy are showing a new eagerness in making people render unto Caesar. "They don't put us into jail yet," an Italian businessmen told me, "but several people I know have been fined for doctoring their books."

Just how long this new eagerness will last is hard to say—"As long as the Americans stand over us," according to the cynics, who may be right. For, to make their decrees effective, those well-meaning governments would have to change the moral code of the rich man who finds nothing wrong with cheating society if he can get away with it. They'd have to give a new dignity to their civil servants—ragged, underfed, overworked men and women, drudging away in shabby, poorly lit, evil-smelling offices, living in crowded tenements without comforts, and not always above yielding to the temptation of a bribe.

"Double their pay," Americans urge.

"We know we ought to," say the French, "but it would wreck our budget."

It is a tall order, this second Marshall plan. Far from merely administering aid to Europe, far from helping her to help herself, our planners are now frankly sponsoring a complete transformation of her social and economic structure. In going beyond the original purpose of ERP, they're off on flights of fancy. What we want the 270,000,000 people of western Europe to do is

only this: Scrap a large part of their industries and find some new use for the equipment and labor employed in them; develop managerial attitudes and working habits now prevalent in the United States, though foreign to the established way of European thinking; open their hearts to a new social consciousness and adapt their tax laws to that new mentality. Above all, sink their old differences, even to the point of giving up a portion of their sovereignty, and become one great, homogeneous body where factories produce for one vast market, where people, goods, and money move freely back and forth.

Few inhabitants of the Old World, confronted with this grandiose concept, will deny that it has the earmarks of progress. Still, few are ready for it. Like the steel worker who believes that his hand file and stone are superior to the machine-mounted file that keeps going at a crazy pace, Europeans are attached to a way of life their fathers taught them. "You want us to eat, sleep, work, and die like Americans," one angry Frenchman said. He, and many with him, will resist to the last a process of Americanization which would leave western Europe more efficient, more industrious, more advanced, more comfortable, and no longer herself.

What, then, is the answer? Shoot a few French winegrowers? Place commissars in factories? Purge the saboteurs of European unity? Haul Sir Stafford Cripps before a people's court for anti-integrationism? Brute force might work, for a while. Napoleon tried it; Hitler tried it; and Stalin is trying it, not wholly unsuccessfully, in eastern Europe. But it isn't the kind of world we want, and our overenthusiastic planners would be the first to throw up their hands in horror at such a prospect.

Why not stick to our original plan—the first and only Marshall plan? Its clearly stated purpose was a 4-year program of blood transfusions to enable the patient to be up and about by 1952. Looking at the results of this thoroughly, realistic, and definitely limited project at the halfway mark, one finds no cause for despair. Western Europe has come a long way already, and there is good reason to believe that at the end of ERP 2 years from now, she'll have progressed to the point where a moderate influx of private United States capital can prevent a relapse. If we leave behind smoking chimneys, busy piers and markets, and governments freely chosen by their people, we'll have done what we set out to do. And we will, in the process, have created the climate for the kind of long-range planning Europe needs.

But this kind of planning can be done only by the Europeans themselves. If the people of this ancient continent have to change their way of life, they'll do the changing on their own hook. With a general rise in standards, and the richer development of the human personality that goes with it, they'll get around to working out their own salvation. No prompting will be required. It won't be tomorrow, and it won't be by 1952, but it's a pretty safe bet that, eventually, their own instinct will guide them toward some sort of unity—Mr. Hoffman's target for tonight. The result of their efforts won't be an Americanized Europe, nor indeed a Soviet Europe, but a Europe in which 270,000,000 proud and surprisingly hardy human beings will somehow make out. Far from being anybody's apes or satellites, they'll be our cheerful partners, building with us a safe and prosperous Western World under the steel umbrella of the Atlantic Pact. Rather than persuade them to pull up their socks would it not be wiser to limit ourselves to the first-aid job and let the Europeans take care of the rest—in their own time?

Father Hubbard's Opposition to Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, on page A1835 of the Appendix of the CONGRESSIONAL RECORD there appears an insertion of an editorial from the Seattle Post-Intelligencer and also an article quoted from the Los Angeles Examiner. These insertions were made by the distinguished senior Senator from the State of Washington [Mr. MAGNUSON] and were undoubtedly based on what appeared to him to be reliable information. However, when the Reverend Bernard Hubbard, S. J., famed "glacier priest," heard of this insertion, he made another statement, which shows him to be definitely against statehood for Alaska at this time, and I have been requested to have his statement, appearing in the March 30 issue of the Seattle Times, printed in the Appendix of the RECORD. His statement is therefore submitted herewith.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FATHER HUBBARD STILL OPPOSES ALASKA STATE

The Reverend Bernard Hubbard, S. J., famed glacier priest of Alaska, sent word from Los Angeles to the Times today that he was misquoted in an article read into the CONGRESSIONAL RECORD, March 10, and which represented him as favoring Alaska statehood.

The article appeared first in a Los Angeles newspaper after a representative of the newspaper interviewed Father Hubbard. The article then was inserted in the RECORD.

"A spurious set of quotations," Father Hubbard said today, "gave the reader the impression that I am for Alaskan statehood now, whereas I am absolutely opposed to it now for reasons that I have stated very clearly. This puts me in the position of reversing my opinions, which is entirely misleading to the American public and unfair to me."

LONG TIME AHEAD

"When Alaska is in a position to support itself, and when there are enough people and business interests in the vast stretches of Alaska to support it as a State, then we can intelligently consider statehood, but obviously that is a long time in the future.

"There has been much loose talk by the uninformed and by politicians with axes to grind about private industry's exploitation of Alaska, but the facts are that private enterprise and risk-capital investment have done wonders for the development of the Territory and its resources. It would be economically unwise and unsound to toss private enterprise into the maws of politicians under present conditions, which would work disaster for private enterprise, even if they would prove a bonanza to self-seeking politicians."

The priest said a lot of gullible people have been misled and cannot see the broad picture of economic and national-security dangers which lie behind the glamor of statehood.

ARGUMENTS FALLACIOUS

Father Hubbard added: "Arguments that Alaska statehood would be a move in the interests of national defense are spurious, superficial, and fallacious, as any agent of the Russian Government in his right mind knows in his heart.

"* * * Any change in Alaska's governmental set-up at any time in the foreseeable near future should be in the direction of a military government, rather than the impractical and suicidal direction of statehood."

Tribute to Hon. Frank P. Graham, of North Carolina, by Alfred Mynders

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD part of the column of Alfred Mynders, editor of the Chattanooga Times, which appeared in the Times on April 1, paying well-deserved tribute to our colleague, the junior Senator from North Carolina [Mr. GRAHAM]. I certainly share the high estimate expressed in the column of this eminent and loyal American, and I wish to add that the record of the Senator from North Carolina in the Senate has been outstanding.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEXT TO THE NEWS
(By Alfred Mynders)

"Give me liberty to know, to think, to believe, and to utter freely, according to conscience, above all other liberties."—John Milton.

What is most detestable in the Russian type of Communist state is complete suppression of freedom of opinion. Just how far this country has drifted under the present wave of fear and hysteria toward that type of state may be determined in North Carolina's senatorial primary of May 27.

Senator FRANK P. GRAHAM, former president of the University of North Carolina, is being opposed by Willis Smith, Raleigh corporation lawyer and a former president of the American Bar Association, and former Senator Robert R. Reynolds.

Mr. Smith defines the main issue as "communism and socialism."

Mr. Reynolds sides with Smith on those alleged issues (though neither is a legitimate issue in North Carolina) and "Buncombe Bob" adds a $100-a-month pension for all persons over 65 as a bait for voters.

The real issue is Senator GRAHAM'S career of public service in which he has tried to work for all the people.

By inunendo or by direct charge, Mr. GRAHAM'S opponents are trying to defeat him by linking him with Communists. This campaign has gone so far that Senator GRAHAM last week issued the following clear and unequivocal statement:

"I am opposed to communism; I am opposed to socialism. I am devoted to the American system of free enterprise for all the people.

"I have always fought, and will continue to fight, fascism, communism, nazism, and every other form of totalitarianism.

"I am, and always have been, a loyal Democrat. In fact, I might add that I have never scratched a Democratic ticket in my life.

"The basic assumption behind Nazi and Communist propaganda tricks is that if a falsehood is big enough and is repeated often enough, some people will start to believe it. Tonight I want to answer a falsehood that has been repeated over and over again about me.

"I have never been, am not now, and never will be a Communist or a Socialist, or a member or supporter of any organization known or suspected by me of being controlled by Communists or Socialists.

"I was never a member of any committee after it was placed on the Attorney General's list as a front organization. I recall having resigned from a committee several years before it was placed on the Attorney General's list."

Speaker SAM RAYBURN, addressing young Democrats in Senator GRAHAM'S home State, at Asheville, recently, said:

"The meanest man who walks the earth is the man who goes out and spreads unjustified fears and fills the people full of unhappiness and discontent and distrust."

But that type of Communist-Fascist technique has gone very far in every State in this country.

North Carolina will have a chance to halt that trend toward a totalitarian state in the May 27 primary. Mr. W. L. Lawrence, of the New York Times, has been making a survey of the political campaign in North Carolina and he says that there seems general agreement among observers at this point that Senator GRAHAM is out in front, with Mr. Smith running second and former Senator Reynolds trailing.

"Money Makes the Mare Go"

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. SANBORN. Mr. Speaker, it is becoming increasingly evident that the pseudo economists who diagnosed our economic ills 16 years ago and tempted us to abandon sound redeemable currency for fiat money under the so-called system of managed currency were in the same class as the quack doctor who, having made a wrong diagnosis of his patient's illness, dopes him with every nostrum on the drugstore shelves.

During these 16 years of socialistic experimentation, the dollar and all fixed-dollar-value securities, including savings, pensions, and life insurance, have lost 63 percent of their value; we are burdened with a $255,000,000,000 debt; faced with a $5,000,000,000 deficit, and threatened with another world war.

Three years ago a 250-page committee report entitled "Money Makes the Mare Go" was printed by the Government Printing Office for the use of the House Committee on Coinage, Weights, and Measures, which, in my opinion, correctly diagnosed our economic ills and offered a practical remedy that can be applied in a matter of a few months without cost to the American taxpayers and without economic disturbances of any kind.

It also offers a practical solution of the perplexing farm problem in a way that will stabilize and maintain farm prices and at the same time relieve the taxpayers of paying billions of dollars in farm subsidies. This book received national and international acclaim, and as a consequence the limited supply was soon exhausted, and thousands of requests for copies have been denied.

There are now pending before the House of Representatives five concurrent resolutions for the printing of additional copies to supply this demand, which can be distributed by the Congress or sold by the Government Printing Office at a price approximating the cost of printing—about 20 cents per copy.

I sincerely trust that, in this time of national emergency, the Congress will authorize the printing of this report which tells simply and effectively, in language anyone can understand, how to prevent wars and depressions and eliminate most of the social and economic ills that afflict our country and the world today. Appended are a few of the comments received by the author:

TELEGRAM FROM THE HONORABLE JESSIE SUMNER, OF ILLINOIS, BRILLIANT FORMER MEMBER, HOUSE OF REPRESENTATIVES

MILFORD, ILL., *November 14, 1947.*

JOHN MCBRIDE,
Clerk of Committee on Coinage, Weights, and Measures,
House of Representatives:

Your report is terrific. Congratulations.

JESSIE SUMNER.

LETTER FROM J. T. CULHANE, PRESIDENT, MINNEAPOLIS GRAIN EXCHANGE

MINNEAPOLIS GRAIN EXCHANGE,
Minneapolis, Minn., November 14, 1947.

Mr. JOHN MCBRIDE,
Clerk, Committee on Coinage, Weights, and Measures,
House of Representatives,
Washington, D. C.

DEAR MR. MCBRIDE: Thanks exceedingly for your fine letter of November 6 and for your kindness in sending me a copy of the report entitled "Money Makes the Mare Go." This was both interesting and heartening, and I am reading it in its entirety. It is my intention, also, to pass the booklet along to other officers and directors of this exchange.

Needless to say, I personally agree with the very practical solution of our present difficulties, as outlined in your letter and in the report.

Sincerely yours,

J. T. CULHANE, *President.*

LETTER FROM FRANCIS H. BROWNELL, CHAIRMAN OF FINANCE COMMITTEE, AMERICAN SMELTING & REFINING CO., 120 BROADWAY, NEW YORK

AMERICAN SMELTING & REFINING CO.,
New York, N. Y., November 14, 1947.

JOHN MCBRIDE, Esquire,
Clerk, Committee on Coinage, Weights, and Measures,
House of Representatives,
Washington, D. C.

DEAR MR. MCBRIDE: Thank you very much for sending me Money Makes the Mare Go, which I have read with much interest.

The pamphlet is scholarly, logical, and lucid. Even if the reader cannot agree with all the conclusions, he will at least have his thought greatly stimulated by such an excellent presentation.

I quite agree that Europe (and I might add Asia and Latin America) needs stabilization of currencies more than it needs our dollars. Perhaps most Americans will agree that requisite food to carry the western nations of Europe over the winter is preeminently necessary. Beyond that, it seems to me stabilization of currencies should be agreed upon before any large expenditure is made on any other theory. Without stabilization, resumption of multilateral trade under a free-enterprise system seems to be impossible. Unfortunately, the subject of currencies and of money is one that is little understood by the people at large and so has not the popular appeal embraced in the thought of "reconstruction." Nonetheless, it is the time when this subject should be given increasing thought and final action taken. Whether the United States should at once proceed alone, I seriously question. But I do believe that any reconstruction approach will ultimately break down unless the currency situation is at least contemporaneously settled.

Thank you for your expression of appreciation of articles written by me. I do not know whether you have seen copy of my Brief on Silver as Money, which I presented before the Board of Governors of the International Monetary Fund early this year, and of which I enclose a copy.

Sincerely yours,

F. H. BROWNELL.

LETTER BY THE REVEREND HENRY F. WOLFE, OF CHARLESTON, S. C., WHICH WAS CARRIED AS AN EDITORIAL IN THE CHARLESTON NEWS AND COURIER

SOUND MONEY: A CURB ON WAR

If it were possible to make a book on money a best seller so that everybody would be reading it and discussing it, wars and depressions would be eliminated. All wars are economic. All depressions are the result of unsound economic and monetary policies.

Until the administration repeals the Bretton Woods Monetary Agreement, the Reciprocal Trade Act, and Public Law 84, all talk of stopping inflation will be so much eyewash. Public Law 84, enacted in 1945, depreciated the dollar 37½ percent, caused commodity prices to advance 60 percent, and is responsible for the vicious inflation and the resultant demand for higher wages.

It is a well-planned fifth column in our country that has blamed the free-enterprise system for our depression when it is the Government that is to blame.

High prices at home, economic chaos abroad, and threats of world war III can be attributed largely to the fact that we have permitted knaves and fools to so debauch our currency that in the short period of 13 years our dollar and all fixed-dollar-value securities have lost 63 percent of their value.

The world needs stabilization of currencies more than it needs our dollars. Sound money is the first requisite for peace and economic recovery. The United States alone has the power to give that stability by adopting a sound monetary system. This can be put into operation in 90 days and will cost us nothing.

Karl Marx said, and Lenin demonstrated, that the surest way to overturn the social order is to debauch the currency. It can be done in such a way that not one out of a million will see it.

It requires $2.71 to buy what could be bought for $1 prior to 1934. Your $10,000 life-insurance policy has a value equivalent to $3,687.50 prior to 1934. Your $50-per-month pension has a purchasing power equivalent to $18.43¾ prior to 1934. A $10 daily wage of today has a purchasing power equivalent to $3.68¾ prior to 1934.

Where have I gathered this information? From a book that could become a best seller, if our congressional leaders in Washington would appropriate moneys to put this book into the hands of every honest-to-God American. Inflation, depression, and world war III would disappear overnight. Russia, the

greatest hoax in all history, would be at an end. Russia knows her only "out" is to keep the United States busy with Europe so she can overrun Asia and seize the rich rubber, tin, and oil resources of Asia and the Middle East.

The name of this book is Money Makes the Mare Go, by John McBride, clerk of the Committee on Coinage, Weights, and Measures, printed for the use of the Committee on Coinage, Weights, and Measures, House of Representatives, United States Government Printing Office, just off the press.

When you write for this book you may be told only 1,000 copies were printed.

But you cut this letter out and send it to your congressional leader and ask him if he will not do all he can to get a printing so you can have a copy. After you read it you will be a red-hot American and you will do your best to get your congressional leaders to get this book published and placed in the hands of all Americans.

Rev. HENRY F. WOLFE,
Sacred Heart Parish.
CHARLESTON, S. C.

Fifteen Years of Farm Programs

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, on February 17, 1950, Chester D. Davis, president of the Federal Reserve Bank of St. Louis delivered an address, entitled "What We Have Learned in Fifteen Years of Farm Programs," before the Twelfth Annual National Farm Institute in Des Moines, Iowa. In view of the fact that the importance of the address was overshadowed by speeches in connection with the controversy between Secretary Brannan and Mr. Allen Kline, Mr. Davis' address did not receive the attention it so thoroughly deserves. For this reason, and because the over-all significance of Mr. Davis' address commends itself to the attention of the Senate, I ask unanimous consent to have it inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT WE HAVE LEARNED IN 15 YEARS OF FARM PROGRAMS

The over-all theme of this institute—"What Price Plenty?"—is an inspiring one, but before getting on with my part in it, let me record serious misgivings as to my particular subject. For I'm not sure that we've learned anything from 15 years of farm programs. It seems to me there is much evidence to the contrary, but I hasten to acknowledge that lack of close familiarity with some of the programs of recent years, and perhaps the growth of elderly caution, may raise question as to the validity of my opinions.

The first task is to define terms. The program committee obviously wanted to open the institute with a review of the attempts that have been made since 1933 to relieve farm distress, support farm prices and income, and assist agriculture to make adjustments required by changing conditions at home and abroad. But that is only part of the story. In other areas than this, agriculture has learned a great deal in the last 15 years. Then, too, it is impossible to consider farm programs by themselves, the way you might fence off and cultivate a field. All of our interests are interwoven, in a tight, complicated, fast-moving economy. In the long run, conditions under which farmers raise and market their crops may be more seriously affected by developments entirely outside of agriculture than by what happens in their own field.

In the 1940 Yearbook of Agriculture I attempted to trace the development of agricultural policy since World War I, and took 30 pages for it. There is neither time nor reason for attempting it here. That chapter closed with the observation that if experience in this field teaches us anything of value, it is that a continuous thread runs through the evolution of an agricultural policy notwithstanding the manifest inconsistencies and contradictions that appear in it. Perhaps that is true, though I am less sure of it today. Some of the current farm programs and commitments, and particularly some of the proposals for tomorrow, leave me in the fix of the young Scandinavian who, becoming rich, commissioned a famous painter to do a portrait of his deceased father, with nothing to go on but the young man's description. At the unveiling, the son looked at the portrait from this side and that, and finally said, "Yes; that's him. That's the old geezer, all right. But, my goodness, how he's changed."

From the Agricultural Adjustment Act of 1933 to now emphasis has steadily shifted from adjustment to price-fixing by law. I think that is leading us down the wrong track.

The major programs of the early AAA were set up to be self-financing. Throughout the twenties and early thirties, farm organizations, particularly of the North and West, insisted on that. Since 1936 the shift, of course, has been toward more and larger appropriations from the Treasury, a part of growing fiscal irresponsibility I am going to talk about later.

We have lost ground in cohesion among farm forces in planning and administering the farm programs compared with the situation we had throughout most of the thirties. Perhaps a certain amount of splitting up in opposing schools of thought was inevitable, but I am sure that most of us who have worked in agriculture in the past hate to see it.

There is no truth-divining rod or universally accepted standard that can be laid across programs of today or proposals for the future to determine with finality which features square with the lessons of experience, which do not. It is rather a matter of opinion and judgment and I can express only my own, not that of any group or organization.

This is not a suitable forum for splitting hairs or fussing over details, nor for a play-by-play recital of developments that are now history. What I aim to do before giving way to the heavy artillery—or should I say the gladiators—who are on this institute program, is to make some general observations, first about specific features of our farm programs, and finally about the pattern of public policy that appears to be emerging in this country, of which projected farm programs seem to be a part.

In the first category are the overemphasis and the increasing reliance on government price supports in postwar farm legislation. We should have learned by now that the bare enactment of a law doesn't make price supports effective at the prescribed level. The prices have to be worked out by shirt-sleeve operations on the farm, in the warehouse, or in the market place. For storable commodities there is a honeymoon period while government stocks are being built up by purchases or nonrecourse loans, until the load approaches its limits. After that, prices have to adjust in one way or another to the level at which the commodity will be consumed, unless war or some other catastrophe comes along to bail us out.

We cannot expect to adjust from one let alone two wars of world-wide scope and incalculable destructiveness without paying some penalties. Government price supports and high-level Government loans can help cushion the shock, but they cannot and should not be expected to avert the adjustments that need to be made. We are living in a fool's paradise if we think otherwise. A system of rigid, legislated price supports extended indefinitely into the future, and at levels higher than the over-all supply-demand situation will support, will have extremely undesirable consequences, including a great deal of harm to farmers themselves. There is a place, particularly through the transition period from which we have by no means emerged, for reasonable price supports, free from legislated requirements that prevent intelligent administration. But we cannot expect to ride them painlessly over the rough roads that still have to be traveled. Supports at wartime levels will lead in the all-too-soon future to tight acreage control, impossible-to-manage farm surpluses, and eventual price collapse. It does no good to lull us to sleep in 1950 if in so doing you insure we will have something worse than a headache when we wake up in 1952 or 1953 or 1954.

Next, I have the feeling that current programs of high price and income supports tend to freeze production patterns, to deemphasize adjustment as a goal of agricultural policy. One of the most important long-range factors at work on the farmer's side is the spectacular increase in our population at a rate that has made expert population forecasts of a few years back look as foolish as the election forecasts of October 1948 look now. By midsummer this year we will have doubled the Nation's population in 50 years—from 76,000,000 in 1900 to 152,000,000. We may be coming in sight of the time when rising living standards combined with population growth will put pressure on our ability to expand and maintain the needed production of milk and meat. I believe present farm programs fall short in encouragement to shifts that need to be made in land use to fit the demand pattern of tomorrow.

Now a word about our export commodities. As I look out at the world picture and the longer-range farm situation, I see many signs which remind me of the twenties and the thirties. I catch myself saying, "I've seen that; here's where we came in." In the twenties we faced real troubles with our major commodities when the United States stopped lending abroad to finance our exports and when our foreign customers ran out of dollars. The first war changed us from a debtor to a creditor nation, and before we had adjusted our thinking and our ways we entered the Second World War, which immeasurably accentuated the change. Adjustments are still ahead of us and they will be particularly severe in the wheat and cotton areas. They will face us as soon as we quit sending out the dollars with which to pay for our exports. Our postwar farm programs do not recognize that fact, right down to and including the Agricultural Act of 1949.

We have unquestionably gained ground in techniques of production, in increased use of capital per worker in the form of more efficient machines, better plant and animal strains, fertilization, etc. We have also made distinct progress in dissemination of know-how in use of land and water to conserve the soil and increase and safeguard its future productivity. Even here a lot of effectiveness is lost through interagency duplication, friction, and even downright conflict. The farmers have a right to better cooperation

than that among the agencies created to serve them. And notwithstanding the growth of technical understanding in this field, the pressure of wartime prices has led wide areas to disregard the warnings of the past, and so set the stage for the dust bowls of the future.

One of the bright sides of the farm picture is the prudent way farmers throughout the forties managed their wartime and postwar income. On the whole, they chose to reduce debt, rather than increase it as happened in the First World War. Public and private farm-credit agencies helped. But the lessons of the last 15 years teach us the need of some new techniques in farm credit, particularly to help finance long-term programs of farm improvements for better land use and conservation. Traditional short-term production loans won't do the job that needs to be done on a big scale throughout the United States.

A glance at your program for tomorrow will tell you why I do not discuss in greater detail the changes in our agricultural legislation advocated by the Secretary of Agriculture. It will be the subject of thorough debate then, but perhaps one or two observations are in order here to give you the direction of my thinking.

I do not agree with the idea that the Government can or should guarantee price supports fixed at a level that will yield farmers in the aggregate a cash income from marketings equal in purchasing power to the average cash income from marketings in the decade 1938–48, and year by year thereafter maintain a level equal to the average of the first 10 of the preceding 12 years. It just can't be done, and that promise along with the implied promise of low-priced food for consumers is the fundamental weakness in the Brannan plan.

I didn't like the idea of general food subsidies during the war, and I like them less now. There's no good reason why nonagricultural workers can't and shouldn't produce enough goods and services to pay for agriculture's production without help from the Treasury. Action to improve the diet of low-income families is quite another thing. That may be good national policy, but it isn't a farm program and shouldn't be called one. School lunches are social programs, not farm programs, and so in fact was the food-stamp plan.

But on the other hand, the device of carrying out Government price guaranties under certain conditions by the use of supplemental payments makes sense to me, if they are geared to moderate, attainable goals, and used with great restraint. If we are going to continue price supports on perishable commodities like potatoes and eggs, there isn't any other socially acceptable way to make them effective. As a matter of fact, supplemental payments were used with cotton in 1955 when the only alternative was a price-fixing loan at or above the market. I think it worked rather well; exports picked up, and the crop moved into consumption. The loudest complaints came from interests that were "long" in the cotton market.

I feel compelled to qualify that approval with a sober warning—don't let anyone tell you there is magic in this device by which to insure high wartime income to farmers on the one hand and cheap food to consumers on the other. The idea may have political sex appeal, but it won't work that well.

Now I want to comment on something I have observed through the years which, if understood, would surprise a lot of people in the cities. The most far-reaching and in an economic sense the most dangerously ambitious legislative proposals for agriculture are not those advanced by responsible farmers or farm organizations but by men who are honestly—and understandably—interested in farm votes. A well-meaning committee chairman may put the farm leaders on the spot by pushing a bill that promises the unattainable, but a farm leader frequently risks his official life if he opposes it. We must look with sympathy on the fix of the Congressmen who are up for election every other year. If given a choice, they tend to vote for the bill which on the face of it promises the highest support price in their part of the country. The Senators are a little better off. Their election comes every 6 years. The easy way out may seem to be merely to extend the wartime guaranties year by year, but sooner or later it will lead us out over our heads.

Before I drop the subject of price supports, I'll stick my head up over the breastworks to be shot at. I am convinced that if we had followed the lessons of the last 15 years—let's make it 25 years—we would have stuck to the long-range provisions of the Agricultural Act of 1948. It impressed me as an attempt to apply experience to present-day problems. No doubt changes were needed, but in the main those long-range provisions would have relieved the Government of the impossible task of maintaining wartime prices in the face of mounting surpluses. They would have introduced administrative flexibility where rigidities still prevail.

Now that I have probably succeeded in ruffling some feelings on the subject of price support and agricultural adjustment, I should like to turn for the rest of my talk to the pattern of public policy we seem to be following in this country, which is more important to agriculture, in the long run, than the shorter-range questions I have touched on.

I mean the growing dependence on Government for direction and aid, and its twin, fiscal irresponsibility inside and outside of Government. Fiscal year 1949 was one of high income and employment and it closed with $1,800,000,000 deficit. The Government estimates $5,500,000,000 deficit this year and $5,100,000,000 for fiscal 1951 with continuation of high-level economic activity assumed. We are nearing the time when billions in savings bonds will mature, with no assurance that holders will reinvest their savings in Government bonds. I doubt if they will if they once get the idea that creeping inflation, continued whittling away of the dollar's buying power, are ahead of us. If the public doesn't take the bonds, the alternative will be more deficit financing at banks, more money not matched by production.

Thinking perhaps I might have a distorted view of the postwar drift, I wrote a friend and told him I was considering starting my talk here today on the question, "What we have learned," with the answer: "Nothing," and then proceed with qualifications and explanations much as I have done. You all know the man—he has held positions of high responsibility in Nation and State, for years in the Department of Agriculture. He replied the other day, and this is what he said in part:

"The only amendment I would make to your answer to the question 'What we have learned in 15 years of farm programs' is that I would say 'less than nothing.' In the current year agricultural prices are still averaging about parity, yet the appropriations proposed for agriculture are $2,500,000,000, plus additional borrowing authority. This is fantastic. We are, I fear, on the verge of losing all the values we have been working for, and the greatest single threat is a loose or reckless fiscal policy."

That is the background for a solemn warning. It will be nothing less than national disaster if the farmers join other groups who are saying in effect: "We can have prosperity, regardless of anything else, if the Government will back us and put up the money." It will also be a disaster if the full weight of farm opinion is not clearly and continuously used to promote policies by labor and industry that will yield the highest sustainable level of nonagricultural production.

Farmers in the main have done a better job than others in keeping on producing at capacity through bad times as well as good. The problem is how to get the others to march along with agriculture in full production. It is the only way the economy can be made to function at a high level. We need adjustments in agriculture, yes, but it will be a bad day for the farmers and for the Nation when we accept the philosophy that nonagricultural industry and labor can't or shouldn't be expected to produce enough to pay for the production of the farms without Treasury help.

Let me elaborate on that a little. Since 1920 the goal of developing agricultural policy has been expressed as the principle of parity of prices or of income for farmers as they exchange their products for the goods and services of nonagricultural industry and labor. Parity does not mean a fixed-price level; it relates rather to the purchasing power or exchange value of the products of one group when traded for the products or the labor of another group. The price level is very important to a farmer who is in debt, but in every other sense the most important consideration is not the dollar price of a product, but what it will bring when exchanged for other goods and services.

If then we think of all the farmers as one trading group, and all the rest of the economy as another trading group, there are two ways to hold the exchange value of the farm output high, or to increase it. One way would be to cut down the volume of farm production. The other way would be to increase the quantity of goods and services produced by the nonagricultural group. I favor the second way as being the better for the Nation, better for the farmers, and better for the world.

My answer to the question, "What price plenty?" would be this: Let the nonagricultural industries and labor find the way to keep working at full efficiency and capacity, turning out goods and services that can be absorbed by this country in a high standard of living—in better homes, equipment, electrification, refrigeration, sanitation, clothing, ad infinitum. With steady work and efficient production, prices could go down without cutting profits or wages. Real wages would rise, for the laborer is like the farmer—it isn't the number of dollars but what he can buy with his products or his labor that counts.

Under such conditions, the farmer could produce abundantly and still trade on good terms for what the other man makes; he could prosper at lower price levels. I think that really is the way out. The relation of agriculture to the rest of the economy is changing radically and further radical adjustments are ahead of us. When Lewis and Clark skirted the western border of Iowa, about 90 percent of the population of the then United States lived on farms, and those farms produced only enough surplus to feed the 10 percent who lived in town. At the peak of war production in 1943 and 1944, 15 percent of the Nation's labor force produced the all-time record crops which fed and clothed this Nation and its own and allied vast war machines. Not much more than one-fifth of our total population actually lives and works on the farms, although the percentage directly dependent on farming is much greater than that.

So you see that with so few producing so much to feed so many, the ability of the cities and towns to pay for and consume our farm products is an all-important consideration to the farmers. That ability in turn rests on the rate at which towns and cities, the mines and factories, keep busy and produce.

In view of the importance to the farmer of employment and production off the farms, what is the situation and what is the outlook today? I think the elements are present to support a high level of business activity for some time to come, if we can only overcome two great big "ifs" that confront us in industry-labor behavior.

We can keep going:

1. If labor leaders will make their followers realize that in the long run, higher wages depend on increased production. Without it, the wage increases are not real, and

2. If management will deliver lower prices as volume grows, and will share fairly with labor and consumer the benefits of increased productivity.

These are stubborn "if's," but they are very important. Perhaps you say there isn't much agriculture can do about these things. Perhaps you think this kind of talk doesn't fit a farm institute. But I tell you these issues are fundamental to farm welfare. Many farm and business and labor leaders have seen clearly the policy we must follow if our economy is to function. Teamwork in attaining and holding a high level of production is necessary if we are to develop the full economic life required of this Nation.

The annual meeting of the American Farm Bureau Federation in New Orleans in 1938 was devoted to this theme. It needs to be sounded "again and again and again." The forces of those who seem to believe we can make ourselves richer by producing less, with Government direction substituted for individual initiative, are numerous enough and loud enough without recruiting from the farms.

Now in conclusion: Along with many of you I have watched the full cycle of agricultural policy unfold since the First World War. Many mistakes have been made, but, on the other hand, many great miracles have been performed. We have demonstrated as a people that we can accomplish the impossible under the grim discipline of war, and I have full faith that, unless international anarchy prevents us, we will demonstrate the same capacity less spectacularly but no less surely in peace. There is no magic formula by which farmers can be insured prosperity as a class apart from others, but there are ways to achieve plenty with which to provide better living standards for all.

Full achievement in line with our capacities is impossible without farsighted, tolerant, and good-natured cooperation, founded on mutual understanding among leaders of agriculture, labor, industry, and government. This great national forum can contribute to that understanding, and I am proud to have a part in it.

Tribute to Judge Burnita Shelton Matthews

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement prepared by me in tribute to Judge Burnita Shelton Matthews, who has just been appointed a judge on the United States District Court for the District of Columbia, the first woman to be so honored.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TRIBUTE TO JUDGE BURNITA SHELTON MATTHEWS BY SENATOR ESTES KEFAUVER

The naming of Burnita Shelton Matthews as the first woman in the United States to sit on a Federal district court was a fitting tribute to a woman who has dedicated herself to the advancement of women.

During the years of Burnita Matthews' professional life, women have gone ahead more rapidly than in any other similar period in history. They have won the right to vote over what seemed to be unsurmountable obstacles; they have had passed laws, too numerous to mention, by the Congress of the United States and the legislative bodies in the several States. Some of these laws have corrected wage differences, some have given women jury duty, some have removed discrimination between the sexes in such matters as property rights and guardianship matters.

Much of this unprecedented progress in the advancement of women is directly attributable to the brilliant leadership of Mrs. Matthews, who has given untiringly of her time, energy, and talents.

Many women have been appointed to high offices in the recent past, all of whom have been outstanding in their fields, but none of them is better qualified by temperament, ability, or integrity than Burnita Shelton Matthews.

Her past record stands and speaks for itself. Her future record will surpass it, for she is and will continue to be an outstanding credit to the women, the legal profession, and the judiciary of the United States.

The $300,000,000,000 "Hickonomy"

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including at this point an article by Robert R. Young which appeared in the March 1950 issue of Railway Progress:

THE $300,000,000,000 "HICKONOMY"—TO ACHIEVE IT WE ARE BEGGARING OUR WHITE-COLLAR CLASS

(By Robert R. Young)

The increase in the standard of living under the New Deal is well illustrated by the decrease in the size of the houses. There is hardly anything one buys, today, that isn't a little shoddier. On top of it we have been made a nation of bookkeepers. By the year 2000, if the trend continues, there promises to be no other occupation left. It will all be as productive and as exhaustive as a game of canasta.

What good is a constantly rising level of wages if the hardware keeps getting tinnier, the beef dearer, and the net after taxes smaller? We are not such hicks as to sell even so cheap a thing as our vote for stage money.

Indeed, nothing could be more destructive of production than spiraling prices, for they destroy the incentive to save which is the source of all production—of Mr. Truman's much longed-for "business investment." And remember, the creditors, whom rising prices de-welfare, are not Mr. Morgan and Mr. Mellon, but the dependent and aged, the owners of savings accounts, insurance policies, and pension funds.

THE DELUSION

Rising wages and prices for a time may delude the worker or farmer into misplacing his vote and his trust, may temporarily make easier the servicing of the national debt, but like dope they are the resource of exploiters of human misery or the escape of weaklings and fools. To expect the system of private capital to meet frequent and radical wage and price changes and maintain previously existing employment is to expect the impossible. Stability of employment can only come through stability in prices. Nowhere is that better illustrated than by the railway passenger equipment industry. It withstood the subsidized competition of the bus and the airplane for several decades, but under the gaff of successive and drastic rounds of wage increases it folded up. Only two of our 132 class I railroads ordered any new passenger cars whatever in all of last year, although virtually the Nation's entire 28,000-car fleet is worn out or obsolete. These 28,000 cars were called upon to deliver as many passenger miles in 1949 as our much newer 45,000-car fleet delivered in 1926. In that year 1,500 cars were ordered, in 1949 only 85. In 10 of the past 12 months no new orders were placed by any railroad.

OTHER BUSINESSES

There are countless other businesses which will find it impossible to raise their revenues fast enough to meet these cost increases, hence, once wartime savings are gone, must fall by the wayside to add to the growing burden of unemployment relief. The white-collar class, representing a large part of our population, bears the brunt of this system of election bribery or pressure-group blackmail, however you wish to label it. It is ironical that the poor grandmother of the fairy tale, the school teachers and public employees, almost solidly liberal, are the very ones the wolf is eating up first. Their income since 1939 has increased even less than the 50-percent increase of the white-collar class, whereas we all must pay 100 percent more for food and 90 percent more for clothing, to say nothing of taxes. It is only with the help of such items as transportation, utilities, and shelter, where time lag, the confiscation of rate and rent control, and the waste of subsidy have temporarily concealed the true cost, that even the skilled laborer has held his own in terms of overall purchasing power, in spite of management's and labor's vast contribution to increased productivity.

In all the history of the world has there ever before been an "idle-ology" such as ours, in which the lazy man is encouraged by pay not to work? Indeed, it is being discovered that in many cases the more enterprising have been paid simultaneously for working and for not working. Is there any wonder that the burden of relief continues to increase even in cities that suffer from shortages of workers, that this decade promises to show nothing like the increase in the standard of living enjoyed by the decade of those liberal laughingstocks Harding and Coolidge, when taxes were reduced, prices gently eased off and Washington was just a pleasant place to go sightseeing? Employment and the standard of living are reduced, not increased, when Congress interposes its cancerous bureaus to give something for nothing, whether it is medicine, housing, the transportation of mail, highway usage, or a day's pay. With welfare, like water, the way to conserve it is to stop giving it away.

RADICAL MEASURES

All of us long for a genuine $300,000,000,000 economy, the hick removed. All of us want that honest-to-goodness $12,000 income and a lot sooner than the year 2000. To attain the "hickonomy," however, there are

certain other radical things being done which a Socialist or a Communist would find too radical to do. He would not, for example, pay bonuses and build storage for produce which the markets will not take when scarcity has driven prices of other produce so high as to cause privation. Yet it is this monstrous albatross which the Brannan plan schemes to fasten permanently about our necks. If this is where laissez faire in electioneering has brought us then, like Wall Street in 1929, Pennsylvania Avenue needs some new rules, our statute books some new crimes.

WASTED LAND

How long can we donate machinery and raw materials to low-wage, long-hour countries and admit their products to our markets duty-free? This, along with easy unemployment relief and the Brannan plan, can quickly make not only a $100,000,000,000 economy out of us but a wasted land.

There are so many radical things a liberal would not do that these strange servants of ours are doing, that grave doubt may be attached by posterity as to their sanity. Yet, there is one thing that runs true to pattern through all these damn fooleries: It is the expediency or the advantage of the moment, not for the electorate but for the elected. In other words, dear child, these grandsires of yours were not such damn fools as they looked. It was only we who were the fools, the weaklings, for taking it lying down—unworthy of our own grandsires.

One thing at least has become clear to me, day by day since 1933: That the New-Deal Democrat is more catholic in his love for mankind. He stands ready at any time to scatter his benefactions world-wide, whereas the Republicans and the conservative Democrat seek to limit them at home.

Judge Rifkind's Resignation

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York World-Telegram of April 4, 1950, and which, in my opinion, very objectively and fully covers an important phase of our governmental activity. A financially independent judiciary insures a competent and impartial protection of the fundamental personal and property rights of our people.

JUDGE RIFKIND'S RESIGNATION

Judge Simon H. Rifkind has resigned from the Federal district bench because he says that the $15,000 a year which that position pays is insufficient for him to live in a manner fitting the position and at the same time to provide adequately for his family.

When he accepted the appointment, Judge Rifkind thought he was taking a life job. He had budgeted his savings to make this possible but rising living costs and higher taxes knocked that budget into a cocked hat.

Now he says he must return to private law practice and the Federal bench is losing one of its younger and most promising judges.

This is a high price to pay for information regarding a condition which should have been apparent to the budget makers in Washington. They are asking those on the district court bench to sacrifice an impossible amount of monetary reward for the honor and distinction such a post carries.

The salary of a Federal district judge becomes ridiculously low when contrasted with what the State and city pay New York's judiciary. A justice of the State's supreme court or of the county courts in New York City receives $28,000. A judge of the city court gets $20,000.

If the Federal bench is to continue as a goal for aspiring young lawyers, and if it is not to lose more of its able jurists, more adequate pay must be provided. This is especially true when the district to which they may be assigned means living in a high-cost urban area.

A Red Dream

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an article by Alfred Kohlberg that appeared in China Monthly several years ago. Members who are interested in the China affair should read it.

A RED DREAM

(By Alfred Kohlberg)

(EDITOR'S NOTE.—In January 1945, one month before Yalta, Alfred Kohlberg wrote down the following dream. On March 23, 1945, having Earl Browder as his guest at luncheon, he mentioned the dream, and that afternoon sent him a copy. On April 5, 1945, he mailed a copy to each Member of the House and Senate. While the course of events for the past 2 years has not in detail followed the pattern of the dream, the similarities to date are so striking that we believe it well worth publishing as food for thought.)

January 15, 1945, I dreamt that I was in Moscow and saw Joseph Stalin in a newspaper kiosk in the middle of the sidewalk selling pamphlets. I stood in line and bought one. It read as follows:

"MY DREAM OF WORLD HISTORY: 1945–1975

"(By Earl Browder)

"The year 1945 opened with the final stages of World War II plainly visible. The vile Nazi-Fascist conspiracy to enslave the world was being demolished on the battlefields of eastern Europe. The indomitable Peoples Army of the Union of Soviet Socialist Republics having freed the holy soil of the Socialist fatherland of the Hitlerite invaders had already brought the democratic blessings of communism to the victims and satellites of the Fascists in the Balkans and eastern Europe. Throughout all eastern Europe the Socialist revolution was proceeding with the liquidation of all 'traitors to the people' and establishment of democratic dictatorships of the proletariat under the leadership of the brave Communist leaders who had come to the fore after the dastardly attack by the Hitlerite criminals on the Soviet Union on June 22, 1941. As stated by the noted non-Communist historian of the day, Edgar Snow, these 'traitors to the people' in all the liberated countries of Europe, as well as the defeated enemy nations, comprised all the large landowners, all large property owners, all officials of former governments, and all who would not cooperate in the new internal reforms of the patriotic Communist administrations.

"The liquidation of these Fascist, reactionary elements in Finland, Poland, the Baltic Soviet Republics, Czechoslovakia, Hungary, Rumania, Yugoslavia, and Bulgaria cleared the ground for the democratic development of people's governments in all these countries, headed by tried and true Communist leaders of the liberal forces. Many of the reactionaries who were adjudged 'traitors to the people' were leniently treated, being granted, with their families, free transport to the Siberian Soviet Socialist Republic where they were enabled to rehabilitate themselves as useful workers in the forests, mines, and industries.

"Popular elections were held, in which an average of 93.4 percent of the qualified electors voted. Delegates elected in these secret, popular elections then met in each of the capitals of these countries and without exception, in accordance with the Atlantic Charter, self-determined themselves into the Soviet Union. This was in accordance with the principle stated by Foreign Commissar Molotov, October 31, 1939, as follows:

" 'We stand for the scrupulous and punctilious observance of pacts on the basis of complete reciprocity and we declare that all nonsense about sovietizing the Baltic countries is only to the interest of our common enemies and of all anti-Soviet provocateurs.'

"As the war against Hitlerite Germany proceeded to its close the Free Germany Committee, originally having headquarters in Moscow, moved to Koenigsberg and was recognized (with altered personnel) by the Soviet Union as the provisional government of the new Germany. In the last stages of the war against Hitlerite Germany, the newly recognized provisional government assisted the great mass of the German people to regain their democratic rights by purging all elements of 'traitors to the people' and installing democratic governments in all areas. Popular elections were held without delay and the newly elected delegates petitioned the Soviet Union to annex the Soviet German Republic as a free, self-governing unit in the Union of Soviet Socialist Republics.

"In this period, also, the Czechoslovak Republic repudiated the exile government of the capitalist reactionary Benes and petitioned for admission to the great Soviet Union. Meantime the bankrupt capitalist plutocratic empires of the United States and Britain failed to understand the wishes of the masses of the people in Greece, Italy, France, and Belgium, preferring to recognize the discredited exile reactionary regimes in these countries, where popular uprisings, taking their inspiration from the people's victories in eastern Europe, though not successful, succeeded in securing important positions in coalition regimes.

"By the end of 1945 all organized resistance in Germany and eastern Europe was ended, and there remained only the task of liquidating remaining pro-Fascist, reactionary guerrilla forces in Poland, Czechoslovakia, and Yugoslavia. The imperialist, plutocratic, capitalist empires of the United States of America and Britain meantime had not been able to bring their war against Japan to a successful conclusion and appealed to the Soviet Union for aid. In accordance with agreements previously made at Tehran in 1943, when Churchill and Roosevelt appealed to Stalin, the Soviet Union honored its promises and recognized the Chinese Soviet republic, headed by that great patriot, Mao Tse-tung, as the government of free China, disavowing the reactionary, pro-Fascist, pro-Japanese government headed by Chiang Kai-shek.

"The indomitable forces of the Red Army attacked the Japanese Fascist criminals in Manchuria and Korea, releasing this holy Russian soil from the invaders who had foully seized it in 1905. At the same time, Russian

forces advanced 300 miles from the borders of the Mongolian Soviet Republic to the capital of the Chinese Soviet Republic at Yenan, bringing supplies and reinforcements. After the freeing of Manchuria and Korea, people's elections were held and the new Soviet Republics resulting therefrom joined the great Union of Soviet Socialist Republics. The invasion of Japan followed with the overthrow of the Mikado and the recognition by the Soviet Union of the Japanese People's Liberation Alliance, headed by the well-known Communist, Susuma Okano, as the provisional government of Japan.

"As the Soviet liberators advanced with the Chinese Communist brothers-in-arms south into the Yangtse Valley, reactionary publications in the United States of America, such as the New York Times and other capitalist papers, called on the government to oppose the advance of the Communist liberators beyond the so-called Chinese Curzon line of the Yellow River and charged a double cross of China. But the liberal, noncapitalist press, such as the Field newspapers, and the scholarly non-Communist research organizations, such as the Institute of Pacific Relations and the Foreign Policy Association, together with the Communist press, exposed the true character of the National Government of China as reactionary, pro-Fascist, and pro-Japanese. They exposed the false Chinese claim that they had been fighting the Japanese for 8 years. In disabusing the American public of the idea that China was its friend and proving that the true meaning of cooperation was acceding to Communist demands, many famous non-Communist Chinese experts and scholars were outstanding, particularly Agnes Smedley, Edgar Snow, Theodore White, Mark Gayn, Maxwell Stewart, L. K. Rosinger, T. A. Bisson, and Frederick V. Field. Thus, the American Government insisted that the Chungking Government negotiate directly with Moscow, and the United States of America refused to interfere in the internal affairs of China.

"During the years 1946–49, the Chinese Soviet Republic gradually extended its territories to include all of China and restored order throughout its realms by liquidating all traitors to the people. This liquidation was greatly aided by a popular questionnaire filled out by every Chinese reading:

" '1. Why have you not retreated with the Soviet Army in 1933?

" '2. What employment have you pursued under the Kuomintang?

" '3. What anti-Kuomintang sabotage have you done?

" '4. Name the accomplices.

" '5. Name three collaborators of the Kuomintang.'

"Thus did the Soviet Union bring the blessings of peace and true Marxist-Leninist-Stalinist democracy to the great farmer-worker masses of Europe and Asia, encompassing a population of 1,100,000,000 people.

"At this point one should mention the short-lived new League of Nations, often named Dumbarton Oaks after the now-forgotten hotel where it was first conceived. The charter for this organization was finally signed in 1945, but in the ensuing years it was often used as a sounding board for unfounded and idiotic complaints by reactionary exiles from member states of the great Soviet Union, falsely calling themselves governments, who sought to cast doubts on the great democratic victories of the Soviet Union. The great democratic movements organized in the United States under Sidney Hillman and other liberals, in England under Harry Pollitt, and in France under Maurice Thorez, did not hesitate, however, to expose these Fascist reactionary complaints.

"During the years after 1945 the great Soviet Union rebuilt the proletarian economy of the vast Eurasian lands, happily united under the people's dictatorship, with special emphasis on weapons of defense against the imperialist British, American, and French empires which looked with envious eyes at the great Socialist gains of the Soviet Union. The death in 1948 of Franklin D. Roosevelt, whose ability to cooperate with Marshal Stalin had brought about so many social and territorial gains for the world proletariat, ended a period of cooperation. Three years later the great democratic Soviet Union heeded the call of the submerged masses of India, crushed under the capitalist, reactionary dominion government headed by the pro-Fascist Nehru, and supplied arms and reinforcements for the Indian People's Liberation Alliance. The Dumbarton Oaks league wrote its own death sentence, when it stupidly passed resolutions of censure against the democratic actions of the Soviet Union in India.

"In the succeeding years other Dominions of the British Empire in southeast Asia followed the lead of India in setting up people's governments and joining the great democratic Soviet Union. In the Near East the former Turkish Republic followed reactionary leadership and sought military alliances with the capitalist empires, much against the wishes of the Turkish proletariat, who appealed to the Soviet Union for aid which was liberally given to establish a workers' Soviet Republic.

"Similar movements in British and French colonies in north Africa were ruthlessly suppressed by the reactionary governments. The patriotic leaders of these movements appealed to their brothers the great democratic classes of the Soviet Union, who could not turn a deaf ear to the call of their brothers in distress. Aid in the form of great air fleets was sent. The reactionary British and French Empires, idiotically chose to regard this as war and called on the Dumbarton Oaks League for sanctions against the great People's Republic of the Soviet Union. Fortunately for the cause of the people's liberation the United States voted against action. In this decision the great liberal movement in the United States took a leading part in explaining to the American masses that no pledges of the Dumbarton Oaks Charter could be perverted to require American boys to fight on foreign soil to maintain the undemocratic empires of Britain and France. As it later turned out the reactionary forces of Great Britain and France were overwhelmed in their homelands before the United States of America could have rearmed and come to their assistance in any case.

"Thus in 1957 the British and French Empires came to an inglorious end, but in their stead, France and Britain became truly democratic free Soviet Republics, no longer misled by such traitors to the people as large landowners, large property owners, former officials, bourgeoisie, and other reactionary intellectuals, all of whom were wiped away.

"After the close of this war which led to the freeing of the great French and British masses from the enslavement of their capitalist masters, freedom movements gained great strength in other countries, particularly in North and South America.

"The American Government, under the control of reactionary isolationists sought to cut itself off from the great movements for liberation all over the world. The freedom movement and the liberal element in the U. S. A. proclaimed that if the U. S. A. would only keep its armament to a minimum, thereby avoiding any threatening action, and liberalize its lands and industries by Government ownership and control, peace, a people's prosperity and great social gains would ensue. Unfortunately the reactionary isolationist government did not follow this far-seeing program. It did reduce armament, thus removing incitement to war, but in 1962, it foolishly attempted by law to prohibit the free assembly of the Communist Political Association and all organizations affiliated with it; and other organizations engaged in building up American-Russian friendship and cultural relations. This reactionary law also canceled free-press privileges of the same organizations and organizations allied thereto. (For several years prior thereto difficulties had arisen between citizens of the Japanese Soviet Republic, enjoying their right of access to the fisheries of Alaska and reactionary American officials seeking to deny this people's right.)

"The Foreign Office of the Soviet Union filed formal diplomatic protests against this law, pointing out that it could not but be regarded as an unfriendly action. The State Department, in its answer, alleged that the Soviet Union did not permit criticism in its press or free assembly by friends of the U. S. A. This specious argument was demolished by the Soviet Foreign Office, which replied that freedom of assembly and freedom of the press were permitted in the Soviet Union and if it so happened that no one in the press or in assembly had anything good to say about the U. S. A. or its Government, that was because the citizens of the Soviet Union had such a superior proletarian Socialist society that they could not be so stupid as not to recognize its merits.

"To this frank and sincere statement the United States returned an obdurate reply. While the Soviet Foreign Office was giving careful consideration, public opinion in the Soviet Union was so wrought up by the plight of their proletarian brothers, enslaved in the capitalist U. S. A., that it was determined by the army that an expedition should be sent to restore their freedom.

"By early summer of 1963 the expedition was ready. It was decided to send the expedition by air. Marshal Nokisblockoff, supreme commander of the Soviet forces, decided not to use any of the later models of Soviet airplanes developed in the plants of the German Soviet Republic, but to keep them as reserves for unforeseen eventualities. While full information of the puny forces of the U. S. A. was available to the high command, nevertheless, with far-seeing vision, Nokisblockoff preferred to be ready for all possible surprises.

"Thus a fleet of 50,000 oil-burning transport and fighter planes took off after dark on the night of June 22, 1963, from France, England, Norway, Russia, Germany, Siberia, and Japan. None of the newer types of planes using rocket or atomic propulsion were used. All were of the older types brought to perfection in the early 1950's. The transports carried an average of 250 fully armed men, or equivalent weight in heavy artillery and rocket equipment, each.

"Flying a great circle route, some directly over the North Pole, this air force approached Boston, New York, Washington, Detroit, Chicago, Ottawa, Montreal, Toronto, St. Louis, Atlanta, Birmingham, New Orleans, Omaha, Denver, Seattle, San Francisco, Los Angeles and other points from the north at dawn, June 23, 1963. Less than half a million paratroopers dropped before dawn on the lighted airports, seized control, and the planes landed their 6,000,000 of the Soviet Union's best trained troops a few minutes later. Control of every vital point from the Atlantic to the Pacific was seized. The war was over almost before it started, but foolish forces of misguided guerrillas, operating in the hinterland, had to be hunted down piecemeal. The pacification was greatly aided by measures adopted by the high command, such as extermination of all towns and villages where guerrillas were suspected of having been harbored. Liquidation of all traitors to the people was successfully and thoroughly carried out and the free democratic American Soviet Republic was proclaimed. Popular elections were held in

which 93.2 percent of the qualified voters voted and the new Congress, so elected, petitioned unanimously to be taken into the Soviet Union.

"In the following few years, reactionary governments in other parts of North and South America attempted to destroy the rights of the people, but when the latter appealed to the great Soviet Union they were sympathetically listened to and Soviet arms aided the democratic masses in each country to seize power and form free democratic Soviet Republics.

"Thus was the fringe of the world brought into the great Union of Soviet Socialist Republics, democratically governed by the Supreme Soviet at Moscow, under the wise and unquestioned leadership of the great premier, Joseph Stalin, Jr. Thus has the horror of war between countries been abolished from the world, and the triumph of Marxism, Leninism, Stalinism been granted to a free and united world where all men are vouchsafed the great democratic right to think alike and vote alike."

As I awoke with a start, it took me some moments to realize that this was still 1945 and all the horrors of my nightmare hadn't happened. Whether too much mince pie, or too much reading of the Communist press, can be blamed for this dream, I leave to the reader, who should be aware that every extension of the Communist system, so realistically visualized in my dream, has been predicted in the Communist press.

Open Letter to Congress

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following open letter to Congress which appeared in the March 1950 issue of Overture:

OPEN LETTER TO CONGRESS

MUSICIANS MUTUAL PROTECTIVE ASSOCIATION, LOCAL 47, A. F. OF M.,
Hollywood, Calif., March 3, 1950.

Honorable Senators and Representatives of the Congress of the United States, the Capitol, Washington, D. C.

GENTLEMEN: On behalf of 14,000 musician members of Local 47, A. F. of M., we are addressing this open letter to the Congress of the United States.

We have suffered since war's end from a discriminatory war-imposed tax, namely, the 20-percent cabaret tax. This tax was originally imposed for the twin purposes of raising revenue and discouraging industry nonessential to the winning of the war.

We are not informed as to the efficiency of this measure in discouraging amusement during the war. However, we are very well informed, indeed, as to its efficiency since the war in throwing hundreds of our members out of employment in hotels, night clubs, ballrooms, and similar places of amusement.

Such loss of employment comes either through the closing of such establishments or through their inability to continue a policy of live entertainment. This tax, gentlemen, affects only those establishments using live talent and, in effect, encourages the use of our mortal enemy, canned music.

As to the revenue-producing aspect of this situation, it would seem obvious that in every establishment which ceases to use live talent the tax revenue is cut in two ways. The change in policy means, of course, that no 20-percent tax is collected and as a corollary that the musicians, entertainers, and other employees cease to pay income taxes. The loss of revenue must be enormous from this source alone. This does not take into account the potential revenue from hundreds of establishments which would employ live talent if it were not for the tax. No tax revenue ever comes from the unemployed.

We pray, therefore, gentlemen, that you will give careful consideration to the proposals now before Congress for the repeal of this discriminatory, nonproductive, and unjust tax.

BOARD OF DIRECTORS, LOCAL 47,
MAURY PAUL, *Recording Secretary.*

There is a third way in which Federal Government finances are adversely affected which is omitted from the letter, and that is that the unemployed not only pay no income taxes but receive unemployment insurance. Let us repeal these unfair, discriminatory taxes.

Importance of Cooperatives

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, on previous occasions on the Senate floor, I have commented on the vital question of the tremendously valuable role which farm cooperatives have played in United States agriculture. Co-ops have become so indispensable a part of Wisconsin and all American farming that it is unthinkable to me that the Congress should take any step which would harm them or hamstring their operations.

The Badger State is, of course, one of the leading cooperative centers of all America and we are proud of the invaluable accomplishments of Wisconsin co-ops in helping to increase and/or stabilize farm income. Recently, there have been very severe declines in this farm income, and without the aid of co-ops, those declines would have still been more severe.

One of the hardest hit groups in Wisconsin have been our fur farmers. Not only have they been affected adversely by the general postwar decline in income and sales, but the ruinous 20-percent excise tax on furs sold at retail has dealt a body blow to the fur industry all along the line.

It is now 14 months since I introduced my fur-tax and other excise-tax repeal bill, but still tax relief is unfortunately stalled over in the House of Representatives. Still another factor accounting for the disastrous conditions in Wisconsin fur farming has been the obstinate refusal of the President and his administration to recognize the terrible harm done to domestic fur farmers by the flood of cheap foreign imports. Time and again, I have appealed to the United States Tariff Commission, to the President, to the State Department, and to Congress, to take necessary actions to prevent complete chaos because of this foreign import flood; but we have always encountered a stone wall of opposition particularly to our efforts—which we are going to carry on nonetheless—to place import quotas on shipments of foreign-produced furs to the United States.

As I say, in spite of administration opposition, we will continue the battle along the line of fur-tax repeal and protection of domestic fur farmers.

I have in my hands now, Mr. President, an editorial from the March 1950 issue of the American National Fur and Market Journal published at Wausau, Wis. The fine magazine is issued by the American National Fur Breeders Association, a mutual nonprofit cooperative organization of American fur farmers. It is edited by Dr. L. J. O'Reilley, president of the ANFBA—a man whose broad background and experience in the industry well qualifies him as a spokesman for it.

I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD this editorial which discusses the importance of co-ops in the fur and other industries.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARM COOPERATIVES

Agricultural cooperation in the United States has been molded by leaders emerging from a constantly increasing number of alert and progressive farmers. Expansion has continued since the experimental days of 1810.

In 1908, President Theodore Roosevelt appointed the Country Life Commission and started a train of events that greatly stimulated the movement. In transmitting to Congress the report of the Commission he said: "The cooperative plan is the best plan of organization wherever men have the right spirit to carry it out."

Early in 1920 farmers were given a new slogan: Orderly commodity marketing.

There are many definitions of a cooperative. Here is one found in the Report of the Inquiry on Cooperative Enterprise in Europe, published in 1937:

"A cooperative enterprise is one which belongs to the people who use its services, the control of which rests equally with all the members, and the gains of which are distributed to the members in proportion to the use they make of its services."

A cooperative society is voluntary and democratic. Generally speaking, cooperation means working together for a common purpose. An agricultural cooperative association is a business organization which operates for the mutual benefit of its members. It is a multiple partnership formed by farmers to provide services for themselves.

The American National Fur Breeders Association is a mutual, nonprofit cooperative organization of American fur farmers with over a quarter of a century of service to ranchers.

Through the years, that service has been rendered impartially to fur breeders, whether they had a few animals or thousands of animals. Every attempt has been made to help the fur farmers in solving the problems of disease, nutrition, genetics, ranch management, legislation, and marketing.

In times of depression as well as in times of prosperity—service has come first.

The production of the fur farm must be made available to the consumer. This involves marketing, and marketing has become a highly complex job.

The American National Cooperative Fur Auction, with its six sales a year in Milwaukee, is especially qualified to handle that complex job and to bring a stability to a market that sorely needs such stability.

Farmer cooperatives are part and parcel of the American economic system. They are set up to render service and increase farmers' profits.

Today, about two out of every three farmers belong to one or more agricultural cooperatives whose total memberships almost equal the number of farms in the United States.

Farmer cooperatives simply serve as agents of farmer members. In this way they give the farmer opportunities equal to those enjoyed by other businessmen engaged in the production of goods.

The American National is the fur farmers' cooperative.

Platform of Home Owners and Taxpayers Association

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following platform of the Home Owners and Taxpayers Association adopted at Eureka, Calif., on January 30, 1950:

PLATFORM OF HOME OWNERS AND TAXPAYERS ASSOCIATION

Whereas taxation is approaching the state of confiscation of property and business, and hampering personal independence, and is fast coming to a point where democracy is in jeopardy of its survival, as has been and now is being demonstrated in Europe and Asia; and

Whereas business, labor, and the American citizens are being throttled by excess taxation, inordinate expenditure of tax moneys without regard to the source of income or the burden placed on the citizens and taxpayers, and for the perpetuation of political officers, commissions, bureaus, Government agencies, and county and city officers, by spending tax money without due regard to the benefits received by the people or stopping the leaks of tax moneys by collusion between officers and contractors and the actual giving away of tax moneys; and

Whereas the spirit of America of 1776 should be revived for the preservation of the liberty, freedom, independence, and opportunity to progress that our ancestors fought for, and should be recovered and preserved for ourselves and our posterity, we taxpayers have adopted a platform as follows:

1. We shall cooperate to preserve justice, liberty, and the pursuit of happiness, as given to us by our Creator and fought for by our ancestors of 1776, and to recover the opportunity to progress.

2. We shall watch and guard well to prevent the waste and useless expenditure of tax moneys.

3. We shall watch well all public contracts where tax moneys are expended and criticize useless waste of tax money.

4. We shall foster all legislation for expenditure of tax money well spent toward public benefit, without graft or waste of tax money.

5. We shall recommend legislation to eliminate needless bureaus, commissions, agencies, and other bodies being supported from public funds and serving no beneficial purpose to the people, but which purpose is for political strength at the expense of the taxpayers.

6. We shall endeavor to impress upon all citizens the obligation of registering and voting. Our ancestors fought to give us the best Government and greatest individual opportunity to promote individual progress, to the end that we may enjoy the results of private industry and enterprise, and, as a result, are now the leaders of the world. We shall endeavor to keep Government out of private business and to contest all legislation restricting freedom, both personal and business.

7. We shall publicize excessive expenditure of public funds for useless purpose and all other legislation tending to increase taxes without full benefits to the people, or which will curb the right of liberty, justice, and equal rights to all. Do all things to encourage initiative and protect the same for future generations.

8. We shall endeavor to perpetuate the principles established by our ancestors that this is a Government of the people, by the people, and for the people.

9. We shall endeavor to regain the Bill of Rights.

10. We shall endeavor to present nonpartisan views on all political and economic issues that may arise and which are of importance to the people in general.

The above platform was duly adopted by the members of the Home Owners and Taxpayers Association, this 30th day of January, 1950, at Eureka, Calif.

HUGH TURNER, *President.*

Attest:

TERRY H. ANDERSON, *Secretary.*

The President's Farm Program

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chattanooga Times:

NOT THE BRANNAN PLAN

When President Truman speaks in generalities, he talks the language of most Americans who are sincerely interested in setting government to work for the welfare of the greatest number. This applies to the economic field as much as any other.

In a special message transmitted to Congress yesterday, Mr. Truman voiced legitimate objections to the Nation's farm program, which has been patched here and tinkered with there, year after year. The result has been a program which approaches unworkability, which contains the worst features of successive plans, and which tends to cater more and more to the interests of special segments of the population.

The price to the taxpayer is represented by a steadily increasing outlay for farm-price supports and a mountainous stock of surplus commodities.

Under the circumstances, the Nation will applaud the President's admonition to Congress to avoid further makeshift legislation in the field and get on with fundamental improvements.

He says the farm program should be changed "to make it more efficient, less costly, and more conducive to abundant production of farm crops, yielding a fair return to farmers, and selling at prices consumers can afford."

These generalities sound fine. But then Mr. Truman says the Brannan plan fills the bill exactly. When he gets down to particulars, he doesn't sound so good.

The Brannan plan would set up a production-payment system under which farm commodities would be allowed to seek their own price level on the open market. If these prices fell below the support level, the Government would pay the farmer the difference.

In the farm bill he has just signed, Mr. Truman found fault with the provision dealing with peanuts because it sets up a two-price system which, in his words, is "subject to serious objections."

Yet the Brannan plan would set up a two-price system for all farm crops.

Mr. Truman can set goals we would all like to reach, but he sometimes loses his way in trying to attain them. Congress will not be likely to follow him into the Brannan plan.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. HERTER. Mr. Speaker, the home-rule bill for the District of Columbia is, to my mind, a bill which deserves to be considered by the House, and I have signed the discharge petition to bring the subject before us on the floor. The Boston Herald editorial of March 16, 1950, which appears below, states a very strong case for home rule:

SQUARE DEAL FOR DISTRICT OF COLUMBIA

Last June for the first time in 71 years a bill to restore home rule to the carpetbag city of Washington actually fought its way through one House of Congress. S. 1527, under the joint sponsorship of Senators KEFAUVER and TAFT, passed the Senate by voice vote and went over to the House for final action.

Unfortunately, it is still waiting for action in the House and, unless members of both parties make a real fight for it, it is likely to die in committee when this Congress ends.

The chief roadblock has been thrown up by die-hard Dixiecrats on the House District Committee. Despite the fact than an almost identical measure was favorably reported in the Eightieth Congress (to be lost in the rush for adjournment), the present committee members will not permit a House vote. The trouble of course is the large potential Negro vote in Washington. A handful of southern bourbons just can't swallow democracy even in the Nation's Capital.

But Republicans also share responsibility to some extent. Massachusetts' Representative JOHN F. KENNEDY, a Democrat, has filed a discharge petition for which he has now obtained 170 signatures. But 218 are needed. If the Republicans, who are the original authors of the home-rule movement for Washington, would throw their whole weight behind Mr. KENNEDY'S petition, it would go over with a rush.

Republicans are committed to the home-rule principle by their 1948 platform. The reform is in keeping with the whole Republican tradition. Let's not drop the ball on this one. Our District of Columbia fellow citizens deserve a break. And so does the reputation of the Republican Party.

Women in the United States Congress

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. MULTER. Mr. Speaker, I think most of the gentlemen in both Houses of Congress—and certainly the gentlewomen—will be interested in reading an article on women in Congress and the influence they exert in our national legislative chambers.

The article, After 30 Years of Emancipation, was written by Murray Frank and was published in the March 1950 issue of the Pioneer Woman, a publication of Pioneer Women of America, which is a Labor Zionist organization of Jewish women in this country doing important relief work here and for Israel. The article is as follows:

AFTER 30 YEARS OF EMANCIPATION

(By Murray Frank)

This year marks the thirtieth anniversary since American women were granted the right of political suffrage. Ever since 1920 women have taken an active part in the political life of the country. They occupy responsible positions in the Government, sit in Congress, in the State legislatures and hold important judicial positions. But what is the sum total of the role women play in American political life? What influence do they exert toward the general welfare?

Frankly, the results to date have been disappointing. Three decades ago, it was hoped they would exploit their newly acquired power toward improvement of humanity—reforms, education, the maintenance of peace and better relations among the nations of the world. It was argued that since women stand to lose so much in war, they would constitute the strongest force for peace.

We are no nearer this goal today than a generation ago. This is partly due to the fact that women have not taken as great an interest in world problems as anticipated although since the end of the last war this had undergone gradual transformation. A case in point is the feminine representation in the United States Congress.

Members of Congress like to refer to it as the "greatest and most democratic legislative body in the world." Certainly it exerts a tremendous impact on American life and practically on the whole world. How many women sit in this all-important legislature? In the Senate, which consists of 96 members, there is only 1 woman; among the 435 Members of the House of Representatives there are 9 women. Thus, the entire feminine representation in the United States Congress does not exceed 10 out of a total of 531 members, or less than 2 percent.

Yet, some progress may be recorded. Three years ago there were only 7 women in the House of Representatives and none in the Senate. From all indications, next November may see the election of another woman Senator and possibly several more women in the House. Furthermore, some of the present Congresswomen are gradually reaching influential status as chairmen and ranking members of important committees. In view of these prospects, the role and influence of women in our Congress should be no less perhaps greater than in the parliaments of several other countries where women gained political suffrage later than in the United States.

BY WAY OF COMPARISON

Women have obtained a substantial representation in a number of post-war parliaments. In recent years, they had as many as 30 deputies in the French Chamber of Deputies, 25 in the British House of Commons, 38 in the Japanese Diet; women sit in considerable numbers in the parliaments of Italy, India, and other countries. Among the 120 members of the Israel Knesset, there are 11 women; this is equivalent to 9 percent of the Knesset's membership. Proportionately, therefore, the representation of women in Israel's Parliament is four and a half times greater than in the Congress of the world's greatest democracy.

The fact, however, should not be overlooked that women in Congress do not sit there solely as the representatives of their sex, but as the representatives of the citizenry of their respective districts. For the same reason, women do not cast their ballots as members of a particular sex, but as citizens of the land. Yet it leaves unanswered the question why women, who make up more than half of the adult citizen population in the country, do not have a larger representation in Congress.

One explanation is that politics is still a man's world in the United States, and the occasion is indeed rare where political leaders will go out of their way to nominate women for high office. Another is the indifference of women themselves. The average American woman keeps aloof from political problems, seldom participates directly in political struggles, and at best is satisfied merely to go to the polls. It may be due to the fact that women in this country enjoy greater freedom, independence and luxuries, while in other countries they must fight side by side with the men for the most elementary needs.

The group influence of women in the United States Congress is limited by their small number. As individuals, however, they constitute an interesting segment of our national legislature, where they serve as a leaven for greater practicality and guidance, each in her own way, through her own accomplishments and field of activity. Politically, they are divided exactly half and half—five Democrats and five Republicans. By way of introduction, we bring some brief facts about each of the women Members of Congress:

WHO IS WHO?

Senator MARGARET CHASE SMITH is the only woman in the Senate. A Republican from Maine, she formerly served as a Member of the House of Representatives for 9 years until she entered the Senate in January 1949. She was successively a teacher, business executive, and newspaper woman. When her husband was elected to Congress in 1936, she served as his secretary. After his death in 1940, she was elected to fill his term and has been a Member of Congress ever since.

During the war, Mrs. SMITH served on the House Naval Affairs Committee, and drew the official commendation of President Roosevelt for her work on its subcommittee on congested areas. In 1944, she was adviser to the United States delegation at the International Labor Conference in Philadelphia, and made an inspection trip of American bases in the Pacific. In 1947, she was assigned by the Armed Services Committee to investigate certain conditions in European countries. In the Senate, she is a member of the committees on Expenditures in the Executive Departments and the District of Columbia. She also serves on the Republican Policy Committee.

The dean of the women members is Mrs. MARY T. NORTON, who was elected as a Democratic Representative from New Jersey in 1924 and was the first woman ever to become chairman of a congressional committee. She was chairman of the District of Columbia committee from 1930 to 1937, headed the House Labor Committee until the end of 1946, and was last year named chairman of the House Administration Committee. Before entering politics, Mrs. NORTON was active in welfare work for many years.

Mrs. NORTON's greatest accomplishment in Congress was her sponsorship of the wage-and-hour law in 1938, which benefited millions of American workers. She has consistently supported and sponsored liberal and reform measures, including housing, minimum wage, civil rights, child welfare, labor, etc. Because of her broad knowledge of labor problems, she was appointed by President Truman as alternate delegate to the International Labor Conference in Paris in 1945.

Mrs. EDITH N. ROGERS, Republican of Massachusetts, was elected to Congress in June 1925 to fill the vacancy caused by the death of her husband, Representative John J. Rogers. She is now serving her 25th year in Congress. She was born in Maine, but was raised in Massachusetts. As a result of her overseas service in World War I, Mrs. ROGERS is primarily interested in the care of disabled veterans and the dependents of those who died in service. When the Republicans gained control during the 80th Congress, she became chairman of the Committee on Veterans Affairs; in the present Congress, she is ranking minority member of the committee.

Mrs. FRANCES P. BOLTON, Republican from Ohio, was born and raised in Cleveland, where she was active for many years in public-health nursing, education, and social work. In 1940 she was elected to fill the unexpired term of her husband, Mr. Chester C. Bolton, and has been a Member of Congress ever since. She serves on the House Foreign Affairs Committee and has traveled abroad on special assignments for the committee. Several years ago she visited King ibn-Saud of Saudi Arabia and upon her return to the United States she espoused the Arab cause and made several damaging statements against the Jewish cause. She later regretted her stand and has recently taken a somewhat friendlier attitude toward Israel.

HELEN GAHAGAN DOUGLAS, wife of movie actor Melvyn Douglas and a famous actress in her own right, is without a doubt the most liberal of all women Members in Congress. She has continually fought for various reforms and civil-rights measures, including abolition of the poll tax, an antilynching law, a fair-employment law to abolish discrimination in employment, housing and slum clearance, rent control, minimum wages, etc. She was one of the staunchest supporters in Congress for a Jewish state in Palestine.

Born in New Jersey and educated in New York, she entered California politics in 1940 as a Democrat and was elected to Congress in 1944 and has been reelected twice since. She is a member of the House Foreign Affairs Committee and served as United States Alternate Delegate to the United Nations Assembly. Recently, she announced her candidacy for the United States Senate and stands a good chance of election next November if she can win the nomination.

Mrs. KATHARINE ST. GEORGE, Republican, of New York, is now completing her second term in Congress as Representative of the Twenty-ninth New York District, for many years the stronghold of reactionary isolationist Hamilton Fish. A wealthy business woman of Tuxedo Park, N. Y., she has been very active in the American Red Cross and in various educational and youth groups. In Congress, Mrs. ST. GEORGE is a member of the Post Office and Civil Service Committee, where she authored and supported legislation for pay raises for postal and Federal employees. She is also the author and sponsor of an amendment to the United States

Constitution to provide equal rights for women.

Canadian-born Mrs. CHASE G. WOODHOUSE (Connecticut Democrat) has combined a home career with a professional and political career. Besides having raised two children, she was professor of economics at several colleges, an expert on home economics with the Department of Agriculture, and a Democratic Party leader. She served one term in Congress in 1945 and 1946, was defeated for reelection, but succeeded in regaining her place in November 1948. She has written extensively on education and women's activities. Besides her political and administrative posts in this country, she served as expert on General Clay's staff in Germany. In Congress she is a member of the Banking and Currency Committee. She has favored repeal of the Taft-Hartley Act, liberalization of the displaced-persons law, low-cost housing, etc.

NEWCOMERS

The three newest Members of Congress or first termers are: REVA B. BOSONE, Democrat, of Utah; CECIL M. HARDEN, Republican, of Indiana; and EDNA F. KELLY, Democrat, of New York.

Mrs. BOSONE is popularly referred to as Judge Bosone, having been municipal court judge at Salt Lake City for 12 years. She is the first woman elected to Congress from Utah and is a member of the Committee on Public Lands, which deals with irrigation, reclamation, territories and insular possessions, and Indian affairs. She was the first woman to preside over a court in Utah, where she made a great reputation for herself as an expert in traffic problems, introducing remedial measures regarding alcoholics and rehabilitation of juvenile delinquents.

The Member from Indiana, Mrs. HARDEN, was a public school teacher who took an active interest in local and civic affairs. She began her political career in 1932 and was elected to Congress in November 1948. She is a member of the House Committee on Veterans' Affairs.

Mrs. KELLY is the newest Member of Congress, having been chosen at a special election last November. She is also the youngest woman Member at 42, the others all being over 50, with the exception of Mrs. DOUGLAS, who is 49. Mrs. KELLY, who represents the Tenth Congressional District in Brooklyn, N. Y., is the widow of the late City Court Justice, Edward L. Kelly. For the past 7 years she was research director for the Democratic Party in the New York State capital, Albany, where she gained valuable experience in legislation.

UNEXPLOITED STRENGTH

On the whole, the women Members of the United States Congress are an intelligent, industrious, courageous, and hard-working group. They take their work seriously, try to represent their constituents with loyalty and devotion, and make a valuable contribution to the Congress which is far in excess of their number. The women of America have reason to be proud of the women Members of Congress.

Ideologically, they are largely middle-of-the-roaders, the Democrats among them tapering off to the left of center and the Republicans to the right. With the sole exception of Mrs. BOLTON, the remainder have supported the Jewish cause for Israel during the political struggles of recent years.

Women could make great contributions to American political life if they would take a greater interest in national affairs. In critical times such as these, the American Congress is denied the balancing contribution of their viewpoints on many perplexing problems. It is illogical and inconsistent that in a country where women constitute the majority of eligible voters and where they are such an important factor in the home and in the cultural and social life of the community, they should have such a weak voice in making the laws of the land.

HOLC Liquidation

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 14, 1950:

HOLC LIQUIDATION

As the Home Owners Loan Corporation approaches complete liquidation there is good reason to offer congratulations. The HOLC is the rescue agency which undertook in the dark days of 1933 to save thousands of American families from loss of their homes through foreclosure. Foreclosures were then running at the rate of more than 1,000 a day. The distress and discouragement resulting from so many domestic misfortunes of this type were a major factor in the gloom that then beset our economic life. To arrest this trend the HOLC made more than a million loans in an aggregate amount of nearly $3,500,000,000. Everyone seemed to assume that its losses would be heavy. Now, with the HOLC 95 percent liquidated, it is clearly evident that all its stock will be retired at par. Indeed, it has a present surplus of about $10,000,000.

Of course, this happy outcome is, in considerable measure, due to the rise in real-estate prices and to the sustained high level of incomes resulting from the war. Nevertheless, it is a notable record, as President Truman pointed out last week when the HOLC repaid $26,000,000 to the Treasury. In a striking manner it vindicates the judgment of HOLC officials, Members of Congress, and others who resisted premature liquidation of that agency when its situation was much less favorable than it is today. Those efforts to wind up the affairs of the HOLC and turn over its mortgages to private home finance agencies were begun in 1937 and continued for a good many years. This newspaper is proud to have had a hand in fighting these moves and in supporting the HOLC's plea that it be allowed gradually to wind up its own affairs.

In 1944 an especially formidable demand for prompt liquidation of the HOLC came to a head in Congress. The United States Savings and Loan League spearheaded the drive with substantial backing in both the House and Senate. One of the schemes advanced would have turned over to private mortgage companies the sound loans made by HOLC, leaving that agency holding the bag with only questionable loans. The Washington Post said at the time: "There is every reason to believe, moreover, that, given time to liquidate its holdings in the patient, orderly fashion originally prescribed by Congress, HOLC will be able to wind up its affairs without a single penny's cost to the American taxpayer."

Had the premature liquidation scheme been accepted, the Government would have suffered substantial losses instead of the profit that is now in prospect. The good judgment in leaving HOLC free to complete its work without undue haste matches the courage and foresight that went into its original creation.

Midsession

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial from the Tuesday, April 4, issue of the New York Herald Tribune.

Mr. Speaker, this editorial sets off pretty well what has been accomplished during this second session of the Eighty-first Congress. After we complete consideration of the appropriations bill, which should be followed shortly by the tax bill, I feel confident that the majority of my constituents would recommend no further action by the Congress on the repeal of the Taft-Hartley Act, compulsory health insurance, or the Brannan farm program. I am in great hopes that the tax bill will reduce the emergency excise taxes, which taxes the Republicans have been seeking to reduce for a long time. It is my understanding that these excise taxes are hurting New York State merchants to a greater degree than they are the merchants in any other State in the Union. It is high time the New York State representatives, both Republicans and Democrats, realize this fact and make a concentrated effort to bring relief to our own business interests.

The editorial follows:

MIDSESSION

With the second session of the Eighty-first Congress now 3 months old, the legislative record is singularly barren. If campaign-conscious Congressmen have their way, not more than another 3 months remain. Much will have to be accomplished in that time unless the favorite programs of the administration are to be frankly accepted as window dressing.

Mr. Truman's domestic leadership has been subject to notable rebuffs. Civil-rights legislation was narrowed down to a Fair Employment Practices Act and passed in the House in a form which scarcely conforms to Democratic promises. Even this version waits, and may wait indefinitely, in the Senate. The housing legislation on which Mr. Truman had particularly set his heart—the provision of Government-guaranteed loans for cooperative undertakings—was defeated in both Houses, despite the President's personal, last-minute intervention. The prospect of continued rent control is undermined by refusals in both Houses to provide sums necessary for enforcement; aid to education remains bogged down in the House; and even the long-awaited approval of the National Science Foundation was marred by security provisions which the administration considers highly objectionable. Meanwhile virtually nothing has been done on those famous administration standbys: Repeal of the Taft-Hartley Act, compulsory health insurance, and the Brannan farm program. Mr. Truman's latest appeal for over-all farm legislation sounds, indeed, more like a man whistling in the dark than like a confident leader marshaling his lieutenants.

To a Republican newspaper the failure of certain administration hopes is by no means unwelcome; yet the President must bear the blame for a defective and faltering leader-

ship which has brought good schemes to nought as well as bad schemes, and has presented necessary reforms in such extravagant and ambitious guise as to doom them from the start. Even more gravely, the President must stand open to the charge of insincerity. He has repeatedly beat the drum for measures which he has little expectation—and little desire—of seeing passed, but which he assumes will provide effective talking points on his whistle-stop tours. That Mr. Truman entertains no very serious hopes for his more grandiose legislative conceptions may do credit to his sanity; it does not do credit to his good faith as a leader or his integrity as a statesman.

Amending the National Transportation Act as Far as Natural or Artificial Gas Is Concerned

REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. O'SULLIVAN. Mr. Speaker, I have introduced today in the House of Representatives a bill seeking to amend paragraph 1 (b) of title 49 of the United States Code, which is a part of the National Transportation Act, by striking out of subsection (b) the words "except natural or artificial gas."

Heretofore because of the fact that artificial and natural gas pipe lines were pioneers in pipe-line transportation—were infant interstate common carriers in an experimental field, they were specifically exempted from the general law governing other common carriers in interstate commerce, such as railroads, trucking and bus companies, telephone and telegraph companies, and oil and gasoline pipe-line companies. Under existing law none of these last-named interstate companies could be owned by any person, firm, or corporation and devoted exclusively to the sole transportation of products owned by any such person, firm, or corporation. As illustrative of this fact you will recall perhaps the case decided by the Supreme Court of the United States which held that the Ford Motor Co., although it owned the railroad and all of its equipment outright, could not use that railroad for the exclusive transportation of its own iron ore from the Iron Mountain Range to its steel smelting and fabricating plants, but was obliged as an interstate common carrier to haul the freight of other persons, firms, and corporations also. One of the reasons behind this and other like decisions was because that very railroad was privileged to exercise the right of eminent domain, which is one of the attributes of sovereignty, and since it could exercise that right, it was a public and not a private railroad.

In the case of these natural and artificial gas pipe lines they are no longer an infant industry pioneering their way in a new venture. They have thrown off their swaddling clothes and have emerged forth as giants. They are dangerously powerful big business, big bankers, big financial dabblers at New York, Boston, Pittsburgh, and Chicago. They are the blood brothers of private power companies. They have outstripped the private power companies selfishness and greed and stand today serene and autocratic snapping their fingers at the Congress of the United States, and cracking their circus ringmasters' whips at recalcitrant Congressmen. Many people already hold them in awe and fearsomely cast sly glances in the general direction of the New York, Boston, Pittsburgh, and Chicago money marts.

They exercise the right of eminent domain.

Because of the present language of paragraph 1 (b) of title 49 of the United States Code, these natural gas pipe line companies transport in interstate commerce only their own natural gas and also occupy the unique position of an interstate common carrier and a wholesaler and a retailer of their own natural gas. It is indeed high time that this be changed. No one can sell their natural gas to them and I know because I have tried to do so. They transport and sell their own natural gas, and perhaps cut "financial melons" with their friends by buying natural gas from them at a higher price than is necessary. They can isolate and ruin any independent owner of a developed natural gas field. Other common carriers in all of their previous wickedness were but "babes in the woods" compared to them.

They have looked far into the future and are acquiring soft coal mines to manufacture gas and that is why the words "or artificial gas" are in the law.

Let us, before it is too late, strip them down now to the sole position of interstate common carriers of natural gas for hire. Common carriers for hire of everyone's natural or artificial gas. Let others be the shippers and owners. Let others be the wholesalers and retailers. Let us serve notice on them that the days of the gas Goliath hath past.

And before I conclude, I would also like to say that Nebraska and every other State in order to enjoy the full measure of natural gas competition needs to organize cooperative natural and artificial gas pipe lines to serve municipalities which should in the real public interest occupy the position of wholesaler and retailer.

I wish that my colleagues would study these suggestions and if I am correct about this amendment and the suggestions I have made, please lend me a helping hand unless your hands happen to be gas-locked.

Address by Hon. Frank Fellows, of Maine

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the gentleman from Maine, Hon. FRANK FELLOWS, at the Republican State Convention:

Fellow Americans, my pride in being permitted to speak to you this afternoon comes from an appreciation of the honor you do me, and, through me, those citizens of the third district it has been my privilege to serve for the past 9 years. Your kindness encourages me to take a moment to confide to you that, for another and very personal reason, this opportunity means a great deal to me. To those of you who knew my father, Oscar Fellows, who served in our State legislature—both on the floor and as speaker of the house—I need not confess the enduring strength of the silken bonds of love that always bound us. This gavel which I shall use here is the one father wielded in behalf of a Republican house in Augusta almost half a century ago. I cannot hope to do him justice, but his presence seems a living thing here today. And so my gratitude for this opportunity.

At this Lenten season each year, every budding flower and blade of grass testifies that the awful waste of yesteryear makes fertile the fields of tomorrow * * * that Easter's promise is endorsed by spring. If evidence were needed that remorse is vain and foolish, the fragrance of new grass and the song of returning robins would furnish proof beyond all reasonable doubt that now is the time rather for repentance and reformation.

We meet today to assess our situation, marshal our forces, raise a standard and give new impetus to the unending battle for the preservation of our heritage—America, the home of free men.

We are not assembled as farmers or industrialists—as members of organized labor groups—or as veterans. We do not convene as Catholics, although many of that faith are here, nor as Protestants or Jews, numerous though we may be.

We are gathered here today as God-fearing and God-loving Americans, intent upon proving that a strong two-party system of constitutional representative democracy is not a great experiment but the established method of furnishing the greatest individual freedom to the greatest number. The Constitution guarantees a republican form of government, not a utopian democracy.

Socialism, in its simplest form, is the complete discarding of private property by converting it into public property and dividing the income equally among the people, says Britannica. Contemporary Russia is known not as a Communist state but as the U. S. S. R.—the Union of Soviet Socialist Republics. Today to accuse a man of being the owner of property is to damn him. Call him a capitalist and he is shunned. Yet every owner of an insurance policy, automobile, home, or Government bond is a capitalist on a small scale. Every freckle-faced urchin chewing bubble gum and reading the funnies, whose dad picks potatoes, or works in the wood room of one of our pulp mills, is a potential capitalist. Our bank officials are the sons of yesterday's truckmen, farmers, mill hands, and insurance salesmen. This is still the land of opportunity.

It is easy to see why people who have nothing under their own system of government should be willing and anxious to try another. A system where the government owns everything may seem desirable to those people who have never known such a land of opportunity as ours, or to that man who suffers because he lacks faith in his ability to match effort and intelligence with the next man. But it is inconceivable that normal Americans should favor a Socialist system. When everyone owns everything, no one owns anything, and it is the most natural thing in the world to take pride in one's own possessions.

Little tots toddling about with red carts struggle, pull, and haul, shrilly crying, "It's mine." When an adult says, "My dad," it is a loving tribute to all the sacrifice and care that is symbolized in his person. Such sacrifice and care are the expression of one who acknowledges his duty to his own. Mothers are God's most perfect gift to a wicked and weary world, but unless each of us can each claim memory of one mother completely his or her own, we are like small children at a church Christmas tree whose names have been forgotten when the presents were handed out.

Defend capitalism? Our country glories in it. Communism and socialism do nothing for the individual. Capitalism recognizes his God-given dignity, gives him opportunity, and has fed and equipped the world, and has won two wars.

As citizens of the first State in the Union to see the rising sun, let us concern ourselves not at all now with the old slogan, "As goes Maine so goes the Nation." As loyal Americans, let us busy ourselves with proving of ourselves, and to the Grand Old Party of the other 47 States, that, as Maine Republicans, we are worthy of Maine's motto, "Dirigo"—"I guide; I lead"—for, unless we are ready and willing to admit that the future of America is more important than the future of any particular political party, we are not worthy of the citizenship we enjoy. Unless we are prepared to advocate, or oppose, every major proposal absolutely on the basis of whether it is good for the country, rather than whether it will gain votes for the Republican Party, we do not deserve to win an election.

Remorse is vain and foolish. Now is the time for repentance and reformation.

Firm in the conviction that "conquer we must, for our cause it is just," let us satisfy ourselves that, as we go, the rest of the Nation should go.

During a discussion in the Constitutional Convention in 1787, some delegates advocated half measures as more likely to meet with the approval of the people. George Washington said, "It is too probable that no plan we propose will be adopted. Perhaps another dreadful conflict is to be sustained. If, to please the people, we offer what we ourselves disapprove, how can we afterwards defend our work? Let us raise a standard to which the wise and honest can repair. The event is in the hand of God."

Whether or not it was desirable, it was inevitable that as this country grew from 13 to 48 States, ocean to ocean, inevitable also that it should grow in government. The adult human body is the result of the division and multiplication of a cell until full growth is accomplished. But the medical profession agree that, beyond a certain point, this process presents a serious problem. Abnormal growth, if not checked, is dangerous, whether in the physical body or the body politic. Just as our vital organs and cancer cannot long endure together, so with democracy and too much government. We have numerous laws today which would have been unthinkable 50 years ago. Whether we approve of some or all of them is not the question, for to try to get rid of them now would be as difficult as putting toothpaste back in a tube once it was squeezed.

But "enough is enough" (as our mothers would say)—if, indeed, it isn't altogether too much! If we are to retain any vestige of self-government, we must practice it. We must practice it in our towns and in our States.

Someone has said that heaven is so high, and the Czar so far away! Well, taxes too are high, and the city of Washington is so far away. The Federal Capital never did anything quicker, better, or cheaper than it could be done locally. And those giants in Washington so anxious to assume all the care and troubles of governing? Distance and propaganda have a way of magnifying both the persons and the deeds of little men.

History and experience are of little value if we read but fail to heed their lessons. Those Pilgrim Fathers who convenanted to erect here in America a substitute for monarchy and despotism were not like those who with ears hear not and who, though having eyes, see not. Liberty, to the Pilgrims, was worth sacrifice and hardship. Now, as then, retention of hard-earned freedom is dependent upon our willingness as individuals to keep awake to the necessity for watching its flame, and furnishing fuel to keep it burning bright. To ignore history and the awful ordeals of other countries is to deliberately court disaster with a view to marriage with calamity and ruin.

The American eagle symbolizes our great country. He was chosen because he has strength, speed, grace of motion and a sense of direction. This administration places emphasis on his left wing. We call them left-wingers. If too much pressure is applied on this eagle's left wing, one of two things occurs—he either turns bottom side up or he revolves in circles. If this eagle has that 'freedom from fear" and "freedom from want" promised by the New Deal, and if his initiative and responsibility for the future are thus removed, he becomes a parrot, either caged or chained to a perch. A parrot only simulates a man—laughs not because he is happy, but because he thinks a laugh is timely. He weeps not because he feels grief, but rather because it is good politics. He whistles because he knows from habit and experience that then somebody will bring him a cracker.

Those people whose ultimate and only concern are security and welfare are the frightened and the selfish. The boys and girls who fought our two World Wars, like the men whose blood ruddied the snows at Valley Forge, gave little thought to personal comfort or financial reward. Neither selfishness nor fear contributed to this country's growth. Justice is more vital than welfare, for without justice even the deserving suffer.

Those veterans handicapped by injury and disease acquired in the defense of our civilization deserve every consideration. And to accord with the American concept of reward, this consideration must find expression not in the form of charitable handouts, but, instead, as justice decrees and in the form of available opportunity.

Our forefathers sailed from Britain and Russia, from Sweden and France, from Germany and Italy, from Greece and all the Near East, with brave hearts and empty hands. Out of the comparative security of the known they came to face the unknown, asking only civil and religious liberty, and equal justice under law.

Do we deserve more?

It was our own Israel Washburn of Maine, who in 1854, said that "The new party should take the name 'Republican' and have for its purpose the welfare of the whole Union and the stainless honor of the American name."

Let us raise a standard to which the wise and honest can repair.

The thought has been expressed that the Republican Party should be "humanized." There may be virtue in the suggestion, but, to humanize it we must be careful not to Trumanize it as well. To compromise principle, in an effort to appeal to the less admirable qualities of human nature, to obtain votes, is unworthy of the great founder of our Republican Party, and no compliment to the intelligence and integrity of the average voter.

No political party has cornered the market on virtue and ability. If our two-party system is to continue functioning, it would seem altogether desirable that each party make its aims so clear that no misunderstanding can exist in the minds of voters, and an honest choice be offered.

Which shall Maine Republicans offer the country?

Shall we offer an undignified scuffle for Trumanized welfare and regimentation—a pauperized paternalism?

Or shall we offer a crusade for self-government, individual initiative, intellectual honesty in government and respect for human dignity?

Let us raise a standard to which the wise and honest can repair.

We hear much today of minority groups. The spokesmen for these groups are ever asking, "What are you going to do for us?" No one present but what could, given the disposition, identify himself or herself as one of a minority. If we judge by the numbers voting in recent years, a Republican too belongs to a minority group. When we consider that the most vocal groups labeling themselves minorities add up to more than 50 percent of our total population, armed with ballots, the whole furor becomes slightly ridiculous.

It ill befits the Republican Party to step out of character in a fruitless endeavor to attract the votes of such self-seekers. Should not men and women, whether white or colored, Republican or Democrat, think of themselves first as Americans, and make their query, What can we do for America? not What will the Government do for us?

When we say us let us mean all Americans, not any particular group.

"What care I for case or creed? It is the deed; it is the deed.
What for class or what for clan? It is the man; it is the man.
Heirs of love and joy and woe, Who is high, and who is low?
Mountain, valley, sky and sea, all are for humanity."

Why did six United States marines, under bitter enemy fire, scramble up the steep side of a volcano on Iwo Jima to stand on rocks and sandbags at the edge of a crater and raise there our country's flag? I will tell you why. They knew that flag represented to their comrades something worth fighting for—yes, worth dying for. It was and is a standard worthy of defense.

LET US RAISE SUCH A STANDARD

This country has long been considered Republican. During the past 18 years it has been in the hands of the opposition party, either because the Republicans themselves voted that way, or because they failed to vote at all. Certainly there is every reason to believe it has become the custom to contribute to the war chest of one party to hold one's Government contracts and contacts—and at the same time to give a lesser amount to the Republican Party, to hold one's membership. The 50 percent who failed to go to the polls in 1948 were largely in small communities, the Republican strongholds.

The New Deal had promised a continuance of practices under a new label, the Fair Deal.

The Republican Party promised to do all the New Deal promised, but indicated its conviction it could do those things better. Those who favored regulation and strangulation from Washington apparently felt that—having the disposition and the stomach for, as well as actual experience in such things—the New Deal should have the job.

Where was our two-party system then?

To the thousands of Americans genuinely disturbed and disgusted by the threat of annihilation of our free institutions by a constantly growing bureaucracy in Washington, no party and neither platform appealed in 1948. They did not bother to vote. Yet, notwithstanding all these things, with 22,-

000,000 votes our defeat could still have been victory had 30,000 of those votes been distributed differently.

We were fortunate to garner as many as we did.

Caution is not an offensive weapon. But, fighting an entrenched enemy, the Republican Party had to exercise caution not to step on the toes of some of their own party candidates, who ranged from those who would out-Truman Truman in Fair Dealism, to those who found Senator TAFT less conservative than they would have liked.

Party platforms are not platforms if they are made up of loose planks balanced precariously on a sawhorse of expediency where candidates can teeter until they and the voters are dizzy.

LET US RAISE A STANDARD TO WHICH THE WISE AND HONEST CAN REPAIR

Not a soul within the sound of my voice but in his secret heart knows that continuance of our present fiscal and foreign policy means national moral and economic bankruptcy and suicide.

In the legal profession, there is what is known as the rule of the last clear chance. There comes a time when a political party faces such a choice. Let us offer the voters a last chance to declare for what we all know to be right. If we do not, our descendants may well raise a monument to what was once the great party of Abraham Lincoln, and upon it engrave the words, "Wrecked on the rocks of expediency."

In the 11th chapter of Genesis, we read that the whole earth was of one language, and the descendants of Noah conceived the notion of building a tower reaching to heaven, and said, "Let us make us a name." The Lord disapproved the intrusion, descended to earth to confound their speech, and dispersed the crowd. God will not be mocked.

Political pygmies of both major parties, gluttonous for power, clothe themselves in the sackcloth of a concern for the common man and his welfare, but erect a bureaucracy of as monstrous proportions as that Tower of Babel.

LABOR

The record of organized labor in the State of Maine is one which might be studied with profit by industry and labor throughout the country. Cool heads and warm hearts, rather than hot heads and cold hearts, make this record possible. We like to believe that Maine men and women would not tolerate the kind of leadership which seeks for itself power and more power at the expense of union members and the general public. We like to believe the native intelligence of Maine men and women, whether employers or workers, is of too high a caliber to overlook the fact that the fortune of each is dependent upon the other. Whatever injures industry, whether reciprocal trade or high taxes, or both, injures labor, for when industry cannot operate at a profit employment ceases. And that which injures labor, whether high living costs, high taxes, sickness, or unwarranted strikes, injures industry. The recent strikes in the coal industry produced nothing but misery for producers, workers, and the public generally.

Any group that accepts the benefits of a law should be obliged to respect it, operate under its provisions, or forfeit the benefits.

The Taft-Hartley law was not designed to prevent strikes but to delay them and give time for consultation and compromise. The best law ever written is useless when the Chief Executive ridicules it, encourages defiance of it, refuses to enforce it, and finally invokes it belatedly with a threat to seize basic industry. Such action was no accident.

Power is a wonderful but dangerous thing. Nation-wide and industry-wide strikes abuse power, for with lack of wisdom in their use they present a constant threat to the general public. Like medicine, power should be used wisely or not at all. Neither Mr. Lewis nor Mr. Truman used his power wisely.

Unless industry and labor can learn to live together by the practice of self-discipline, the future of either is not bright. Hitler abolished labor unions. The British Labor Government does not permit a farm worker to change his employment. Labor decreases its opportunities for advantage when it operates on an industry-wide or Nation-wide scale by increasing the possibility of creation of national crises and punitive legislation.

Socialism, communism, or a totalitarian government of any kind has nothing to offer American labor. Labor's stake in our free enterprise system is fully as great, if not greater than industry's.

Let us raise a standard to which the wise and honest can repair.

FARMERS

In Britain today the very school children on the farms are conscious that their parents are worried. Under their present government, the how, what, when, and where of planting is at the dictation of a central authority—the government. A farmer who plants more or less than he is ordered has his land assigned to someone who will do as he is told. Let us not forget it is happening here.

Mr. Attlee's Mr. Bevin gives warning: "American is following the footsteps of Britain."

"We will become economic galley slaves," declared former Secretary of State and Supreme Court Justice Honorable James Byrnes.

A Maine writer has said that cows are like folks. They like to be led, if at all, by happy companions, not by dudes with umbrellas or demagogs with pitchforks. They like, also, the path to be sunny, tuneful, fragrant: the weather—as it happens; the way—homeward.

Unlike cows, we have the ability to observe and choose. Coaxed with tempting stabilizing plans, we may mistake for happy companions the demagogs leading us down a road from which the ruts of uncertainty seem to have been smoothed, and then we find ourselves, brakes gone, on a steep downgrade which is neither sunny, tuneful, nor fragrant, and which leads—not homeward—but to a strict regimentation and control we have never known before. A dead man, remember, is safe, certain, and secure. But do Maine folks want that kind of security?

Under a Fair Deal administration, the State Department imports from Canada the farm surplus which wrecks the economy and leaves our farmer holding the bag The potato gets the unfavorable publicity—cotton and peanuts get the cash. And the Democratic Party offers as its pledge of security and welfare to patriotic American farmers the Brannan plan—a scheme whereby the producer receives top price, the consumer pays bottom price, and each makes up the difference to the other in taxes. The farm plan which saw us safely through the war years, with less unfriendly and unwise administration would have operated economically until such time as it became clear that a repetition of the earlier demand to feed the world would not soon again be made as we fight and lose the cold war.

Only salvation is free and in freedom this country has found its salvation.

As the British Labor Government acknowledges, under a similar system in Britain, farmers prefer to be tenants. If a British farmer does not satisfy the Government in the matter of production, his land is taken from him, and farm workers may leave their jobs, but are not permitted to take new ones outside agriculture. That is, indeed, security, for the farmer is not secured—he is chained.

WELFARE

There is not a man or woman in America who is not concerned with the public welfare, whether he be a so-called ultraliberal or ultraconservative. The ultraliberal's philosophy would return us to what our forefathers faced which necessitated their sitting down to write the first rules of human liberty.

The conservative believes in home rule and, although he does not attend the dinner for Mr. Jefferson, he does not discard the philosophy which holds that that country is governed best which is governed least—that you can carry on your farms, stores, employment, and professions better in the interest of public welfare at home than it can be done for you by a defunct college professor who sits in a chair in Washington.

The record of this administration has been one of stupidity and cynicism.

From amid a welter of mink, orchids, champagne, gold plate, and tickets at $100 per, we hear pious mouthings about the common man. It cynically assumes that everything and everyone has a price, and that salvation can be assured if sufficient money is expended. It has led us down the road to national socialism to a state called welfare. Britain followed the same course to financial, mental, and moral bankruptcy.

DISLOYALTY

If it was not deliberate trickery, it was colossal failure to recognize and evaluate the true situation at home, to direct all our attention abroad, when disloyalty was being permitted to invade and spread through the vital centers of the executive department of our own Government.

Communism is a way of life, but not our way. It is built on disillusion, skepticism, cynicism, and treachery. It is godless and ungodly. It is at once corrupt and corrupting. Like the graduates of the Pendergast machine, its converts and fellow travelers eventually will answer before the judgment seat, but en route they enjoy, while they abuse, the privileges of citizenship—go to jail—or get policy-making positions in Washington under the Fair Deal.

Our State Department admits it has but recently purged itself of some 90 moral perverts, and allowed some persons charged with disloyalty to slink away, unregretted—but also, alas—unhanged. And even such belated action came only after Congress had made public evidence resulting from an investigation which the Fair Deal labeled a "witch hunt" and a "red herring."

The Hiss and Fuchs cases are examples of the folly of expending all our energy and treasure fighting communism abroad. That same Hiss served as Department of State's adviser to President Roosevelt at Yalta, when Stalin was handed China, Poland, and eastern Europe. When Hiss' loyalty was questioned, he was placed where he could give aid to Russia in her China policy—then made secretary of the San Francisco United Nations Conference. And when he was indicted for perjury, a sense of propriety was so lacking in such Fair Dealers as the widow of President Roosevelt, Secretary of State Acheson, and two Justices of the Supreme Court, that they volunteered testimonials as to the good character of the culprit.

During the Battle of the Bulge, when America was fighting Germany and Japan for its very existence, and our boys in the Army were subject to 40 years at hard labor for overstaying their leaves, FBI recovered hundreds of documents which had been filched from the files of our State, War, and Navy Departments. Three State Department employees were arrested. Two were indicted and fined only $500 each, under a law which provided a penalty of 5 years in prison and a fine of $5,000 for theft of any one of those documents. The third man

went unscathed, and today holds a high position in the Department of State. A special prosecutor for the Attorney General of the United States stated in open court that the action of these defendants did not involve any element of disloyalty. How does that fit in with your ideas of loyalty?

Our fighting forces won the war. Our diplomacy has nullified their victory. A department which spends 50 percent of its time conditioning our own citizens for the defeat its policies make certain is at least a 50-percent detriment. The vital question is not the number of Communists in the State Department. It is whether stupidity and disloyalty are to be tolerated and condoned.

Webster defines "diplomacy" as "dexterity or artfulness in securing advantages without arousing hostility." Wherein has our State Department evidenced any of these abilities in behalf of our country?

Vindictive and vicious executives have undertaken purges of elected representatives of the people, and the products of corrupt political machines have not hesitated to enlist, or at least accept, the good offices of professional lawbreakers to steal and destroy ballot-box evidence of their misdeeds.

TAXES AND DEFICIT SPENDING

The Fair Deal has Trumanized Government expenditures, the national debt, and the budget. And these things are sanforized as well as Trumanized, because they have been treated to political processes which insure against shrinkage.

When we stop to consider that, if every life-insurance policy in force were cashed in—every city home and country farm with its equipment sold, and every industry converted into cash—the total receipts would run this Federal Government at its present rate of spending only 3 years, we get some idea why the same financial wizardry applied to a small haberdashery in the Middle West led its proprietor in accordance with the Bankruptcy Act of 1898, as amended, to seek other and more fertile fields for the exercise of financial genius.

An administration which has ceaselessly worked at increasing Government's power and enlarging the national debt has taken charge as well of the citizens' pay-envelopes. The value of the dollar has not been sanforized. It shrinks daily and hourly as Government spending and political manipulation of currency continues.

Thirty-two cents of every dollar of income goes for taxes. Based on Nation-wide averages, a man who receives $50 a month from the Government pays $16 of it over the counter in hidden taxes. We spend more on Government than on groceries; 13 times as much as on education; and 40 times what we contribute to our churches.

Seventy cents of every tax dollar goes to the Federal Government, which picks our pockets, and, to give it ever-increasing power over our persons and property, uses that loot to bribe the States into surrender of their power over activities which local government can administer better and more efficiently.

"Such an excess of stupidity is not in nature."

Let us raise a standard to which the wise and honest can repair.

Writing to our own Henry Knox, 163 years ago this month, George Washington said, "It is among the evils, and perhaps is not the smallest, of democratical governments, that the people must feel, before they will see. When this happens, they are roused to action; hence it is that this form of government is so slow."

The people are beginning to feel.

The bite being inflicted upon the American taxpayer by the Federal Government is being felt by individuals and local and State governments. It is a hopeful indication that soon they will see as well—see the folly of allowing centralized government tap all the sources of taxation, leaving local and State officials and governments to beg for grants-in-aid to conduct local government activities.

The inanity of the administration's fiscal policy, so-called, is only equaled by the ineptitude of its alleged foreign policy.

It spends billions in Europe to contain communism there, while it harbors in its State and other Departments communistically inclined men and women whose loyalty has been questioned or found wanting, and protects and excused them while they write a policy for Asia which puts millions of souls behind the iron curtain, that shuts God out.

A chill of delayed comprehension and ominous apprehension follows the truth made public at the Hiss and Coplon trials here, and the Fuchs trial in London.

Our Fair Deal poses as the protector of the workingman by advocating a labor policy barring importation of cheap foreign labor on the one hand, and on the other, admits the products of that same labor to compete for our markets.

When a President of these United States took the novel position that a country that had promised to pay in gold could pay in any legal tender it chose, it was an indication of things to come—an era when the mode was to say one thing and mean another.

Let us raise a standard to which the wise and honest can repair, for certainly now is the time for all good men to come to the aid of the country.

Cynicism has consorted with perversion of truth.

Intellectual honesty is one of the worst shortages from which we suffer. Playing on the emotions, coloring the news, embroidering the truth—all lead to only one end—confusion.

As our own David Barker once wrote:

"Go for error or for truth;
Go for darkness or for light;
Paint your flag and hang it out,
Be it black or be it white,
Ever.

"Never ape the tadpole, man;
Never swim around incog;
Off with tail or off with claws;
Be it polliwog or frog,
Ever."

We need a new appreciation of democracy.

We need a new dedication to higher standards of the conduct of public affairs.

We need, as has been held by authorities, stock piles of manganese, tin, and lead, to meet emergencies. But, even more, we need to renew our stock piles of spiritual values.

The Republican Party was called into being to save the Union. It saved the Union!

The Republican Party would deem it a high privilege, as well as its bounden duty to save the country now.

The Grand Old Party of Abraham Lincoln cannot deny responsibility merely by indicting the Fair Deal.

We must never underrate the intelligence and integrity of the average citizen.

We can give concrete evidence of our belief that indeed honesty is the best policy by frankly and fearlessly proclaiming our convictions, and by ceasing to dignify with the title of leaders mere political weathervanes that subject themselves to each passing breeze.

Lincoln believed that human liberty is like unto a coral isle—built from the deeps, built by the dying of the builders, until at last it greets the surface and the sun and he held steadfastly to his main purpose with the charm of a poet and fell, as only monuments can fall.

We would say—he preferred to go down to defeat with banners flying, rather than just go down to defeat—period. The question to be answered by this convention is, "Have we had our banners flying?"

If not, are we prepared now to raise a standard to which the wise and honest can repair?

The Republican Party never had been too proud to fight! It must never fight for an unworthy cause!

Give us leaders—and let us fight for principles!

Men facetiously remark that women always have the last word. Without question that will be true in the coming election. They have the power to decide what the future shall hold for their children. Awake to the fact that the present foreign policy, deficit spending, increasing national debt, and a trend toward regimentation bid fair to enslave for generations those they love, the women of this Nation can be depended upon to turn the tide. We feel confident of that, for of each man here it may be said that, because of the memory of his own mother, "faith in womankind beats with his blood, and trust in all things high comes easy to him; and tho' he trip and fall, he shall not blind his soul with clay."

Here in Maine, a Republican executive and legislature, assisted in some instances by loyal and able members of the opposition party, have conducted our State affairs to the entire satisfaction of a large majority of our citizens. Safety, sanity, and solvency have been their goal, and the State's record remains, as always, one of which our Governor and legislature may be proud.

Your delegation in Washington, with such weapons as it could muster, has fought a rear-guard action to delay, when it could not halt, what has at times seemed the inevitable ruin of all that the architects and builders of our system have evolved.

This convention should present an outline of doctrine understandable and easily applied to any situation:

LOCAL SELF-GOVERNMENT

Our children—the Young Republicans—must fight for a return to local self-government, with power to tax and spend their own money. Such was our inheritance, but the exigencies of two World Wars and a world trend dissipated that legacy. We and they must recover and restore it for their children.

SOUND MONEY

Sound money, brought about by economy and thrift on local levels and a saving of the collection and disbursing fees of that greatest of all 10-percenters—the Federal Government. Cost of government must be cut. Deficit spending must stop.

RESPONSIBILITY

Recognition that projects, however worthy, should not be undertaken if we are either unable or unwilling to be taxed to pay for them.

INTELLECTUAL HONESTY

Intellectual honesty in Government and officials. For no man is better than his word, and "by their fruits ye shall know them."

LEADERS

Insistence upon men and women who, in ability and moral courage, loom above and beyond the trusting and timid, and by precept and example prove they stand for something more than their own election.

Our Father, at this vesper hour, we look backward in gratitude and forward in confidence, for we know that Thy laws are now and ever have been the supreme law—unchanged and unchanging—that truth, and truth alone, withstands the test of time.

As we onward walk the paths of duty, do Thou endow us with stout hearts, and open minds. Stimulate us with the faith that

greets the dawn rather than the setting sun; faith in Thee, in our fellow men, in our Republic, and in the ultimate triumph of all things right. Dismissing past regrets and future fears, send us forth on errands of mercy and good will; then we shall have the restful satisfaction that comes to those who have borne wisely and well their part. Fill us with large sympathies for others, and bless us with complete trust in Thy goodness, and Thine shall be the glory forever.

Need for Intelligent Opposition

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the well-known historian, Arthur Schlesinger, Jr., appearing in the magazine section of the New York Times, Sunday, April 2, 1950. The article, entitled "The Need for an Intelligent Opposition," presents some sound advice pointing to the development of a truly conservative yet constructive Republican Party.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEED FOR AN INTELLIGENT OPPOSITION

(By Arthur Schlesinger, Jr.)

The Republican Party, after due meditation in the wilderness, awhile ago came forth with a statement of principles. That statement, while forthright in its endorsement of diligence, economy, courage, initiative, and patriotism, was less clear when it moved on to details. Thus it came out strongly for civil liberties, while at the same time it condemned the administration for its "soft" loyalty policy. It firmly favored the promotion of world trade, while with equal firmness it insisted on the principle of tariff protection. It demanded welfare programs, a strong national defense, and a balanced budget, while it denounced taxation and spending.

A leading Fair Dealer was soon after heard to remark, "What this country needs is an intelligent opposition." Now this wish should not be dismissed as a pious but insincere genuflection to the two-party system. The hard fact is that, while the Democrats may gain short-run benefits from the present absence of competition, thoughtful members of the party understand the long-run dangers from absence of competition. An essential function of a party in our system is to secure the concurrence in our political processes of that part of the community which it represents; and, if a party becomes so feeble and confused that it turns into an object of public pity or contempt, it can no longer assist in securing that concurrence. As a result our whole political fabric suffers; the party itself disappears; and there is no guaranty that any new party which rises in its place will have a basic respect for constitutional processes and public order.

A responsible liberal, in short, would rather have a healthy and intelligent conservative party, which might even win an election now and then, than a dull and hopeless conservative party, threatening at any moment to break into pieces and leave its members prey for Fascist-minded demagogues. Or, to put it in another way, a liberal must prefer a genuinely conservative party to a reactionary party because reaction, though it may be static and stupid for a time, can always, and easily, emerge as a dynamic and dangerous force.

There is a vital difference between a conservative and a reactionary. A true conservative believes that the processes of change are gradual and organic; that you cannot impose abstract ideas on the massive, glacial flow of society; that the comprehensive blueprint and the exclusive panacea are alike irrelevant to the stream of history. But he knows well that there is a stream of history, that change does come about, and that the recognition of the necessity of change is the best way of preventing it from disrupting society.

The reactionary, on the other hand, hates and fears all change—except that which promises to entrench him all the more firmly in his power and privilege. He is dedicated to the interests of his class—unlike the conservative, who has a sense of social and national responsibility which absorbs and sometimes overrides his loyalty to his class. The conservative believes in freedom under law for all and recognizes his obligation to make all citizens members of the community. He is a constitutionalist and therefore a libertarian, and a pluralist; and because he understands that constitutions live only as expressions of organic vitality, he is a believer in reciprocal obligations and social welfare. His gods are law, freedom, and social cohesion. His prophets are Burke and Disraeli, Alexander Hamilton, and John Quincy Adams.

The model of such responsible conservatism was the Tory democracy of Victorian Britain. Here, Disraeli, perceiving the necessity of social change, and recognizing, moreover, the obligation to make the new industrial masses feel themselves a part of the community, led the way in converting the two nations, which threatened destruction of the British community, into one. His success dulled the sharp edges of revolutionary discontent. It also transformed Toryism into a doctrine of at least partial social responsibility and thereby transformed Marxism into the amiable and peaceful creed of Fabianism. The result was that vital British sense of national community—of being, for better or worse, members of one great family—which saw Britain through the war and is overseeing today the experiment in socialism.

In our own country, conservatism began under affirmative and public-spirited auspices. At a time when the followers of Jefferson, fearing the establishment of national authority, supported a futile localism in politics and a static agrarianism in economics, it was the Federalists who demanded a strong Central Government and who projected a splendid vision of an industrial economy. Alexander Hamilton was indeed advancing class interests in his financial program, as Charles Beard has pointed out. But the Hamiltonian interpretation of the interests of the business community promoted the general welfare as well.

It can also be noted that Jefferson's views on politics and economics—I do not speak here of his views on education and on civil freedom—were just as much an expression of class interest—and of a class interest which, if dominant, would have gravely retarded our national development.

The Federalist Party had at the start a high sense of national obligation. But its flavor and its rhetoric were aristocratic in an increasingly democratic land, and it soon passed from the scene. Its nationalist heritage was taken over, however, by statesmen like Henry Clay, with his American system, and John Quincy Adams, with his call for national economic planning. Almost in the accents of a believer in the welfare state, the younger Adams as President could define the great object of government as the progressive improvement of the condition of the governed.

Yet, after Adams the decline of American conservatism set in. The administration of Andrew Jackson, with its vigorous exercise of the national power in the popular interest, set in motion the long process of weaning the Jeffersonians from antistatism. At the same time, the Whig Party rejected the truly conservative possibilities inherent in its own intellectual position. That party—as August Heckscher has argued in A Pattern of Politics—was founded on a recognition of the diverse interests in society. Its avowed end was the harmonizing of those interests in the service of a national unity; its cherished means was the positive action of government within a framework of constitutionalism. Yet it came to sacrifice the interests of society to the interests of the business community. It became, in Emerson's phrase, too much the shop-and-till party.

Later the Presidency of Abraham Lincoln momentarily recharged American conservatism with a passionate sense of the national interest. But class interests took over again in the next generation; the short-run interests of business became glibly identified with the long-run interests of the Nation.

Theodore Roosevelt made the final—and a vigorous—attempt to restore to American conservatism something of the spirit of the Tory democracy of Britain. "We Republicans [must] hold the just balance," he cried, "and set ourselves against improper corporate influence on the one hand as against demagogy and mob rule on the other." But those who controlled the Republican Party would not tolerate so detached an attitude toward the great corporations and, in 1912, they drove Roosevelt out of the party. With him went the last powerful impulse of true conservatism in the Republican Party.

True, there have been some authentic conservatives since Theodore Roosevelt—Henry L. Stimson, Charles Evans Hughes, Elihu Root, Dwight Morrow, Wendell Willkie, for example. But it is chastening to note how few were ever used by a Republican administration, except in the field of foreign policy, or were politically acceptable to the Republican bosses. Indeed, such followers of Theodore Roosevelt in 1912 as John G. Winant, Harold Ickes and Frank Knox eventually found a more congenial atmosphere in the liberal administration of Franklin D. Roosevelt. Generally, however, the conservative party in the United States has become, in a degree unimagined by Emerson, the "shop and till party."

"Conservatism belongs to society as a whole," Peter Viereck has written in Conservatism Revisited, "for its purpose is to conserve the values needed by society as a whole. Conservatism is betrayed when it becomes the exclusive property of a single social or economic minority." It is precisely this betrayal which has reduced American conservatism to its current fatuity. For the Republican Party as an organization has become in recent years so committed to the short-run interests of the business community that it has often tended to ignore what are clearly the long-run interests of the Nation.

A few examples will suffice to illustrate this conflict. High tariffs, for instance, protect the immediate advantages of certain industries. Yet every economist knows, and every politician should know, that we can maintain our tariff barriers and close our markets to foreign goods only at the expense of world economic stability. In the

long run, a protective tariff system will destroy the position of American business. But the magnetism of the short run is too great, and the Republican Party resists nearly every attempt at tariff reduction.

Similarly, in the field of social welfare it is obviously essential, if capitalism is to survive, to hold the loyalty of the masses to the existing economic system. And it is obviously impossible to hold that loyalty if the existing economic system fails to feed, house, and clothe all the people, to provide them decent medical care or adequate education. So the dictate of true conservatism would be to bribe the masses into loyalty, if you like, by assuring them the basic decencies of living.

As the British Tory Quintin Hogg has put it, "if you do not give the people social reform, they will give you social revolution." Yet the Republican Party, in proclaiming its crusade against the welfare state, is abandoning the working masses to the radicals—and all in the name of a lower tax rate. Again the short run triumphs over the long.

Similarly, in the field of foreign policy, the business community has no future except in a free and peaceful world. Yet again, under the banner of tax reduction, it demands cuts in our spending which threaten to dismantle vital parts of our Defense Establishment and of our foreign economic policy. The price of retirement in a world on the verge of war may well be national disaster.

Is American conservatism dead beyond recall? Has it become simply the political reflex of the fears and timidities of the leadership of business? One certainly sees no Disraeli leading the Republicans to an affirmative social policy at home; no Churchill calling for an adequate program to resist tyranny abroad.

Yet there are, I think, signs today that the true conservatives are attempting to rescue their party from the reactionaries with a vigor they have not shown since the days of Theodore Roosevelt. Young men like August Heckscher, Peter Viereck, and McGeorge Bundy have set forth for the first time in a generation a usable political philosophy for conservatism, and the activity of Senators like WAYNE MORSE and HENRY CABOT LODGE and Congressmen like JACOB JAVITS; of governors like Youngdahl, of Minnesota; Peterson, of Nebraska; and Driscoll, of New Jersey; as well as of younger politicians like Oren Root, Jr., and Philip Willkie, has suggested the main lines of an intelligent conservative policy.

It is not too hard to describe the positions a true conservatism should take. It must, in the first place, follow the example of Theodore Roosevelt and dedicate itself to the public interest as against the special interests of any single group. This position would have particular potency at a time when many citizens are becoming apprehensive over the power of organized labor. But it is not a position which Republicans can convincingly assume until they demonstrate that they have liberated themselves from a posture of entire subserviency before the business community.

In the second place, the conservative party must, like John Quincy Adams, commit itself to a program of social welfare. It can make its distinctive contribution to such a program by opposing the centralization of welfare services in the Federal Government. It can argue for the encouragement of private and voluntary initiatives; it can argue for the local and State administration of welfare policies. But again the Republicans cannot plausibly assume this position until they demonstrate that they are genuinely devoted to welfare objectives.

In the third place, the conservative party must, like Abraham Lincoln, assume a principled position on the question of civil rights. It must demand the speedy recognition of the equal rights of the Negro. And it must revive the ancient conservative respect for due process of law, especially as it affects the freedom of expression. It must follow Holmes and Hughes, not Mundt and Nixon; its best traditions, not its worst, on questions of political and intellectual liberty.

In the fourth place, the conservative party must, like Henry L. Stimson and Wendell Willkie, give unstinted support to foreign policies designed to assure national security. This means recognizing the dangers in the world and preparing to meet them. Nor do verbal blasts at communism or reckless demands for military adventures in Formosa constitute any substitute for the hard, exacting, costly job of constructing a foreign policy and appropriating the resources necessary to execute it.

Would such a four-point program be "me-tooism"? In the sense that this program admits to meeting the problems of the age of Truman, and not those of the age of Rutherford B. Hayes, it is no doubt guilty of that weird heresy. But in the sense that it represents an identity of program with the Fair Deal, surely not. The differences between the parties would remain great and significant.

By standing convincingly for the public interest, the Republicans could throw on the Democrats the onus of representing special and "selfish" groups. By standing convincingly for a program of decentralized welfare, the Republicans could throw on the Democrats the burden of explaining why everything must be run from Washington. Within the objectives of the twentieth century, an alternative program to the Fair Deal is entirely conceivable.

But to stand "convincingly" for these objectives, the Republicans must remember that conservatism is not the private property of the National Association of Manufacturers. It is not a device for increasing the short-run security of business. It is rather a profound sense of national continuity, stretching deep into the past and forward into the future, and providing a protective membrane for all the people of society.

"It is the people with a sense of injustice," Senator LODGE recently observed, "who become a target for Communist activity. The way to defeat the Communists is not by trying to shoot them, but by being just to our own people." This would be the essential doctrine of a responsible American conservatism and the only likely condition for its revival.

Low Brand of Politics

EXTENSION OF REMARKS

OF

HON. E. H. HEDRICK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. HEDRICK. Mr. Speaker, under unanimous consent to extend my remarks, I include in the Appendix of the RECORD an article from the Charleston Gazette, Charleston, W. Va., dated March 28, 1950, and entitled "Low Brand of Politics":

LOW BRAND OF POLITICS

It is unfortunate that an otherwise smart man like Secretary of State Dean Acheson should have been so neglectful of his public relations. Many a less able man has succeeded in public life because of a pleasing personality.

We believe that there is something more than loyalty to friends that has made President Truman announce that he is not going to fire Acheson in spite of the fact that it was hitherto generally reported that the President had enough of him and was letting him go. Apparently Acheson is to stay on the job indefinitely.

The foreign policies adopted by the Secretary of State are not his alone. They were worked out after many conferences with the President and his other advisers. The policies are the coordinated conclusions of the national administration.

Acheson is not the sort of man to "make friends and influence people." No doubt this phase of his character is due to some youthful inhibitions that expressed themselves in a retiring nature, even an antagonistic attitude toward others. He retreated within himself and fought back only when molested. Being an introvert he devoted himself to study, and having a fine mind he accumulated a wide and well-coordinated lot of general knowledge.

Be sure Acheson was fully discussed before the President appointed him. A man was wanted who would put up an uncompromising front toward Stalin and at the same time would follow the rules of common sense. Thus far that is what Acheson has done and the policy is having marked effect on Soviet Russia.

Acheson started out with making himself unpopular with the press. Probably he was not warned against that which is the only mistake of consequence he has made thus far. No newspaper reporter has given him the worst of it, but at the same time few if any have taken the trouble to report the more favorable aspects. Some columnist once observed that you may be able to whip a reporter one day but that he can whip a man in public life every day by leaving him out of the paper. That is not vicious retaliation but mere disinterest.

The Secretary of State having built up his own poor press he was considered a vulnerable member of the national administration by the Republican leaders. They decided to concentrate their attack on him, even to try to run him out of office. They hoped for criticism of the public that might be brought to bear on the administration as a whole. That explains the vicious attack by Republican Senator JOSEPH MCCARTHY. Acheson was to be made the goat and MCCARTHY was to heap criticism upon him.

Now the better balanced Republican leaders regret that the plan was ever adopted. It has kicked back seriously. MCCARTHY has been making accusations that later proved to be groundless. He has been so hell-bent on getting something on the Democrats that he has been blasting with a blunderbuss, hoping that he might hit someone or something in his blind attack.

Time was when the Department of State was an inept, antiquated and ineffectual department, run by career men whose chief ability lay in retaining social connections. A lot has been done toward ridding the Department of this element and toward making it a modern, up-and-going department. Acheson, without any publicity, has accomplished much along these lines.

Acheson's chief value, however, has been in his handling of international relations and in this he seems to have employed a high type of intelligence.

On the other hand, MCCARTHY by his blind, vicious and violent attacks on the Department has put serious obstacles in the path of the Secretary and has served only to hurt our international standing and influence.

It is a pity that a man like MCCARTHY can be allowed to do such a disservice to his

country by employment of low political party devices in an effort to discredit a high member of the national administration.

For honor, patriotism, and intelligence there is no comparison between the two men.

Foreign Policy an Issue

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the April 4 issue of the Bridgeport (Conn.) Telegram relative to our foreign policy:

FOREIGN POLICY AN ISSUE

In the congressional elections to be held in the fall, United States voters are going to be much more concerned with candidates' records than with their personalities.

Major issues are beginning to shape up, and reports from over the Nation indicate that men and women are deeply interested in foreign policy. Already the Republican National Committee chief, Guy Gabrielson, has denounced the administration's policy in violent terms, asserting also that the Communists have China today, solely as the result of our policy.

President Truman left no doubt that foreign policy will be a major issue with him and his Fair Deal associates when he thundered against Senators WHERRY, BRIDGES, and MCCARTHY, calling them saboteurs of foreign policy and branding them as the greatest assets of the Kremlin.

Senator TAFT then, speaking to Maine Republicans, said the only thing that will keep us from being victims of creeping socialism is to elect a GOP Congress this year and a GOP President in 1952. This is the only way, he said, to get rid of Communists in the State Department. And the State Department is engaged directly in shaping and carrying out foreign policy. Its leading exponent is Secretary Acheson, champion of the policy which, his critics say, is sympathetic to the aims of Soviet Russia.

Not since the issue of the League of Nations issue following World War I have we had such interest in foreign affairs. The world situation today is much more inflammatory than it was then.

When the President brushed off the Communist problem with the now famous redherring expression he made campaign material for his foes. He said the inquiry initiated by the Republicans was designed only to detract public attention from the extra session of Congress he had summoned to curb inflation. On the same day Alger Hiss denied he ever had any connections with Communists. We know now all about him, and Julian Wadleigh, Judith Coplon, and we know that 91 depraved persons were ousted from the State Department because they were easy prey for the Soviet's ring of agents here. Also, an undisclosed number of persons were tossed out of the Department because they were found to be poor security risks.

There is more to come, lots more apparently. By the fall the American people will have been treated to such an abundance of name calling, political pyrotechnics, testimony, and possible convictions of spying, their votes will be cast largely on where a man stands on this paramount question of foreign policy.

Address on Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. DOYLE. Mr. Speaker, the following is an address on Abraham Lincoln, delivered on Sunday afternoon, February 12, 1950, at the Ford Theater, Washington, D. C. This is the very theater room and location where Abraham Lincoln was assassinated. The speech was delivered by a distinguished lawyer of the State of California Bar Association, to wit, Ralph G. Lindstrom. Mr. Lindstrom is recognized as one of the prominent men of our Nation; he has given much of his time and ability to a deep and consecrated study of the events surrounding the life of Abraham Lincoln, and had come to Washington again for the expressed purpose of doing some more research work in our great Congressional Library. He had not come to make this address on the occasion of the observance of Abraham Lincoln's birthday. I was privileged to introduce him, as I know him personally, as a distinguished, able member, of the California bar, at Los Angeles, Calif., and as I am president of the Abraham Lincoln group of Long Beach, Calif., and also a member of the board of directors of the Lincoln group of Washington, D. C., I considered it a privilege to preside at this meeting February 12, 1950.

In my introduction of the distinguished speaker, I remarked that Los Angeles was a suburb of my home city of Long Beach, and that I had been relieved of giving the main address on this occasion on the life of Abraham Lincoln, by reason of the fact that Attorney Lindstrom had come to Washington that very Saturday evening before. This explains Mr. Lindstrom's remarks contained in the first two paragraphs.

The address follows:

ADDRESS ON ABRAHAM LINCOLN

Congressman DOYLE, ladies and gentlemen, I, too, am in one of the main points of Los Angeles County as to residence. I live in Beverly Hills and Los Angeles is the suburb in which I have my office. We permit Long Beach to be another minor community attached to Beverly Hills.

Congressman DOYLE was at a disadvantage. You see, he had 24 hours in which to worry. I have only had 15 minutes, so I'll start worrying after I make this speech on the way back to the hotel after the meeting is over.

Because of the shortness of time after the invitation today to address you, when I walked over to Ford Theater from my hotel, I stopped across the street at the Petersen House and stood there a little while in the room where Abraham Lincoln expired after having been shot by Booth in this building. This thought came to me: What would Lincoln be saying to us now? Are we embalming him in beautiful, lifeless monuments, or are we letting all these lovely memorials speak to us the message that Abraham Lincoln lived and died to leave behind for us? Is Abraham Lincoln dead in America or does he live in our hearts and in our civic lives? Are we thinking in terms of that great Federal Union for which he gave his life?

He had one life purpose, just one. He never forgot that one purpose. He was vilified because he wouldn't forget it. Abraham Lincoln stood long under great vilification because he was waiting for the support of the people of the United States in carrying out that purpose and for the time in which to carry it out.

This one life purpose I should like to have you consider was a Federal plan of government, a government under which people could live in a large area with unity in diversity. He was for that Federal Union because he knew the only alternatives were either the anarchy of no law in interstate or national affairs, or an over-all unitary national tyranny which absorbed all of the States and local governments, instead of preserving them.

In this morning's New York Times there is a beautiful editorial and I'd like to use two short paragraphs as my text for this afternoon. The editorial was speaking of the Gettysburg Address and of what Mr. Lincoln went there to proclaim, and then says:

"Mr. Lincoln's mind went back to the beginning of the Republic. He knew that principles laid down in 1776 were not secure in 1863 unless men were still willing to give their lives for them as they had done at Gettysburg and unless the living were still willing to work for them. One birth of freedom was not sufficient. From generation to generation freedom had to be reborn.

"Mr. Lincoln had a deep reverence for George Washington. It could not have been in his mind that he himself would some day be as greatly revered as Washington and even more deeply loved. He turned back to Washington and Jefferson over what seemed to him a considerable length of time, looking to them for inspiration and justification. Now, in the same way over the same span of time we turn back to Lincoln. The great task is still unfinished. If freedom in his day was having its new birth on one continent, now it is struggling to survive on all continents. From the words and memories of Abraham Lincoln we here again take increased devotion after this new lapse of fourscore and 7 years to the ancient and undying cause."

There are two possible paths before mankind. It was the peril which Mr. Lincoln saw for a nation which is now a world peril from which, in the light of Mr. Lincoln's life and purpose, we must save the world.

It is the old question of how to avoid the anarchy of no law to govern the relations of men, and still also avoid the unitary tyranny which absorbs all into a general government. Stephen Douglas on July 9, 1858, at Chicago said, in effect:

This fellow Lincoln would destroy all the parts, all the States, all the local conditions and sovereignties. He'd have Congress regulating cranberry laws of Indiana and telling Louisiana to raise corn and Nebraska to raise cotton. Why, God has fixed all that.

The next July 10, 1858, Mr. Lincoln made his response. Think it over in the light of today's conditions in the world:

"I believe each individual is naturally entitled to do as he pleases with himself and the fruit of his labor, so far as it in no wise interferes with any other man's rights."

Don't you see he reached way back to the first chapter of Genesis for that one? God gave man dominion over all the earth and man has been busy prostituting that dominion into an effort to have domination over other men. Lincoln continued:

"Each community as a State, has a right to do exactly as it pleases with all the concerns within that State that interfere with the right of no other State; and that the General Government, upon principle, has no right to interfere with anything other than

that general class of things that does concern the whole."

There is a perfect definition of sovereignty as always internal to an area of law and government.

Douglas, you see, charged Lincoln with a purpose to establish throughout the nation dead uniformity. Mr. Lincoln went right back to the constitutional fathers for his answer. He said:

"The great variety of the local institutions in the States, springing from differences in the soil, differences in the face of the country, and in the climate, are bonds of union. They do not make 'a house divided against itself,' but they make a house united. If they produce in one section of the country what is called for by the wants of another section, and this other section can supply the wants of the first, they are not matters of discord, but bonds of union, true bonds of union."

In his House Divided Against Itself speech in 1858 when he announced his candidacy for the United States Senate, you remember he started out by saying:

"If we could but know where we are and whither we are tending, we could tell better what to do and how to do it."

Well, where are we today and whither are we tending?

America has been given an opportunity to take leadership in the world, moral and civic leadership, in establishing law in place of anarchy for world affairs. This cannot be done without strong support and understanding by the people of the United States. I know there is a developing ground-swell for the establishment of law for world affairs by making the United Nations an effective instrumentality for world order and peace. But democratic governments cannot get too far out ahead of the people. It is of no use for us to inveigh against either political party or the administration, unless we give that ground-swell of public opinion to sustain a course of action which makes it safe in a democracy for an administration to proceed. Listen to how Mr. Lincoln saw that, when he was faced with the crisis of a dividing union and two sections of the country ready to destroy each other. When he was en route to Washington at Indianapolis on February 11, 1861, he said this, and he is saying it to us today:

"When the people rise in mass in behalf of the Union and the liberties of this country, truly it may be said 'The gates of Hell cannot prevail against them.' * * * It is your business to rise up and preserve the Union and liberty for yourselves, and not for me. I appeal to you again to constantly bear in mind that not with politicians, not with Presidents, not with office-seekers, but with you, is the question: Shall the Union and shall the liberties of this country be preserved to the latest generations?"

Oh, he labored, he thought, and, my friends, he prayed to save our Federal Union, our Federal plan. Now, was this for the United States alone and for its people alone? Let's turn to what Mr. Lincoln himself said so it will be no one's opinion about what he thought. When he responded to Douglas in Peoria in that great speech of October 1854, he said this:

"Let us readopt the Declaration of Independence and with it the practices and policies which harmonize with it. If we do this we shall not only have saved the Union, but we shall have so saved it as to make it and keep it forever worthy of saving. We shall have so saved it that the succeeding millions of free, happy people the world over shall rise up and call us blessed to the latest generation."

Again when he reached New Jersey on the same trip he referred to the struggles of Americans in the Revolutionary War, and then said:

"I am exceedingly anxious that that thing which they struggled for; that something even more than national independence; that something that held out a great promise to all the people of the world to all time to come: I am exceeding anxious that this Union, the Constitution, and the liberties of the people shall be perpetuated in accordance with the original idea for which that struggle was made."

Then, at the very darkest hour of the Civil War, when his Cabinet wasn't sure that he should retain the war powers as Executive and when the Congress, in its Committee for the Conduct of War, was questioning everything he did, then Mr. Lincoln dipped his pen into his very heart and told Congress in his message of December 1, 1862:

"We know how to save the Union. The world knows we do know how to save it. We, even we here, hold the power and bear the responsibility. * * * We shall nobly save or meanly lose, the last best hope of earth."

Notice, he didn't say "last best hope of the United States" but "last best hope of earth." Then he went on referring to the Union, the Federal Union:

"Other means may succeed; this could not fail. The way is plain, peaceful, generous, just—a way which, if followed, the world will forever applaud, and God must forever bless."

Well, whither are we tending? Now no one can seriously question today, that physically or conceptually, we are one world in time and space and in communications. We can fly to California from Washington in 9 hours. You can go to Europe overnight. It is one world physically. On that fact we cannot disagree; but in this one world physically we have two worlds, at least, politically.

One of these worlds or power groups is headed up, not by the Russian people, but by a dictatorship over the Russian people which seeks to be the head of a unitary world government with this Kremlin Politburo as a tyrannical totalitarian topkick. Oh, they don't say this. They deny it. But all their actions prove it.

On the other hand, the United States—and I fear unwittingly because of not taking the leadership in lawful world affairs—is rapidly establishing a unitary national government. This is not because of anyone's ideology, not because of anyone's politics, but primarily because in war or threat of war, the war power must be supreme. In the threat of war and in the conduct of war and in the backwash of war, power is siphoned from the States and local levels to the national level. It has done so, not only in this country, but is doing so in every nation threatened with or participating in world-wide war. In this country we are very largely substituting for our Federal plan, a unitary national government. Power flows to Washington. Its jurisdiction increases necessarily under the impulse to build a garrison police state to assure peace in a world area of no law or anarchy. We may find ourselves without peace, without a Federal Union, without liberty under a unitary, national, all-absorbing military government.

Again, whither are we tending? The people of the world stand mesmerized today before the hellishness of bacteriological weapons, an atom bomb, and a hydrogen bomb. They say to themselves, "Oh, we ought not use these but we must and so we will." Oh, I am not criticizing those in power who are developing these weapons. We cannot disarm unilaterally. We must be nationally strong until the United Nations has effective power to police the peace.

But the atomic monopoly is gone. The hydrogen bomb is no pure science secret. It apparently is only a question of technological development. Bacteriological horrors are beyond description as war weapons.

Well, then, what is the best hope of earth presently? Today our best hope is the United Nations. We must not sneer at it. We must not allow it to be frustrated out of existence by asking it to do what we do not give it the power to do. It is veto ridden. But we cannot and should not abolish the veto without safeguarding changes in the United Nations Charter.

It may be seriously questioned if Russia ever spiritually joined the United Nations. Today she is not participating at all. And when she does participate she stymies important action by the abuse of the veto.

The whole world is confronted with business dislocation and trade unbalance which makes, day by day, ever more serious problems in all parts of the world. In the United States we have an uneasy prosperity with a $260,000,000,000 national debt. Last year we had a $5,000,000,000 deficit, and this year we'll have another $5,000,000,000 deficit. We'll have a great deal of excitable debate about balancing the budget and reducing taxes, but as long as the present threat of war and an arms race with hydrogen bombs and other horrendous weapons continues, with 79 cents of every Federal tax dollar going to war, past, present, and future, there isn't much opportunity for reduction in that area of expenditure. We cannot much reduce that 79 cents per dollar until the nations of the world cease spending all their substance and give up all liberty in the stupid business of developing themselves into mutual extermination camps and competitive garrison police states.

I repeat, we cannot disarm unilaterally. We must develop a way under which it safely can be done.

The threat of inflation out of control is also the way we are tending. Speaking of inflation, I wonder if you have heard the anecdote which I recently learned. When in the Civil War the gold and silver stocks were shrinking rapidly and paper currency increasing, one member of the Cabinet said: "Mr. Lincoln, if we are going to have to print more of this paper money, let's at least take off this motto 'In God we trust.'" Mr. Lincoln thought a little while and then said: "Well, if you do take off that motto, we could print: 'Silver and gold have I none but such as I have give I thee.'"

We must also realize, I repeat, that Russia is deliberately the most isolationist nation in the world today. The Kremlin Politburo is striving for a unitary, single control, world government. Her concept of a world government would be a totalitarian tyranny, with the Kremlin Politburo at the top. Such a world government would absorb all sovereignties, all nations, all states, all cities, all school districts, all colleges and universities, all cultures and customs, all religions and rights. It would make our world the place of the living dead.

On the other hand, the United States unwittingly, I repeat, has gone farther down that same road than we realize. We do not in the United States seek a totalitarian world tyranny, but we are unwittingly changing our National Government into more of a unitary type than a Federal plan of government. Under the supremacy of the war power, it is idle to say that someone is deliberately doing this. It cannot be prevented, and if the cold war continues long enough and if we continue developing these mutual extermination camps and regiment this Nation of people to the extent necessary to police against hydrogen bombs, then, ladies and gentlemen, you are going to have a unitary National Government, no matter who is in power, because there is no alternative. And remember that power which continually flows to a unitary government seldom returns, not only because of the habit of power at the unitary level but also because the habit of the surrender of the exercise of local sovereignty and responsibility by the people and smaller units of government corrupts

independent self-reliance into supine dependence.

Oh, if we carelessly and through inertia change the Federal Government, to preserve which Abraham Lincoln gave his life, into a unitary National Government, even if we then won world war III, whether we fight it as a preventive war or as a defensive war, we will no longer be a nation of free men. We would have forgotten, I fear, America is adjured by her hymn: "* * * confirm my soul in self-control, thy liberty in law."

The United States, if it became the head of a unitary world government, would cease to be the instrumentality of freedom, of demonstrating liberty under federal law.

The American-tested federal plan of law for over-all affairs, but limited in jurisdiction to over-all affairs, is our only possible salvation from (1) world-wide destruction, (2) continued anarchy in world affairs until we return to barbarism, or (3) unitary and tyrannical world government. This federal plan is what American civic genius tested for the world. It is this federal plan for which Abraham Lincoln gave his life in this very building. This federal plan is the only possible alternative to unitary tyranny on the one hand or to anarchy between nations on the other hand. It is the only effective way to save the United States its internal sovereignty and way of life. It is the only safe and still effective way to save the UN. It is the only safe and still effective way to have a government for world affairs which will not be a threat to our Nation, our way of life.

In creating such a federal world government, as was true when we created our national federal government, by transforming, if we will, the UN into a government solely for world affairs, we will exercise our sovereignty. We will not surrender sovereignty. We surrender sovereignty by failing to use it. We will put law where anarchy now exists between nations. That is the only way of ever reducing the backbreaking expenditures which are making this and every other nation in the world insolvent today. Do not forget that in the most inflated economy of any nation in history which still retained any currency responsibility, we have not been able to reduce but rather have increased our national war debt. In 2 years we are adding $10,000,000,000. If the time came when we had a truly effective federal government for world affairs, and we were to spend $5,000,000,000 to support it, there would be, as against the nearly $15,000,000,000 we now spend on the current Military Establishment, an annual difference of $10,000,000,000. This saving could pay interest—$5,000,000,000—on our debt and amortize the debt at the annual rate of $5,000,000,000. What we now spend on debt interest could be used for a really helpful and much-needed tax reduction.

Also such a federal plan of government for world affairs would reverse the trend, the very dangerous trend, within the United States, toward a unitary, centralized government. It would permit us to carefully give Washington—and other nations can then give their national capitals—all the power, but only the power, essential in internal affairs in connection with their developing commerce and the closer association of people in daily life. At the same time it will enable us to retain our national sovereignty and existence, while at the same time we preserve local governments under local control. Thus we may also preserve the individual self-reliance which we so highly prize.

Sovereignty, as Mr. Lincoln conceived it, is an internal thing. It is internal to an area of law. It is internal to a government. It is internal self-control. Whenever you have a thing called external sovereignty, whether it be men with guns on their hips or nations with hydrogen bombs in their arsenals, to be used in an area without law, it is anarchy. External sovereignty is only a delusion. It is sheer anarchy. It is the anarchy which could spell the end of man.

When we save the UN by making it a federal world government for world affairs only, we will do it by creating an era of world liberty under world law where the anarchy of nonlaw now exists. This effective UN will be federal not unitary. Such an effective UN federation would not absorb national sovereignty but will preserve it. It will preserve nations and states and cities and cultures and religions and rights and freedoms and local laws. Yes, it will preserve, as our form of government has preserved, unity in diversity. That is humanhood's only way of governing a large area without the loss of liberty which is inevitable in a unitary over-all government.

Finally, the greatest blessing of such a federal concept of law for world affairs would be to challenge man to think in terms of people, in terms of men, and not in terms of nationals of despised enemy states. If man can commence to think in terms of man, there may again be peace on the earth and there may be brought out what Mr. Lincoln called in his first inaugural "the better angels of our nature."

I should like to close with what may be to some a presumptuous but slight paraphrase of a part of the Gettysburg Address. I am thinking of Mr. Lincoln whose conscious human life ended in this building. When he spoke at Gettysburg, referring to the dead there who gave their lives that our Federal Union might continue as our way of life, I think he was speaking to all men everywhere and for all time to come. Let Lincoln speak to us, here, now in our self-pledge to that great Unionist: "It is for us, the living, to be here dedicated, today and always, to the unfinished work which he who was assassinated in this building so nobly advanced. It is for us to be here dedicated to the great task remaining before us—that from our honored, assassinated President we take increased devotion to that cause for which he gave the last full measure of devotion; that we here highly resolve that our noble Lincoln shall not have died in vain; that the federal plan of government, under God, shall give birth to universal freedom from war; that federal government for world affairs—government of the people, by the people, for the people, shall be established upon earth so that men shall not perish from the earth."

Unjust Partition of the Republic of Ireland

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following letter and resolution:

ANCIENT ORDER OF HIBERNIANS,
Somerville, Mass., April 3, 1950.

Hon. THOMAS J. LANE,
Member of Congress,
Washington, D. C.

DEAR SIR: The enclosed resolution passed unanimously by the Massachusetts State Board, Ancient Order of Hibernians, at our last meeting is transmitted to you by direction of the State board.

I am sure it is not necessary for me to call to your attention the deep interest that true sons of Erin the world over have in eliminating the unjust partition of Ireland.

Your efforts in behalf of the Fogarty resolution (H. Res. 270) are earnestly requested.

Sincerely yours,

THOMAS C. PHILLIPS,
State Secretary.

RESOLUTION OF THE MASSACHUSETTS STATE BOARD OF THE ANCIENT ORDER OF HIBERNIANS IN AMERICA

Whereas our membership, as American citizens of Irish birth or descent, are justly proud of the contributions, sacrifices, and efforts the Irish have always so unselfishly made for the preservation of the great American principles: freedom, liberty, and the unity for the people of the United States of America; and these same Irish contributions were made in every war to preserve these same principles for the peoples and nations of the world oppressed by totalitarian groups or governments through communistic or other un-American practices; and

Whereas the Republic of Ireland is the one country in the world free from communism and its liberty-destroying theories and practices which today threatens the United States of America and the whole world; and

Whereas the Government of Great Britain has been the recipient of financial gifts and grants from the American taxpayers, including some 30,000,000 taxpayers of Irish blood, and from this aid, Great Britain has supported a puppet government in the six northeast counties of the Republic of Ireland against the will and votes of the majority of the people of Ireland; and

Whereas Great Britain has recently given its governmental recognition to communism in another nation of the world; and

Whereas in the event of war between our United States of America and the forces of communism, the Republic of Ireland, united with its 32 counties free from the Great Britain-made partition, would be the United States of America's strongest bulwark in Europe against communism: Therefore be it

Resolved, That the Massachusetts State Board of the Ancient Order of Hibernians in America, in regular meeting assembled at Boston, Mass., urgently requests the President of the United States of America, the Secretary of State Department of the United States of America, the Members of the United States Senate and United States House of Representatives to take proper action to have the Government of Great Britain to remove this unjust partition of the Republic of Ireland immediately by the passage of the Fogarty bill now before the Legislature of the United States of America; and that copies of this petition be sent to the presiding officers of Government in Washington, D. C.

The Massachusetts State Board of the AOH: Rev. Michael J. Houlihan, Chaplain, Watertown; Paul E. Tierney, President, Somerville; William P. Sullivan, Vice President, Holyoke; Thomas C. Phillips, Secretary, Worcester; James P. McCarthy, Treasurer, Malden; Hugh P. Caffrey, Organizer, Brockton; Thomas H. Murray, Mission Chairman, Brighton; P. Frank Kean, Director, Brighton; Thomas F. Hall, Sr., Pittsfield; William J. Ronan, New Bedford; Joseph P. McKenna, Methuen; Daniel J. Clifford, Watertown; Daniel F. Slattery, Norwood; Richard Fitzmaurice, Brockton; Hugh A. Moriarty, Worcester.

House Resolution 270

Whereas the House of Representatives, Sixty-fifth Congress (1919) third session, by House Joint Resolution 357, duly passed a resolution declaring that the people of Ireland should have the right to determine the

form of government under which they desired to live; and

Whereas in the intervening 30 years, the people of Ireland have so determined but the effect of their determination has been thwarted, and they have in fact been deprived of the right to the form of government under which they desire to live; and

Whereas 26 of the 32 counties of Ireland have been successful in obtaining international recognition for the Republic of Ireland which has, as its basic law, a constitution modeled upon our own American Constitution: Now, therefore, be it

Resolved, That it is the sense of this House of Representatives that the Republic of Ireland should embrace the entire territory of Ireland unless the clear majority of all of the people of Ireland, in a free plebiscite, determine and declare to the contrary.

The Effect of Present Federal Taxes

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. BOGGS of Delaware. Mr. Speaker, from time to time I have made statements on the floor of this House and elsewhere concerning our burdensome Federal taxes and their effect upon individuals and small business. In doing so I have attempted to express my own views as well as those of Delawareans who have written or spoken to me on this subject.

Recently, however, I received a letter from a Delawarean which expresses with infinite clarity and thoughtfulness the views and impressions of a private citizen as to the serious and detrimental effects of existing Federal taxation. I was so thoroughly impressed by the content of this letter and the importance of the views set forth in it that I requested and obtained permission of its author to have it included as a part of my remarks in the CONGRESSIONAL RECORD.

Mr. Speaker, in including this letter as a part of my remarks I urge all the Members to read it with care and to give fullest consideration to the statements contained in it. I especially direct attention to the fact that the day-to-day work of its author is the counseling of taxpayers and the preparation of business and personal income-tax returns. Through this experience she has, therefore, become particularly qualified to discuss the subject of the effect of Federal taxation.

Mr. Speaker, I want to add that in my opinion this is one of the finest statements on this subject which it has been my pleasure to read. The letter follows:

WILMINGTON, DEL., *March 25, 1950.*

HON. CALEB BOGGS,
House Office Building, Washington, D. C.

DEAR SIR: I have read with interest your efforts in behalf of a more nearly balanced budget for Government expenditures, but, like most of the business and private individuals in our country today, I am much concerned about the shackling of business and private enterprise due to the already high taxes and am more concerned about any possibility of having them increased.

It happens that my line of work and my private business is advice and preparation of business and personal income-tax returns. This has given me a very sharp picture of the effect of our present system, not only of taxation but the methods of collecting same.

I am sure you have been besieged with letters on the subject of taxes and their crippling effect, first on business expansion, business existence, the security of people who have retired on what should be, at least, a comfortable living income, as well as the great army of young people who are starting out today. My remarks in connection with these are brief:

1. People in retirement (who are trying to live on what was considered to be an adequate pension, augmented, perhaps, by some additional income from stocks and bonds, or real-estate investments), due to taxation crippling their dividends, due to rent control crippling their income from real-estate investments, and to the extremely high cost of everything they buy (perhaps because of taxes or Government subsidies) are faced with the fact that they do not have a living income.

2. The young people today, due also to the high cost of everything, have been forced to obtain property for themselves, and their families, with a crippling debt. The amount they have each year to amortize their homes is so small that, after all taxes have been met, the debt remains at a figure they may never be able to clear. When a young couple having an income of say $4,000 must pay a direct income tax of approximately $600 or over, plus a State tax, plus another $200 or $300 hidden tax on everything they buy, they have practically nothing to save.

3. In considering small business concerns the past 2 years alone, when preparing income-tax returns, I have seen three out of every five small businesses go to the wall and give up because their capital, instead of building up against a few months of slackened business (or perhaps a year) has had to be milked to the last cent for income tax even though their net profits were comparatively small.

4. It is a self-evident fact that each large corporation is the goose that lays the golden egg. It is they who already pay millions to the Government for taxes; it is they who furnish employment to thousands and thousands of workers who, in turn, pay millions in taxes; it is they who pay dividends to individuals who, in turn, pay tax on the dividends. It is they who, because of their economy of organization made possible because of their size, can operate with lower overhead and furnish every product they make to the public at a lower cost, and they, too, who support the smaller business firms from whom they purchase supplies.

The above protests are all in favor of the individual citizen or organization that suffers from high taxes, but our legislators, I am sure, must analyze the tax problem also from the standpoint of annual income to the Government. From this standpoint it seems to me the same arguments are effective as for the above groups who are taxed, i. e., add, if you will, additional tax to corporations. They will pay lower dividends. The individual will pay less tax on those dividends. The corporation will pay lower salaries. The employees will pay less tax to the Government on a lowered salary. They will have to increase the cost of their product. Assume, for a moment, it is an automobile. Higher prices of cars, with lowered income for the individual, means less sales of cars, less sales means no excise tax on the unsold cars.

Every small company that goes out of business ceases to pay tax to the Government, while it is the high price of taxes in the beginning, to a great extent, that has squeezed them out; they, in turn, pay no employees. Those employees go on relief. The Government must use an equal amount of money to support them.

In the final analysis does increasing taxes increase Government income? Where, then, is the advantage to the Government of keeping crippling wartime taxes with a country not at war?

In considering the hardships of excessive taxation, there is one point which has been brought out to me in contacts with many taxpayers through my own business. They are a solid front on the standpoint that the Government should allow, at least, a fair living sum as exemption before start of taxation. This applies especially to young, single people, widows, and people well along in years yet below the 65-year limit. One thousand and two hundred dollars exemption as a living income, before taxation, is the very least that seems fair for the citizen, regardless of the Government's need for money.

May I call to your attention the fact that the auditors of the Internal Revenue Bureau in auditing an account that seems out of line and in which they cannot identify money used for the taxpayer's living expenses, always add as a minimum to their indebtedness for assessment from $1,200 to $3,000. If that is considered the minimum to be added for living expense of the taxpayer's money in a year for taxation, that should be the minimum used for the individual's exemption against taxation. In other words, when our Representatives in Congress come to the point of feeling that income taxes should be reduced, the fairest place to start is to allow more exemption for everybody. The reduced taxation in 1948, due to the recognition of community property rights with a split income for married people, relieved that class of people a great deal. It did nothing for thousands of individuals who have lost their mates, or who have never had one, or for the young people who are just starting out in life and must look forward to the necessity of saving if they are ever to establish themselves on a firm basis in the United States of America, the finest country in the world.

Apologizing for taking so much of your time, and congratulating you on every good move you have made in the interest of the citizens of the first State of the United States, whose deciding vote decided liberty, and with admiration for your representation of me in Congress, I am,

Most respectfully yours,
(Miss) LOUISE H. TATNALL.

Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. COLE of New York. Mr. Speaker, among the innumerable letters from constituents occasionally we receive one which contains an unusual amount of sound judgment relating to manifold problems of government. Such a one I have recently received from a constituent and take pleasure in including it in the CONGRESSIONAL RECORD.

The letter follows:

OSWEGO, N. Y.

HON. W. STERLING COLE,
House of Representatives,
Washington, D. C.

DEAR MR. COLE: While I realize that you are very busy I would like to tell you the kind of Government that I would like.

I would like a Government that is for all the people and not for this labor group or this farm group.

I am not a member of any labor union but I firmly believe in the right of labor to organize and bargain collectively.

I believe they should accept the responsibility that goes with power and remember that a few labor unions in key industries should not rule the country.

Between 1900 and 1908 we curbed the power of the great trusts and it is as it should be.

I believe that labor unions should be subject to the same laws as any other body with great wealth and power. We cannot have one law for Joe Doakes and another for Tom Jones.

As for the Federal aid to schools, I do not want it or need it. In the first place I want church and state completely separate.

I am not in favor of $1 of public money going to any private school, religious or otherwise. If the Baptist, Methodist, Catholic, or any other group want a private school they should pay for it. I want the privilege of helping if I feel that it is good. I do not want it in my tax bill.

I am not in favor of Federal aid to anything that should be done on the local level.

I do not have a college degree in economics but from any angle that I can figure I can't see where it pays to send $3 to Washington to get from $1 to $2 back in Federal aid. In many cases the money raised on the local level would do the job without the aid.

Our county's last report said that the relief load was 56 percent of our budget, 80 percent being reimbursed by the State. The 20 percent that we raise locally would do the job if the State and Government would keep out and only those were on relief that should be.

Will you please tell me where I and millions of small fry like me can go for some relief from this kind of government, surely not the Democratic and Republican Parties as they now are.

If you have taken the trouble to read this I thank you. This letter is from one of your small-fry constituents who has never bothered you before. I am a World War I vet, having served in France with the Eighty-seventh Division and strange as it may seem I am not looking for a pension or any other hand-out, except the privilege of working and taking care of myself.

Respectfully yours,

GUY E. PETTIS.

Government Propaganda Writers

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of March 28, 1950:

HOW TO WRITE PROPAGANDA

For young students of the art of writing political propaganda we recommend very highly a study of the Steel Report just issued by the Joint Committee on the Economic Report.

The drafter of this report, whoever he may be, is an excellent craftsman. Eschewing the bludgeon, he shows what a master artisan can do using words with the subtlety and finesse of a fencer.

The techniques used in the report are many, but perhaps one example will suffice to show the skill of the writer. One of the recommendations of the committee was made to read like this:

"With the express purpose of revealing the effect on free, competitive enterprise of present trends in the steel industry, a study should be authorized to examine the extent to which the steel industry has developed technological and economic similarity to public utilities and has acquired such strategic importance in war, peace, and the maintenance of high-level employment as to become uniquely affected with a public interest in order that Congress may determine what, if any, legislation should be adopted for the preservation of competition."

Now a cursory reading of this paragraph might persuade any man to endorse it. Seemingly it only calls for another of those studies that Congress habitually undertakes wholesale. Who could possibly object to a study of the steel industry?

But let us look more closely at what a skillful writer has done with the wording of this simple proposal.

The study's purpose, it will be noted, is not to determine whether present trends in the industry have effected free, competitive enterprise; its purpose is to reveal what the industry has done to free, competitive enterprise. And a revelation subtly predisposes the mind to presuppose there is something bad to reveal.

Again, the question is not whether the steel industry has become similar to a public utility or whether it is uniquely affected with public interest. The study is to determine the extent to which it has devolped these qualities. Again, you see, it is assumed in advance that the steel industry has acquired at least something of this peculiar status about which something ought to be done.

But what about that phrase "if any"? The Congress is to determine what, if any, legislation is to be adopted. Doesn't that leave the question unbiased and open to debate? Isn't the writer being eminently fair in not prejudging matters?

Well, Congress having revealed that the present trends in the steel industry are affecting free competition and having decided that the industry is uniquely affecting the public interest in everything from war to full employment, is to decide what, if any, legislation "should be adopted for the preservation of competition."

Consider this marvelous smoothness. Congress is not to decide whether legislation may be necessary or advisable; it is to determine what legislation should be adopted. And this legislation is for the preservation of competition—competition that is assumed to be endangered.

True, the wording does leave one avenue open. Congress could decide it isn't interested in preserving competition; it could decide it doesn't give a hoot-nanny about war preparedness, the maintenance of high level employment, or the public interest in general. In that case it might decide to have "not any" legislation.

The skill of this is that the word duellist has closed off every avenue of escape from his way except the one road he knows his antagonist will not take. For all practical purposes, the findings of fact, the conclusions and the recommendations are decided before the study even begins.

It is a beautiful piece of work, and this excellence of quality is, amazingly, sustained throughout the whole report. If there were a Pulitzer Prize now—as there may be some day—for outstanding work in dialectical propaganda, we should unhesitatingly recommend that it go to the nameless and unhonored creator of this work of art.

Natural-Gas Industry

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes from the Buffalo News of March 31, 1950:

THOMAS L. STOKES SAYS DEMOCRAT-PASSED GAS BILL TO HAUNT TRUMAN ON TOUR

WASHINGTON, March 31.—President Truman may find himself embarrassed in attacking the special interests in his projected cross-country whistle-stop tour to begin early in May unless, meanwhile, he vetoes the Harris-Kerr-Thomas bill that frees independent natural gas producers from regulation by the Federal Power Commission.

The measure, which would cost 40,000,000 natural gas consumers millions of dollars annually, soon will be placed on his desk for decision. It was sponsored by Democrats and put over in the Senate this week, as in the House last session, by Democratic votes in a Democratic Congress. A bill of similar purpose, though broader in scope, could not even get through that Eightieth Republican Congress, which the President denounced in 1948 as the worst in history.

This was, indeed, a special-interest coup. The result in the Senate is disturbing evidence of the weight now exerted by "big oil" in the Democratic Party. "Big oil" was behind the bill, which will benefit handsomely a handful of the Nation's major oil companies. They own the bulk of natural-gas reserves in the Southwest and will enjoy virtually a monopoly status if it becomes law.

On his way across the country the President will travel through States where consumers are vitally affected by this measure. A number of Republican Senators from that area, reflecting this consumer concern, fought bitterly against it and voted against it.

Republicans supplied the majority of votes against the bill in the Senate, with 16 Democrats voting with them. Twenty-eight Democrats voted for it, along with 16 Republicans.

At the western terminus of his tour, the President is to dedicate a great public power project, Grand Coulee Dam in Washington State. Incidentally, it was while on a visit to Grand Coulee on his transcontinental tour in June 1948 that the President made his crack about the Eightieth Republican Congress being the worst in history.

The Democratic Party's leadership in Congress plainly defaulted on this issue, though a minority of individual Democrats in the ranks fought it. President Truman, who openly opposed it in the last session of Congress, was represented about the lobbies of the Senate during its consideration as not accepting it, though this was denied by aides in Key West.

Senator SCOTT LUCAS, Democrat, of Illinois, the administration's Senate leader, walked out completely on the fight. Leadership was assumed by Senator PAUL DOUGLAS, Democrat, of Illinois. So effective was his direction of the battle, with the able help of a number of Republicans and a few other Democrats, that the reported overwhelming majority claimed for it at the outset was whittled down to a very thin majority ultimately.

Originally, it was thought the debate would consume only 3 or 4 days. As public interest and pressure mounted, the debate continued for 2 weeks. During its course the bill was transformed from the routine matter that its

sponsors tried to make it into a full fledged national issue on which consumers far and wide were alerted.

The Democratic Party hasn't heard the last of this.

United States Can Save World From Communism Only by Unity at Home and Abroad

EXTENSION OF REMARKS
OF
HON. REVA BECK BOSONE
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mrs. BOSONE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Salt Lake Tribune of January 29, 1950:

UNITED STATES CAN SAVE WORLD FROM COMMUNISM ONLY BY UNITY AT HOME AND ABROAD

Are we going to give Russia the world by default?

If the rejection of aid to Korea by the House Representatives is made to stick and represents a continuing attitude of the anti-administration bloc, Asia might as well be written off our slate. Europe, too, is threatened by a widening partisan split which may affect the Marshall plan.

Strategically, there may be little reason to try to hold Korea. Much of past expenditures there may have gone down the drain. The main thing about the congressional rebellion—stemming from a quarrel between the past and the present—is that it clouds our over-all foreign policy. "The issue in the Korean aid bill is whether the United States will honor a commitment made to the people of southern Korea and in the presence of the United Nations," says Walter Lippmann. "The question of honor is paramount." If the people of Asia, not yet gobbled up by communism, become convinced our policy is unstable, they will be quicker to turn to Russia. The Soviet, of course, is working through its fifth column and propaganda machine to drive us out of Asia. The "hate Americans" campaign is bolstered by the fact that Chiang Kai-shek remains on our back.

Two courses of action could alleviate our foreign policy crisis. Formation of a really bipartisan program (actually none has existed concerning Asia) and closer cooperation and consultation with other non-Communist countries are essential to salvage anything. This being an election year, it is perhaps naive to hope that any working arrangement can be made between the administration and the congressional rebels. Both sides are to blame for the current schism.

Having written off Nationalist China, the State Department is awaiting the report of Special Ambassador Jessup, currently touring the Far East, before launching a new policy. But time does not stand still. The India-Pakistan feud grows hotter while the Communists await an economic break-down to pave the way for them to take over. French Indochina is in peril from a domestic Communist revolution and possibly from an invasion by Chinese Reds. Civil war undermines Indonesia. Communist forces are on Tibet's frontier, and Burma's Government totters. The question of Japan and the need for a peace treaty is so highly complicated that discussion must wait for another day. Meantime, General MacArthur is occupation chief for the former allies, including Russia and Britain, which have recognized Red China, as well as the United States, which has not. Japan's economic future is closely tied to China.

Signing of agreements with eight Atlantic Pact partners under the military phase of the North Atlantic Defense Pact turns attention for the moment from Asia's misery to Europe. Our row with Bulgaria has brought suggestions that Congress act to revoke and repudiate the treaties with the Russian satellites which have been made meaningless. Secretary Acheson, reversing his policy toward the last survivor of the Fascist Axis, Spain's Franco, now proposes to restore full recognition, when and if the United Nations approves. (This indication of expediency and self-interest is similar to our plans for supporting Bao Dai in Indochina.)

The "little blockade" in Berlin is variously interpreted as a minor harassing tactic and a possible show-down which could bring war. Tension in the Saar, disagreement with Britain, and countless other mounting problems call for a definite and agreed over-all policy by the United States.

It is becoming increasingly clear that we cannot continue indefinitely to try to mold the kind of world we want with mere dollars. If the debacle in China did not prove that, our national deficit does. Even administration supporters admit we must limit our objectives to what we can afford, and to programs which can be carefully worked out. Thoughtful observers believe that much can be salvaged in southeast Asia, but only after consultation and cooperation with other governments having interests in the region, including India, Pakistan, Indonesia, Thailand, the Philippines, Australia, New Zealand, Great Britain, France, and the Netherlands. Point 4 help should go to countries which indicate they want it and show they can use it effectively.

Meanwhile, the door should not be shut tight against dealing some way with the Chinese. The Mao regime, like that of Tito in Yugoslavia, may find its interests clash with Moscow's.

The cold war will continue for some time. Failures may heap fuel upon isolationist fires and increase cynicism. Regardless of what we try to do the world is bound to remain in a mess for years. Our main hope is to build stability where possible. It can be done only if we achieve a measure of unity in our Government and with the friends we have left in the world.

Meanwhile, we should lend all support to efforts to strengthen the United Nations, leading eventually to some form of world government.

Profits of Corporations

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

1949 CORPORATION PROFITS ALMOST RECORD BREAKER

NEW YORK, March 11.—Profits of 565 representative American corporations last year almost equaled the all-time high record set in 1948. The total is only 2.6 percent under 1948 earnings of these same companies, making 1949 the second most profitable year in the history of the Nation's industry.

These companies earned 20 percent more than in 1947, and 70 percent more than in the postwar conversion year of 1946.

The figures are shown in a compilation by the Associated Press of earnings reports of typical corporations, large and small, in 26 major fields which to date have published balance sheets for last year.

The showing for 1949 is impressive because of the snap-back in business from the recession starting early in the year. At that time the profits barometer pointed downward, giving rise to a feeling that the big postwar boom was over.

But recovery progressed steadily thereafter with a pick-up in the profits picture becoming more evident in the final quarter of the year.

The 565 corporations reported dollar profits of $5,049,852,639, a decline of 2.6 percent from the 1948 total of $5,186,705,908. The total was a gain of 20 percent over the 1947 total of $4,218,702,007, and was 70 percent higher than the $2,971,939,076 reported by these corporations in 1946.

The earnings of the big automobile companies had a marked influence on the over-all totals. Total earnings of nine makers of autos and trucks were 44 percent higher than 1948 although five of the nine fell behind their 1948 totals. These companies not only made the biggest percentage advance but also contributed the largest number of dollars to total earnings.

Earnings of air lines and aircraft companies gained 41 percent over the previous year, but total dollar earnings were small compared with automobiles.

Agricultural-implement companies advanced 24 percent, cement makers were up 17 percent, and the manufacturers of drugs, cosmetics, and soap showed a 13-percent rise.

While automobiles were moving ahead in the profits column, the producers of motor-vehicle parts and accessories just managed to hold their own by making only five-tenths of 1 percent less than in 1948.

On the other side of the ledger are the companies whose 1949 profits were less than in 1948.

The oil group, with 24 companies, stands out. Last year the group headed the list of dollar earners (excluding utilities) even ahead of automobiles, but this year it slipped down to fifth place with total earnings 26 percent less than in 1948.

The biggest slide from 1948 was made by the textile group, off 54 percent.

Coal-mining companies, as might be expected because of strikes, backed down 43 percent from the previous year. Metal-mining companies were close behind with a total 42 percent under 1948. Paper and pulp makers were down 36 percent, and the machinery and tool manufacturers were 31 percent lower.

Altogether, 63 percent of the individual companies reporting had profits lower in 1949 than in 1948, while 37 percent advanced.

The railroad group of 27 lines, not included in the grand total of 565 companies, reported earnings of $334,032,560, a decline of 37 percent from 1948 and 11 percent from 1947. The total, however, was 70 percent higher than in 1946.

Val. J. Peter Named a Knight of St. Gregory

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following letter and newspaper article:

GERMANIC PUBLISHING CO.,
Buffalo, N. Y.

Hon. ANTHONY F. TAURIELLO,
Congressman, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: I thought you would be interested in the news that Pope Pius XII has named Val. J. Peter, publisher of our newspaper, a knight of St. Gregory. Press clippings enclosed.

Mr. Peter comes to Buffalo often although he lives in Omaha, Nebr. The announcement of his appointment was made by Archbishop Gerald T. Bergen, of Omaha, upon advice of the papal delegate in Washington.

We, who have had the good fortune to be with him for many years, know the tremendous work he has done and is continuing to do toward the goal of Christian approach to the solution of world problems through his various newspapers from coast to coast.

We know that you and his many other friends join with us in extending our best wishes to him on the occasion of this honor.

With every good wish, I remain,

Sincerely yours,

BUFFALO VOLKSFREUND,
By HARRY B. SCHUNECHT,
General Manager.

[From the Omaha Morning World-Herald of March 31, 1950]

OMAHANS NEW PAPAL KNIGHTS—BERT MURPHY, VAL PETER TO BE INVESTED

Two prominent Omahans have been made Knights of St. Gregory the Great.

Archbishop Gerald T. Bergan said Thursday the high Catholic Church layman honors were conferred by Pope Pius XII on Andrew Albert (Bert) Murphy, 75, car dealer; and Valentine Peter, 74, German-language newspaper publisher.

Word of the Pope's action came from the apostolic delegation in Washington, said Archbishop Bergan. The pontifical honor was conferred on the recommendation of the archbishop.

Public investiture of the two new knights will be after Easter, when official briefs are received from Rome.

The knighthood was established about 100 years ago by Pope Gregory XVI to honor Catholic laymen for exemplary lives and services for the church.

SIX OTHER KNIGHTS

Other Omaha knights are Navy Secretary Francis P. Matthews, J. Francis McDermott, Dr. Adolph Sachs, J. E. Fitzpatrick, Edward F. Leary, and Charles W. Hamilton, Jr.

Archbishop Bergan said that Mr. Murphy "is held in the highest esteem by all citizens of Omaha and the Midwest irrespective of religious belief."

Mr. Murphy's business, Andrew Murphy & Son, last November marked its eightieth year in business in Omaha.

"Without any doubt," said Archbishop Bergan, "he would be considered Omaha's most beloved citizen. He has ever enjoyed the regard and respect of all the clergy and bishops of Omaha, including myself."

PETER'S DESCENT GERMAN

The archbishop lauded Mr. Peter as one of America's outstanding Catholics of German descent.

Born in Lower Franconia, Bavaria, Mr. Peter was brought to the United States when he was 14. His father died 2 years later. Mr. Peter taught school for two sessions, then got a job on a semiweekly language paper at Rock Island, Ill. Later he bought the paper at a sheriff's sale.

He now publishes papers from Baltimore to San Francisco and is believed to be the country's largest publisher of German-language newspapers. He has the Omaha Daily German Tribune in Omaha.

The Peters have 12 children.

Smear Campaign Threatens To Slow Down Movement To Build a Peaceful World

EXTENSION OF REMARKS
OF
HON. REVA BECK BOSONE
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mrs. BOSONE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Salt Lake Tribune of March 27, 1950:

SMEAR CAMPAIGN THREATENS TO SLOW DOWN MOVEMENT TO BUILD A PEACEFUL WORLD

The American people are genuinely concerned about the growing world tension and Congressmen's mail is being flooded with proposals for peace. Pressures for action have mounted since the administration decided to proceed with building of a hydrogen bomb, according to a Congressional Quarterly report.

In addition to organizations seeking world federation, disarmament, peace talks with Russia, or a revamping of the United Nations, church groups are emerging as strong backers of a moral crusade for peace.

Unfortunately, organizations disagree on ways to insure peace. Shaping up is a bitter-end show-down on the question of world federation versus national sovereignty. The controversy conceivably could become so bitter that it would balk any real movement toward a stronger global organization. However, more hopeful observers see an opportunity for working out a compromise between the various plans as the debate reaches a climactic stage.

Chief stimulant for the flood of letters to Congressmen, says the Congressional Quarterly, continues to be plans pending in Congress for a kind of Government which could legislate on the basic causes of present international frictions. Eleven major proposals are formally before Congress at present; 3 of them are jointly sponsored by 10 or more Senators. One is backed by more than 100 Representatives. All are aimed at peace, though varying in ways the sponsors feel it may best be secured. Most prominent among the proposals are plans to alter the United Nations and to achieve a federation of democracies by way of the UN. Leading proponents of various plans are United World Federalists, Federal Union, Inc.; American Association for the UN, Citizens' Committee for UN Reform, Chamber of Commerce, League of Women Voters, American Legion, Society for the Prevention of World War III, and the Committee to Frame a World Constitution.

While plans for insuring peace have been multiplying and gaining converts, a counter-campaign has gained strength to balk any proposal which would abridge American sovereignty. This campaign has taken on such proportions in some sections that efforts are being made to smear the United World Federalists. In Georgia a world government resolution has been repealed. Maine's House of Representatives voted for repeal, but the senate stood by its world government resolution. Repeal motions are pending in New Jersey and Virginia.

Mary Hornaday reports in the Christian Science Monitor that the campaign against world government has been taken up by such right-wing organizations as the Women's Patriotic Conference on National Defense, the National Society of New England Women, the Dames of the Loyal Legion of the United States of America, the American Coalition, and the Veterans of Foreign Wars.

A speaker before a group of women patriots told a congressional committee, "There is little difference between those who advocate the overthrow of the Government of the United States and those who advocate the surrender of the Government of the United States." Some critics have gone so far as to brand the UWF subversive. Some of the "dangerous left-wingers" interested in the movement include such patriotic and able persons as Dr. Albert Einstein, commentator Raymond Gram Swing, playwright Robert Sherwood, Supreme Court Justice William O. Douglas, attorney Grenville Clark, historian Carl van Doren, and Norman Cousins, editor of the Saturday Review of Literature. How ridiculous can smear campaigns get?

UWF policy adopted in October 1949, said federalists differ on how much power a world federal government should have at the start, but fully agreed that we should move as rapidly as possible to a world federal government with authority and power to legislate on basic causes of international friction. The group backs UN, but says it cannot prevent war as long as it remains a league of sovereign states.

The Atlantic union plan of Federal Union, Inc., calls for a union of the free democracies. It calls for immediate development of the North Atlantic treaty powers into a regional federation within the UN. It differs from world federation mainly in procedure. Other plans would revise the UN Charter and abolish the veto in the Security Council.

There is little hope for achieving real security as long as people are locked in a bitter fight over sovereignty as against world government. America will be unable to sell the idea of federation to the strongly nationalistic Europeans until its people demonstrate that they are willing to lend their support to an international authority to stop wars. The United States can hardly point the finger of scorn at "noncooperative" Russia if they cannot join in support of a plan calling for more than an international debating society.

Conservation and Development of Natural Resources

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. RAINS. Mr. Speaker, on February 27, there was held in my home town of Gadsden, Ala., an important meeting for the purpose of discussing ways and means for the conservation and development of the natural resources of our great State. Maj. Gen. Lewis A. Pick, Chief of the Corps of Engineers, was the featured speaker at this meeting. I commend his address to the attention of the Members of Congress:

What I would like to talk about is the building of a greater America.

If you were going to start out today to lay out a blueprint for the building of a greater America, where would you start? If you were going to lay out a plan for the building of this great dam on the Coosa River that we

hope to start next year, what would you do? Well, I don't know what you'd do, but I'll tell you what if you didn't do, you'd be in a very bad way in a very short while. And that is, if you did not find the right kind of foundation before you started building on it.

Now, if you're going to build a greater America, what kind of foundation would you start with? As you build a great country you can't stop in the middle of the building and turn around and start all over again. Because it requires too much effort, too much money, and would disrupt too many things to try to rearrange the building of a great country every few years. So, to build a greater country than we are now and one which you and I both know is the greatest country in the world, you'd have to start on those things which would give you the firmest foundation. Those of which you have the most. Those which would last you longer than any other potential which you have. If you didn't, you'd be like the man memorialized in the Bible who built his house upon an unsecure foundation.

Now, in order to build a greater America, and we must build a greater America. We must build a greater United States. We must build on our greatest potentials. I've seen the Garden of Eden. I've seen where the Euphrates and Tigris come together. And I'll guarantee you that there's nothing left there but a little thin fringe of date palms on both sides of those two streams. And they're maintained because they take the water out of the Tigris River and run it around the rows of date palms in order to feed the roots with the proper amount of moisture to keep them going. For thousands of miles on each side there is nothing but sand, no trees, no grass—perhaps a little thistle. And that was the section of the country which at one time produced cities like Babylon. It was the center of the agricultural development of the known world at that time because that was memorialized as the area in which the Garden of Eden was located. We in the United States, know that we are a young country. We know that there is plenty of land right in the States of Alabama, Georgia, and Mississippi and the other Southern States that have been worn out farming. A man told me not long ago that he had worn out three farms. Think about it—a man wearing out three farms during his own lifetime. It means that he actually did wear it out. He cultivated the land so that all the topsoil washed away. But, down in this part of the United States when you do wear out a farm, we can throw it out and let it lie idle for a number of years and it'll grow a crop of pine trees or hardwood. We can reclaim that land, but you can't reclaim such land in the West. Once it wears out and gets ground up into shale, it won't even grow grass. It's gone forever. It's bad land.

Therefore, if you were to lay out a blueprint for the United States you'd have to start with your land if you wanted to continue strong as an agricultural nation, and we must do that. God forgive us that day when we have to go abroad for our meat and bread. Meat and bread for whom? The present population? Or the population we're going to have in the next 50 years? You and I know that the population of the United States has doubled since 1900. You and I know that our population is increasing at the rate of 2,000,000 per year. You and I know that at the end of this present century—50 years hence—we're going to have a much larger population than we have now. And, certainly, in a hundred years from now, conceivably, we will have 300,000,000 people. Now, what does that mean?

It means that we cannot exist as a leading nation of the world by continuing to be just an agricultural nation. However, we must continue to be a strong agricultural nation. We must always try to raise enough meat and bread to take care of our own people.

We've already developed into one of the greatest industrial nations in the world. Can we rest on our laurels? If we come up in the year 2000 with 200,000,000 people we've got to have jobs for them. We've got to provide employment for them. We've got to keep those people busy, if we want to maintain our way of life. Therefore, we must continue to build industrially. We cannot afford to stop now because, as soon as we stop building in this great country of ours we'll start down. Think about the countries that have passed by the wayside during the time of written history. You can see that the civilization has drifted from the Middle East on to the west. We have just inherited the leadership in the world, although that leadership is being challenged. We must not allow the challenge to disturb our going forward. We must not allow anything to disturb us from going forward. But we've got to do it wisely.

I've told you about one of the great potentials. The other is water. It means that we've got to have sufficient water to meet the needs of the people of the United States in carrying out the rebuilding of a greater America. The building of a greater United States. We've got to have the water. In my estimation there is no limit to that building of a great America. There isn't but one thing that will limit that building of a great United States or greater United States. That one thing is not land, but it's water—water. Our Nation, less than 200 years old under our presently constituted government and, yet on Saturday night, I was sitting in a hotel restaurant in New York and the man came around and said, "Will you have a glass of water?" I said, "Yes." He said, "You know if you want water in New York you have to ask for it." They are not serving water on the restaurant and dining room tables in New York now.

Think about it. Think about it. They discovered gold in California in 1849. In that 100 years the boundary of the United States has been shifted from the Mississippi River to the California coast. All of that happened in such a short time. Most of it happened since the Civil War. We've got States in the United States that are only 34 years old. We are a young and prosperous Nation. We must continue to be a young and prosperous Nation because the young men will build this country. The young men will build it. The young men must take up the burden as they come around to take over the jobs from us older people. They are the men with vision to go ahead with the building of this great country. Industrially we've been able to build up rapidly because we had such a vast storehouse of natural potentials in the form of mineral resources in this country. You and I know that those mineral resources have been used up at a rapid rate. You and I know that the backbone of all of this great development in the United States has centered around that load of iron ore on the Iron Range in Minnesota and Wisconsin. You and I both know today that's running out. And you and I know that it wouldn't be wise to take all of that out of the ground before you found a new source.

You have to provide cheap transportation if you want to continue as a great industrial nation. That is absolutely true. We must provide the cheapest transportation that is possible, because what have we got to do? We've got to continue as a great industrial Nation. That means we can always produce more than necessary to meet our home consumption. We've got to send some abroad to the far corners of the world. Now we can go into the far corners of the world, and get the natural mineral ores and raw products that we need if we bring them here by employing cheap transportation. And get it to the areas in which they can be worked up, processed, and then sell the finished product to our own people and export the rest of it to the far corners of the world. But we cannot do that and at the same time go out and have to bring in our meat and bread. We have seen countries fall by the wayside because they tried just that system of doing things. England today is in a terrible fix because she's trying to carry on an industrial development and, at the same time, bring in the raw materials and also bring in the food. It can't be done.

We've got the highest standard of living in the world. We've got to guard that, jealously so. Therefore, we've got to do everything as cheaply as possible. And, remember, that we've got the two potentials to work on—our land and water. We can take care of the land. The people of the United States, our Government, our Congress, are all conscious of that fact and working toward that development. It necessarily must come slow because it is such a vast undertaking. But tremendous progress is being made on it. But, if we've got an industrialist development in the United States now that balances off to take care of 152,000,000 people, we've got to have a greater industrial development later on to take care of those people that are coming along to increase our population. The one thing that stops industrial development in any area is the lack of water. New York is short of water now. They can get some more water, but there is a limit to that which they can get. They will increase their supply up there. They are already working to increase it. But that will take care of them for 15—not more than 20—years because they've had to rebuild their system on an average of every 10 to 15 years. Philadelphia, Jersey City, Baltimore—they all know exactly how much water they have available to them now, and that must last them from now on.

See where you get your water supply. See where it comes from. See how much you've got to work, not only for the next 25 years but 50, 75, 100, and 500 years from now. That's all the water you've got. You're blessed here in the Tennessee Basin because there has been a great and wonderful development out here to conserve the water in this area. You could pipe water from the Tennessee River up here and some day you may have to do it. But there are a lot of areas in the United States that can't do that. I know places in the United States—great industrial areas—that you couldn't put one more industrial establishment because they don't have the water. I know areas in the United States where they are running salt water through some of their industrial processing plants because they have no fresh water and it's costing them very dearly to be using salt water because the corrosion is terrific. We can't continue on that basis so we've got to conserve the water in all of our stream basins in the United States because we need it.

Industry will be distributed all over the United States. You've heard a lot said that that is necessary from a national-defense standpoint. That no doubt is entirely true, if we understand what's going on in the world today. But I will tell you that there are going to be industries distributed all over the United States whether we have potential peace or not. That's bound to come because of a lack of water. The Corps of Engineers, under its charge from the Congress, is vitally concerned with and responsible for the conservation of water and the destruction of floods and the providing of navigation channels all over the United States. This organization has been doing this work for the Congress for 125 years. They have been engaged in engineering work for 175 years. Today we are working on over 200 stream basins in the United States. We've done a lot to help in large areas in the

United States to develop the water resources in those States. The Missouri Basin, for instance, 530,000 square miles of territory, is being actively worked on today, to stop the destruction and put the water to work for the people.

I've looked at this area down in the South and, if you want to see a magic area, you look at the area from the Savannah River watershed on around through Alabama over into Mississippi and down to the Pearl River. There is a territory that has been settled a long time that used the waterways to the maximum. They came in here. And then they left the waterways alone. That was the thing to do because the transportation facilities required were much faster than those that could be afforded on the waterways. The waterways in their natural state would not serve the people. We needed a network of railroads, we needed a network of highways and now we've got the air lines we certainly need. We've seen this area develop, we've seen the possibilities of developing the resources to provide the wherewithal to carry on a greater industrial development. And, in this area, there are vast resources of minerals that will stand us in good stead for many years to come. And I understand there may be oil here in Alabama and Mississippi, perhaps in Florida and Georgia. That will be grand, but all of those will go by the wayside. I've seen great areas in Kansas where the oil derricks were just as thick as these tables around here when you stand off and look at them at a distance. And yet I've seen them where they have pulled the pumpers out and I've seen the farmers planting their wheat, last year, right up to the old site of the pump. They pumped all the oil out and have gone. But they're still growing wheat out there and that is where we produce all of our surplus wheat in the United States. The minerals are gone.

The minerals will go from this area down here, in time. But there is a vast store of them here yet to encourage the development of a great industrial area down here. I call it the magic area. About 2,000,000 kilowatts of power is possible in the area I am telling you about. You've got the transportation facilities here—land, rail, and highway and air. You have the possibilities of bringing those rivers right into the heart of the area where that power is possible. You impound the water and you have plenty of fresh water in that area. It's remained dormant, almost, for years so far as the water is concerned. But it's needed now and, if the people want that water developed down here, if the people want to see a great industrial development in this section, they are going to have it. The Congress is developing those sections of the country like the Central Basin of California, the Missouri Basin, vast territories in Texas and Oklahoma, New Mexico, and Arizona and the Columbia Basin. Up the Mississippi Basin, they are developing those great areas because the people want them developed. I'm positive that the Congress wants to see this area developed down here because they've authorized a survey and it'll prove the project and they've started appropriating the funds.

The United States steel people now expect to bring in within 3 years of the port of Mobile to start out with 3,000,000 tons of rich iron ore, even richer than that on the iron range in the central part of the United States. Even richer—67 percent iron. They are going to start by bringing 3,000,000 tons into the Birmingham area. Why? Not because they need it all now but they don't want to take it all out of the ground. Obviously they haven't told me that but I know that's true. We can go all over the world and get the raw products and bring them in here. We can expand our industries. We can develop jobs for the thousands and hundreds of thousands and millions of people that are to come on later.

But we've got to have the water. When the water is impounded, it should be used over and over and over as many times as we possibly can to get all of the benefits out of it before we turn it into the sea. We must prevent the destruction caused by floods. We must provide depth to the water in the rivers so that towboats can come up there and bring these raw products in from ports like Savannah, Jacksonville, Mobile, New Orleans; so they can bring it into the areas where it can be processed. And we ought to have an exit from this area to the central part of the United States. We ought to have a connection from the Tombigbee and the Warrior system down there with the Tennessee River so that those finished products could be distributed in our own country. I've seen people in India die by the thousands because they couldn't distribute the needed bread from one state to another because they have no means of transportation. You've got to have transportation from the great industrial areas down in Alabama and Georgia and Mississippi and Florida to get it to the central part of the United States. There is a little gap here between the Tennessee River and the Tombigbee River. If that were cut through (it is entirely feasible and not too costly) you would be able to ship the products from the Birmingham area, from this industrial area, and from the Coosa River where you just built that great paper mill. You can send paper from the paper mill right here on the Coosa River to one of the owners of that mill by barge through the waterways that exist today except for that little narrow gap between the Tennessee River and the Warrior River down there. You can ship in slack water to the Tennessee and up the Ohio to the Pittsburgh area. You can ship it to St. Louis, you can ship it to Chicago, you can ship it to Minneapolis and St. Paul. You can ship it on up the Missouri River as far as it goes. It is approved now 800 miles up the Missouri River. You can ship it to Corpus Christi, Tex., or Brownsville, Tex., or you can ship it up the Atlantic seaboard all the way up to New Jersey.

Transportation—cheap transportation—it can't be too cheap. You say that takes revenue away from the other forms of transportation that we have got to keep up. No. In this area right here, if you doubled the industrial development in this that I call the magic area, you'll have to rebuild the railroads to haul what they will be called upon to haul out of here. The power companies—I don't care who distributes the power, I don't care who gets the money for it. All I want to do is see us not destroy any of the power possibilities here. I know that if you develop a large amount of power in Alabama, Mississippi, and Georgia, it will be for the benefit of the people. And the Congress and the Federal Power Commission have never had any trouble in working out satisfactory rates so that the people would get those benefits. So let's not worry about who is going to get what. Who does what and who is going to get the $2. Let us develop the country. We can work out these things on an equity basis. If we do not start out right you can change it. But if you destroy any of the potentials on any of these waterways or if you destroy the possibilities of using the water in these streams to the maximum, then you are doing something that cannot be easily undone. Let us get all out of our water we can.

Gentlemen, you have got to have water for people to drink. You have got to have water to carry on industrial development. It takes 300 gallons of water to make a pound of synthetic rubber. It takes 33 gallons of water to make a pound of steel. It takes a tremendous amount of water for one of our newest industries—air conditioning. It takes water for every industrial processing that we know of and the more you have the more water it is going to take. But, listen, don't ever let anybody get you to invest a lot of money in a scheme where they are going to get cooling water from the ground. Because, gentlemen, that is only a very, very temporary source. You can't make it in this country by trying to get the water out of the ground. I know States now that have found that out. Let that water stay in the ground and figure on using the annual run-off by conserving all of our streams in this country, and we will perpetuate the United States as a great Nation for thousands of years to come.

How to Achieve Total Diplomacy

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent article by George Sokolsky. It recites once more some of the record of Mr. Dean Acheson which makes it difficult, if not impossible, for either Americans or foreign nations to have the confidence in our Department of State which it must command if we are to have at home and abroad the strength and unity necessary to meet the perils of this hour. Mr. Acheson rightly says we need total diplomacy. Some of us have urged that for 3 years. But the fact is that Mr. Acheson's own record makes it impossible for him to command the confidence necessary to achieve total diplomacy.

(By George Sokolsky)

Dean Acheson is now a convert to reality. After a career of error, beginning in 1941 and ending a week ago, he has finally come to a realization of the errors, but not to a recognition of his responsibility for them. His last gamble with destiny was a bad throw; he had fantastically assumed that reality was at fault and he played to lose on Mao Tse-tung.

In any country other than ours, any man who had been so consistently and obstinately wrong would have been driven from public life. He would long since have been forced to resign.

All he seems to do here is to announce a change of policy, not even confessing his errors, and we are expected to accept his conversion without scrutiny or even wonder.

Acheson asks us all to unite in a total diplomacy against Soviet Russia, but how can we unite with him? From 1941 until last week, he and his teammate Alger Hiss, were responsible for the appeasement of Russian policy. The record is clear.

Dean Acheson, graduate of the Harvard law school, like so many others of the confused employees of our Government, entered upon his career in the Treasury, where he did not agree with Mr. Roosevelt's fantastic fiscal conceptions and was dropped.

In 1941, he entered the State Department as Assistant Secretary of State; then he became Under Secretary of State, a position he held until 1947 when he resigned. He returned as Secretary of State in 1949.

The Acheson influence in the State Department has been enormous. He was the

smart man. His principal adjutant was Alger Hiss.

Alger's brother, Donald, became a partner in Acheson's law firm, which specialized in representing foreign countries in Washington, particularly such as had special relations with the State and Treasury Departments: Colombia, Greece, Iran, Denmark, Pakistan, and Soviet Poland.

We must now go back a step to the Harold Ware Communist cell organized in 1934. That cell was organized to penetrate high levels of administration and it is clear from the evidence at both Hiss trials that Alger Hiss was of this cell.

At any rate, in 1939, Dr. J. B. Matthews of the Dies committee gave to the Department of Justice the names of the members of the Ware cell. Among those names was that of Alger Hiss. Matthews showed me the list at the time.

Also in that year, Whittaker Chambers and Isaac Don Levine discussed most of the evidence that was brought out at both Hiss trials with Adolf A. Berle, then of the State Department.

Berle has testified under oath that as early as 1941, he had warned Acheson that the loyalty of both Alger and Donald Hiss was doubtful. In 1944, Berle, then security officer of the State Department, warned Acheson and others in the State Department that their pro-Russian policy was wrong.

The Acheson group, with Alger Hiss as Acheson's principal assistant, fought Berle, had him transferred to Brazil and as Berle said: "That ended my diplomatic career."

Subsequent to Berle's reports on Alger Hiss, Acheson had his friend transferred from the Far Eastern Affairs Division, where he had no business to be as he knew nothing about the subject, to the Office of Special Political Affairs which Acheson ran and which had to do with all the peace efforts of the Government.

This was no place for a man whose loyalty was in doubt and who could have an affiliation with a foreign government that might imperil the negotiating power of the United States.

Acheson cannot plead that he did not know about Hiss; he can only say that he did not believe what he was told. But in his position, could he risk a doubtful personality as executive secretary of Dumbarton Oaks or as President Roosevelt's adviser at Yalta, or as secretary-general of the San Francisco Conference setting up the United Nations?

Dean Acheson succeeded Joseph C. Grew as Under Secretary of State after Grew insisted upon prosecuting the spies in the Amerasia case. What power in our Government drove Grew out and put Acheson in his place?

Are We Heading for Financial Disaster?

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Are We Heading for Financial Disaster?" delivered by the Senator from Ohio [Mr. TAFT] to the American Retail Federation, on April 4, 1950, together with a statement prepared by me to precede the address.

There being no objection, the statement and address were ordered to be printed in the RECORD, as follows:

STATEMENT BY MR. GURNEY

Mr. President, last evening I attended the annual dinner of the delegates to the American Retail Federation convention. This is the parent organization representing many national and State retail trade organizations—representing therefore a very fine and large group; a real cross-section of America.

The address was delivered by an honored Member of the Senate of the United States, the senior Senator from the State of Ohio, Mr. TAFT. His address, entitled "Are We Heading for Financial Disaster," is a subject about which many of us in the Senate are deeply concerned and about which the people of our country are rightly worried.

This very serious financial situation our country is now in was described in such a concise and logical manner that I should like to bring it to the attention of my colleagues who did not hear the address. I commend it to all Senators and urge all Senators to read it.

ARE WE HEADING FOR FINANCIAL DISASTER?

It is a great privilege to be invited to address the American Retail Federation in their annual convention. The Retailers of America number more than half of the people who are engaged in operating their own business. They, therefore, contribute to the independent thinking and the free system of the American economy. They carry out to the limit the theory of competition and, as a general rule, the larger the company the narrower the spread on which it does business. We have no problem here as I see it in preventing the growth of monopoly. Rather, the danger is an occasional excessive use of unfair methods of competition.

The retailers, I believe, are a real bulwark against the steady trend toward socialism which has been so apparent in our recent history. They believe in liberty, as the cause of our success, and as the basis for hoping that the American people may constantly improve in their knowledge, their ideals, their production and their standard of living. They can be the leaders of American thought in the right direction.

I spoke last week of the necessarily socialistic effect of the program presented to the Eightieth and Eighty-first Congresses by the Administration in power in the demand for economic planning to be carried out by complete bureaucratic control of commerce, industry and agriculture; in the demand for free Federal services in every field of education and welfare; in the attempt to repeal the Taft-Hartley law and purge those who dared to limit the special privileges of labor union officials. In that policy we find a program almost exactly like that of the labor-socialist government of Great Britain, urged upon us in homeopathic doses. It adds up to a complete concentration of power in Washington.

DEFICIT SPENDING

Tonight I want to deal with another policy of the Government which can lead just as certainly to the same end—the policy of Government spending unlimited by any necessity of raising taxes to pay for the spending—deficit spending in time of peace. Every citizen of this country should be tremendously disturbed and alarmed at the present fiscal program.

The first year of the Eightieth Congress we had a surplus of more than $8,000,000,000, the second year a deficit of one billion eight. To end of the first year of the Eighty-first Congress will see a deficit of $6,000,000,000, and the budget message submitted by the President contemplates another deficit for the year ending July 1, 1951, of more than $5,000,000,000. In 3 years the expenses of the Government have increased from $34,000,000,000 to $43,000,000,000, of which only about $2,500,000,000 is in foreign spending, perhaps justified by the cold war against Russia. The President's budget and tax messages gave a slight lip service to the principle of a balanced budget. It is suggested that taxes at the present rate will ultimately yield more because there will be an increase in prosperity. It is suggested that the veterans' education program and the aid to foreign countries will taper off. Nothing is said, however, about the additional expenses recommended in the Brannan plan, direct Government loans for housing, universal military training, socialized medicine, and increases in other welfare services, all recommended by the President and amounting to far more than any possible saving in the items which he mentions. The President blames the deficit on the Republicans because they enacted a decrease in the war income-tax rates, but he nullifies his own argument by recommending against a restoration of those taxes. In fact, the essence of his fiscal policy appears to be that Government deficit spending is desirable in order to prime the pump of increased prosperity which will then produce more taxes to balance the budget. This is the old fallacy that we can spend ourselves into prosperity. I do not think there is any respectable economic authority, right or left, who favors an unbalanced budget at the present time. There are some economists who feel that we should not attempt to balance the budget in depression years—but they would balance the deficit in such years with surpluses in more prosperous times. Today we are not below normal, and even their theory that the budget need only be balanced over a reasonable number of years would not justify a deficit.

We have a huge debt of $256,000,000,000. It is hard to carry today and dangerous indeed if we have to face the financing required by another war. If we increase it at the rate of five billion a year, it is difficult to see how we can do any war financing without destructive inflation.

Even without war, such a deficit means a resumption of the inflationary spiral. It creates purchasing power with no production to balance it. It means, therefore, a further rise in prices, stimulating further increases in wages and a steady depreciation in the value of a dollar. It is, in effect, a form of bankruptcy. The Government is repudiating a portion of its own debt, including savings bonds now being sold, by pursuing a policy which will enable it to pay that debt off in cheap dollars far below the real value of the dollars which it borrows.

The deficit spending policy is demoralizing to Congress. If any Congress ever accepts the philosophy that money can be spent in peacetime without any necessity of levying taxes to provide the money, there is no limit to what Congress can spend. We have projects before us for many billions of dollars, many of them worthy projects if we could afford them. Take away the necessity of enacting unpopular taxes and our deficit will be closer to fifteen billion than five. The policy is demoralizing to the people and an easy road to socialism. In effect, it says to the people that they can get something for nothing. Of course the fact is they will pay double for the spending projects through the inflation of prices. The principle of deficit spending makes socialism easier to achieve. The British are at least frank with their people. "Here is socialism," they say, "and here is the bill for it. True, it is expensive, but it is worth it." The British Government balances its budget. But our deficit spending policy is an attempt to tell the people that they can have all these free services without 1 cent of cost.

GREATER TAXATION IS DANGEROUS

If we wish to escape the national calamity contained in such a policy, we have only two alternative—either we must increase taxes, or we must reduce expenses. The increase of taxes seems to me also a very dangerous policy, because I believe that taxes are already so high as to threaten the success of a free economy. In the next fiscal year, we intend to raise $38,000,000,000 in direct Federal taxes, another $6,000,000,000 in pay-roll taxes and perhaps $16,000,000,000 in State and local taxes. This is a total of $60,000,000,000 or 28 percent of our national income—about 24 percent of our gross product. Unquestionably, there is some limit beyond which taxes cannot go and still expect the free system to operate or even produce the taxes we are trying to collect.

In the first place, such a tax burden directly reduces the standard of living of the people, including those who think they do not pay a cent of tax. Most taxes are passed on to the consumer. Certainly, the real estate tax appears in rent, the pay-roll and withholding and excise taxes in the price of the products bought. I think it is conservative to estimate that probably 20 percent of the price paid for food and clothing and other necessities of life represents taxes passed on by those who pay them directly. Taxes, therefore, have already become a serious limitation on the liberty of the people. We have been asked by the administration where we have lost any liberty up to this time. Here is the place. The Government tells us all that we cannot keep the proceeds of our own labor and spend it as we desire to spend it. It will take from 20 to 50 percent of our income and will spend it as the Government sees fit, instead of leaving us free to do our own spending. It proposes to spend our income on services which we may or may not get, and which we may or may not want. Obviously, if this percentage is increased, we have less and less freedom. If we reach 80 or 90 percent, we have a complete socialist state in which the Government conducts all our activities and our spending for us.

Furthermore, excessive taxation can kill the goose that lays the golden egg and prevent the operation of a free economy. I fully agree with President Truman when he said in his message "taxes can and do have an important effect upon business conditions and economic activity. It should be our constant objective to improve our tax system so that the required revenues can be obtained without impairing the private initiative and enterprise essential to continued economic growth." Remember, we cannot stand still. We must provide about a million new jobs a year to provide for the young people coming into the labor market and those displaced by technological improvements. Perhaps the present system can be improved, but even our present weight of taxes today has cut down the money available for risk enterprise. There is little investment money for common stocks in large or small companies. There is little money for new businesses, except very small ones which can be financed by one man and his family. The reason is very clear. Any man who invests in any business finds a tax of 38 percent on corporation profits, and a high personal income-tax rate on any money which is distributed to him. If he loses, he loses his own money—and two-thirds of new businesses are said to fail—if he hits a profit-making enterprise, the Government takes most of his profits away from him. "Heads you win, tails I lose."

As I say, we can perhaps improve this condition at our present level of taxation by devising some means of reducing the double taxation on risk enterprise and directing the large savings from lower-income groups into industry rather than into institutions which can only lend money. One thing is certain to my mind, however; we cannot safely increase the present tax burden. In Great Britain they have raised taxes to a point where they are taking 40 percent of the national income. Most men have a hard time keeping enough money to pay their living expenses, and few have any money to invest in industrial expansion and improvement. The result has been stagnation in such development, and austerity for the British workmen.

In our States and localities, we have constitutional and statutory tax limitations. Since we have none in the Federal Government, the people have come to believe that the Federal Treasury is an inexhaustible grab bag. As a matter of fact, we have a practical limitation on Federal taxation beyond which we cannot go without destroying the very proceeds we are trying to reach and in the process destroying our free industrial system. We have reached that practical limit.

THE ONLY REMEDY IS TO REDUCE EXPENSES

It seems clear to me, therefore, that Government spending has reached a point beyond that which we can maintain and still hope to retain the liberty of a free people and the success of a free economy. Those expenses must be reduced if we do not intend to go steadily down the road toward socialistic controls and the all-powerful state. The increase of expenses from fiscal 1948 to fiscal 1950 is $9,500,000,000. Of this increase, about six billion is in domestic expenditures, more than two and one-half billion in foreign. I believe the statement made by Senators BYRD and GEORGE asserting that six billion can be cut from the budget is a practical program, perhaps not for the coming fiscal year, but certainly for the following year. A good many of the programs cannot be cut off over night, and so I would be willing to accept some smaller deficit for the year 1951 if we can see a balance in 1952.

At the present moment, I do not feel that we can afford to cut the national defense forces. I believe that Mr. Johnson has done a good job in eliminating unnecessary duplications and perhaps something more can be done in that line, but if so the money can well be used for strengthening the weak spots pointed out by General Eisenhower.

The President has expressed the view that our aid to foreign countries will decrease. I have supported the ECA because I felt that as an emergency matter to meet the crisis growing out of the war we could block communism in Europe by aiding western nations to come back to normal much more rapidly than they could do without our aid. Their production today is back to normal, and the problems they have to solve are long-range problems which basically they must solve for themselves. I believe the ECA should be rapidly tapered off, as originally contemplated, and that aid to foreign countries within 2 years should be reduced by $3,500,000,000. If we had not had a large surplus I doubt if such aid should ever have been undertaken. No other nation in the world has ever contemplated such a program. No doubt, there will always be some expenditures where the value is so great as to justify the taxing of our people for the benefit of other nations, but the aid should be confined to matters clearly beneficial both to us and to the nation assisted, and I should hope that even that burden might be taken over gradually by private capital seeking investment.

In the domestic field, however, we have been led into many programs which have assumed an expense far beyond the figures which were at first suggested. It seems to me that the time has come to make a completely impartial, nonpartisan study of this whole problem of Government spending. A nonpartisan Commission of leading citizens should be appointed by the President and Congress, containing representatives of the executive and legislative branches, to study and report on the long-range spending programs of the Federal Government with reference to their relative importance, and also on the burden of taxation which a free economy can stand and still exist. We have not understood, as a rule, the tremendous expense involved when the Government attempts to benefit directly millions of its citizens instead of confining itself to operations in research, education, advice, and assistance. Thus, the veterans' expense of more than $6,000,000,000 has to reach 20,000,000 veterans. That makes it necessary that the program be scrutinized with critical care.

During the current year we are paying out more than $12,000,000,000 under various programs direct to individuals whose contributions, if any, have been made in past years. At the moment they are getting something for nothing. In addition to the veterans' program, we are paying $2,600,000,000 in dividends on life-insurance policies, more than $1,100,000,000 for public assistance, more than $1,100,000,000 for retirement pensions of different kinds, more than $2,000,000,000 for unemployment compensation. We have been led into many of these on the theory that they cost nothing to the taxpayer and do not directly affect the budget. Nevertheless, they all add to the burden of taxation and cut the taxes which can be safely levied to meet other expenses. Pay-roll taxes for unemployment compensation, Federal old-age and survivors insurance, railroad retirement funds, are just as much taxes though levied for a special purpose.

A complete restudy should be made at once of the agricultural program from the point of view of the long-range expense to which we have found ourselves suddenly committed. Farm programs like the McNary-Haugen bill and the export debenture plan never contemplated any subsidy out of the Treasury. The farmer himself took the loss involved in disposing of the surplus. The price-support program as originally conceived did not involve the Government in loss, but only the carrying of surpluses from good years to bad and in general the maintenance of a fair price which would also be fair to the consumer, and enable any products purchased to be disposed of in most cases without loss.

Nor did the GI housing program originally propose to draw any cash out of the Treasury, but only to guarantee loans. Yet today it is taking more than a billion dollars a year to buy the GI mortgages.

The function of such a commission as I have suggested is much broader than the Hoover Commission. Substantial savings can be made if the Hoover report is accepted, but that report after all deals only with the reorganization rather than with changes in policy, and the matter so far submitted by the President, except in the case of the armed forces, hardly promises any financial saving.

It is strange indeed that in an administration devoted to the principle of economic planning no real over-all plan has been made. I believe the reason is that the economic planners for the most part like the idea of a Socialist state. That is what their planning thoughts are directed toward, and not toward the successful operation of a free economy. Consequently, they are more than pleased with a policy of drift and feel no restraint about unlimited spending, excessive taxation, and huge deficits. It may be that only the people at the polls rather than a scientific commission can introduce sound planning into Government.

At the present time great pressure is being brought to bear for the armed forces and foreign spending. It is possible that the danger of a crisis is being exaggerated somewhat at the time when appropriations are

being sought. On the other hand, I may be wrong and Congress may determine that huge foreign expenditures will have to continue because of the cold war waged against us by Russia. If the administration and Congress determine that present-level foreign spending shall be continued, it can only be justified by the real existence of a tremendous national emergency very similar to war. Under those circumstances, we should balance the budget by postponing many expenditures at home just as we did during the Second World War.

Public works are highly desirable, but they can be postponed for a few years. Improvement in public welfare is one of the purposes of our Republic, but the liberty and the security of the Republic is of still greater importance. The very cold war crisis which would justify continued foreign spending demands a sound fiscal foundation against the possibility of a shooting war. I am personally in favor of many welfare measures and most of the public works program. But if final decision is that foreign spending is necessary for national security, then I would be willing to postpone even those programs in which I have the greatest interest.

There is some tendency to say that the cold war justifies a deficit. I do not agree. If we could have financed the Second World War out of taxes, we should have done so. Failure to do so raised the cost of living by 70 percent and cut the value of a dollar almost in half. But the sums which had to be spent there were so huge no one could devise a tax system to meet them without the greatest injustice to millions of our people and hardship to many. This cold war, no matter how serious, can be financed by taxes if we are willing to postpone a few of the things which we would like to enjoy.

The purpose of our foreign policy is primarily to maintain the liberty of the American people. For that purpose, I am willing to spend money which is proved to be necessary, but it makes no sense to spend vast sums abroad to maintain that liberty, and then at home pursue a policy of deficit spending or excessive taxation which would bring to an end here the very liberty which we are trying to maintain.

The Pony Express

EXTENSION OF REMARKS

OF

HON. CLARE MAGEE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. MAGEE. Mr. Speaker, under leave to extend my remarks, I include the following speech by Congressman PHIL J. WELCH, of Missouri, at the ninetieth anniversary of the start of the Pony Express, which was printed in the St. Joseph News-Press of April 3, 1950:

Honorable Mayor Allison, Mr. Redmond, distinguished guests, friends; we tread historic ground here today.

At this very spot just 90 years ago a brave and colorful undertaking—the historic Pony Express—started.

The Pony Express, as daring an adventure as features the pages of our history, did more than merely deliver letters between the East and West.

The Pony Express aided an imperiled government, helped to pacify and retain in the Union the giant commonwealth of California. It showed the practicability of building a transcontinental railroad, and keeping it open for traffic regardless of winter blizzards and snows.

It bound together the East and the West at a time when overland travel was slow and cumbersome, when a great national crisis—the even then impending Civil War—made the rapid communication of news between the East and the West an imperative necessity.

Had it not been for the Pony Express this Nation might today be two countries—one western, one eastern. The Pony Express played the titanic role of lessening the distance of plain and desert that 90 years ago separated this Nation into two segments only sparsely connected.

True, the Pony Express failed financially, but it served the Nation faithfully and well, not only during the comparative brief months of its existence but on through the years.

Thus it is most fitting that we are gathered here at the site of the Pony Express Stables to join in a celebration of the ninetieth anniversary of the start of the Pony Express with our sister city on the west coast, the capital of California, Sacramento, the western terminus of the Pony Express.

Just as we stand here today so 90 years ago did our forefathers stand on this very ground to witness the start of what then, as now, was a courageous example of American enterprise.

Many of us in this crowd today are direct descendants of the stalwart people who stood here that April 3, 1860, evening as the first Pony Express rider dashed away into the gloom with his precious load of mail.

We are gathered this afternoon to dedicate the Pony Express Stables which the Goetz Pony Express Foundation will this year restore as a perpetual historic shrine and museum. Today these stables are in disrepair. But already the work of reconstruction has begun.

When completed it will stand as a monument to the glorious history of our State and the Old West. It will draw visitors from all corners of the United States to St. Joseph and the Midland Empire. Yes, the restoration of the Pony Express Stables will be a great civic asset a great Midland Empire asset, and a fitting tribute in reverence and honor to the men of vision who dreamed up the idea of a Pony Express and the intrepid young riders who carried that dream to glorious fulfillment.

As you know, I was not supposed to be the speaker here today. But as a St. Joseph man I naturally was interested in the Pony Express and the celebration planned for today. This is why I availed myself of the greatest source of information in the world, the Library of Congress in Washington, to increase my knowledge of the Pony Express.

James Buchanan was President of the United States when the Pony Express started. Twenty-one years before this county had been named in his honor. That was, of course, long before he became President. The county was named in his honor because of his great and outstanding service as United States Ambassador to Russia.

The population of St. Joseph when the Pony Express started was 8,891. Here let me digress a few seconds. Two of those 8,891 were my grandfather and my grandmother.

Our city today is approximately 10 times as large. The population of our Nation is approximately five times as large as the 31,443,321 inhabitants totaled in the 1860 census.

The total expenditures of the United States Government for the fiscal year that included the latter half of 1860 and the first 6 months of 1861 was $58,579,780. That included interest on the public debt.

Today our national budget is past the $40,000,000,000 figure.

Missouri, which now has 13 Congressmen, had 8 in 1860. The district of which St. Joseph was a part, the fourth in those days, was represented by the Honorable James Craig, many of whose descendants, including the Garth family, still reside in St. Joseph and are active in the affairs of the community.

It is most reassuring to have the Pony Express stables restored. We here in the Middle West are often too careless with our historic buildings and landmarks. Many a building that would in the East be regarded as outstanding because of its historical significance has been allowed to go before the wreckers' hammer thoughtlessly in this part of the country. We in the Middle West have a great and colorful heritage. We should do everything we can to see that that heritage and our history is preserved. Steps such as this preservation work undertaken by the Goetz Foundation are of immense value to a community and we cannot commend too highly those behind this and similar movements.

The operation of the Pony Express was a supreme achievement of physical endurance on the part of man and his ever faithful companion, the horse. It has been said that the history of the Pony Express should be a lasting monument to the physical sacrifice of man and beast in an effort to accomplish something worthwhile. It should be added that its history also should be an enduring tribute to American courage and American organizing genius.

Probably more than anything else, the Pony Express accurately portrays the kind of men who made possible the winning of the West. Its riders were youngsters who daily took their lives in their hands, youths who delighted in daring and who disregarded the suffering so often occasioned by their duties. Their idea was to get the mail through, regardless of cold, Indians, treacherous mountain paths, or desert. And they did just that. They were not to be halted. Those five words tell in full how our people won the West.

The men who operated the Pony Express were blunt. They made no attempt to hide the risks the riders would face. Proof of that is the advertisements they ran to secure riders.

Those advertisements boldly proclaimed that orphans were preferred as riders. The intent was clear. There would be no families to mourn their passing if ever-lurking ill fate befell them while on duty.

Your Pony Express Rodeo Band, the western attire which so many of you are wearing today, even the 10-gallon hat which you folks have so graciously presented to me, indicate the glamour the Pony Express holds for all of us. And no wonder. The Pony Express recounts the most thrilling chapter in the story of the Old West.

I can vividly recall my childhood days when Buffalo Bill would come to St. Joseph with his circus. I can still see him riding down Felix Street in a stagecoach in the parade of his circus, his long white hair touching his shoulders. I can recall the buckskin clothing he wore, the very way he waved his hat to his cheering admirers.

And why did Buffalo Bill thrill us?

Buffalo Bill had been a Pony Express rider. He had gone through with his mail despite Indian arrows and bullets. To us he was all that was great and glamorous. He was a Pony Express rider.

We went home thrilled and exhausted. For days there was no playing of cops and robbers. The game was Indians and Pony Express riders and the fellow who could prove he was toughest got the much desired role of Buffalo Bill in our game.

Our live-wire St. Joseph Junior Chamber of Commerce has offered $100 for the person who can present documentary evidence to prove the identity of the chap who swung his leg across a pony here in St. Joseph and took the Pony Express mail on the first run west.

I do not have much documentary evidence, but I feel certain that the first rider was Johnny Fry. I say that because when I was a boy I never heard anyone but Johnny Fry mentioned as being the first rider. I know that the late Josiah B. Moss, a talking history book of St. Joseph, always said that Johnny Fry was the first rider. And Mr. Moss was among those who stood at this very spot that day as the Pony Express started.

Yes—that was a long time back. It was the spring that Abraham Lincoln was making his campaign for the nomination for the Presidency. But the memory of Mr. Moss, who died only a few years ago, was remarkable, and I want to go along with him and my youthful playmates in the belief that Johnny Fry was the first rider.

Let us in mind's eye reconstruct what happened 90 years ago.

A crowd, as gay as that with us today, was gathered to witness the start. Mail from the East destined for the first run had been placed on the old Hannibal and St. Joseph Railroad at Hannibal. That was the first railroad west of the Mississippi and today it is part of the Burlington lines.

That day the wood-burning locomotive had a bad time. It was late arriving in St. Joseph, but the crowd at this spot waited. The mail was taken from the train to the post office, sorted, transferred to a mail pouch, and delivered to the first rider. Then there was the dash of the rider to the ferry, the bump as the ferryboat touched Kansas soil, and then the rider disappearing into the darkness as his mount started thundering along the first stretches of the long path across then bloody Kansas.

What happened that day was repeated over and over during the 79 weeks the Pony Express continued in operation. The management, although losing money, tried its best to improve the service and to shorten the time. It did and it cut the cost of sending mail.

Although the Pony Express was such a great factor in the California crisis and in assisting the Government in retaining the Pacific coast, it was the irony of fate that Congress should never give any direct relief or financial assistance to that mail service.

It was a private enterprise that did not rely on the Government. It paid its own way and more. One of its major expenses was the $75,000 it spent for protecting its interests in the war waged by the Utes and allied tribes. Undoubtedly that protection should have been furnished by the Government or the State or Territorial militia. It wasn't though. The Pony Express bore the brunt of that Indian outbreak and paid for it out of its own coffers.

When Edward Creighton, on October 24, 1861, completed the Pacific telegraph and began sending messages by wire from coast to coast, the doom of the Pony Express was sounded. The people of the far West were ardent supporters of the Pony Express by that time, and, records in the Library of Congress show, strongly protested against the eliminating of the Pony Express service.

For a glorious year and a half the Pony Express operated. The advance of civilization ended its operation, but did not mar its luster as one of the great, daring projects of the Nation. The names of the towns and the stations along the Pony Express Overland Route read like a litany of Old West lore—Elwood, Troy, Kennekuk, Seneca, Marysville, Big Sandy, Fort Kearney, North Platte, Fort Laramie, Casper, Salt Lake City, Carson City, Placerville, Sacramento, and the most famous of them all—St. Joseph, Mo., where the great adventure started.

Today I want to congratulate the people of St. Joseph, its excellent junior chamber of commerce, Mr. G. I. Zwick, president of the State Historical Society of Missouri; Bartlett Boder, president of the St. Joseph Historical Society; Floyd Shoemaker, executive secretary of the State Historical Society; St. Joseph's newspapers and radio stations, and all the other civic groups and organizations which have cooperated in this all-day celebration on the nineteenth anniversary of the Pony Express. To Sacramento and San Francisco may I also extend the greetings of this city.

And to the Goetz Pony Express Foundation I want to extend an especial congratulation. Because of this foundation, work on the reconstruction of the stables has already begun. And so, after 90 years, St. Joseph and the Midland Empire can say to the dauntless pony riders of yesteryear—to Johnny Fry, Pony Bob Haslem, Buffalo Bill Cody, Billy Richardson, and all the rest:

"Ride your ghost ponies back to St. Joseph. The doors of the Pony Express stables are open once more."

Gadsden, Ala., Airport

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. RAINS. Mr. Speaker, the surplus airport program initiated by the Congress, whereby airport properties were transferred to municipalities for use and development, has in my home town of Gadsden, Ala., been an outstanding success. Much of the credit for the successful development of this airport is attributable to the outstanding mayor of Gadsden, the Honorable J. Herbert Meighan.

Recently, Mr. W. Russell Graham, Jr., a representative of the CAA in Washington, inspected the airport property at Gadsden, and issued a very fine report on the development and operation of the Gadsden Airport. I attach herewith excerpts from his report, as follows:

Purpose of assignment: To analyze the administrative and financial operations of the Gadsden Airport; to survey the use of the airport properties which had been transferred to the city under the provisions of Public Law 289; and to evaluate the relative success of these operations, together with the city's use and management of the revenues received from such properties.

GENERAL

At the beginning of this report, it should be stated that the city of Gadsden has given us an outstanding demonstration of what can be accomplished with surplus properties when they are taken over and managed by public officials who have the will, initiative, and imagination to make such properties produce revenues to support, finance, and advance the local development of civil aviation.

Approximately 2 years ago, this city assumed the ownership and management of three very substantial bases which had been declared surplus to the needs of the military. At the time of their transfer from the War Assets Administration, many of the buildings were in a deplorable condition of repair. The city has spent some considerable sums of money in rehabilitating these buildings and other facilities. It has rented many of the buildings on long-term leases to tenants who are engaged in a variety of commercial enterprises. It has encouraged and persuaded these tenants to make substantial installations of equipment, and to spend sums on extensive repairs, rehabilitation, and maintenance.

As a result of these efforts, the city will earn revenues during the current year which are sufficient to repay all of its expenditures to date, and, in addition, will create a sizable reserve which will be used for major improvements of its airport. Within the near future, the city contemplates the following major improvements to its airport all of which, it is anticipated, will be financed from the revenues derived from these facilities.

1. Installation of new runway lighting system. The contract for this work has already been awarded at an estimated cost of $16,400.
2. Clean and reseal all expansion joints in the concrete runways and apron.
3. Stabilize the drainage area adjacent to the landing strips.
4. Construct a new access road.
5. Construct a new terminal building and control tower.
6. Construct new civil-aviation building.

CONCLUSION

In view of the very splendid job which is being accomplished in the management of these properties by Mayor J. H. Meighan, Mr. W. B. Mills, Jr., Mr. Cary Graham, and other city officials, this writer felt that he had no advice or suggestions to offer.

Know Your Waterways—Flood Control

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. LARCADE. Mr. Speaker, under authority granted me to extend my remarks in the RECORD, I wish to submit copy of an article published in the Washington Post, of even date, signed by the Marine News, of New York, as follows:

KNOW YOUR WATERWAYS—FLOOD CONTROL

Should our rivers flow down to the seas carrying away fertile topsoil from countless upland acres and wreckage from flood desolation, rather than a large part of the Nation's commerce? It is estimated that the Mississippi deposits more than 400,000,000 tons of fertile soil (silt) into the Gulf of Mexico every year, and the Columbia more than 100,000,000 tons into the Pacific. This tremendous loss of one of the Nation's most valuable assets, its land, is ominous. Should upcountry floodwater be dumped on unprotected regions below? Overflows from as widely separated areas as Montana and New York State finally reach the Gulf through the Mississippi and its tributaries. No State can take care of its floodwaters within its own borders. Should the tremendous power in our rivers run wild, disrupting industry and transportation, destroying wealth rather than creating it? When unimproved and uncontrolled, rivers are idlers and destroyers; when controlled and improved, they are servants and producers.

MARINE NEWS,
GEORGE H. PALMER,
President and Publisher.

NEW YORK, N. Y.

Emory R. Johnson and the Panama Canal

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. THOMPSON. Mr. Speaker, the special subcommittee on Panama Canal tolls, under House Resolution 44, Eighty-first Congress, of which I am chairman, and Representatives TOM B. FUGATE and EDWARD T. MILLER are members, started upon its investigation of the financial operation of the Panama Canal in the first session of the present Congress.

In conducting our studies we consulted the celebrated works on Panama Canal Tolls by Prof. Emory R. Johnson, a member of the Isthmian Canal Commission for Exploration—1899–1900—and author of the toll system of the Panama Canal. His studies and conclusions on this subject, in the main, are still applicable today and were important reference sources reflected in our first interim report, House Report No. 1304, Eighty-first Congress. The subcommittee also corresponded with Dr. Johnson during the course of its studies.

It was with deep regret, therefore, that I read about the death of this eminent authority, which occurred on March 6, 1950, closing a career of rare distinction.

As the greatest work of his life centered around the Panama Canal, it is most fitting that the account of his career as published in the Panama Star and Herald of March 15, 1950—the fine newspaper which has served the Isthmus since its founding in 1849—should be made available to the Congress and the Nation.

Under appropriate leave, I am extending my remarks to include its full text:

DR. JOHNSON, TOLLS EXPERT, DIED MARCH 6—TRANSPORTATION SPECIALIST SERVED WITH SEVERAL ZONE COMMITTEES

Dr. Emory R. Johnson died March 6, according to information received on the Isthmus recently. He was 86 years old.

As a widely known expert in the field of transportation research and economics, he exercised considerable influence on the development of the Panama Canal from the earliest days of the American canal effort.

From 1899 to 1904, he was a member of a special commission on the Isthmian Canal. In 1911, he was appointed special commissioner on traffic and tolls for the Isthmian Canal Commission. In 1936 and 1937, he served as chairman of a special Presidential committee on Panama Canal tolls and vessels measurement rules which resulted in the establishment of the single system of measurement on the Panama Canal.

Dr. Johnson visited the Isthmus twice, the first time in connection with his service as a special commissioner for the Isthmian Canal Commission and again at the time he was chairman of the special committee on tolls.

Among his many books on economics and transportation were these concerning the Canal: The Report to the Isthmian Canal Commission on Industrial and Commercial Value, Isthmian Canal, 1901; Panama Canal Traffic and Tolls, 1912; Measurement of Vessels for the Panama Canal, 1913; and The Panama Canal and Commerce, 1916.

Dr. Johnson was born in Wautun, Wis. He served for several years as economics instructor at Haverford College before assuming the same position at the University of Pennsylvania in 1893. He remained at the university for many years and from 1919 to 1933 served as dean of the Wharton School of Business and Finance.

Throughout his long career as educator and economist his services were utilized by many government and private agencies inside and outside the United States, but were directed primarily to rail and water transportation.

Private Business Has Many Reasons for Supporting the International Trade Organization

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Winthrop G. Brown, Director, Office of International Trade Policy, Department of State, on January 11, 1950, before the Synthetic Organic Chemical Manufacturers Association of the United States, New York, N. Y.:

WHY PRIVATE BUSINESS SHOULD SUPPORT THE ITO

You have asked me to come here today to tell you why you as American businessmen and as leaders in the chemical industry should support the International Trade Organization. I can give you the answer very simply. You should support it because you are believers in the private-enterprise system and in the United States. You have a great stake in the private-enterprise system and in the prosperity of the United States. Therefore, you should support any agreement or organization which will serve to promote those two great interests. It is my conviction that the International Trade Organization will materially advance the interests of the private-enterprise system and the interests of the United States, and I propose to try to tell you why.

Let us look first at the problem and at the facts which we face. We can then judge better as to whether the means adopted to deal with them are appropriate.

Most of the countries of the world emerged from World War II with their economies seriously disturbed. Their normal trade channels had been cut off, their business connections disrupted, their productive facilities destroyed, many of the means of earning their way lost. At the same time, with the experience of the economic warfare of the interwar period and the necessities of war itself, governments had developed a whole variety of new and improved techniques for the control of the domestic and foreign trade of their citizens. In wartime it was absolutely essential to have those controls, so that the full strength of the Nation could be focused on the matter of winning the war. But after the cessation of hostilities, countries still faced tremendous difficulties and these instruments of control were available to help deal with them. This was true in our own country as well as in others.

In our international trade we deal with a very large number of countries. They are in all stages of economic development and they have widely different political and economic attitudes. Some believe in capitalism, others believe in socialism, others use a mixture. In some countries government imposes only mild controls over certain parts of trade; in other countries the government actually does the trading in whole or in part itself. This is true of the United States as well as of other countries.

We don't believe in socialism; we don't want to have it in this country. Other people do believe in socialism and do want to have it in their countries. These are facts. We can't change them. The waves did not stand still simply because King Canute told them to.

Almost all countries are vitally interested in international trade. In a country like New Zealand, for example, 85 percent of its national income comes from international trade. In the United States, international trade accounts for perhaps 10 or 12 percent of our national income. But that 10 or 12 percent in 1949 amounted to something over $20,000,000,000, so it is not hay.

Because of the importance of trade and because of the shortages and dislocations which arose out of the war, countries have been deeply concerned to use their own resources to the best advantage and to get the things they needed from other countries. Because the things that were needed were for the most part in short supply, their distribution had to be controlled so that it could be most effectively used and grave inequities and injustices avoided. You will recall vividly last winter, for example, the outcry which went up in the United States against the export of oil to other countries because we were short in this country. There was great demand for the Government to step in and keep oil in this country. The people who made that outcry apparently did not think that the private-enterprise system adequately met their needs in this particular case.

Most countries in the world are short of dollars. Therefore, they cannot permit their citizens to use the few dollars which they do have at will. They have to limit their purchases from the dollar area to be sure that they get the things that they can't do without, just as a man with a limited income has to limit his family's purchases so as to be sure they get their food and pay their rent.

Now these techniques of control and Government interference with the flow of trade can be used for necessary and legitimate purposes such as the budgeting of foreign exchange to which I have just referred, or they can be used for straight protection, or they can be used for economic warfare, or they can be used for political advantage, or they can be used to promote bilateralism.

Faced with such a world and such conditions, what then is the wise and sensible course to pursue? Should we just let things drift? Should we leave each country free to use all of these techniques for any purpose it desires without restraint, without the possibility of complaint or redress? Shall we follow the policy of every man for himself and the devil take the hindmost? The statement of the question almost states the answer.

This brings me to the reason why I think that everyone who believes in the private-enterprise system and in the American way should support the ITO charter. For the ITO charter is essentially a limitation upon the power of governments to use these restrictive and controlling devices. The charter gives no powers of control or intervention to governments which they do not now possess and which they are now not free to exercise at will, except in the few cases where they are limited by specific agreements. The charter limits the operations of governments when they are in business them-

selves and it limits their rights to interfere with the operation of private business. It also limits the right of private businessmen to interfere with the trade of other private businessmen by cartel combinations.

This is important, and I want to repeat it. The charter gives no new powers to governments to interfere with business. It limits the powers which governments now have and which they are using to interfere with business.

I stress this point because critics of the charter have so often implied that the charter gives governments permission to use new devices, that it sanctions new interference and new discrimination. I think what these critics are thinking about and have misunderstood is the fact that the charter limitations upon the powers of governments are not all-embracing; they do not require the abandonment of every use of all of these control devices. Obviously, they cannot. If it were possible today to secure the abolition of all government controls over international trade, there would be no need for a charter or for any international agreements in the field of trade. But just because you can't get agreement to eliminate all government restrictions and interferences with trade is no reason not to get agreement to eliminate or reduce as many as you can. And that is what the charter does.

Let me illustrate. The core of the charter, so far as the United States is concerned, is the chapter on commercial policy. The first article commits member countries to give general most-favored-nation treatment. This is good United States policy. We follow it for everybody except Cuba and the Philippines, where we have long-established preferential systems. It did not seem to us sensible to abandon a world commitment not to discriminate in tariff treatment simply because we and the British could not overnight eliminate long-established trading relationships with certain countries, even though we were willing to undertake the commitment to negotiate for their elimination.

Another article in this chapter limits the powers of governments to use internal taxes and regulations as a discrimination against imports. It did not seem to us sensible to throw away this world-wide commitment to limit a governmental interference with trade used against us much more than by us simply because we could not and would not give up our mixing regulations designed to protect our synthetic rubber industry.

Article 20 provides for general elimination of quotas, the worst of all restrictive devices. It did not seem to us sensible to give up a world-wide commitment against the use of this restrictive device simply because exchange shortages required even a large number of countries to use the device until their exchange reserves were restored or because we would not abandon our agricultural price-support programs.

The recognition in the charter of this fact that it is permissible to use quotas and to discriminate because of the shortages of foreign exchange has been the central basis for one of the main objections to the charter—namely, that it allows discrimination against the United States. It is said that since the United States and possibly Switzerland are almost the only countries in the world which aren't in balance-of-payments difficulties, this is in some way unfair to the United States and Switzerland. Gentlemen, the other countries of the world are spending every dollar that they have in the United States, and every dollar that they can get. They are doing everything they possibly can to get more dollars and to cease this discrimination against the United States, if it be in any colloquial sense a discrimination. But I don't think it's any more a discrimination against the United States than it is a discrimination against Cartier's when I don't buy my wife a diamond bracelet there. I can't afford it. When I make enough money so that I can afford it, then I will buy the bracelet and cease the discrimination.

It is also said that because the charter permits this type of discrimination it prevents the United States from retaliating, and that this is unfair. What would our retaliation be? It would be to impose some barrier or quota to imports from the countries that are not buying from us. And, gentlemen, all that would do would be to decrease the amount of dollars they have and to increase their need to discriminate against us.

Another set of articles in this chapter limits the activities of state trading enterprises by requiring that they be guided by commercial considerations, that they give private and public enterprises of other countries opportunity under normal business terms to bid for their business, and requires them to negotiate for the reduction of protective margins in their operations. It did not seem to us sensible to give up a commitment to restrict the operations of state trading enterprises simply because we could not get agreement to eliminate state trading. The United States, of course, could not agree to abandon state trading.

The chapter also deals with subsidies, limiting their use. The whole set of articles dealing with the invisible tariff of customs regulations is designed to prevent and limit arbitrary interferences with trade through the use of these regulations.

The chapter on cartels establishes the first international mechanism for limiting the operations of international private cartels. The chapter on commodity agreements, which has been described as sanctioning government cartels, is a limitation upon the occasions on which such agreements can be entered into and the nature of the agreement when it is entered into. At present governments are free to make commodity agreements. I am willing to make the flat prediction that they will make commodity agreements when the needs of their people impel them to do so. Now they can make them when they will, without consultation, if they will, and in any form that they want, without regard to their consequences to others and to us. Under the charter they can only make them under certain circumstances which are specified. If they do make them we have to be consulted. As the largest consumer of almost everything, we would have to be represented. The consuming countries would have to have an equal voice with the producing countries. And we intend to submit any agreement which we may negotiate under this chapter to the Congress for its approval.

At the present time other countries are free, except in a few cases where we have treaties with them on the subject, to impose any requirements or limitation that they choose, arbitrary or otherwise, upon the admission of our capital to their borders or upon the treatment of our capital now invested there. Under the charter they cannot do this. Under the charter, members are required to provide adequate security for existing and future investments, and any requirements that they do impose must be just and reasonable. If the United States should consider that any regulations or requirements are arbitrary, oppressive, unreasonable, or unjust, we would under the charter have a basis for protest, first to the Organization, and, if necessary or if we wished it, to the International Court of Justice. We have none of this now. Moreover, the charter expressly recognizes that this is a minimum requirement and obligates members on request to negotiate for more detailed arrangements, such as the type of commercial treaty which we have recently signed with Italy and with Uruguay. Both of these countries, incidentally, were at Habana and their representatives concurred in the text of the charter.

One further point on this matter of investment: and that is that an effort was made to introduce into the charter the principle that compensation in the case of expropriation would be in local currencies. This effort was unequivocally and flatly rejected. I agree that it would have been fine if we could have got agreement on, say, the terms of the Uruguay Treaty as part of this charter, but it seems to me foolish to throw away what we did get simply because we couldn't get all that we may have wanted.

There is one other subject dealt with in the charter which I think would be of interest to this audience. That is the subject of the tariff. Certain members of this group have expressed the opinion that the charter condemns the use of tariffs and that it takes the tariff-making power out of the hands of the United States and gives it to the Organization. I might add that I have gathered that there are certain members of this association who think that the present administration in Washington condemns the use of the tariff and thinks that any tariff is ipso facto bad. Since I have, during the course of my connection with the State Department, been in charge of the Department's work on tariffs and chairman of the interdepartmental organization which administers the Trade Agreements Act, I believe I am qualified to speak on both these points.

Let me make two things explicitly clear. The charter does not condemn the use of the tariff. The charter does not not affect the complete control of the United States Government over its tariff policy.

What the charter does is to commit the other countries of the world to the policy which the United States has been following since 1934 of standing ready to negotiate with other countries for the selective reduction of tariffs on a mutually advantageous basis.

There is a very important distinction in the charter between tariffs and certain other forms of trade restrictions. For example, the quota is to be abolished. Negotiations about preferences are to be directed toward their elimination. With respect to tariffs, any negotiations that take place are for their reduction. Negotiations about tariffs must be on a mutually advantageous basis. No country is required to reduce the tariff on any particular product. No country is required to make any concessions unless it receives satisfactory concessions in return. That is the commitment which this country would accept under the charter, to continue to do what it has done for 15 years.

Not a word as to the administration's attitude toward the tariff. We do not think that tariffs per se are bad. We agree with Dr. Killheffer that they are far less objectionable obstacles to trade than the quota, because if you pay the tariff and the demand is there, you can get your product into the country, whereas the quota is an absolute bar. But we think that the Smoot-Hawley tariff established many rates which were unnecessarily high. We believe that in many cases a tariff can be an embargo just as effectively as a quota, and we don't believe in embargoes. Like you, gentlemen, we believe in competition.

We believe that we should not deal with any tariff rate without consultation with people in labor or agriculture or industry whose interests may be affected. We do consult them. And we pay attention to the case which they present. We, of course, do not always agree with it. If we did, the rates would all have stayed just where they were in 1930, because the normal attitude of those who come down to tariff hearings is that

any reduction of any kind in the tariff rate at present existing on their product will be ruinous.

But we do pay the most careful attention and give the greatest weight to the facts and figures presented in the briefs and testimony, and I submit that any dispassionate study of the tariff schedules of the agreements which have been negotiated under the Trade Agreements Act will show the influence which the facts presented by various industries have had upon the final outcome of the negotiations.

Under the charter each country is the judge of what tariff concessions it will make. Each country is the judge of how it will handle the negotiations and what procedures it will follow. And the Organization has no power whatsoever to order or direct any country to alter those judgments.

One more point before I summarize. I understand that many of you are concerned about the fact that the United States will have only one vote in this Organization. You are concerned lest we be perpetually in a minority and be outvoted on important questions affecting our interests. I am not worried about this. Let me tell you why.

This fear of our being ganged up on and outvoted is based upon several false assumptions. It assumes, first, that the influence of a country in international councils is measured only by its numerical vote. That is, of course, not true. Everywhere I go in international meetings and in international negotiations, the main question on every important problem is, "What is the attitude of the United States? What is the United States going to do?" Our predominant position in the world obviously gives us an influence far greater than that of smaller countries, if for no other reason than that our support and cooperation are essential for the accomplishment of most important international measures.

Secondly, this fear assumes that the interests of the other fifty or so countries will be the same and predominantly adverse to that of the United States. This, again, is a false assumption. On any particular issue that comes up there will be a diversity of attitudes among the other countries. In any case of trade restriction, for example, there will almost always be a substantial number of other countries who are in the same position as the United States either as producers or consumers of the product involved, or as producers or consumers of other products which they might not like to see restricted in the future.

More important, perhaps, this fear assumes bad faith on the part of the other countries in accepting the commitments of the charter, or stupidity and incompetence on the part of the representatives of the United States in presentation the United States' case. It even goes so far as to assume bias on the part of the International Court of Justice, to which under the charter we have recourse in any case where we feel that its provisions have been improperly interpreted by the Organization. I don't accept the assumption of bad faith on the part of other governments. If I did, I would not recommend entering into the charter or any other international organization. I do not accept the assumption of incompetence on the part of our representatives. My personal experience in Wall Street, in Washington, and in international negotiations has been that our representatives compare favorably in both competence and negotiating ability with men in other walks of life in this country and with the representatives of foreign countries. Moreover, actual experience in the United Nations and in the meetings of the contracting parties to the general agreement on tariffs and trade, in both of which we have only one vote, has demonstrated that we are not ganged up on and outvoted, but are normally in the overwhelming majority. So I am not afraid to go into a meeting representing the United States even though I have only one vote.

Well, gentlemen, what does this add up to? It adds up to the fact that we are confronted with the amazing and unprecedented achievement of having secured agreement between the representatives of some 54 nations, representing every stage of economic development and a wide variety of political philosophies, on a code of rules to guide their international trade which embodies fundamentally the United States philosophy of the maximum amount of competition and the minimum of government control.

Under this agreement even governments themselves when in business will be required to be guided by commercial considerations. This agreement does not attempt to have every country adopt the same form of government or the same political or economic system. It provides a means whereby countries with different political and economic systems can trade together in an orderly way. It commits them to the obligation to consult with each other before they take action which will adversely affect each other's interests. It is essentially a limitation on the power of governments to interfere with trade. It does not abolish all interferences. Of course not. But it does abolish some, it reduces others, and it limits still others to precisely defined areas.

What is the alternative? Governments are in the international trade picture more than ever before. At their disposal are new, highly effective and ingenious devices for the control of trade. The circumstances in which many countries find themselves create powerful demands for the use of these techniques for narrow, short-run, selfish interests. If the rules of the ITO are not accepted, countries will be free to use these techniques, not only in the cases not prohibited by the charter but in all other cases not specifically covered by treaty or agreement.

Where does the private trader stand in such a world? And where does his government stand when he comes to it and asks it to protect on his behalf against the arbitrary action of some other government which injures his business? We can say to the other government that we don't like what it is doing and that its action hurts our citizens. This often produces results. If this fails, in extreme cases we might impose counterrestrictions on their trade. But this is self-defeating. Restriction breeds restriction, and before long the government is controlling the destinies of private business. With the ITO we will be able to say to that other government that we are protesting what it has done not only because it hurts our citizens, but also because it violates an obligation which it has assumed not only to us but to other governments as well. Moreover, if necessary, we will be in a position to call that government to account before the other ITO members, before the International Court of Justice, and before the public opinion of the world. I submit to you that the choice is clear.

International Confederation of Free Trade Unions

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of an article which appeared in the January 1950 issue of the Master, Mate, and Pilot, the official publication of the National Organization of Masters, Mates, and Pilots of America.

An international conference to establish a new democratic world labor federation opened in London on November 28, 1949. Delegations from Britain, western Europe, Scandinavia, the Middle East, the Far East, and Latin America, as well as United States and Canadian delegates from the A. F. of L., the CIO, and the United Mine Workers were in attendance. It was estimated that a membership of over 48,000,000 workers in 53 countries were represented. The International Confederation of Free Trade Unions was organized as a result of the conference, and Mr. Jacobus Hendrik Oldenbroek, of the International Transport Workers Federation, was elected by acclamation as the first secretary general.

The article to which I refer, describing the career and accomplishments of Mr. Oldenbroek, follows:

REVIEWING THE CAREER OF JACOBUS H. OLDENBROEK

(By John Herling)

A stubborn Dutch boy, you remember, once stuck his finger in a dike and thereby kept back the threatening sea until help came. He saved his country from the floods.

Today, a twentieth century edition of that storybook hero is a very determined, not-to-be kidded Dutchman. He is Jacobus Hendrik Oldenbroek. Recently he was elected, by acclamation, as secretary general of the newly organized International Confederation of Free Trade Unions, with thirty-five to forty million members in about 50 countries.

This merely makes official what a lot of people already knew—that ruddy-faced 52-year-old Oldenbroek is one of the outstanding labor leaders of our time.

MULTILINGUAL

He has had no career outside the labor movement and has merely equipped himself to do a bang-up job as a labor official. He speaks a dozen languages.

As a young man, he became the assistant to the late Edo Fimmen, the Dutch longshore leader, who was secretary general of the International Transport Workers Federation. Mr. Fimmen was a man in the craggy mold of Andrew Furuseth, the leader of American sailors. Under him, Mr. Oldenbroek was taught that there was more to labor organization than direct job considerations. He also learned how not to get lost in the labyrinth of labor movement machinery.

During the war he took general charge of underground activities and the restoration of trade-unions on the Continent. His main job was to keep together the organizational pieces and personnel of the European trade-union movement.

Both Nazis and Communists knew him as a vigorous opponent. When the Nazis began overrunning Europe, it was Mr. Oldenbroek, as acting secretary general of the International Transport Workers Federation, who began at once to organize a detailed plan of sabotage.

WORK AGAINST NAZIS

As a Dutchman, he was especially keen on seeing to it that the Nazis would have a very difficult time. He kept his labor contacts warm through an intricate system of communications—from Norway to Italy. He was able to engineer strategic strikes wherever

and whenever it would make the Nazis scream the loudest. They didn't like him.

But neither did the Communists, Soviets or otherwise.

For years before 1939 the Communists were very anxious indeed to work their way into the Transport Workers, which is the international union of all the railroad workers, sailors, longshoremen. Logistically speaking, anybody who controls or even influences such an organization has a terrific leverage on the world's economy. But in fair weather and foul, the Commies were kept out.

Then came the Nazi-Soviet Pact, and Mr. Oldenbroek's work began in grim earnest.

The Transport Workers Federation, the great mobile unit of what was left of the international labor movement, had its work cut out for it. Both the Nazis and the Communists were the combined enemy, right out in the open.

The totalitarian influence ranged all over the world. In the port of New York, Communists were trying to get Norwegian and Dutch sailors to jump ship, and so interfere with the flow of munitions and goods to Britain, which was the jumping-off place for all of beleaguered Europe.

It was a tough time, requiring enormous skill, and a full knowledge of ships, road systems, and manpower. Oldenbroek was one of the chief organizers of the labor base for the antitotalitarian cause. He was a coordinator, if there ever was one.

NOT HOODWINKED

But when the Soviets were pushed into the war by the Nazi attack, and the whole world lost its mind and memory, Oldenbroek kept his twinkling, but disenchanted blue eyes wide open. He knew that many of the most gallant trade-union leaders on the Continent, especially in France, had been exterminated by the Nazis, with the Commies often acting as the finger-men.

That was why the Communist leadership suddenly zoomed in importance in the resistance movements. They had survived at the expense of honest men. Now they were ready to shed crocodile tears of remorse and take over the labor movements they had tried to undermine.

After the war they hoped to get control of world labor through the World Federation of Trade Unions, which was set up in 1945.

There was one organization the Commies were particularly anxious to get into the world federation, the International Transport Workers Federation, of course. The pressure on Mr. Oldenbroek became tremendous. If the transport workers yielded to become a subordinate part of the Communist-dominated World Federation of Trade Unions, others would have to follow suit.

But Mr. Oldenbroek said no. Privately he made it clear he thought that the WFTU could not be long for this world, since the Communists are what they are. He found important help in the 19 United States railroad brotherhoods. They joined the International Transport Workers Federation. And at the same time, without saying so, they made it clear they had no intention of joining the Communist-dominated WFTU through any back door.

There no longer was any doubt of the Communist postwar intentions. In the face of the Soviet and Communist attack on the Marshall plan, he and the transport workers put their full strength behind the economic rehabilitation of Europe.

Mr. Oldenbroek was able to take his finger out of the dike and lead the counteroffensive against the Communist aggression. He built up the ITF's strength through branch offices in New York, Rome, Bombay, and, most recently, Habana.

By last year the WFTU began to disintegrate under the impact of possible alternatives. Through careful handling Mr. Oldenbroek was able to save face for the British and CIO, who had to retire in good order from the WFTU they had help set up.

So a new International Confederation of Free Trade Unions has been launched. Mr. Oldenbroek will be able to talk directly to all the leaders without the services of an interpreter.

Fort Harrison Veterans' Hospital

REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. MANSFIELD. Mr. Speaker, I want to join my colleague the gentleman from Montana [Mr. D'EWART] in calling to the attention of the House the deplorable situation which exists at the Fort Harrison, Mont., veterans' facility at the present time. Fort Harrison is not taking in the veterans as they come because it has neither the necessary funds nor personnel. This is not due to any fault of the manager at Fort Harrison who has done an extremely good job, but because cuts have been made recently which have made it impossible to operate this hospital as it should be operated. I am hopeful that the Veterans' Administration under General Gray will take cognizance of the pleas of the gentleman from Montana [Mr. D'EWART] and myself and do something about the Fort Harrison hospital to the end that Montana veterans can be taken over, our nurses not be overworked, and our doctors at the fort given the aid and assistance which they must have. The fine work done by the staff at Fort Harrison should be encouraged and not hindered.

Mr. Speaker, under permission to extend my remarks, I include the following communications I have received and the answers thereto on this subject:

CHRISTIAN RURAL OVERSEAS PROGRAM
Helena, Mont., March 23, 1950.

DEAR MIKE: The plight of the veterans' hospital at Fort Harrison was called to my attention yesterday. I am acquainted with some of the staff and have attempted to assist in obtaining some highly trained technicians for it.

The recent cut in the hospital's staff, as a result of budget cuts, would not have been serious if the staff had been up where it should have been, for an institution its size. Coming as it did the situation is really serious.

As of yesterday the waiting list was 40, 2 cancer in its early stages. Four nurses resigned recently because of overwork, caused by a small number trying to take care of the patients. Surgeons did 50 major operations in 15 days last month.

I hope you will contact the Veterans' Administration, get the facts concerning this institution, and see if some relief can be obtained.

With kindest regards, I remain

Yours very truly,

ALBERT H. KRUSE.

MARCH 27, 1950.

Gen. CARL GRAY,
Administrator, Veterans' Administration, Washington, D. C.

DEAR GENERAL GRAY: I am enclosing herewith letter I have received from Albert H. Kruse relative to the situation at Fort Harrison.

I would appreciate your looking into this matter to see what might be done to alleviate the situation. May I hear from you, and please return the enclosure with your reply.

Thanking you and with best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

MARCH 27, 1950.

Mr. ALBERT H. KRUSE,
Helena, Mont.

DEAR ALBERT: This will acknowledge receipt of your letter of March 23 which I have read with much interest.

I am immediately looking into the situation at Fort Harrison and you may be assured that I will do all I can to be of assistance on this.

Must close now but assuring you of my deep interest in this and with best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

MARCH 31, 1950.

Hon. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

DEAR MR. MANSFIELD: Your letter to the Administrator, dated March 27, 1950, with attached letter from Mr. Albert Kruse, 1051 Breckenridge, Helena, Mont., has been referred to this office for reply. I appreciate your concern over the reduction in medical and allied staffs with its possible impairment of service.

It became necessary to effect a reduction of employees in hospitals and regional office medical divisions in order to stay within the funds available to us in the fiscal year 1950 appropriation and proposed fiscal year 1951 appropriation. The reductions were not based on a State-to-State comparison, but were apportioned to each hospital and regional office medical division based on the following factors: (a) number of beds, patients, or out-patient work load; (b) research and training programs; (c) special activities; and (d) type of construction in the case of hospitals.

Complete reports from hospitals and regional offices on the effects of the reductions are being reviewed at this time with the objective of making adjustments where appropriate. It is planned to continue with our staffing of new hospitals as they are completed. Every effort will be made to transfer to new hospitals doctors, dentists, nurses, and medical technical personnel who may be declared surplus at various hospitals and regional offices.

Very truly yours,

PAUL B. MAGNUSON,
Chief Medical Director.

HELENA, MONT., *April 5, 1950.*

Hon. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.:

Your immediate help is urgently needed. Fort Harrison officials faced with early decision concerning reduction in bed capacity in the loss of hospital medical personnel. Veterans' Administration contemplated order for reduction we believe discriminates against Fort Harrison. In discussing matter with Meredith, manager VA center, he advised that since the number of professional medical-service personnel authorized at Fort Harrison was so far below the allocation of similar personnel at other VA hospitals of comparable size he expects allocation of additional medical personnel which has not as yet materialized. Senator MURRAY familiar with recent criticism lodged by several patients, not against the physicians, and in our opinion criticism if justified is traceable to lack of supporting medical personnel. We

want to retain the present bed capacity of 264 if possible, which is only 1 bed for every 295 veterans. This is entirely inadequate. This cannot be done unless an increased allocation in personnel is made.

E. J. CALLAGHAN,
Veterans' Welfare Commission of Montana.
HERBERT KIBLER,
Department Adjutant,
American Legion of Montana.

APRIL 6, 1950.

Mr. E. J. CALLAGHAN,
Veterans' Welfare Commission.
HERBERT KIBLER,
Department Adjutant,
American Legion, Helena, Mont.

DEAR GENE AND HERB: This will acknowledge receipt of your telegram of April 5 which I have just received and read with much interest.

Just recently I contacted the Administrator of the Veterans' Administration relative to the reduction in medical and allied staffs at Fort Harrison. On March 31, I received a letter from Paul B. Magnuson, chief medical director of the Veterans' Administration, which read:

"It became necessary to effect a reduction of employees in hospitals and regional office medical divisions in order to stay within the funds available to us in the fiscal year 1950 appropriation and proposed fiscal year 1951 appropriation. The reductions were not based on a State-to-State comparison, but were apportioned to each hospital and regional office medical division based on the following factors: (a) Number of beds, patients, or out-patient work load; (b) research and training programs; (c) special activities; and (d) type of construction in the case of hospitals.

"Complete reports from hospitals and regional offices on the effects of the reductions are being reviewed at this time with the objective of making adjustments where appropriate. It is planned to continue with our staffing of new hospitals as they are completed. Every effort will be made to transfer to new hospitals, doctors, dentists, nurses, and medical technical personnel who may be declared surplus at various hospitals and regional offices."

You may be certain that this matter is receiving my best attention and that I will do all I can to be of assistance.

Must close now, but thanking you for your telegram and with best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

Central Arizona Project

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include copies of two editorials which have recently appeared in San Francisco newspapers regarding the central Arizona project, which has been approved in the Senate in S. 75 and which the House will presently consider.

The first editorial appeared in the San Francisco Chronicle of February 27, 1950, and is entitled "Dreamy Central Arizona Project." The second is from the San Francisco Examiner under the title "The Need and the Right." The editorials follow:

[From the San Francisco Chronicle of February 27, 1950]

DREAMY CENTRAL ARIZONA PROJECT

Arizona's Senators have scored a preliminary victory in their long battle to start a huge project tapping Colorado River water for the irrigation of 725,000 acres of central Arizona and New Mexico farm land. The Senate last week authorized $708,000,000 to dam the Colorado at Bridge Canyon, above Hoover Dam, and to build reservoirs, tunnels, canals, and pumping plants to carry the water 315 miles to the cotton, grain, and hay farms, for which it is almost exclusively intended.

This project is premature in a number of senses. In the first place, it is subject to doubt whether Arizona even has the right to take 1,200,000 acre-feet of Colorado River water each year, as proposed. That is a question very much in dispute.

In a bill passed by the Senate along with the central Arizona project authorization, California is given permission to file suit in the Supreme Court for the determination of the Colorado water rights controversy. So until the Court rules, any expenditures on the project would be unwarranted, and indeed the Court may entitle Arizona to so small a part of the 1,200,000 acre-feet sought that the project would be washed up right there.

It is well that the Senate has put the issue on the way to settlement, and we call on the House to ratify this permission to bring suit. But, in obligation to the whole American people, the House ought not to ratify the central Arizona project.

Persuasive testimony shows it to be uneconomic and therefore indefensible at this time—premature again. Its high cost would not justify the purpose of irrigating low-cost crops. It is charged by Senator DOWNEY, of California, that the project will cost ultimately at least $1,250,000,000 or, in other words, $1,750 for every benefited acre. Yet, as he says, the land when irrigated will be worth only $300 an acre. The Department of Agriculture has an illuminating comment on this point:

"The first and most important question that must be asked about any proposed public work is: Will the total benefits produced equal or exceed the total costs? Frankly, we were unable to determine."

The Department of Agriculture charges that the Bureau of Reclamation's methods of estimating benefits are not valid. It speaks of procedural error and asks for the correction of these errors before giving its opinion on the worth of the venture.

In short, the Bureau of Reclamation has been exposed in a palpable effort to make the project look good. This is no surprise, for the Bureau is always glad to accommodate with estimates of a rosy character.

If, as we suspect, the Senate authorized this huge works as a barrel of pork for the Southwest, we can only say it is outrageously expensive pork. The last time President Truman was heard on the subject, a year ago, he advised that it was not in accord with his program at this time. To protect his already large budget from further inroads he should exert his leadership to get the central Arizona project quashed in the House.

[From the San Francisco Examiner]

THE NEED AND THE RIGHT

The Colorado River forms part of the southeast boundary of California, and by natural riparian rights, this State is entitled to its full share of the waters of that river. That is the right.

The need for that water by southern California cities and farming communities is imperative.

But both the right and the need are in jeopardy in Congress, where there is pending a bill to grant Arizona a Federal gift of a billion-dollar water project.

There is no question of Arizona's right to its share of Colorado River water. There must be no question of California's right to its share.

The United States Senate on February 21 passed a bill to make the billion-dollar grant to the Arizona project. The measure is now pending in the House of Representatives, and there the fate of much of California is at stake.

It might be noted that if the Arizona project billion-dollar bill passes, California, with its high income-tax payments, will have to meet more than $100,000,000 of the cost. That is, California would have to pay $100,000,000 so that its area could be deprived of essential water.

All of California's 23 Representatives in Congress are united in defending the State's rights, irrespective of party lines and of sectional lines. All these California Congressmen have introduced identical bills calling for settlement by the United States Supreme Court of the interstate dispute over the water.

That is, the California Congressmen want the question settled on a fair, legal basis. They do not ask for a grab by their State. They are confident in California's legal rights to its share of the water, and they want the matter adjusted fairly, legally, not as a matter of political expediency.

Now the people of California can do their part by assuring all California Congressmen that they have universal State support in their fight.

In particular, northern and central California citizens should write or wire their Congressmen they are back of them in this desperate fight for a fair allotment of water.

As a matter of justice alone no Californian wants to see southern California dispossessed of water needed for present and future needs.

Let each one of the 23 California Congressmen know that their people are behind them in their tough fight against the Arizona project grab.

Resurvey of the Warrior-Tombigbee River System

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. BOYKIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein a statement made by my friend and constituent, Mr. W. I. McElroy, of Mobile, Ala., regarding the resurvey of the Warrior-Tombigbee River system from Mobile to Birmingham, Ala. I consider this, Mr. Speaker, one of the most intelligent statements I have ever read, and I know thousands of people from one end of the State of Alabama to the other will be interested in reading the facts as presented by Mr. W. I. McElroy.

The statement follows:

STATEMENT ON THE RESOLUTION TO AUTHORIZE RESURVEY OF THE WARRIOR-TOMBIGBEE RIVER SYSTEM BEFORE THE SUBCOMMITTEE ON RIVERS AND HARBORS, PUBLIC WORKS COMMITTEE OF THE HOUSE, ON APRIL 3, 1950

My name is W. I. McElroy. I am superintendent of operations of the Warrior & Gulf Navigation Co., Chickasaw, Ala. The purpose of my appearance here is to emphasize the necessity of securing approval of a resolution to authorize the Chief of Engineers of the United States Army to conduct a resurvey of the Warrior-Tombigbee River system from Port Birmingham to Mobile, Ala., to consider the justification of a modernization program. The Warrior & Gulf Navigation Co. is a contract carrier operating a fleet of modern Diesel towboats and barges between Port Birmingham and Mobile on the Warrior-Tombigbee system and from Mobile east to Tampa, Fla., and west to Corpus Christi, Tex., on the Intracoastal Waterway.

The Warrior-Tombigbee River system is one of the oldest commercially navigable streams in the country, the first project for its improvement having been authorized by the Congress March 3, 1875. Realizing the potential value of this waterway to the southeastern region, Congress continued to authorize improvements until 1915, when the last of some 17 navigation locks were completed, providing a navigable channel from Mobile to Port Birmingham on the Locust Fork and to Cordova, Ala., on the Mulberry Fork, 419 and 439 miles, respectively, above Mobile.

The subsequent historic development of this region is a matter of record. The city of Birmingham has become a most important industrial and manufacturing center in the South and the port of Mobile is now ranked the sixth most important port in the Nation by the United States Department of Commerce. The Birmingham district bears a striking resemblance to the Pittsburgh district, not only in the matter of steel production, but likewise in the fact that Birmingham has a river connection with the seaport of Mobile which might be compared with the Monongahela, Ohio and Mississippi River system serving the Pittsburgh district. Our big advantage lies in the shorter distance from Birmingham to Mobile as compared with the distance from Pittsburgh to New Orleans.

Approximately 22 years after the river was canalized, the Congress apparently recognizing the importance of this waterway as a transportation artery authorized a complete survey to determine the possible need of improvement and modernization. Acting on the direction of Congress, an exhaustive study was made by the district engineer, who recommended a complete modernization program to be effected in three phases, House Document 56, Seventy-third Congress, first session. The district engineer, on the occasion of this survey based his findings on the potential increase of commerce which would justify the improvements and he further advised that a number of the locks and dams were in such a deteriorated condition that they would have to be replaced in relatively short time in order to avoid heavy continuing maintenance. The study of the waterway embraced, in addition to navigation, the subject of water power, flood control, and irrigation. He found that the development of hydroelectric power and flood control was not justified. Some of the improvements originally recommended have been completed, such as improvement to dam No. 17, the Sunflower Bend cut-off, and a new lock and dam built at Tuscaloosa, Ala., to replace three obsolete locks and dams which were over 40 years old. After the building of the Tuscaloosa lock, no further improvements were made, principally because of the outbreak of World War II. In the meantime, the existing old structures on the river have been held together as best as could be accomplished by more or less temporary repairs. In one instance, a blow-out occurred in one of these antiquated wooden dams which necessitated unwatering a section of the dam by use of sheet steel piling in order to make repairs. This occurred at lock No. 8 and attached photographs (exhibit A) clearly show the deplorable condition of the dam. This condition is typical of the eight remaining wooden dams and we consider ourselves fortunate in that the blow-out was discovered in time to make repairs before a complete failure of the entire structure. Such an occurrence is quite possible at any of these dams and we are thus faced with an impending disaster which would close the waterway down for an extended period.

In another instance, a blow-out occurred in the wooden floor of the chamber of lock No. 6 which brought about a serious delay to traffic. Photographs of this blow-out are attached and the seriousness of the situation is clearly pictured. The river was closed to navigation for a period of 10 days during the repairs to this lock.

All of the existing locks, with the exception of the Tuscaloosa lock, are equipped with antiquated hand-operated gates and valves which make the lockage of vessels and barges a very slow and laborious process. Further, these locks are provided with lock chambers 52 feet wide by 286 feet long as compared with the standard Ohio River lock of 110 feet by 600 feet. Under the circumstances, it is necessary to break our standard tows up into three segments and thus make three separate lockages while tows of a similar size and even larger may lock in one operation through an Ohio River lock. Time lost on the Warrior-Tombigbee, including the breaking up of the tow, the lockage operations and the reassembling of the tow will approximate 3 hours at each lock as compared to approximately 20 to 30 minutes on the Ohio River. Photographs of one of our tows approaching and locking through lock No. 1 are attached (exhibit D). The restricted size of the lock chamber and the antiquated method of operating the gates are clearly shown. Large tows making a round trip from Mobile to Port Birmingham and return lose approximately 3½ days due wholly to the antiquated and outmoded system of locks. With a lesser number of modern Ohio River type locks which could be spaced further apart by reason of higher dams, it is conservatively estimated that time lost due to lockage operations could be reduced to 1 day, a saving of 2½ days per trip. The total saving in time which would be afforded by such a system of locks would be the equivalent of five round trips per year. On the basis of an existing schedule of 24 trips per year per vessel, an increase in cargo handling capacity of 21 percent would be effected. The only additional cost involved in the handling of the extra 21 percent of freight would be the actual fuel, lubricating oil and miscellaneous deck supplies consumed during the extra five voyages, plus a small amount of additional maintenance expense. Vessel expense such as wages of crew, depreciation, taxes, insurance, etc., is an annual expense continuing throughout the year and naturally if additional trips can be made, this cost will be spread over a greater tonnage, thereby resulting in further savings.

Construction of the existing locks during the early 1900's took place as the need arose to extend the navigable channel to accommodate the commerce offered. They were designed to meet the needs of the shallow draft paddle wheel vessels then in use and consequently were comparatively low in height which permitted the use of wooden timbers in their construction. The result was the building of a large number of low lift locks, the average being about 10 feet. These low lift locks created a series of shallow pools which are characterized by an extremely narrow and winding channel. In many reaches of the river, especially between Demopolis and Tuscaloosa, Ala., the channel is barely 150 feet in width and 7 to 8 feet in depth. Serious delays to traffic have occurred because of the grounding of tows in the shallow reaches of the river. In May of 1949, three of our vessels towing a total of 25 loaded barges were delayed for 6 days between mile 182 and 206 in the Tombigbee River. Several other vessels and tows of other operators were likewise delayed at this point. Modern high lift locks and dams which provide wide deep pools would allow operators to increase appreciably the size of tows handled.

This company has recently placed into service on the river, two new powerful towboats capable of towing 11 barges with an aggregate tonnage of 6,000 or an increase of 3 barges over the standard tow of 8 barges. Since there have been only comparatively minor increases in water freight rates, the only recourse open to operators today to meet mounting operating costs, is to increase the size of the pay load on each tow. With this thought in mind, we attempted to increase our tows to 11 barges, but our experience in the restricted channels of the river soon led us to return to the 8-barge tow, due to so much loss of time resulting from groundings in the narrow bends and shoals.

In spite of the operating handicaps, the river today is handling more commerce than ever before and we come before you with the earnest request that you authorize a resurvey of the river as we are convinced that such a survey will disclose the urgent need of a modernization program to keep this important waterway in step with the vast amount of development that has taken place in the section of the country which it serves. Since the last survey made during 1927, improvements have been made in the art of waterpower development and it is now entirely possible that a program for the production of power will be found to be practical. With the relationship which exists between power development and flood control, the latter will be automatically taken care of with the installation of power development facilities.

According to standard and accepted accounting practice with regard to depreciation and amortization of capital equipment, all of the locks on this waterway, except the Tuscaloosa lock should have been completely amortized and written off some years ago. Four of the locks are 45 or more years old; six locks 40 or more; and four locks 35 or more years old. (See exhibit E attached.) These structures have long since become obsolete and presently do not provide the efficient capacity needed to accommodate the traffic. These original facilities, however, have forcefully indicated the wisdom of early Congresses in allocating funds for their construction and the rapidly growing commerce which has been experienced during the past several years and the prospect of continued expansion, accentuates the need for modernization to bring this artery of transportation to a peak of efficiency.

We believe that the proposed survey will develop potential tonnage for the waterway that was entirely unheard of in the era when the last survey was made. It is also our belief that this system of rivers has served a very valuable purpose and that unless a program of modernization is shortly reinstated we will continue to be faced with an impending disaster by failure of one or more of the antiquated and obsolete structures. We are sure that the Army engineers have been carrying a very heavy burden to forego such a possibility. In view of the physical

condition and age of some of the dams and locks it seems to be questionable as to how much longer the use of hay bale wire and strings may serve to keep these structures functioning. Without a thorough resurvey, the important facts can hardly be developed.

In spite of the fact that the river, under present conditions offers many handicaps to economical operation, nevertheless, as indicated by the steady increase in tonnage there is definite proof that it has an important attraction to commerce. With much needed improvement and modernization to the stream we anticipate rapid growth in tonnage volume and we hold the conviction that benefits to the territory served, will be widespread and abundant.

The tonnage handled on the Warrior-Tombigbee Rivers has grown from 407,245 short tons in 1915, the year the entire system was opened to navigation, to a total of 2,058,504 in 1948. Fluctuations in tonnage handled were comparatively light. Exhibit E containing tonnage record from 1915 to date is attached hereto and submitted as part of this statement. This record was compiled from figures shown in the annual reports of the Chief of Engineers, United States Army. A steady increase was recorded from 1915 to 1942 with the exception of the depression years, 1930, 1931, and 1932. Even during this period, the waterway enjoyed a substantial flow of commerce as may be noted from the exhibit. The river, in 1933, began to regain its depression era losses and this trend continued through 1942. During the period from 1943 to 1946 commerce was adversely affected as a result of the adjustments made during and subsequent to World War II. It is apparent that the traffic on this river system is not subject to violent fluctuations, but provides a sustained large volume of tonnage. The principal commodities transported which constitute more than 90 percent of the total traffic are: iron ore, manganese ore, petroleum products, coal, logs, pulpwood, sand and gravel, sulfur, iron and steel. Tonnage figures for 1949 are not yet available, however, indications are that the 1949 traffic will show an appreciable increase over that for 1948. The increase in tons handled by the Warrior & Gulf Navigation Co. from 329,779 in 1948 to 422,371 in 1949, or slightly more than 27 percent will substantiate this statement.

The upward trend of traffic on the Warrior-Tombigbee system is reflected in tonnage figures of the Warrior & Gulf Navigation Co. Attached hereto, as a part of this statement is exhibit G showing the tons handled by years from 1929 to date. The consistent increase, year by year, since 1944 clearly indicates the growing importance of the Warrior-Tombigbee system to the continued development of the southeastern and southwestern regions. Tonnage handled in 1947 more than doubled that moved in 1944 and the 1944 figure was almost tripled in 1948. A similar increase was recorded in 1949 when 422,371 tons were handled. Movements and existing commitments thus far in 1950 indicate that we will transport more than 500,000 tons this year. Both the 1948 and 1949 volumes were the largest handled in the history of the company. A substantial part of this tonnage was imported high-grade iron ore which is vitally needed to supplement comparatively low-grade native ores. Its importance is particularly apparent in view of the most urgent need for increased steel production and of the fact that steel is one of the most essential materials, both in time of peace and war.

The Warrior-Tombigbee River system is an important artery for the distribution of bulk petroleum products, the volume of which runs between 200,000 and 300,000 tons per year. This commodity is of great significance to the economy of the areas served by the river system, and based on the increasing public demand, there is every possibility that its transportation by barge will experience a substantial increase. It is essential that such a widely used commodity must have the advantage of modern inland waterway routes.

Quite recently oil has been discovered in south Alabama within a short distance of the river. A new field is now in production and shipments of crude petroleum by barge to a refinery in Tuscaloosa have been in progress for some time. Geological reports indicate that this section of the country is destined to become a leading petroleum producing center. This commodity was not of course in the picture on the occasion of the last survey and the transportation of the greater volume of production of this field by barge both upstream to Tuscaloosa and downstream to the seaport of Mobile is a foregone conclusion.

It should be pointed out that a majority of the commerce transported on this river are bulk commodities which are particularly suited to water transportation. There is in prospect today, the movement of a substantial quantity of coal from the Warrior coal field to Mobile, thence by intracoastal waterway to Houston, Tex., for consumption in Houston's new steel industry. Here is a clear-cut example of recent industrial developments that have taken place in the Gulf coast area which will directly influence expansion of river commerce beyond the estimates given in the last survey made around 1927.

It is interesting to note that in his survey, the district engineer, estimated in 1930 that commerce would increase to 4,545,000 tons by 1950 provided the plan of improvements recommended were carried out by this time. The general plan of improvements recommended included construction of six new locks and the enlargement of the lock chambers and raising of the dams at six existing locks. Of this plan, the only item completed thus far is the construction of one new lock at Tuscaloosa. A study of traffic statistics reveal that as early as 1941 tonnage had risen from 1,581,974 in 1930 to 2,296,562, an increase of 45 percent. This increase was made in spite of the fact that less than 15 percent of the recommended plan of improvement has been completed. Under the circumstances, it is not unreasonable to conclude that had the entire program of modernization been carried out as scheduled, the present traffic on the waterway would far exceed the original estimate of the district engineer.

It is now public knowledge that the production of high-grade iron ores in the Mesabi Range in Minnesota will almost disappear within the next 20 to 25 years. Realizing the seriousness of this situation, the United States Steel Corp., after spending millions of dollars in the exploration of world ore reserves, located vast deposits of high-grade iron ore in Venezuela. Plans are already under way to commence shipment of some 2,000,000 tons annually from this field to the Birmingham district, all of which is scheduled to move through the port of Mobile. The rich Venezuelan ore (over 60-percent iron) will be mixed with native low-grade ores, and on the basis of experiments made by the Tennessee Coal, Iron & Railroad Co. in their blast furnaces in Birmingham, will result in an increased steel production of 15 percent with the existing facilities. Obviously the movement of such a large volume of bulk ore must be done as cheaply as possible in order to make its use economical in Birmingham. This cannot be accomplished with locks built more than 40 years ago whose narrow and obsolete size require multiple lockages of tows, restricts the passage of larger tows that are in use today, and will further restrict the desirable larger units and tows that could be employed with increased movements of huge quantities of bulk commodities. A reduction in the number of dams and the enlargement of lock chambers so as to permit the passing of tows intact will result in lowered transportation cost and assure the movement of this commodity over the river.

The value of the new iron-ore discoveries in Venezuela and its movement by water to the steel mills in Birmingham cannot be overemphasized from the standpoint of national defense as well as peacetime production. Should this country be faced with another war of similar proportions to the last, our ability to produce a war machine capable of defending the country is open to question in view of our present depleted iron-ore reserves. The movement to the mills of a large volume of foreign high-grade iron ore by the use of a modern waterway will supplement our diminishing ore reserves and provide a margin of safety in time of war. We have information that the United States Steel Corp. by 1955 will be shipping upward of 2,000,000 tons of imported iron ore annually to its Birmingham mills. It is urgent that the modernization of the Warrior-Tombigbee Rivers be resumed at the earliest possible date in order that this ore may be transported economically.

Our company has operated on this system of rivers for approximately 22 years. We are fully cognizant of the handicaps and of the impending risk to continuing our operations due to the bad physical condition of the major part of the navigational structures. We have been compelled to assume that this critical situation continues to prevail because of a lack of understanding by the Congress, who alone has the authority to correct the deficiencies. It is principally this thought which suggests to us the matter of resurvey of the facilities. It should be obvious that in no other way can the facts be made known to the proper authorities. With this in mind, the foregoing information is respectfully submitted.

Recommendations of the President on Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. KING. Mr. Speaker, although the State of California is one of the largest and most critical areas of unemployment in the country, the specter of unemployment is of national concern. Nearly a year ago, shortly after the President submitted his midyear economic report, on July 12, 1949, I introduced a bill to strengthen the Federal unemployment insurance system by establishing minimum benefit standards for all parts of the country and by broadening coverage.

My bill would have established a Federal reinsurance fund for greater protection of those States threatened with a prolonged period of substantial unemployment.

I am fully convinced that the great natural resources of the West will enable us fully and productively to employ the talents of the large increase in population since the beginning of the war. During the period of adjustment while new enterprises are being established and getting into large-scale production, however, a more adequate system of unemployment insurance is essential. I am gratified that the President has gone beyond the proposals contained in my bill, and I shall do everything that I can to obtain early consideration of his recommendations by the Committee on Ways and Means.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. STEED. Mr. Speaker, under leave to extend my remarks I desire to include a letter recently published in the New York Times, which letter was signed by persons prominent in the field of education and public service, on the subject of Federal aid to schools.

Since the views expressed by these prominent figures coincide with my own and because these views so clearly present what to me is the major premise upon which I think Congress ought to consider this issue, I am making this article available to those who hold views on this same basic principle. To me, I feel any action by Congress that includes any other factors will be a mistake that will do permanent and lasting harm to the cause of education as well as democracy.

Those signing this letter are taking an active part in the affairs of the committee for Federal aid to public schools.

The letter follows:

To the EDITOR OF THE NEW YORK TIMES:

Foremost among the unfinished business of the Eighty-first Congress is the enactment of a bill providing Federal aid to public education. Few can doubt the need for Federal assistance to the States to meet the present educational crisis. In the wealthiest Nation in the world vast numbers of children receive no elementary education at all or at best a seriously substandard education. In the Second World War 12 percent of the men found unfit for service were rejected solely for educational deficiencies. The United States Census Bureau estimates that for the year 1947 about 4,000,000 children between 5 and 17 attended no school at all. More than 10 percent of teachers in public schools are serving under emergency or substandard certificates.

We believe that a bill for Federal aid to education which can unite the forward-looking forces and thus insure its enactment must possess the following minimum essentials:

EXPENDITURES CONTRASTED

1. Basically it must be an equalization measure. The educational situation is far more critical in some sections of the country than in others, since the country's wealth is unequally distributed among the States. Income per capita in the United States ranges from $659 in Mississippi to $1,781 in New York (1947 averages), and this geographic maldistribution of wealth and income manifests itself in a tragic maldistribution of educational opportunity. During the school year of 1944–45, New Jersey expended $198.33 for each child in its public schools, while Mississippi spent no more than $44.80. The amount spent for each child in New York was $194.47, while in Arkansas it was only $60.25. The average teacher's salary in New York was $2,783, while in Arkansas it was only $918. That this discrepancy is not caused by a greater concern for education in New York than in Arkansas is proved by the fact that Arkansas spent a greater percentage of its income for its schools than did New York. Inequality of educational opportunity is the result of economic inequality, not of inequality of will.

Hence, while a nominal allocation may be made to every State, the bulk of the appropriation must be distributed among the States in accordance with need.

2. The bill must contain adequate safeguards against discriminatory treatment of Negro and other minority groups. According to the United States Office of Education, States having segregated school systems expend an average of almost twice as much for the education of a white child as for a Negro child. The existence of racially segregated schools is itself a blot upon the American public school system which must in time be eliminated. Any measure which forward-looking forces can support must provide effective means to prevent discriminatory application of Federal funds. Such discrimination is inequitable and unconstitutional.

3. It should be an educational measure dealing only with educational services. Federal aid for health and other necessary welfare services must be met in legislation apart from a law to equalize educational opportunities.

RECIPIENTS OF BENEFITS

4. The educational benefits of a Federal aid bill must be limited to tax-supported and publicly controlled educational institutions, whether or not State constitutions or laws permit use of State funds for sectarian educational institutions.

5. The bill must contain adequate safeguards to prevent violation of these principles. Provision must be made for judicial review of its administration so as to insure against unlawful diversion of Federal funds for sectarian purposes.

A bill containing the essential elements outlined in this letter could, we are convinced, unite the forward-looking forces of our country in a determined and successful campaign to equalize educational opportunities while maintaining the integrity of our nonsectarian public-school system.

Witch Hunting

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. DOYLE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial in the Long Beach Independent about Senator McCARTHY and communism. The Long Beach Independent is a daily newspaper printed in my home city of Long Beach, Calif. I have the pleasure of calling to your attention an editorial therein, under date of Friday, March 31, 1950, as it specifically mentions the Republican Party, the Democratic Party, the Communist Party, the President, and the State Department. Too, I feel it especially appropriate that you have the benefit of reading it. It described the charges of the Senator as "his wild charges of Communists in the State Department." The editor says:

> We have no use for the McCarthy tactics. The Republican Party leaders who fail to speak out against them are doing themselves a great injustice.

We Members of Congress should take note of the editor's observations when he says:

> There is danger of allowing irresponsible Senators to go through a man's entire life records.

Mr. Speaker, the editor's comment just quoted by me, causes me to remark that on February 13, 1950, in this House of Representatives, I again vigorously spoke out to the end that we not be irresponsible as Members of Congress in what we say on the floor of the House.

I firmly agree with the editor when he says, "We need vigilance" and "we must not have 'witch hunts' destroying reputations over rumors for hungry politicians" and that "we want common sense and a sense of decency that is lacking at present."

At the time I said:

> This, under the circumstances of the present world situation, does clearly add to confusion; to fear; to suspicion; to ill will; to national and even international misunderstanding as to what the facts really are. For, I say to my colleagues, that the distinguished gentleman uttered his intemperate words without basis in law or fact to substantiate his untimely and unwarranted remarks. And so it goes.
>
> Granting that we have congressional immunity in what we say; granting that we are free to say what we wish on the floor of this Congress as Members of Congress without fear of libel or slander, this does not justify us in being any less diligent in sticking to the facts and the law and the truth than we would have our own constituents be in our own respective congressional districts; does it? Why should we take liberties on the floor of this House in speaking of any matter when it is only sounds and rumor and gossip and "political dishwater"? Yes, even though most of us are candidates for reelection, even though the two-party system thrives and lives, partially, at least, on account of the desire of those in the majority to stay in the majority, and those in the minority party to become the majority party, this does not justify members of either party in relating as facts or truth anything which is known to them to not yet be established as facts or as the truth.
>
> Gentlemen of this House, let us by our daily words and conduct add to the sum total of our privilege and obligation which we especially have to strengthen the sinews of our American way of life. As democracy depends on an intelligent and well-informed participating electorate at the grass roots, so the American electorate depends upon us, as Members of Congress, both the House and the Senate, to be consciously temperate, truthful, accurate, and of careful and considerate speech in everything we say.

Mr. Speaker, I feel that this editorial in one of my home city newspapers, is very timely. I commend your reading it:

WITCH HUNTING

Senator McCARTHY with his wild charges of Communists in the State Department is not helping the chances of Congressman NIXON who is running for the Senate from California. NIXON did a wonderful job when Alger Hiss was brought to justice. It was NIXON and the un-American Activities Committee who forced the trial of Hiss over the apathy or opposition of the President and the State Department. It was the President who referred to the case as a "red herring."

It was hoped that the spectacular "Pumpkin Papers" and Judith Coplon conviction would carry NIXON along on a popular wave of Americanism versus Communism. Now the burlesque ballyhoo of Senator McCARTHY with his unproven smears of many people has made the people cautious. The cry of Communist against a hundred or more mythical public employees has dulled the people's appetite.

We have no use for the McCarthy tactics. The Republican Party leaders who fail to speak out against them are doing themselves a great injustice. The people are now not in sympathy with the demand for the loyalty files. They feel confidential information concerning individuals could not be entrusted to men like McCARTHY. The great disservice McCARTHY has done his cause is that the people now turn to the other extreme. They may allow the President to suppress much information the people should be given.

There is danger of allowing irresponsible Senators to go through a man's entire life records. There are few of us who do not have a skeleton hidden somewhere in our closet. At some time in the life of most of us we have done something we would suffer greatly from if it were later disclosed. We may have corrected our fault, and no one was ever hurt, but to publicize it at this late day would cause great suffering to ourselves and others who are innocent. In other words, such information would be valuable to a blackmailer or an irresponsible Senator, with his immunity from libel damages.

In this city are men who 25 years ago were prominent members of the local Ku Klux Klan. These men would pay dearly today to keep that from being published. They joined with a lot of other fellows in what seemed to them a good cause. They soon became thoroughly disgusted and quit. They and their families would be sick at heart if their friends of today knew of what they now consider their gullibility.

The same situation is undoubtedly true of many people who have been members of the Communist Party. We have many known examples of men who have resigned and turned against all its teaching. One of the heroes, in our estimation, is Whittaker Chambers. He has lost his job and placed his life in jeopardy to repay the debt he owes for his membership.

We need vigilance and an uncompromising policy against Communists in public employment. There are still disloyal people working in vital spots. But we must not have witch hunts destroying reputations over rumors and for publicity-hungry politicians. The Republican Party has a lot to live down because of its McCARTHY's, just as the Democrats do their Huey Long's, Bilbo's, and Talmadge's. We want no tolerance toward Communists. But we want common sense and a sense of decency that is lacking at present. Candidate NIXON might well speak out against the irresponsibility of McCARTHY if he hopes to hold the interest of his listeners when he talks of un-American activities.—L. A. C.

Members of Congress and Their Families Will Visit New York City April 28, 29, and 30

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. VAN ZANDT. Mr. Speaker, the annual congressional visit to New York City will take place Friday, Saturday, and Sunday, April 28, 29, and 30.

For the information of those interested I am inserting in the CONGRESSIONAL RECORD a copy of my letter to Members of the Senate and House of Representatives:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 30, 1950.

MY DEAR COLLEAGUE: It is my pleasure to inform you that the Honorable William O'Dwyer, mayor of the city of New York, has again invited Members of Congress and their families to visit New York City, Friday, Saturday, and Sunday, April 28, 29, and 30, 1950.

The mayor has arranged a most interesting schedule of events which will include a sightseeing tour of New York, boat trip around Long Island Sound, Hell Gate Rapids, and New York Harbor, Statue of Liberty, Ellis Island, Maritime Academy at Kings Point, Coney Island, Jones Beach, United Nations at Lake Success, Radio City and Rockefeller Center, International Airport, the line-up at metropolitan police headquarters, tickets for radio and television stage shows, a personal welcome to the city by Mayor O'Dwyer at New York City Hall.

The trip from Washington to New York and return will be made by special train via the Pennsylvania Railroad, leaving Washington at 12:55 p. m. Friday, April 28, returning leave New York 5:25 p. m., eastern daylight-saving time (note daylight time Sunday), arriving in Washington 9:25 p. m., eastern daylight-saving time. Our headquarters in New York will be the Hotel New Yorker.

The total cost of this trip will be $30 per person. It will include your round-trip railroad ticket, two nights at the New Yorker Hotel, all meals, baggage transfers, tips, and entertainment.

The mayor of the city of New York has designated Hon. EMANUEL CELLER as chairman of the reception committee while the group is in New York City, and myself as chairman of the committee on arrangements for the congressional group.

In view of the great expense to be incurred by the Department of Commerce of New York City and the time required for arrangements it shall be appreciated if you will promptly indicate your interest by returning

the enclosed card or calling my office, extension 366.

Those of you who made the trip with us last year will never forget the royal welcome extended to our party.

With best wishes, I am,

Very sincerely,

JAMES E. VAN ZANDT,
Chairman, Committee on Arrangements.

What Is Americanism?

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. JENISON. Mr. Speaker, one of the most promising signs for the future well-being of our Republic is the heightened appreciation among the young people of the land for the true significance of Americanism. Nowhere is this better demonstrated than in the essay contests being conducted currently among high-school students under the sponsorship of the Benevolent and Protective Order of Elks.

I have read with great interest the first prize essay in the contest conducted in Lawrence County, one of the 11 counties in the Twenty-third Illinois District which I have the honor to represent in this Congress. The winning essay was chosen as the best among 123 entered in the competition, and as an indication of growing interest it should be pointed out that a year ago, in similar contest, only 31 students competed.

The winning essay was written by Miss Noretta Koertge, a junior in Bridgeport Township High School. Active in student affairs, she is the feature editor of the Portonian, Bridgeport High School's newspaper, as well as a member of the school band and a consistent honor student. Her grasp of the deep meaning of Americanism reflects great credit not only on herself but on the high caliber of the school in which she is a student. Under permission granted to extend my remarks, I am including the text of her prize-winning essay:

WHAT IS AMERICANISM?

(By Noretta Koertge)

If we ask ourselves, "What is Americanism?" our simple reply is, "Americanism is the belief in American ideals and the American way of life." But that is not very complete. What are these ideals? Are they absolute and unchanging? Laws passed now to promote the general welfare would have been considered destructive of individual liberty in the early days of our country. The old policy of America for Americans and hands off Europe is quite different from the Marshall plan. The influence that our huge Government wields over the world and the individual is rapidly increasing, making this an opportune time to learn more of our great American ideals that do not change although the method of expressing and attaining them does change as our civilization becomes more complex. Every new and untried plan for human betterment should receive serious thought. We should ask ourselves, "Will this plan actually work? Will it destroy our American heritage of freedom?"

We believe in the dignity of man. We believe that everyone should have an opportunity for training or education, have the right to choose his own profession, and to work where he desires. The situation in Britain at the present time where workers are forbidden to change jobs seems repulsive to us. We believe in individual initiative. Ever since the time of Horace Greely, who said, "Go west, young man," American youth have gone wherever a new frontier of opportunity is found. Our national economy is built on the success of individuals. The American efficiency that is world known is a result of competition between energetic individuals. Our standard of living is the highest in the world. This shows that democracy is not an impractical ideal but is much more successful in the actual working than any form of statism, such as communism or socialism.

We believe in political liberty for the individual. Ever since the days of Magna Carta English speaking people have fought for equality before the law, freedom of speech, the privilege of invoking habeas corpus, self-taxation, protection against unlawful seizure of person or property, and many other rights. Our history rings with statements like, "No taxation without representation," and "A man's house is his castle." Today, when freedom of speech is extinct in many countries, we should be especially thankful for our free press and radio. We should be grateful for our right of assembly also. Some freedoms are curtailed in wartime but with the consent of the people, and not a permanent condition as in a police state.

We believe in religious liberty. Everyone may worship as he pleases, or not worship if he so desires. However, the fact that all sessions of Congress are opened with prayer for guidance shows that we are a godly Nation. Our recognition of the importance of the individual is akin to Christ's interest in every single soul. An example of this is the story of an aircraft carrier in the last war. Although the ship was in dangerous waters, it turned on its lights making it a perfect target, so that a few airplanes might land. This would never have happened in an atheistic state.

What is Americanism? As a midtwentieth century "teenager" basing my reply on a study of history, current events, and actual experience, it seems that it is belief in every individual being developed by education and training to live a happy, useful life so that he can work where he feels opportunity is greatest, under a democratic form of government that protects his life, civic liberty, and religious freedom.

Today's youth can face the challenge that the history of America offers. Let America still be the land of opportunity—that is security enough. Any promise of security that is not based on the energy and efforts of individuals seems to be an illusionary pot of gold at the foot of the rainbow. I believe in Americanism, the American way of life.

The Kerr Bill Is of Democratic Paternity

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. PATTERSON. Mr. Speaker, on Tuesday, April 4, 1950, the three Republican Members from Connecticut addressed to the President a statement requesting that he veto the so-called Kerr natural-gas bill. Cognizant of our responsibilities to the general public, Representatives SADLAK and LODGE and I are tremendously concerned over the effect this legislation will have if signed into law. President Truman has consistently assailed special interests without identifying those groups. It can be specifically charged that failure to veto this measure will be recognized as complete capitulation by the President and the Democratic Party to special interests.

The people of New England will not endorse the action of this Congress in passing the Kerr bill. They will realize that it was motivated by a greedy group of producers seeking carte blanche to gouge the consumer. The bill was pushed through Congress by Democratic leaders to pay off past political debts, and to assure that financial support will be forthcoming in the future. This baby is on the Democratic doorstep, and that party cannot deny paternity.

The Waterbury (Conn.) Republican and American, in editorials on April 4, point out the fact that the public is the scapegoat in this matter. The letter requesting Presidential veto is also inserted.

The matters follow:

[From the Waterbury (Conn.) Republican of April 4, 1950]

VETO THE KERR BILL

To Connecticut and to other New England States it is particularly important that President Truman veto the legislation which exempts the so-called independent producers of natural gas from Federal regulation.

If New England is to remain a good location for industries, one of the advantages the section must be able to offer is a reliable supply of low-cost fuel.

What with rising transport costs, mine strikes, and the other numerous factors which make our usual fuels more expensive and their supply less certain, natural gas has looked like a better and better possibility.

But just as New England utilities concerns were beginning seriously to consider arrangements and contracts for the distribution of natural gas piped here from oil fields in Texas and Oklahoma, the big oil companies which own the sources of natural gas turned tremendous pressure on Congress and on the administration to make natural gas one natural resource that isn't regarded as a public utility by the Government.

In the Eightieth Congress an attempt to exempt nearly all of the natural gas industry from any Federal regulation over prices and practices was defeated by a narrow margin. The Fair Deal used its successful fight against this legislation as campaign material in the 1948 Presidential battle.

The natural-gas interests were back again in the Eighty-first Congress, however, and succeeded in lining up a number of Dixiecrats and such Republicans as Senators WHERRY, CAPEHART, HICKENLOOPER, and MCCARTHY to put through another version in the Kerr bill. This, although it doesn't exempt quite all of the industry from the kind of regulation which would enable the Government to keep prices from becoming extortionate, is almost as bad a measure as the one that was defeated in the Eightieth Congress.

Senator DOUGLAS, one of the leaders of the opposition to the Kerr bill when it was in the Senate this year, has estimated that unless the President vetoes it the consumers of natural gas will pay up to half a billion dollars more a year in fuel charges.

Connecticut's Senators and Representatives were unanimous in their opposition to the Kerr legislation, and rightly so. They

were thus allied with most other legislators from New England and the progressive-minded legislators from all parts of the country. It was a misfortune that by the slenderest of majorities this sell-out to greedy interests and their lobbyists was passed in both Houses.

President Truman, with the utmost of justification, can veto the Kerr bill. He should do so without hesitation.

[From the Waterbury (Conn.) American of April 4, 1950]

RIDDLE FOR TRUMAN

Staunch loyalty to his friends has been one of President Truman's outstanding traits. He has shown it, sometimes, even toward friends who evidently didn't deserve it. There was Edwin S. Pauley, for instance. There was Gen. Harry H. Vaughan.

Maybe, now, Senator ROBERT S. KERR is going to fit into the same category. He has been a good friend to the President. He supported Mr. Truman 2 years ago, in his candidacy for nomination to succeed himself in the White House, when many prominent Democrats were opposing it. He is supposed to have contributed liberally to the Democratic Party's national campaign fund.

In the present session of Congress, Senator KERR has sponsored a measure to exempt so-called independent producers of natural gas from control by the Federal Power Commission. Both Chambers have approved it. Mr. Truman accordingly has to decide whether to let it go or to veto it. If he turns it down, his good friend Senator KERR surely is going to be chagrined.

Perhaps it may bother Mr. Truman particularly to have in mind that if he signs this bill he will be putting himself on the same side with Senator ROBERT A. TAFT. Senator TAFT spoke for it and voted for it. In general, he has been the President's severest critic.

There is still another point about the bill that may worry Mr. Truman. He may foresee that by signing it he would be handing his Republican opponents a means of annoying him in the congressional election campaign this year. In 1948 he condemned Republican leaders of the Eightieth Congress for sponsoring the Moore-Rizley bill. It would have exempted almost all of the natural-gas industry from Federal control. It failed by a small margin. The Kerr bill would exempt about 85 percent of the industry, including 34 of the biggest producers.

With the aid of advice from expert legal technicians, Mr. Truman might be able to figure out a way to reconcile opposition to the Moore-Rizley bill, Republican, with assent to the Kerr bill, Democratic. But it would be a difficult stunt. Many people certainly would be unable to see through it. They would be haunted by a deep suspicion that the President was faking.

APRIL 4, 1950.

The PRESIDENT OF THE UNITED STATES,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: This request is addressed to you on behalf of the American public generally, and the citizens of Connecticut specifically. The House of Representatives, on Friday, March 31, endorsed prior Senate action with reference to the Natural Gas Act by passage of H. R. 1758. The fate of this legislation and the responsibility for its effects rests with you.

It is the sincere desire of this group that you exercise your Presidential prerogative by vetoing this measure, which we believe not to be in the public interest.

The bill as enacted leaves natural gas without the jurisdiction of the Federal Power Commission until such time as it enters interstate commerce. A very plausible case has been presented by proponents to the effect that such regulation would be an infringement upon the rights of producers engaged in free enterprise. Nothing could be further from the truth, as natural gas sold to consumers will be in the nature of a virtual monopoly, and should be treated as such.

We unanimously concur in the opinion that natural gas be made available in Connecticut and throughout New England. Should H. R. 1758 be enacted into law, the consuming public would be completely unprotected as to the ultimate cost. It is obvious that a commodity without regulation at the source cannot be successfully regulated in transit or at its end use. No honest analogy can be drawn with other fuels—as coal and oil sell in competitive markets subject to public demand and public choice. Should H. R. 1758 become law, the general public will be at the mercy of the producers, as a single entity will control the distribution of natural gas from the point of the original arms-length sale.

New England is presently facing economic hardship through loss of industries to areas where fuel is available at lower cost. Should natural gas be made available to New England users in the immediate future, and this step is contemplated, prices of this fuel, if unregulated, would be so high as to severely limit its potential value. The danger of this course to our Nation is of serious consequence.

For the reasons stated, we respectfully request that you, as the President of the United States, seriously consider the harmful effects of this legislation, and exercise the power of veto to protect the public from the unregulated sale of natural gas.

Very respectfully yours,

JAMES T. PATTERSON,
ANTONI N. SADLAK,
JOHN DAVIS LODGE,
Members of Congress.

Industrial Expansion in California

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. SHELLEY. Mr. Speaker, the State of California and the entire Pacific coast are now experiencing a tremendous expansion of population and of industrial activity. The war and postwar years have brought an influx of new permanent residents, the exact extent of which can only be estimated at present, but which the census now being taken will definitely determine. These people have been attracted to California and the coast by the outstanding natural advantages of climate and scenic beauty, and by the unrivaled opportunities for economic and social development which that region enjoys. However, in order to support the presently swollen population and the future growth which seems inevitable, it is absolutely necessary that the Pacific coast be freed of economic fetters which now restrict the natural industrial expansion which should and must accompany an increased population. I wish to call the attention of this House to a news article recently published in a San Francisco newspaper which high lights one of the most noxious conditions now hampering the development of west-coast industries. I refer to the viciously inequitable system of freight rates now existing, which stifles the flow of goods from West to East and prevents freely competitive trade by Californa and west-coast industries with eastern markets. This system of inequities is a relic of our economic past which perpetuates freight differentials now completely anachronistic in the light of present transportation facilities and economic conditions, and must be revised in order that natural industrial growth may be uninhibited.

The news article brings out a further situation which bears investigation by the Federal Trade Commission. I speak now of practices indulged in by eastern manufacturers endeavoring to capitalize on the justly deserved reputation of the California clothing industry for quality and style of product. Labeling of New York products as "Styled in California" and inclusion of the designation "California" or "Hollywood" in the names of New York manufacturing concerns is surely the type of misrepresentation and misbranding which that body was set up to prevent and which it has strongly condemned in the past.

I ask that the news article to which I have referred be printed in full in the RECORD and that immediate consideration be given to methods of correcting these abusive situations. For that purpose I now submit the article:

"MADE IN CALIFORNIA" LABEL STOLEN BY NEW YORK MANUFACTURERS

SACRAMENTO.—New York garment makers have appropriated the "Made in California" label, Governor Warren was informed yesterday.

He was also told that high freight rates threaten further expansion of the clothing industry in California.

The Governor met for 3 hours with representatives of California garment makers and then promised:

"You have an ally in me as far as freight rates are concerned. I want to help you and I will help you."

Adolph Schuman, San Francisco, told the Governor that he can ship woolen fabric from New York to London to San Francisco and save one-third over the New York to California rate.

"Our transportation rates are a relic of the Golden West days," held Charles Fleischman, San Francisco. Asked Dan Gerteman, Los Angeles: "Why can't we ship goods east at least on an equitable basis?"

The accusation against the New Yorkers came from Dorothy Handelman, Los Angeles. She said New York garment factory racks are full of items labeled "Styled in California." She urged protection of the "Made in California" label to assure buyers they are getting California design, California style, California color, and California comfort.

Mathew K. de la Vallade, Los Angeles, said he once looked into a New York telephone directory and found 3½ columns of clothing firms with names beginning with "California" or "Hollywood."

This recommendation on shipping was given the Governor by Fleischman:

"California is now the second State and unless California, politically, throws its weight around on the freight rates nothing is going to happen."

Henry Hyman, Los Angeles, told of his shipping problem. He said he has been mailing brassieres east by parcel post. Stamps, he found, cost less than freight rates. But now, complained Hyman, there is a bill before Congress limiting the size of packages which can be mailed.

Unions Are Not Monopolies—Play Important Role in Maintaining Democracy

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. BIEMILLER. Mr. Speaker, in view of the misinformation currently being spread about labor unions, their power and their practices, I want to bring to your attention a recent lecture delivered at Wayne University at Detroit, February 2, 1950, by Edwin E. Witte, the distinguished chairman of the department of economics at the University of Wisconsin.

Titled "The Role of Unions in Contemporary Society," it is an effective and detailed refutation of those who claim unions have monopolistic power in our society. It would be well if more Members of the House understood what Professor Witte says in his closing statement:

Free trade-unions can exist only where there is a democratic government and, vice versa, I believe, the survival of democratic government, under present-day conditions, is dependent upon the continuance of a strong trade-union movement.

The matter follows:

ROLE OF UNIONS IN CONTEMPORARY SOCIETY—THEY ARE NOT MONOPOLIES

That unions have attained a very important position in the United States of today is known to everyone. On occasions people who do not like unions still talk about the small percentage of all workers who are members of unions. Some 62,000,000 Americans are in the labor force and only 15,000,000 are in labor unions. But much more frequently, nowadays, these people who do not like unions talk, alarmingly, about the monopolistic power of the unions. Only this week, General Counsel Denham of the National Labor Relations Board painted the teamsters' union as having such vast power that it could bring our entire economy to a standstill within a few days through a Nation-wide strike.

Quite a few academic writers on industrial relations have expressed similar views. A recent book, Unions and Capitalism, by Charles E. Lindbloom, a Yale University economist of theoretical bent, has attracted wide attention, not only in academic but also in nonacademic circles. In this book, Lindbloom is greatly worried about the growing monopolistic power of the unions. "Unionism," as he sees it, "is destroying the competitive price system" and leads to the "systematic disorganization of markets and persistent undercutting of managerial authority." Unions are undermining capitalism and are rapidly converting our entire economy into a syndicalist society. In less alarmist tones, one of the foremost of American economists, Sumner H. Slichter of Harvard, has long been talking about a laboristic society, which, he thinks, the United States has now become.

Quite naturally, these interpretations of the role of unions in our contemporary society by economists of unquestioned repute and objectivity have eagerly been seized upon by people who would like to see the unions cut down to size, if not destroyed. In all the vast propaganda now being carried on against the unions, their alleged monopolistic position and enormous power is stressed. At the same time, however, there often creeps into this propaganda the completely inconsistent claim that the unions, after all, have the support only of a small minority of the workers.

NO MONOPOLY CONTROL

As I see the position of the unions in the contemporary United States, neither of these contradictory claims is supported by the facts. The American unions have, indeed, made great progress and have attained a degree of strength which no one thought possible less than two decades ago. They do not have, however, monopolistic control of wages or other conditions of employment, to say nothing about production, prices, or profits. They do not control Government and, acting alone, have little prospect of gaining such control in the forseeable future. Unionism is not a single centrally controlled movement, but is split into two major federations, plus numerous unaffiliated unions. The federations are constituted of several hundred international unions, which are themselves composed of more than 50,000 local unions. In dealing with employers and in substantially everything else, the unions of this country never act as a unit. Nearly everywhere, the organized workers, including their families, are only a minority in the population, and even their leaders are socially unacceptable in the so-called best circles. Our society is "laboristic" only in the sense that unionism has made great gains and is beginning to challenge the dominance of our great corporations. But they have neither monopoly control over industry nor the main say in public affairs in the contemporary United States.

Unionism in this country is almost as old as is the Nation. There were strikes and short-lived unions in the last years of the eighteenth century. The first city centrals were organized in the 1820's, and at that time also the first independent labor party was launched. The first national federation of unions was organized in the 1830's; the first of the still existing international unions, the typographical union, early in the 1850's. We now have some local unions which have had a continuous history of more than 100 years. By the time of the Civil War we had a truly national labor movement, with some unions in all or nearly all Northern States. By the 1880's we had a much greater labor movement centering in the Knights of Labor. In the second half of that decade the Knights were challenged by the newly organized American Federation of Labor, which soon replaced them as the central organization in the labor movement. Thereafter unionism had ups and downs, periods of increasing and decreasing membership. But at least since the 1880's unionism has always been of real importance in our American society.

The great growth of unionism in this country, however, has occurred during the last 15 years. At the beginning of the New Deal period unionism was at a low point, after a continuous decline in membership during the prosperous twenties. The total union membership was only 3,000,000, contrasted with over 5,000,000 in 1920. Even at this low point, the building trades and the printing and garment industries, and some skilled occupations, were reasonably well organized. But in the great mass-production industries the unions were almost nonexistent. Much of American industry was militantly antiunion and was practically unrestrained in the methods it could use to keep out the unions.

NEW DEAL HELPED

The depression made the American workers more receptive to unionism and the New Deal brought a political climate favorable to its growth. Law restricted the employers in the methods they might employ to keep out and destroy unionism and made it their legal duty to bargain collectively with unions representing a majority of their employees. While Government never directly aided the organization of workers, as it has long aided the formation of cooperatives among farmers, it looked with favor upon unionism and encouraged collective bargaining.

Under these favorable conditions, but primarily because there was a real need for unionism, as well as aggressive leadership, the unions grew in membership and power. This growth started in 1933 but made real headway in the mass production industries only after the organization of the CIO in 1936 and the decisions of the United States in 1937 upholding and giving broad application to the Wagner Act. From under 3,000,000 members in 1933, union membership increased to 7,400,000 in 1937 and 8,500,000 in 1940. In the last years of the thirties, the unions won recognition and their first contracts from many of our greatest corporations. Gains in union membership continued at a rapid pace during the war years, reaching a peak of 13,750,000 in 1944, despite the fact that 3,000,000 union members were in our armed forces. In the period of great labor troubles immediately following the war, the unions made some further, although smaller, advances. The Taft-Hartley Act passed by Congress in 1947, further slowed union growth in a period of increasing employment, but the unions at least held their own. It is probable that there has been some decline in total union membership during the last year of decreasing total employment. Probably the 15,000,000 figure usually given for the present total union membership in this country is an overstatement, if only dues-paying members in good standing are counted, but an underestimate of the total number of Americans who regard themselves as union members. The number of workers employed in establishments in which conditions of employment are, in part, governed by collective bargaining agreements is slightly larger. There are quite a few union members in industries and plants where agreements are not sought or in which the unions have not gained recognition. These are somewhat more than offset by nonunion workers included within the bargaining units in which there are union agreements. The United States Bureau of Labor Statistics estimated that at the end of 1946 there were 14,800,000 workers in this country working under collective bargaining agreements, compared with 13,800,000 union members. Since then there have been no official estimates of either union membership or the number of workers under collective bargaining agreements, but both totals probably, are now somewhat greater, although not very much.

The growth of unionism in the last two decades has been very great in absolute numbers and still greater percentagewise. There has been a fivefold growth in union membership since 1933 and more than a 75-percent increase in the last decade. The increase in the number of workers covered by collective-bargaining agreements has been even greater.

FIFTEEN MILLION UNION MEMBERS

The total present labor force of this country is above 62,000,000. As there are only 15,000,000 union members, the statement is often made that the organized labor movement represents less than one-fourth of the country's workers. But the total for the labor force includes the noncorporate employers, the farmers, the urban self-employed, and even the men and women in the armed forces, as well as all employees. The employees include the managers and other executives and supervisors in our corporate enterprises, all clerical and white-collar workers, as well as the production employees. While there are above 62,000,000 persons in the labor force of the United States, only around 40,000,000 are workers in employments in which there is any appreciable organization. But even so the organized workers constitute less than 40 percent of all

the workers in such employments and less than one-third of all employees, exclusive of executives and supervisors.

These totals obscure much higher percentages of organization in many major industries. In all manufacturing industries combined an estimated 70 percent of the production workers are employed under collective-bargaining agreements. This percentage is even higher in mining, construction, and transportation, but is less than 60 percent in public utilites, less than 40 percent in service industries, and less than 20 percent in trade, finance, Government, and agriculture. In particular industries and occupations within these broad classifications there are higher percentages of union organization, but there are few industries or classes of workers in which there is approximately 100 percent of union organization. This may be true of such small employments as photoengravers, pattern makers, window-glass cutters, and a few others, but even in coal mining there is today a considerable volume of nonunion production and a not negligible rival union which is working while the United Mine Workers are on strike.

The alarmist outcries about the monopolistic position which unions have attained seem least warranted when comparison is made between the strength of our unions and that of our great corporations. In many respects the labor union is the counterpart of the corporation. Both are associations, with an entity and existence distinct from that of their members.

There are something like 500,000 active corporations in this country—10 times the number of our labor unions. Collectively, they do two-thirds of the business of all kinds in the United States of today. In manufacturing they have well in excess of 95 percent of the total production and even higher percentages in the finance, public utility, and transportation fields.

The great majority of the corporations differ from individual and partnership enterprises only in having a corporate existence district from their members and limited liability for their owners. They are individually or family owned and do not represent large aggregations of economic power and resources.

CORPORATION WEALTH, POWER

While corporations of this sort greatly outnumber the large corporations, the latter have vastly greater wealth and power than all the small corporations combined. The TNEC investigation on the eve of World War II disclosed that the 780 corporations—each of which owned assets of $50,000,000 or more—represented but two-tenths of all corporations but owned 52 percent of the total assets of all corporations. Thirty corporations had assets of more than $1,000,000,000 each. The two largest of these immense corporations each had assets greater than the combined wealth of all the people in 38 of the 48 States of the Union. Since this report was made, 10 years ago, moreover, the great corporations have grown immensely and almost certainly control a greater percentage of the production and wealth of the Nation.

In contrast with the great wealth of the large corporations, the resources of the labor unions of today are but puny. A recent study of the financial resources of 50 international unions, whose combined membership was nearly 12,000,000—four-fifths of the entire union membership of the country—reported their total net worth to be $339,000,000, including all their insurance funds. Only one union, the Brotherhood of Railroad Trainmen, had assets of as much as $50,000,000, while, already 10 years ago, as has been noted, 780 corporations had assets of above this amount. Only 28 of the international unions had a net worth of as much as $1,000,000. The resources of each of the two great labor federations, the American Federation of Labor and the Congress of Industrial Organizations only slightly exceed this figure of $1,000,000. No similar study has been made of local union funds and only estimates are available regarding the total resources of all our unions. A very recent estimate by Dr. Alexander S. Lipsett, of Floyd L Carlisle, Inc., public relations consultants for business organizations, is that all our unions at all levels today have total assets of between three and four billion dollars—a figure exceeded by each of more than a half dozen of our large corporations.

In other respects also, the great corporations are much more powerful than our largest unions or all unions combined. In many large corporations the stockholders outnumber the employees, which is significant because these corporations get almost unanimous support from their stockholders when they get into labor difficulties. The great corporations also have far more extensive propaganda facilities and generally get much more favorable publicity through regular news channels. Corporation managers and executives are the best paid of all people in our present-day society. They are socially acceptable everywhere and command much attention whenever they express their views on any subject. In contrast, our labor leaders are outcasts in social circles, and are suspect by a large part of the general public.

LABOR IN POLITICS

Much alarm has been expressed about the growing political consciousness of labor. But labor people seldom are elected to top offices anywhere in the United States. Probably, no other large element in our country is proportionately more under-represented among our office holders than are the production workers in industry. In this connection it is important to bear in mind that in nearly all States, the production workers and their families constitute only a minority of the population and the organized workers are only a minority of all production workers. Moreover, seldom, if ever, have all union men voted together. If labor is to succeed politically, it must get strong support from other groups. Certain it is that it is still far from dominating the political scene or our Government on any level.

What all this comes to is that the United States is today far more of a managerial than a laboristic society. Industry is our main source of income and managers run industry, or at least large industry. A majority of our great corporations are management controlled, in that, normally the management selects the directors. Managers are very much the leaders in our society and, as such, have great influence upon all our institutions.

To some degree, unionism represents a challenge to absolutism on the part of management. When the union enters, the management ceases to have a completely free hand in many matters affecting conditions of employment. What these are varies from union to union and from time to time. Speaking generally, there has been a tendency for unions to concern themselves about more and more matters. This has led to the outcry about the invasion of management rights by the unions and to claim that what labor is after is to usurp the powers of management or, at least, to demand an equal voice with the representatives of the stockholders in management.

GREAT VARIETY OF UNIONS

Among the 50,000 labor unions of the country, examples can be found of almost everything. There are as great variations among unions as among corporations, with respect to organization and structure, size and power, objectives and methods. The smallest international union has only 100 members, the largest above a million. There are a few unions which are profit-making business organizations; some others that are cooperatives; and a few which are really medieval guilds, constituted of both masters and journeymen. A few unions have brought disrepute upon the labor movement by employing racketeering methods and others by resort to terrorism and violence. There are unions which seem to have as their primary objective service to foreign ideologies and nations. On the other hand, there are company unions, whose real purpose is to undermine genuine unionism and to fool the workers, in the interests of employers.

The labor movement is too large and too varied to be fully and accurately described in a few brief sentences. The sort of unions mentioned, however, are not typical. There have been crooks in the labor movement, but not more than in other strata of society. Unions and union men have sometimes employed lawless methods, but what group has not done so? With the passing of the years, violence in labor disputes has become much less common than it was earlier. Unionism has suffered from the infiltration of Communists and their attempts to use the union movement to advance party interests. But no one has done so much to keep the Communists from making real headway in this country as have the unions. A vigorous union movement is the best safeguard we have against the possibility that our workers may fall for the false promises of those who would undermine our economy and Government.

When it comes to generalizing about unionism in this country, one of the few characteristics which applies to all unions is that they are organizations of workers formed for their benefit. They are more than social clubs, although they do afford workers an opportunity for meetings with their fellows outside of the shop and on terms of social equality and often sponsor very worth while social gatherings for the families as well as the members. They are not educational organizations, although unions are devoting increasing attention to union education and the training of their officials and representatives. They are not propaganda organizations, although they have come to recognize the great importance of getting their message to the public in a favorable light. They are not occupational organizations whose purpose is to improve the skills of their members and their efficiency as producers, although wise leaders recognize that continuous large advances in real wages are possible only if there is increased production. Neither are unions primarily service organizations, although they render a multitude of services for their members, many of them not directly related to their work.

Services of this kind have grown apace in recent years and are an essential function of present-day unions, but they are only incidental to the main purpose for which unions were organized. Unions, also, are not business organizations, which seek to maximize the earnings of their members, as individual entrepreneurs and corporations seek to maximize their profits. While wages are a matter of much concern to all unions, they are by no means all that matters to them. The continued existence of the union often is of greater importance than what the members may get out of it at the moment. Finally, unions are not political organizations in the sense of party organizations or political clubs. It has become fashionable, even among friends of labor, to say that they are essentially political organizations. But this is true only in the sense that the union leaders must satisfy their members and pay heed to their wishes or suffer the penalty of defeat in elections.

UNION BENEFITS

Unions in this country have traditionally functioned primarily in the economic sphere.

This is still the major field of activity of substantially all unions. Their best-known objective is to increase the return to their members from their productive efforts. Many new union members look upon their unions as something akin to a slot machine, in which they put in a few dollars and expect to make a killing. This has led unions to overemphasize wage rates, especially in their early years, but increasingly union members and the unions they control have come to recognize that the largest possible return to the workers involves more than increases in rates per hour. So they have become concerned with wage-rate inequalities and wage-rate structures, incentives and production standards, down time and call-in time, overtime and holiday pay, vacations, sick leave, and, this year, to a greatly augmented degree, retirement pensions, group insurance, and health and welfare funds. Just around the corner, perhaps, is a real drive for guaranties of employment or wages and severance pay.

Less well known to outsiders but not less important to the members are the efforts made by unions to protect their members from arbitrary action by management and to insure that they will be treated in the shop with fairness and in accord with human dignity. This is involved in many grievances, to which all unions devote a great deal of attention. It is also the basis of seniority rules and of review of discharges and other disciplinary action.

But more important to the dyed-in-the-wool unionists and the far-seeing union leaders than any of these is the preservation of the union and the strengthening of its position when its existence seems to be threatened. This is the reason why real union people are not much impressed by the propaganda, which makes its appearance in every serious strike, to the effect that the strikers are losing far more in wages than they can possibly recoup in many years through wage increases they may win. One of the most important aspects of unionism in contemporary America is the intense loyalty the unions arouse among their active members.

To attain these objectives unions in their dealings with management have placed main reliance upon collective bargaining, contracts with employers and machinery for grievance adjustment. Not until the 1880's were these procedures utilized and not until the present century can they be said to have become the standard practices of unions. Despite splits in the labor movement and controversies on many issues among rival unions, all unions now operate in this manner.

UNIONS ALWAYS IN POLITICS

On the part of the general public there is a widespread belief that unions in recent years have changed their tactics to gain their objectives through politics. Unions are more active in politics now than they ever before have been. But it is erroneous that they previously were indifferent to politics. From its very beginning American unions often took part in politics and on many occasions formed independent political parties. The American Federation of Labor from its inception gave much attention to lobbying and at each of its conventions adopted resolutions dealing with general public issues. For nearly 50 years it has pursued the policy of "reward your friends and punish your enemies" in elections. What is new in the present situation is an issue which has united all labor—repeal of the Taft-Hartley Act. In the past also organized labor has been most aroused politically when it felt that the unions and their economic activities were being threatened by the Government. There is on the part of some influential labor leaders an appreciation that the unions have attained a position in our society which requires that they must concern themselves with major public questions of general import. Further the change in the attitude of the United States Supreme Court on protective labor legislation has made it possible to attain some of the objectives of organized labor through legislation. But I see the present activities of unions in politics, not as a fundamental change in concepts and policies but as an intensification of tactics they have always employed, brought about primarily by the fact that their economic freedom of action has been restricted by the passage of the Taft-Hartley Act.

The leading living interpreter of the labor movement among academicians, my colleague at Wisconsin, Prof. Selig Perlman, has termed the economic objectives of American unionism and the methods it employs to attain these objectives, "job control." The strength our unionism has attained, he attributes to this earthy objective, distinguishing it from the revolutionary aim of establishing some form of a socialistic society, which has been the objective of most European labor movements and which not a few intellectuals in this country have wanted our labor movement to adopt.

As Professor Perlman has also pointed out, job control as practiced by unions in this country does not deprive management of any of its function. Rather it is a program for giving labor a voice in determining conditions of employment. It limits absolutism on the part of management, but does not sovietize industry or change our system of free enterprise into one of syndicalism.

RECOGNIZE MANAGEMENT RIGHTS

Labor's attitude on management rights was fully disclosed in the National Labor-Management Conference of 1945. In that conference, the management members, among whom were many of the leading industrialists of the country, wanted labor to agree that a long list of subjects, including even safety in the workshop, were matters of management rights with which labor would not concern itself. The labor representatives both AFL and CIO refused to go along. Their position was not that there are no management rights or even no matters about which the unions would not concern themselves, but that no enumeration of such rights could be applicable under all conditions, and at all times. They recognized that management is necessary for the successful conduct of industry and stated positively that labor does not wish to take over management or even to share it. What labor seeks is a voice for the workers in determining their conditions of employment.

There is nothing revolutionary in this aim. Both the CIO and the AFL have repeatedly declared that they favor the continuance of our system of free enterprise. Labor can properly claim that it more sincerely favors free enterprise than do many of those who try to pin the charge of monopoly on it. What labor insists upon is that human beings are more than commodities and that the welfare of the workers should not be determined solely by market considerations. It challenges absolutism on the part of management in dealing with workers, not free enterprise. Rather it is the strongest bulwark we have against the replacement of free enterprise by some form of socialism or communism.

ACCOMPLISHMENTS OF AMERICAN UNIONISM

Having now dealt with the position unionism has attained in the contemporary American scene and its objectives and methods, I want to conclude by a brief recital of what it has accomplished to date.

American unions have not been successful in everything they have undertaken and everything they have done has not been in the public interest. But viewed as a whole, the record of the American labor movement has been one of substantial accomplishments for its members and of benefit for our entire society. Its record has been at least as good as that of any other labor movement in the world and its contributions to the general welfare of our country as valuable as those of any other group in our society.

On the value of unions to their members the first question which arises is whether the unions increase rates of pay and earnings. Most union members have no doubt that they do; in fact, that is why most workers first join unions. But spokesmen for anti-union employers often say that the unions get no wage increases which they would not have gotten anyhow, or, if they do that the higher wages are at the expense of reduced employment. At other times, and sometimes almost in the same breath, they say that the unions have been responsible for price increases which were rendered necessary by wage increases forced upon industry by the unions. These claims of people who do not like unions have considerable support from theoretical economists and a little support in bona fide statistics. The most impressive statistical data supporting the view that unions have not done very much to increase wages or, at least, real earnings is that relating to the total percentage of the national income going to labor. This shows that the percentage of the total income going to labor has not gone up very much since unionism became powerful. But what this proves is not certain. Labor in all such statistics includes management and all types of workers, organized and unorganized. Data on the share of the total income of given industries going to the production workers alone is scant; moreover, there is no way of knowing what would have been their share had they remained totally unorganized. With the aggregate capital invested in industry ever increasing, there might well have occurred a decided reduction in the share of income going to the workers but for the spread of union organization.

Besides such data relating to the share of labor (including management) in the total income, there have been some analyses of the increase in the earnings of organized workers with those of unorganized workers. How those come out seems to depend upon the particular groups compared and the years used in the comparisons. Quite clearly, the organized tend to shoot ahead of the unorganized most rapidly in their first contracts. Further gains are slower and smaller and may even be reversed. But conclusions drawn from such statistics are also doubtful. The spread of unionism has benefited the unorganized, as well as the organized. No one can prove statistically what wage rates and earnings would have been had there been no unionism.

HIGHER PAY

In the absence of conclusive statistical proof, we must fall back upon every day observations. Very generally, organized workers get higher pay than unorganized workers. Workers know this and so do employers. Both act accordingly and there is little doubt about the facts, theoretical reasoning and statistical manipulation to the contrary notwithstanding.

But all intelligent unionists know that there is a limit to possible wage increases at a given time. That limit is set by the fact that industry must meet all costs and normally must yield a profit. Some wage increases are possible without price increases, but large continuous increases can be gotten only if there is increased production and productivity.

Increased wage rates and higher earnings are by no means all the gains unions have brought their members. There have been innumerable other improvements in conditions of employment. Among these are such material, although intangible, matters as vacations, paid holidays, benefit funds, and many others. Such advances cannot be

measured in exact monetary terms, but collectively have added a great deal to the economic gains unionism has brought to its members. Prof. Joseph Shister of the University of Buffalo, an economist who inclines to the view that the long-run influence of unionism on wage rates is likely not to be very great, in a paper at the recent New York meeting of the Industrial Relations Research Association, has pointed out that such nonmarket gains to workers and society are not automatic but need the stimulus of unionism. It is his conclusion that the rapid progress in these respects is attributable, mainly if not entirely, to unionism and the threat of its spread.

HUMAN DIGNITY

Beyond all economic gains are noneconomic values, perhaps even more important to the workers. These relate to treatment of working men and women in accordance with human dignity and the freeing of the workers from a terrible fear of insecurity. By no means all managements and supervisors before unionism or even a majority of them treated the ordinary workers as inferiors or as mere cogs in production. But there can be no doubt that with the coming of the unions conditions in these respects improved greatly in many shops. Similarly, the unions restricted arbitrary discharges and other disciplinary action and afforded considerable protection to the jobs of their members. Through such policies the unions have greatly improved the position and psychological satisfactions of the workers—their status in their own eyes and that of their fellows as men and women.

Unionism has afforded opportunities to many workers for growth as men which they probably would not have had otherwise. Citing another address made at the recent meeting of American Economic Association, this one by Professor Spengler of Duke University, it was Professor Spengler's observation that, increasingly, management is recruited from the colleges, not from the rank and file of the workers. Whether this is or is not true, certain it is that many workers have found in their unions opportunities to grow and rise to positions of esteem among their fellows. While union leaders are often looked down upon by management and the public, these positions are eagerly sought by many workers; in fact, if public opinion polls are to be trusted, more than advancement to the ranks of management.

The benefits of unionism have not been confined to the union members, but have accrued to all workers. When unions become the exclusive collective bargaining representatives of all workers, they are obligated by law to fairly represent the nonmembers in the plant or company, in the same way as the members. Generally the nonmembers get the benefit of the same wage increases and all other improvements in working conditions provided for in union contracts. Unorganized workers in plants where there is no unionism at all also have benefited greatly from unionism. Wage increases are often made to keep out the union and when unionized plants get increases, the nonunion plants also make increases—usually later and often in somewhat lesser amounts, but something at least. With the spread of unionism, grievance machinery and fairer treatment of workers has also developed in many unorganized plants. Further, the unorganized workers have been the principal beneficiaries of protective labor legislation, whose most powerful supporter has been organized labor. Protective labor standards—the increase to the 75 cents per hour minimum recently effective under the amended Fair Labor Standards Act, for which organized labor fought so hard, for instance—directly benefit many, if any, union members but means higher pay and few unorganized workers.

UNIONISM HELPS MANAGEMENT

Unionism also has had many values for management. This is a thesis often developed by Sumner Slichter. He starts with the fact that unionism tends to increase wages and labor costs. This makes management more alert to technological improvements and steps up to the tempo of progress. Slichter credits unionism with operating to put management on its toes, to the benefit of the entire public. Joseph Shister, in the address previously referred to, notes that the nonmarket values of unionism tend to improve employee morale, which is of direct benefit to management and the stockholders.

Certain it is that in the last decade in which unionism has been powerful, corporation profits have reached all-time highs. A Federal Trade Commission survey of the profits of 528 manufacturing corporations in 25 major industries disclosed that in all these industries the total profits were greater in 1948 than in 1940. In all but two of the 25 industries, also, the rate of return on investment was greater. An average return of 10 percent on investment in 1940 became 20 percent in 1948. I doubt whether there is much of a casual connection between the growth of unionism and the great prosperity of industry. But strong unionism, very certainly, has not resulted in financial ruin for industry. Strong unionism has coincided with increased production, higher salaries to management, larger dividends, heavy reinvestment of profits in plant modernization and expansion, and general prosperity.

Unionism has also benefited the general public. The economic gains won by the unions for the workers have not been at the expense of other major elements in our society. Higher wages to workers have meant a great purchasing power, which has benefited all groups. Treatment of workers in accordance with human dignity costs nothing but raises our entire social level. The advances made by the workers in industry have aroused many jealousies, but, at least to date, other groups have prospered along with the workers and have benefited from their economic advances.

For the public, also, there are values in unionism going beyond monetary gains. Sumner H. Slichter has very truly remarked: "Industry produces men as well as goods and the kind of men which a democratic community needs may not be produced in shops which are small oriental despotisms." The survival of our democracy depends to a very great degree upon the quality of our citizens. The close relations between industrial and political democracy is indicated by the fact that every totalitarian government on earth, whether of the right or the left, has always suppressed free trade-unionism and has remade the unions into mere organs of the party or the government. Free trade-unions can exist only where there is a democratic government, and vice versa, I believe, the survival of democratic government, under present-day conditions, is dependent upon the continuance of a strong trade-union movement.

Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. CANFIELD. Mr. Speaker, according to the Washington Post today the mayors of 18 big cities yesterday joined in a telegraphic request to President Truman strongly urging him to veto the Kerr natural-gas bill "on behalf of the millions of consumers in our cities." Those signing the telegram were the mayors of New York, Chicago, Philadelphia, Detroit, Los Angeles, Cleveland, Pittsburgh, Baltimore, St. Louis, Milwaukee, Minneapolis, Kansas City, Cincinnati, Denver, Toledo, Birmingham, Akron, and St. Paul.

I cannot help but believe that when the full import of this legislation, which was passed last week by the House only after several Members changed their votes, is realized by other mayors, especially those in the New York-New Jersey area, they, too, will urge a Presidential veto in behalf of the consuming public they represent.

Why Not a Subsidy on Rockers?

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. WILSON of Indiana. Mr. Speaker, under permission to extend my remarks, I include in the RECORD a letter from a clever constituent of mine from southern Indiana. Coming from one of the most down-to-earth sections of the country, this tongue-in-cheek communication tickled me, though the situation it points up is anything but funny:

SEYMOUR, IND., *March 25, 1950.*

DEAR MR. WILSON: I am in the furniture business and am writing this letter to request that you obtain for me a subsidy on our platform rockers. We are now making about a thousand a year and are eager to step this production up to 50,000 as soon as possible. With so many people in the country getting rockin'-chair money, we feel that the market is unlimited for our product. Since you are voting money for potatoes, cotton, tobacco, railroads, aviation, and many other industries, I see no reason why we in the furniture business should be slighted.

Now, we would like a guaranteed price of $50 each for these rockers. In the event we are unable to sell all of them, we will arrange to burn them right here at the factory rather than go to the expense of shipping them somewhere else to be destroyed. I notice that you paid $2.90 a bag for potatoes in Maine and then shipped them to Chicago, which raised the cost to $4 a bag, and then sold them to farmers for 1 cent a bag. That sort of thing is pretty expensive, so we will gladly arrange to destroy any surplus of our rockers right at the factory.

It should be an easy matter for you to get the above-mentioned program through Congress, since I see that last year you boys voted to spend $29,000,000,000 without even a roll call. Perhaps you can get one of Harry's boys to enter our rocker program in the budget. I realize that it will be small potatoes to the billion-dollar programs that you are accustomed to, but perhaps you can start a new bureau or something to raise the ante and get it in the billion-dollar bracket. I certainly cannot see that I am asking anything unreasonable, as I have paid taxes all my life and have never received a check from my Government. You paid some of the boys in Maine as much as $450,000 for raising potatoes which the Nation could not possibly

consume, so why not a few bucks for the underfed furniture business?

We are in a position to provide some pretty expensive lobbyist with a pocket full of money to spend on the program if you think that is necessary. There must be some secret to getting those big spending programs which benefit a particular group through Congress, and we are eager to obtain the secret. Any information regarding the same will be gratefully appreciated.

Please let me hear from you as soon as possible regarding the above-mentioned rocker program, as we are eager to get the Government checks started rolling in.

Yours most respectfully,

HARRY BOLLING.

Justice for Poland

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent, to insert in the RECORD an address delivered by the distinguished Hon. Arthur Bliss Lane on the "Justice for Poland" radio program sponsored by the western Massachusetts branch of the Polish American Congress and the introductory remarks made by Attorney Paul P. Flak, of Springfield, Mass.

It is refreshing to note that the cause of Poland has not been and never will be abandoned.

Despite weak-kneed appeasers, soft-thinking internationalists and tyrannical Communist persecution, there are many of us in this Nation who will never cease our activity until the betrayals of Yalta and Tehran have been renounced, until Poland shall be liberated from the bondage of godless enemies of democracy and freedom.

I congratulate my valued friends upon their efforts, urge their continued activity and pledge them my unyielding loyal support for this great cause.

The address follows:

INTRODUCTORY ADDRESS OF ATTORNEY PAUL P. FLAK

The Poles have been the warmest friends that the United States had in Europe. To retain this valuable friendship, so essential in the present unsettled condition of the world, justice must be accorded to Poland because she was brutally betrayed by her western allies. For this reason in a series of addresses the speakers who have appeared on these programs have delved on stimulating interest in the tragic fate of Poland and have shown the necessity of the repudiation of the Yalta agreements that opened the gates for the imperialistic expansion of the Soviets. It was at Yalta that we violated the noble pronouncements of the Atlantic Charter and the four freedoms. As a result of Yalta, Soviets became a threat to our American security and forced us to spend billions on the Marshall plan and other preventative measures. We are beginning to see some ray of light appearing, for recently Congressman ROBERT HALE, of Maine, introduced a resolution stating that the agreements at Yalta are not binding, for they were violated by the Russians. The Secretary of State in his California speech has brought out among the seven points needed to achieve peace and end the cold war "to withdraw Russian military and police forces from present satellite nations and let them choose their own form of government." This is the first time since Yalta that the countries behind the iron curtain, now enslaved by the Soviets, received encouragement and some evidence of sympathy against oppressors. Another topic that our speakers have brought to the attention of our fellow Americans was a grave warning against the spread of communism in the United States. I shall read you an editorial from the Times Leader, Wilkes-Barre, Pa., presenting the remarks of the head of our organization and also the editorial comment:

"Charles Rozmarek, president of the Polish-American Congress and of the Polish National Alliance, speaking at a benefit dinner for displaced persons in Chicago last week, said among other things: Let us clean up the Communist scum in America. Communist propaganda should be banned. No red professors should be permitted to teach in our universities. Communists should be treated the way every criminal is treated. Let us show them no mercy. They are traitors and should be treated as such. Every foreign-born Communist should be thrown out of America. Every native-born Communist should be placed behind prison bars. This great country of ours should belong only to loyal Americans. In plain words, let us destroy communism in this country. If we don't, it will destroy us. It is a case of their neck or ours."

That is language that can be understood by Americans everywhere. It makes sense in Wilkes-Barre, Mr. Rozmarek's home town, as well as in Chicago, the city of his adoption. It might even be understood in Washington, but Mr. Rozmarek would not be too sure of that in the light of his experience with the Roosevelt administration and the double-cross of Poland and the cause of freedom at Yalta. The sentiments Mr. Rozmarek expresses in his Palmer House address were those of a loyal American. It was not the first time he raised his voice in warning on the threat of communism. He has the foresight to detect the designs of Soviet Russia on the land of his forefathers, but the wartime administration in Washington played Stalin's game with disastrous results. The fate that befell Poland now menaces America.

Mr. Rozmarek is justifiably alarmed and he makes himself unmistakably clear in sounding a call to arm for his fellow countrymen. True, the measures he proposes are drastic in a land like ours, but it is well to bear in mind that we are facing a ruthless foe who plays according to his own rules and with whom anything goes if his purpose can be accomplished. We dare not to be too squeamish without inviting the fate that inevitably will overtake us unless we secure ourselves on the home front. Mr. Rozmarek's proposal that all foreign-born Communists be deported is sound. If they don't like the American way of life, they don't belong here. Why are they here, anyway, if it is not to stir up strife and undermine our liberties? They are enemies of the United States as much as the Nazis and Japs ever were. In a sense, they are worse, for they take advantage of our hospitality and bore from within. Why not round up all these alien reds and replace them with homeless soldiers and exiles of Poland and other lands who fought for our cause and who sacrificed everything except their lives, which they offered to preserve the ideals of America? It is easy to agree with Mr. Rozmarek that the time for pussy-footing on communism is passed. He is right when he indicates it is a case of survival. The suggestion that communism and democracy can live side by side in this world is the bunk. The record of recent years speaks for itself.

Our speaker today is Hon. Arthur Bliss Lane who resigned as Ambassador to Poland and terminated what President Truman called "a long and distinguished career in the American foreign service." He began his diplomatic service in 1916, the year he was graduated from Yale, as a private secretary to the United States Ambassador to Italy. Some of his other assignments have included secretary to the United States delegation to the Supreme Council at Paris, Chief of the Division of Mexican Affairs, Envoy Extraordinary and Minister Plenipotentiary of Estonia, Latvia, Lithuania, and Yugoslavia, minister to Costa Rica, and Ambassador to Colombia.

The difficult Polish assignment began in 1944 when Mr. Lane was appointed Ambassador to the Polish Government in exile in London and later as Ambassador to Poland's regime. Mr. Lane was at Warsaw to enforce the Yalta and Potsdam mandates stipulating that the Polish election be free and unfettered. Once the election was held, in his letter of resignation to the President, he charged the Polish Government with cynical disregard for the international obligations. He caused an international stir by his decision to gain the freedom of a private citizen by resigning his diplomatic post so he could speak openly to the American people on the subject of the betrayal of Poland. It is a pleasure that I now present the Honorable Arthur Bliss Lane.

ADDRESS OF HON. ARTHUR BLISS LANE

As one who has twice served in Poland as a member of the American Foreign Service and who has accordingly acquired the highest admiration and the deepest affection for the Polish race, I feel greatly privileged to speak on the Justice for Poland radio program of the Polish-American Congress.

No people has suffered greater injustices, physical, and mental hardships. In addition, the Nation has twice lost its liberty—once to the Nazis and then to the Communists.

And the terrible admission which we Americans must make is that Poland's present plight today—being subjected to a regime of persecution where none of the "four freedoms" exists—is due in part to the attitude of the United States at the conferences of Tehran and Yalta. Whether this betrayal of a faithful ally was deliberate or unwitting, the fact is that in acquiescing to the cession of Polish territory to the Soviet Union we ourselves violated the principles of the Atlantic Charter for which we had supposedly been fighting the war. We thereby cleared the way for the setting up of the Communist Government in Poland. Contrary to the principles of the Atlantic Charter, we did not consult the Polish Government in exile in London, which we then recognized as the legal Polish Government, regarding the cession of 60,000 square miles of Polish territory, nor did we consult the Polish people. Anyone who knows the Polish people knows that they have no sympathy for communism. They are one of the most religious peoples in Europe and certainly would not wish to be ruled by a government which is openly atheistic.

Many explanations have been made as to why it was necessary for the United States at Tehran and Yalta to agree to the imposition on Poland of Communist domination. Some claim that if we had not agreed, Stalin would have made a separate peace with Hitler. Others claim that Stalin's participation in the Japanese war was essential for the United States and would save countless American lives by shortening the war. In any case, it is clear at this point in our history that we renounced the principles to which we had solemnly subscribed and which we persuaded other members of the United Nations to subscribe, including Poland and the Soviet Union.

By renouncing solemn principles involving our international integrity, not only was our prestige greatly lowered by our unwittingly encouraging the Soviet Union to proceed in Poland and in all the other countries of eastern Europe as well, to disregard the promises which it and its satellite countries had made regarding the holding of free elections.

Our Government has on many occasions denounced the violation of the Yalta agreement by the Soviet Government and by its satellites. Our protests have had no effect whatever, for the Soviet Government well understood that short of war there was no action which we could take to remedy the situation. But we as a Nation should do far more than protest the violations of Yalta. We should denounce Yalta. Not only is Yalta unconstitutional, never having been ratified by the United States Senate, but as a violation of the Atlantic Charter it should be denounced and repudiated as being contrary to the principles of our expressed foreign policy. Only a few weeks ago Dean Rusk of the Department of State, in referring to the possibility of a meeting between President Truman and Stalin, said: "We are not prepared * * * to sit down in a corner with another great power and dispose of the basic interest of other governments or peoples behind their backs." And yet that is exactly what we did at Tehran and Yalta.

Some may accuse me of being destructive in my criticism. But if we are to build a new world we must tear down the false foundations on which certain conceptions of our foreign policy are based. And the American people can use their democratic processes so that the United States will take constructive action. The step which I propose that the American people should take is indeed simple and will cost no appropriation by Congress. It is merely that the Congress of the United States should be urged by the people to declare that Yalta is no longer binding on the United States, for the reasons which I have given. This step is more than an academic one. It would have far-reaching effects. First, it would show the Soviet Union that the people's representatives in the United States are warning the Soviet Union that it can go no further in its policy of aggression. Second, it would tell the peoples behind the iron curtain, through the Voice of America, that we are thinking of them and that their day of liberation is still a possibility despite present-day oppression. Thirdly, we would be putting ourselves on record as having reverted to the principles of international morality which we so righteously proclaimed in the Atlantic Charter. If we are to regain the international respect which has traditionally been ours for years, we must base our foreign policy on principles and not on expediency.

All of you can and must help to accomplish this ideal.

National Security Resources Board

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. CANFIELD. Mr. Speaker, since September 1949, I have been calling attention to the fact that the all-important National Security Resources Board has been without a permanent Chairman and its acting head, Dr. John R. Steelman, assistant to the President, was too busy with other duties to provide proper leadership.

This week in describing to the House the chapter in the omnibus appropriation bill dealing with the National Defense Establishment, our able colleague, Representative MAHON, of Texas, agreed with me that it had been most unfortunate that the National Security Resources Board had been leaderless for so many months during the so-called cold war. Both of us hail last week's selection of W. Stuart Symington, Air Force Secretary, as the Board's permanent Chairman and we are mindful of the tough job he has ahead.

Mr. Drew Pearson in today's Washington Merry-go-Round has some pungent words to say in the situation. They follow:

HEADLESS BUREAU

When hard-driving, imaginative Secretary of the Air Force Stuart Symington changes desks to run the National Security Resources Board, he will find an outfit about as full of snap as a worn-out spring. On the books, the NSRB has the vital job of blueprinting civil defense, relocating industries, finding the most effective use of resources, and planning for regulating production, manpower, and Government facilities in time of emergency.

But this all-important Board has been both leaderless and kicked around by agencies that should be obeying its orders.

The Amerasia Case

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. WIGGLESWORTH Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Sokolsky:

THESE DAYS

(By George Sokolsky)

No writer likes to keep everlastingly on one subject, trying the patience of his readers—and his own—but I know that the suppressed Amerasia case is the key to all this miserable quarrel over the State Department.

Two raids were made on that magazine—one by the OSS; the other by the FBI. In this piece I shall discuss the suppressed OSS investigation.

An unimportant report on Thailand appeared as an article in the magazine Amerasia. While the article itself did not matter, obviously, the OSS, which was a very secret arm of the Government under the direction of Gen. William Donovan, was deeply concerned, for it led to a leak in its own organization. It meant that the OSS, which dealt with espionage, was itself the subject of espionage.

Thereupon an investigation ensued under the direction of Frank Brooks Bielaski, ordered by A. Van Beuren, security officer of OSS. It was found that about 30 persons in various departments of the Government had access to this document and each name was known.

It was decided to visit the offices of the magazine. It took the investigating crew about a week, from March 3 to 10, 1945, to get into the premises because someone was always working there late at night.

Five persons entered the premises at midnight of March 11, one a mechanic. The reason for the late hour was that the office was in use all day Sunday until 5 p. m.

This magazine then had a circulation of 1,700—a fact which is important because, while the publication itself could not have amounted to anything, its premises seemed very busy. In it was located a large photocopy room with an unusual amount of equipment. Such equipment could not have been needed to produce this small magazine.

In the rear of the office suite were three principal rooms—the office of Kate Mitchell, the office of Philip Jaffe, and a large library which contained hundreds of volumes relating to the Far East.

On the library table was an envelope containing secret documents, across the top of each of which was written the name of one of America's most important novelists, whose name I am not giving now. In that envelope were found six documents, hastily copied on a typewriter from original Navy documents, all marked "top secret." I have in my possession a general description of these documents.

In Philip Jaffe's office were found a bellows-type suitcase and two brief cases suitable for carrying documents. The suitcase was marked "P. J. J." Scores of secret documents were found in these three receptacles.

They were from the State Department, Naval Intelligence, Army Intelligence, and the OSS. Some were original documents; some typewritten copies, with three or four carbon copies. There were also photostats of State Department documents.

The raiders actually took some of these documents as samples. All the OSS documents were stamped with a declaration to the effect that possession of such articles by an unauthorized person constituted a violation of the Espionage Act. One of the photostats, from the State Department, showed the complete distribution of all groups in the Chinese Army, the places where located, under whose command, naming units division by division, and showing their strength.

Four agents saw all the documents and are therefore witnesses to the transaction. They have never been called in any investigation, although 5 years have passed and the statute of limitations has been permitted to run.

All this was duly reported and the documents delivered to the OSS security officer, A. Van Beuren. Undoubtedly this was given to Gen. William Donovan, who has never been called to testify concerning a case of major espionage, involving hundreds of documents.

The original officers of the Amerasia magazine were:

Editorial board, Frederick W. Field, chairman; Philip J. Jaffe, managing editor; Lilian Peffer, assistant editor; Harriet Levine, secretary; T. A. Bisson, Ch'ao Ting-chit, Kenneth W. Colegrove, Owen Lattimore, William W. Lockwood, Cyrus H. Peake, David H. Popper, William T. Stone. (From issue of August 1938, vol. 11, No. 6.)

To this subject I shall refer again.

Home Rule for the District of Columbia

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial from the Sandusky (Ohio) Register-Star-News:

HOME RULE FOR CAPITAL DENIED VOTERS BECAUSE OF RACE ISSUE

Of all the burdens saddled upon Congress, acting as a city council for Washington seems the silliest. Long hours are devoted to details of municipal government that are admittedly tiresome to most of the lawmakers involved.

Actually, no one likes the arrangement. Washington's residents want to govern themselves just as do citizens everywhere else. Officials of the District of Columbia, who run the city under the thumb of Congress, plead for more authority.

Both major parties went on record in their 1948 platforms as favoring home rule for the Capital.

Despite all this action on home rule legislation is stymied. Last year the Senate passed a bill by Senator KEFAUVER, Tennessee Democrat, to give Washingtonians the right to vote for a city council and to provide for a reorganized District government. But the House District Committee sat on the measure.

That's the situation today, except that a petition is being circulated among House Members to discharge the committee from further study of the bill. The discharge petition, the only way a measure can be brought to the floor over the adverse vote of a committee, now lacks but 49 of the 218 signatures to become effective.

Why has the home-rule proposal been blocked when so many appear to favor it?

The answer is simple. Between a fourth and a third of the Capital's population is Negro. There is fear in certain quarters that to enfranchise Washington voters will mean to give this minority more than its proportionate strength at the polls.

Obviously there can be no defense of such a viewpoint in this country. Forward-looking elements in the South have been slowly but surely winning the Negro his rightful status at the polls after decades of disfranchisement. And there the problem has, of course, been most acute.

Certainly Washington is the last place democratic America should wish to see barriers raised against use of the voting privilege. It may be pointed out that the Capital is in a ticklish spot, on the borderline between North and South. But the possibilities for conflict are probably no more explosive than in, let's say, Detroit or Chicago, where the growth of Negro minorities is pressing hard on a limited housing supply.

The fact is Washington is a Capital first and a border city second. As the Nation's Capital, it must reflect in daily practice the country's loftiest ideals. How can a city symbolize democracy if it doesn't live it?

This Odious So-Called Kerr Natural-Gas Bill

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. O'SULLIVAN. Mr. Speaker, I have received many reports from the Second Nebraska Congressional District, which I represent in the Congress of the United States, asking me to not only oppose this thoroughly bad measure but to endeavor to induce President Truman to veto same.

As illustrative of these missives, I wish to now set forth a letter which I received from Greenville P. North, Esq., a prominent Omaha attorney, who has devoted much of his time in the interests of the people, which letter expresses so well the thoughts of the persons who, as under-contract consumers, are now relegated to the natural gas rate-raising clutches of the natural-gas companies, if the so-called Kerr natural-gas bill is not vetoed by the President:

OMAHA, NEBR., *April 4, 1950.*

Hon. EUGENE D. O'SULLIVAN,
House of Representatives,
Washington, D. C.

GENE: As I expected, you are on what appeared to me to be the right side of the Kerr bill.

I cannot but believe that the President would veto this bill if he knew the very great fear of thousands of the people (and by that I mean only of this district as I am not familiar with others) that the taking away of the jurisdiction to regulate the prices at the point of delivery to the pipe lines would not only result in an enormous increase in price to the users of gas but would also result in an enormous increase in the price of coal and fuel oil and all related commodities. To the great majority of wage earners in this district this would so reduce their incomes as to seriously affect the entire economy of the district, and I assume that the same conditions are true in many other localities.

Of course, I realize that I have not the same perspective as either you or the President concerning this matter and there may be some other material matter that would necessitate the approval of this bill, but I have been unable to learn of such necessity from any source.

You know that I have always been a great admirer and friend and defender of the President, even to the extent that I always considered his friendship for the late Mr. Pendergast a great virtue and not, as many Republicans and some Democrats in this district claimed to have considered, as a vice. Of course, you know that no matter what his final decision will be, I have the utmost confidence that it will be based upon what he believes to be right.

I have not discussed this letter with anyone nor has anyone requested me to write or telegraph you, but it is being sent only in the thought that it might help you to present the feelings of a great many people in this district. I am sure that if the President does not veto the bill it will cost him literally thousands of Democratic votes in this district. Of course, if he has information that he feels would justify him in approving the bill he would have to do it no matter whether it cost the votes or not, but I think you have a right to know what I think the attitude of the people is and as your friend and as a friend of the President, I am writing this and sending it air mail, special delivery.

So that Mr. North and my other constituents may be advised correctly about what I am doing in the premises, I now set forth a copy of a telegram which I sent today to President Truman:

WASHINGTON, D. C., *April 6, 1950.*

President HARRY S. TRUMAN,
Key West, Fla.:

Please pardon me for doing a JOHN W. HESELTON and telegraphing you about vetoing the Kerr natural-gas bill. Have received many letters and telegrams from my district from little and big consumers and Democrats generally who feel that this measure is a special-interest one and I hope you will pardon me for urging you to veto the bill.

EUGENE D. O'SULLIVAN,
Member of Congress, Second Nebraska District.

The Fuchs Case

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from a recent issue of the Boston Post, Boston, Mass., by Lester Allen:

FUCHS CASE DID LOT FOR REDS—MADE UNITED STATES AND BRITISH SECURITY SERVICES APPEAR SILLY AND CAUSED ATOMIC RIFT

(By Lester Allen)

Beside the name of one Klaus Emil Julius Fuchs, Ph. D., in the notebook of a Soviet agent seized in Canada, was the Russian word for "ours" and never was an ownership more complete, for the Soviet Union owned him body and soul, used him to extract the most carefully guarded atomic secrets, used him to drive an almost irreparable wedge between the United States and Great Britain and destroyed one of the world's great theoretical physicists in the process.

What befell Dr. Klaus Fuchs is contained in his confession, a document which may never become part of a public record because of the appalling amount of information it contains, not only about atomic secrets he betrayed to the Russians, but also the fantastic carelessness with which Fuchs was blithely admitted to the innermost councils of the top physicists working on atomic development.

Those few who have seen the confession declare that it is one of the most tragic documents they have ever read, to be compared with Oscar Wilde's De Profundis in describing the deterioration of a man's soul under the handling of Soviet agents. They took Klaus Fuchs, the ideological zealot, and turned him into a thief stealing secrets for miserable pay. The treachery he undertook out of a burning belief in the Communist cause was deliberately turned into petty larceny by Soviet agents who schemed and plotted to make Fuchs accept a miserable pittance in payment for his treason.

PLAN MISFIRED

No better illustration of the sinister and inhuman attitude of the Soviet plan for world domination could be found than the Fuchs case. There is good reason now to suspect that the exposure of the Soviet spy ring in Canada, which entrapped only the smallest of small fry, was staged for the purpose of driving a wedge of suspicion between the United States and Great Britain.

It is unreasonable to suppose that a Soviet agent would be in circulation in Canada carrying an incriminating list of men working for the Soviet Union which included names of men as highly placed as Klaus Fuchs in atomic research. The notebook containing Fuchs' name now looks very much like a plant. He was being thrown to the wolves for the purpose of setting up distrust between the United States and Great Britain. It appears to have been the aim to compel the United States, out of self-interest and for security, to deny the sharing of any further atomic information with Great Britain.

The plan misfired, however, because nothing was done about Fuchs' name found in the Soviet agent's notebook. It is astounding but true that not only was it ignored by M15 section of the British Home Office intelligence, but by the M16 section of the British Foreign Office—the latter a secret intelligence operation of vaunted skill in espionage and evaluation. The Department of Justice in the United States ignored the Fuchs notation as well for several years, for so long, indeed, that Fuchs was chosen chief of the theoretical physics branch of Britain's secret Harwell atomic research center.

DID IT FOR MONEY

It was 2 years before anything was done about Fuchs and then it was done only because the Soviet Union dropped another hint that Fuchs was their creature and in their pay.

Never was a jurist more mistaken than Lord Goddard when, in sentencing Fuchs at Old Bailey to 14 years' penal servitude, he said that Fuchs had done irreparable and incalculable harm to Britain and the United States merely to further a political creed. The man in the dock knew differently, knew how base had been his motives after he was launched on his career of treachery. He had done it for paltry sums of money, even though he had been willing to do it for nothing.

Fuchs clarified something that had always puzzled the intelligence agents of the democracies. Soviet spying operations had been carried out in a large measure by rabid Communist zealots who believed they were aiding a great cause in spying for the Soviet Union. Yet in almost every instance where the spy became important or achieved access to important information the Russians insisted upon making payment for service rendered.

COMPLETELY DESTROYED HIM

Perhaps the most puzzling element in the Hiss case was the presentation to Hiss of an oriental rug which could easily be traced back to the donor. It was so simple that its very simplicity made Hiss appear to be an innocent dupe. Fuchs made it clear that the purpose of such payments was the destruction of a man's inner integrity and faith in his own zeal—to make a miserable thief out of him and deprive him of the consolation of assuaging pangs of conscience with the belief that what had been done was done of high faith and zeal for a cause.

Not a small part of the rage and frustration of the American Communists who were exposed by Department of Justice agents who had infiltrated their ranks was their chagrin at not having compromised the infiltrating operatives so that their testimony would have been invalidated.

Fuchs was given the full treatment. A mousy, myopic, and absorbed scientist whose chief interest was his work, they turned him into a loathsome thief who could have no respect for himself. But they went further. They involved him in shady and clandestine affairs with women and completed the job of destroying him.

FEAR HUMILIATION

The Fuchs case accomplished a great deal for the Russians. It made the vaunted skill of the British secret service look silly, and did the same for American security safeguards. It caused a rift between the two countries on atomic matters which only the most courageous and farsighted judgments of high-policy-level individuals can overcome. It created an atmosphere of "What next?" among the scientists of first rank working on American and British atomic developments and made the imperative task of securing the top men in theoretical physics for the atomic program much more difficult. It added fuel to the heat of suspicion, unfounded and otherwise, and virtually guaranteed more and more witch hunts for possible traitors.

There's only one positive safeguard against leakage of atomic secrets and that is utter secrecy. Scientists hold that such complete secrecy makes rapid research into atomic problems impossible because of the fact that they are operating in a realm of science where even the merest clue unearthed by some independent researcher may provide the link they need to complete a chain of scientific evidence.

Frankly there are all too few top scientists who will take the risk of going to work for the Atomic Energy Commission today because they would never know when they might have to run the gauntlet of a loyalty review, a congressional hearing, or a guilt-by-association proceeding.

Most of the top scientists know or have exchanged information of a scientific nature with professed Communist sympathizers in their own fields. Many of them are unwilling to bury their careers without acclaim and without recognition in a secret program that will bring them nothing but a very modest salary and the possibility of humiliation.

WHAT REDS WANTED

This was precisely what was in the minds of the Soviet spy masters when they threw Fuchs to the wolves. That's the way they planned it. They wanted distrust, fear, unfounded suspicion, faltering confidence. And it looks as if they got what they were after.

The one means that the Atomic Energy Commission had of setting up a research program that might have bypassed the reluctance of established scientists to continue their efforts was denied them. It had been planned to select brilliant young graduates of American universities whose background had been cleared by all the security tests necessary to insure complete loyalty and give them research fellowships. The money was not appropriated, however, and the funds available had to go into projects which had high priority.

Had the Fuchs case happened in Russia it would not have been nearly as damaging to the Russians. The Soviet Union is a total police state. Klaus Fuchs would merely have disappeared and no mention would have been made of his fate. But Anglo-Saxon justice does not work that way. Fuchs had to take his medicine in public.

AGENTS NEVER RETURN

Just how total the police state is in Russia may be determined by the fact that no intelligence service in the world, except the Soviet service, knows for certain where any of the Soviet atomic energy plants are located, much less what they are doing. There is a grim joke among the operatives in the intelligence services of the western nations. They say: "We have effected a saving on our operations in the Soviet Union. We now buy only one-way ticket to Russia." The inference is, of course, that agents who get behind the iron curtain never return.

The one real service Klaus Fuchs performed for the United States and Great Britain, particularly the latter, is his exposure of the incredible stupidity and ineptitude of the counterintelligence services. It was established that the British secret service wasn't even aware that Klaus Fuchs was a Communist, yet, as his defense counsel, Derek Curtiss-Bennett, declared, he had never pretended to be anything else. That seems to be carrying the theory that a man's political beliefs are his own personal concern a little bit too far.

Klaus Fuchs' confession, only parts of which were read to the court at Old Bailey, may never become public. What is more likely is that the impounded document will disappear after a generation or so. But if it does become public within the next few months it will be plain indication to the Russians that we have some new secrets—and they will have to find another Fuchs.

Columbiana Soil Conservation District Annual Report, 1949

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the 1949 annual report of the Columbiana County, Ohio, soil-conservation district. It was my privilege to address the members of this district at their annual meeting at Lisbon on March 10, and I found that they are enthusiastically working to preserve one of the greatest assets this country has, its topsoil.

The report follows:

COLUMBIANA SOIL CONSERVATION DISTRICT ANNUAL REPORT, 1949

The matter of first importance in the annual report of a year's work of a soil conservation district should be the amount of work done. The Columbiana Soil Conservation District of Ohio can take some pride in its accomplishments in 1949. Details of this, as to figures, will be found tabulated later in the report. It can be stated briefly that the work accomplished, in such important fields as watercourses constructed, contour strip cropping, and cropland limed, amounted to more in the past year by 10 to 25 percent, than was completed for the previous year.

The work done fell somewhat short of the amount that the Soil Conservation Service personnel thought could be done, and there is always the great amount that should be done in the county, but the district supervisors feel that 1949 was a good year.

Confining most of the concrete accomplishments to tables, the narrative part of the report will concern some of the actions and opinions of the district supervisors.

It was a fairly active year for both supervisors and Soil Conservation Service personnel, with somebody representing the county at practically every meeting or event important to soil-conservation work. It should be reported that in our county there is excellent cooperation with other agencies in the farm field. The president of our board is a member of the county PMA committee. Our meetings usually have in attendance both the county agricultural extension agent and the area forestry extension agent, both of whom take an active interest. Public acceptance of the program seems fairly general.

A tour was sponsored for farmers of the county to the Soil Conservation Service Hydrological Laboratory at Coshocton, Ohio, and it was considered a successful event. Clyde Freeman attended the annual meeting of the Ohio Federation of Soil Conservation Districts.

Two persons, district conservationist Pendry, and supervisor Rupert, accompanied the tour of area farmers to the Regional Pasture Laboratory at State College, Pa.

A tour of a good farm was conducted by the Soil Conservation Service Farm Planner for the benefit of rural ministers, just prior to the national rural life Sunday.

It should be pointed out that the Extension Service was active in arranging the details of some of these tours, as well as helping in the organizing of neighborhood study groups.

During the year our personnel gave more attention to group work, as a means of reaching more people with educational material,

and with the idea of cutting down work of the farm planner to some extent, by equipping cooperators to do more of their own planning. While it is perhaps too early to judge the results of the 1949 schools, Farm Planner Reuter has been commended for his work along this line.

Three county farms received honorable mention in awards of the Cleveland Farmers Club for good farming practices. We had no entrants in the B. & O. contest, although several folks were asked by mail if they would care to enter. The minutes for the board meeting, September 28, 1949, include the following statement: "The idea was expressed that the prizes in this contest are not very large for the amount of labor that is usually expended in preparing the applications, and technical personnel was instructed to do no more work for the contest unless some of the persons approached asked for help to enter."

During the year a letter was sent out asking for association fund membership money, and several farmers responded to this. Enough was sent in to secure an affiliate membership to the national federation.

Supervisors started a plan of each man visiting a cooperator's farm to study the application of the farm plan on the land. Reports from these trips served to help supervisors understand problems involved, and perhaps be of some help to the planners through the discussions that were held. Many shortcomings were found in actual working of the plan, but the supervisors heard very little criticism of the program on the original plans.

The annual meeting of the district was well attended (240 present), and James Chapman, farm-program director of radio station WTAM, Cleveland, was the speaker.

The district supervisors and Soil Conservation Service personnel helped at the Apple Creek Field Day.

A tour to the Bromfield farm was held and was well attended (150 present).

As indicated in the 1948 report, the board did not attempt any general field day during the year, but planting of forage crops were made, which might serve as exhibits for such a field day in 1950. Plans for this were discussed at various times during the year.

The State representative was asked to use his influence to get a larger number of trees from the State nursery for actual farm planting. It was pointed out at the board meeting that many strip-mine spoilbank plantings in the county show clearly that a large percentage of the trees allotted for spoilbank reclaiming are wasted because of failure to grow.

Personnel were instructed to start arrangements for an air tour in 1950, so that farm people could see erosion and control work from overhead.

The board was perhaps a little more critical in accepting work during 1949. Not many requests were refused, but a few very large farms were at least postponed because the board felt there was no assurance, in view of past history and people involved, that the work planned would be completed. Likewise, a few small places were refused, in cases where farming was not the primary interest and where it was felt that the applicant was not interested in a complete plan for his land.

The supervisors wish to thank all cooperating agencies—the Soil Conservation Service for furnishing full time of a farm planner and aide, also an extra aide to work on follow-up with our 400 cooperators; the Extension Service for help in our educational program; and all others.

Statistics concerning the condition of the district follow.

CLYDE FREEMAN,
Chairman, Columbiana Soil Conservation District, Lisbon, Ohio.

Other members of the board: James Huston, Elden Groves, Don Rupert, Edwin Copeland.

Annual report of receipts and expenditures, period Jan. 1 to Dec. 31, 1949

Receipts (by source):	
Balance brought forward	$185.48
Cooperators fees	30.00
Affiliate membership contributions	62.00
Rental of equipment	23.60
Annual meeting (donations and sale of food)	51.38
Check No. 18 (was outstanding)	2.50
Total	354.96
Expenditures (classified):	
Repair of plow	4.60
Postage, stamps, post cards, etc.	20.83
Annual meeting (speaker, food, etc.)	59.13
Service charge	.25
Lyle printing	2.85
Advertise, election	4.38
Tags, field day	.75
National association dues	10.00
State association dues	10.00
Affiliate membership dues	50.00
Mileage, Mr. Walton	36.40
Mileage, Mr. Hays	25.50
Total	224.69
Total receipts	354.96
Total expenditures	224.69
Balance on hand	130.27

Operation Economy

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. PATTERSON. Mr. Speaker, I am pleased to spread upon the RECORD the resolution adopted by the Waterbury Junior Chamber of Commerce with reference to the recommendations of the Hoover Commission.

It will be recalled that the members of this fine organization recently came to Washington in furtherance of its support for the Hoover Commission program.

I believe that this group is performing a fine public service by bringing to the attention of the general public the many savings which can be made by adoption of these proposals:

WATERBURY JUNIOR CHAMBER
OF COMMERCE, INC.,
Waterbury, Conn., March 21, 1950.

Hon. JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE PATTERSON: We are enclosing herewith the text of a resolution adopted by the Waterbury Junior Chamber of Commerce, Inc., at a meeting March 20 in the Elton. We respectfully urge you that serious consideration and wholehearted support be given to this resolution:

"Whereas the United States Junior Chamber of Commerce has called attention to the recommendations of the Hoover Commission report through its program of education and petitioning known as Operation Economy; and

"Whereas the Connecticut Junior Chamber of Commerce and the Waterbury Junior Chamber of Commerce have assisted in this No. 1 civic project since last fall: Therefore be it

"*Resolved*, That it be known that the Waterbury Junior Chamber of Commerce is on record for urging the Congress for the adoption of all the recommendations as set forth in the Hoover Commission report and as presented to the Congress by President Truman."

Respectfully yours,

EDWARD A. JONES,
President.

JOHN DELDONNO,
Chairman, Committee for Support of the Hoover Report.

Maintenance of an American Merchant Marine

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. SHELLEY. Mr. Speaker, I am sure that no one will question that the maintenance of an American merchant marine is an absolute essential to an integrated American economy in time of peace. In time of war the necessity of a developed and efficiently operating domestic shipping industry is multiplied a thousandfold. That fact has been demonstrated through the harsh lessons of the last two wars, to our great cost in terms of money and human lives. We are now faced with a situation which, God forbid, may result in a third repetition of that same harsh lesson. It is with the view of forestalling to some extent the cruel consequences of an unintelligent lack of ability to profit by the lessons of the past that I address the House today.

H. R. 7786, the omnibus appropriation bill which we are now considering, contains in chapter VIII, pages 301 to 309, an appropriation for the United States

Maritime Commission. That appropriation includes a total amount of $46,749,000 in new appropriations and funds from various existing accounts for operating-differential subsidies to American-flag ships as authorized by the Merchant Marine Act of 1936, as amended. I have no quarrel at this time with the amount of that appropriation. However, on page 304, lines 5 to 10, of the bill there appears a proviso which can only serve to cripple an already seriously menaced American shipping industry. That proviso reads as follows:

Provided further, That no part of the foregoing appropriation shall be available for obligation, nor any obligation made, for the payment of an operating-differential subsidy for any number of ships in excess of the number of ships receiving such subsidy as of January 1, 1950.

I have before me an information release from the San Francisco Chamber of Commerce, dated March 27, 1950, which explains in detail the very serious consequences which will almost inevitably result should we permit that proviso to remain in the bill as finally passed. Freezing of operating-differential subsidies to the number of vessels receiving such subsidies as of January 1, 1950, can serve no useful purpose. The total amount of funds appropriated is an effective limitation on the cost of the subsidy program. The restrictive proviso cannot, therefore, be defended as an economy measure. Its sole purpose is to handicap presently unsubsidized operators, now voluntarily assuming operating-differential costs, in favor of the owners now receiving and enjoying the benefits of Government subsidies. Its sure result will be a reduction in the total number of American-flag vessels in the face of reduced freight rates, cargo shrinkages, increased operating costs, and increased foreign competition.

May I ask that every Member of the House read and seriously consider the information release which will accompany these remarks in the RECORD so that when chapter VIII comes up for consideration this iniquitous proviso may be stricken out? The matter referred to follows:

The House Appropriations Committee has included in the general appropriation bill, 1951, a provision which is intended to freeze the number of subsidized vessels to the aggregate number of vessels actually receiving subsidy on January 1, 1950. The action was taken without a full presentation of all the facts, which are as follows:

1. According to the reports of the American Bureau of Shipping, there were a total of 856 American-flag, dry-cargo, and combination-cargo and passenger vessels operating in the foreign trade during the calendar year 1949 (March 1950 bulletin). According to the Maritime Commission testimony before the House Appropriations Committee, there were only 235 subsidized vessels operating during the calendar year 1949. The effect of the House action is to prohibit the extension of Government aid to any of the 621 vessels which operated in 1949 without Government subsidy.

2. The operators of the 621 unsubsidized vessels who have been trying to run without Government aid are penalized by the House action, whereas the owners of the vessels which actually received subsidy in 1949 are protected. Therefore the legislation is outrageously unfair (obviously unintentionally so) to that group of operators who are deserving of maximum Government support and encouragement because of their willingness to operate in the past without seeking Government aid, as contrasted with other companies which have operated only with the protection of millions of dollars of Government subsidy.

3. The companies which have been operating without subsidy in the past are not in a position to continue indefinitely to operate without subsidy in the future. There have been substantial reductions in freight rates during the past year. There has also been a shrinkage in cargo and increased foreign-flag competition, as a result of which the space utilization per vessel has been reduced. To an increasing extent, foreign-flag competitors, in view of their lower costs, are in a position to cut rates below the break-even point for American-flag vessels, thus driving American-flag vessels out of business unless their cost differential is equalized by the Government. Based on subsidy payments by the Maritime Commission, it would appear that the cost advantage of the foreign-flag operator is $50,000 to $75,000 per voyage. That is the amount of handicap which the unsubsidized operators have been voluntarily assuming in the past, but which they will probably be unable to assume in the future.

4. It appears that the House Appropriations Committee is proceeding on the erroneous assumption that additional subsidy payments are synonymous with an expanding American-flag merchant marine, notwithstanding a contracting world-wide trade. There is no question but that the total American-flag merchant marine engaged in foreign trade will contract, perhaps substantially, thereby reducing the total number of vessels engaged in the foreign trade from 856 (1949 average) to a substantially lower figure. This is regrettable, but apparently inevitable. However, even the reduced number of vessels will be unable to operate unless a larger number of vessels are subsidized. There is nothing inconsistent between increasing the number of subsidized vessels on the one hand and reducing the total number of vessels in the foreign trade on the other hand. We may end up with a subsidized merchant marine of 500 vessels, which would result in approximately doubling the amount of operating subsidy. However, on the assumption that vessels cannot operate in the foreign trade without subsidy, this will mean a reduction in the total foreign-trade fleet from 856 to 500 vessels, or approximately 30 percent. If the confusion between the total number of vessels engaged in the foreign trade as against the total number receiving subsidy is cleared up, we are confident that the Appropriations Committee will realize that it is erroneous to assume that an expanding number of subsidized vessels is inconsistent with a reduced number of vessels in the foreign trade under the American flag.

5. The total participation in the foreign trade by American-flag vessels in the aggregate during 1949 was less than 50 percent. This includes participation of both subsidized and unsubsidized vessels. A substantial reduction in the number of vessels operating in the foreign trade will result in a further reduction in the American-flag participation in the foreign trade.

6. The action of the Appropriations Committee creates a very disturbing precedent. It in effect repeals the Merchant Marine Act, 1936, except as to persons who have already been fortunate enough to secure its benefits, and does so without advice or consultation with the legislative committees which are primarily concerned with the merchant-marine policy of the United States. It also requires dismissal of proceedings now pending before the Maritime Commission based on applications for subsidy which have been carried on for the past several months with the expenditure of considerable amounts of time and money in an attempt to make a case for subsidy under the provisions of the act. The precedent will likewise destroy any hope of further building commitments from applicants, since companies making commitments for purchase or construction of vessels will be required to gamble on the action of the Appropriations Committee in connection with annual budget requests emanating from the Maritime Commission.

In view of these considerations, we hope that the House Appropriations Committee will reconsider its action and refer the matter to the legislative committees for further consideration. In that connection, the President's plan for the reoganization of the Maritime Commission may be taken into account, since it apparently delegates to the Secretary of Commerce authority to make over-all policy determinations regarding our subsidy program, which would presumably include determinations as to the size and scope of our subsidized merchant marine.

Federal Assistance to School Districts

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I will deliver over radio station WJR on Friday, April 7, 1950, at Detroit, Mich.:

Ladies and gentlemen of the radio audience, my broadcast to you a month ago pointed out what happens to a community when a large Federal installation, such as an airfield or a large plant manufacturing airplanes for war purposes is established, and thousands of additional workers are brought to the area to man the installation. I pointed out that Federal activities of this type had affected hundreds of communities during the war and that such activities as reclamation and flood control projects, Atomic Energy Commission projects, and other peacetime activities of the Federal Government, had accentuated this problem since the war. Our own area here in Detroit, many times referred to as the "arsenal of democracy" was particularly affected during the war period as hundreds of thousands of new workers and their families moved in to man the factories producing materials for the war.

In that talk I further pointed out that the Congress had set up during the war a program of assistance to communities, particularly school districts affected by Federal activities, and had continued that program since the cessation of hostilities on a restricted basis, because the affected school districts still had a critical problem. In fact, the problem has become so acute that a dozen different Federal agencies have been given the authority by the Congress to provide Federal assistance to school districts affected by their activities. This legislative authority is not uniform from one agency to another. There is some duplication and there are some gaps not covered by any authority to provide assistance. This entire matter was considered by the House Committee on Education and Labor, of which I am chairman, in the first session of the Eighty-first Congress, and it was determined to appoint a subcommittee to study this problem and bring back recommendations for a solution early in the second session of the Eighty-first Congress. As a matter of fact, two dif-

ferent subcommittees were appointed to study this problem and also to investigate some labor problems. Congressman CLEVELAND M. BAILEY, of West Virginia, was chairman of one subcommittee, and the members were Congressmen IRVING from Missouri, STEED from Oklahoma, MORTON from Kentucky, and NIXON from California. The other subcommittee, under the chairman of THOMAS H. BURKE of Ohio, included Congressmen PERKINS of Kentucky, WIER of Minnesota, MCCONNELL of Pennsylvania, and WERDEL of California. These two subcommittees held extensive hearings throughout the Nation receiving testimony from over 600 witnesses in 23 locations in 17 States. The material presented before those subcommittees in those hearings have been printed in two volumes, constituting approximately 2,700 pages, filled with factual information showing how the Federal Government has seriously affected the ability of school districts in which its projects are located to finance school services.

These two subcommittees supplemented their field investigations by statistical data reported by affected school districts which show the total number of children involved, the number of school districts affected, and the degree to which these Federal activities have affected school services in the communities. This mass of information conclusively shows that Uncle Sam, when he becomes a citizen in a community by owning land, by building and renting houses, and by operating industrial or commercial activities without paying taxes, creates a financial burden on the community which it cannot solve without Federal assistance. These Federal activities affect school districts principally in two ways. The Federal Government acquires property, removing it from the tax rolls, and thus the school districts lose the revenue that otherwise would have been received, because federally owned property is not taxable. It brings in a large influx of population to man the installations built on this property creating an additional financial burden on the remaining taxpayers in the community. In some cases people live on the Federal property and attend the adjacent school districts. In other districts they live in the community but work at the tax-free installation. The evidence collected by the committee shows that there are 600 or 700 school districts that have been so seriously affected by these Federal activities that they cannot finance normal school services without Federal help. There are 1,500,000 children living in these school districts who will be deprived of normal school services unless Federal assistance is provided. They need additional funds to pay current operating expenses, and they need Federal assistance to provide additional school buildings.

The two subcommittees have been meeting each day for the past 3 weeks to develop legislation that will meet this problem created by the Federal Government on a fair and equitable basis. They have completed action on the bill which will provide assistance for current operating expenses. The bill for current operating expenses was introduced March 30, of the present year, and the number is H. R. 7940.

Briefly, the bill provides that the Federal assistance shall be extended in such a manner that it will meet only the Federal responsibility and will not relieve the school districts or the State of their normal responsibility of providing school services. It assumes that the Federal Government should be responsible for making a payment equivalent to the reduction in school revenues by removal of land from the tax rolls so that all school districts which have suffered a Federal impact because of a reduction of school revenues from Federal acquisition of property will receive a payment on this basis. The bill then provides that in addition the Federal Government will make a payment for those additional children brought to the school district as the result of Federal activities. The amount of the payment will be based on the extent of the Federal burden placed on the school district. For children living on Federal property for which no tax is received by the school district, the Federal Government will pay an amount equivalent to the local share of the cost of current operating expenses per child. For children whose parents work at nontaxable property located in the school district, the Federal Government will pay a smaller amount per child, and the final category is that group where there has been a very sudden and substantial impact of additional children without a commensurate increase in tax valuations. For this group the Federal Government will pay an amount determined by the Commissioner of Education to be necessary to provide normal educational services for the additional children. Assistance in this last category is to be continued only for a 3-year period, because it is expected that the communities will have been able to make the financial adjustments necessary to handle this impact of additional children at the end of that period.

Provision also is made in the bill to assist for a limited period of time those school districts that have experienced a severe impact during the war period because of Federal activities and still have a heavy financial burden caused by this Federal impact. The amount of this assistance will be based on the extent of this past impact and the burden it still places on the district. There are safeguards in the bill to restrict Federal assistance only to the amount necessary to meet Federal-caused needs and to prevent any Federal interference or control over local educational matters. The provisions of the bill also assure that Federal funds will not be used to pay those costs that should be borne by State and local governments. It is truly a bill to meet the Federal responsibility created when Uncle Sam becomes a citizen of a community.

It is the intention of the subcommittee to report out in the very near future a bill that will provide Federal assistance for construction of additional school-plant facilities made necessary by the increased number of children in the district caused by Federal activities.

I am unable at this time to give you any details of the bill that will be proposed to provide assistance for construction of additional school facilities because the subcommittees have just started work on that phase. I am informed by the subcommittee members, however, that they intend to develop a bill that will meet the responsibility of the Federal Government for additional school facilities which its activities have created.

Now let us look for a moment at what the bill already introduced will do for the State of Michigan. Statistical data reported to the subcommittees by the school districts do not show the extent to which school districts would be eligible for assistance because of reduction of revenues resulting from Federal ownership of land. They do show, however, the extent to which districts would be eligible because of an impact of additional children. There are 16 seriously impacted school districts that reported information which was sufficiently complete to include in the subcommittees' tabulation. This is not the entire number in the State that may benefit from this proposed legislation, but includes only those on which the subcommittee now has necessary information.

It appears from the data these 16 districts reported that each of these would be eligible for assistance under the terms of H. R. 7940 as proposed by the subcommittee. Six of them would be eligible to receive payments because they have children living on nontaxable Federally owned property. An additional 4 school districts appear to be eligible for assistance because they have children whose parents are employed at Federally owned nontaxable property located in the school district; and 11 of the 16 districts appear to be eligible because of a sudden and substantial impact of additional children resulting from activities of the Federal Government not accompanied by Federal ownership of property. Those districts on which the data are now complete are: Erin Township No. 6, Erin and Warren No. 2, Fraser Public Erin No. 1, Livonia Township District, Madison No. 10, Mount Clemens No. 1, Muskegon Township No. 1, Romulus Township, Roseville No. 5, Royal Oak Township No. 1, Warren Consolidated No. 1, Wayne District, Ypsilanti Township District No. 1, Dearborn Township, Grosse Ile Township, Warren Township. These figures must be regarded as tentative and may change next year, but based upon the data reported by the school districts, the categories as outlined above will apply.

It is not possible to tell you from the data now available the amount these districts would receive, because that will be determined by taking the actual figures for the school year in which the payment is to be made. However, it does appear that this bill, if passed by the Congress, will give substantial assistance to those critically overburdened areas in our State, many of them in and around Detroit, which have for the past 8 or 10 years been carrying added financial responsibilities placed on them by the Federal Government.

My sincere thanks to WJR, the good-will station, for the opportunity to speak this evening over their facilities.

Thank you and good night.

Two Great Omahans Honored by His Holiness, Pope Pius XII

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. O'SULLIVAN. Mr. Speaker, in a recent issue of the Omaha World-Herald there appeared the following article which announced to the reading public that two great Omahans had been signally honored by His Holiness, Pope Pius XII, by having been made Knights of St. Gregory the Great.

I wish to congratulate these two outstanding citizens of Omaha, Nebr., for having received this great honor, and in passing may I also observe that I am sure that every Nebraskan will join with me in stating that these two fine gentlemen richly deserved the signal recognition which they have received.

The newspaper article is as follows:

OMAHANS NEW PAPAL KNIGHTS—BERT MURPHY, VAL PETER TO BE INVESTED

Two prominent Omahans have been made Knights of St. Gregory the Great.

Archbishop Gerald T. Bergan said Thursday the high Catholic Church layman honors were conferred by Pope Pius XII on Andrew Albert (Bert) Murphy, 75, car dealer, and Valentine Peter, 74, German language newspaper publisher.

Word of the Pope's action came from the apostolic delegation in Washington, said Archbishop Bergan. The pontifical honor was conferred on the recommendation of the archbishop.

Public investiture of the two new knights will be after Easter, when official briefs are received from Rome.

The knighthood was established about 100 years ago by Pope Gregory XVI to honor Catholic laymen for exemplary lives and services for the church.

SIX OTHER KNIGHTS

Other Omaha knights are Navy Secretary Francis P. Matthews, J. Francis McDermott, Dr. Adolph Sachs, J. E. Fitzpatrick, Edward F. Leary, and Charles W. Hamilton, Jr.

Archbishop Bergan said that Mr. Murphy "is held in the highest esteem by all citizens of Omaha and the Midwest irrespective of religious belief."

Mr. Murphy's business, Andrew Murphy & Son, last November marked its eightieth year in business in Omaha.

"Without any doubt," said Archbishop Bergan, "he would be considered Omaha's most beloved citizen. He has ever enjoyed the regard and respect of all the clergy and bishops of Omaha including myself."

PETER'S DESCENT GERMAN

The archbishop lauded Mr. Peter as "one of America's outstanding Catholics of German descent."

Born in Lower Franconia, Bavaria, Mr. Peter was brought to the United States when he was 14. His father died 2 years later. Mr. Peter taught school for two sessions, then got a job on a semiweekly language paper at Rock Island, Ill. Later he bought the paper at a sheriff's sale.

He now publishes papers from Baltimore to San Francisco and is believed to be the country's largest publisher of German language newspapers. He has the Omaha Daily German Tribune in Omaha.

The Peters have 12 children.

Appropriations Spent Quarterly

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. WEICHEL. Mr. Speaker, over and above the annual appropriations made by the Congress, there are in addition deficiency and urgent appropriations amounting to more than $15,000,000,000 for the fiscal years covering 1945, 1946, 1947, 1948, and 1949, all going to the bureaus and oftentimes spent by the bureaucrats without regard to waste, authorization, and the intent of Congress.

Now the Congress is asked to authorize the spending of "what we don't have"—to spend nearly $6,000,000,000 more money than the Treasury will collect as income, even in face of the Government now being in debt for nearly $260,000,000,000.

Will the Congress again authorize the spending of billions more than income at the request of the executive branch of the Government?

Is it any wonder that the bureaucrats waste and spend other than authorized, spend and give away for purposes not intended by the Congress?—for the whole annual appropriation is made available to the bureaucrats in a lump sum, all at one time, and with nothing to worry them for another year.

Each bureau spends as it desires, often regardless of the intent of Congress, and then makes its excuse the following year. For the report of irregularities and abuses come from the Comptroller General only after the money is gone from the Treasury. It is the same pattern and practice each year with little done—not even the proverbial "locking the barn door after the horse is stolen"—the door is open each year for the same abuses, waste and misspending. And after the money is gone little investigation or none at all.

While hundreds of millions of dollars of the taxpayers' money have been lost to the Government by the spending of these bureaucrats, yet many pass over such conduct by facetiously saying it is simply "Yankee shrewdness doing business with saps in the bureaus."

Let us stop this year-after-year waste and spending of funds by not waiting until the moneys are actually gone, by not permitting the same people in the Government to waste the taxpayers' money, and release no further appropriations to such people in the bureaus. I do not believe that appropriations should be paid and given to the bureaus for spending in an annual lump sum. Private business would be bankrupt if it gave millions of dollars for a year's operation and paid no further attention to the moneys expended until the following year. It seems that much of the abuse, misspending, and waste of taxpayers' money, might be stopped by only paying and releasing it to the bureaucrats in quarterly installments. And if the bureau does not justify its spending in the previous quarter, the next quarterly installment should be reduced and the personnel responsible separated from the Government. By such procedure waste and misspending of the taxpayers' money might be stopped, for under the present system the bureau can spend all that is appropriated and sometimes overspend.

Mr. Speaker, I believe that the quarterly release and payment of appropriations would save hundreds of millions of dollars and would be a greater saving to the taxpayers rather than investigation after the money is gone. I have introduced the following bill to make appropriations available in quarterly installments:

A bill relating to the checking, spending, and quarterly payment of appropriations for the executive branch of the Government, and for other purposes.

Be it enacted, etc., That all appropriations for the executive branch of the Government shall be available for payment and spending only in four quarterly installments, and in such amounts as the Senate and the House of Representatives through their Appropriations Committees shall approve within 30 days previous to the 1st day of July, October, January, and April, beginning on the 1st day of July 1950, and thereafter.

SEC. 2. And such quarterly release and payment of moneys for spending shall be only after appearance, justification, and report to the House Committee on Appropriations detailing the payment and spending of the previous quarter by each department of the executive branch of the Government and the Treasurer of the United States shall release only such sums as shall be so determined jointly by the Senate and House Committees on Appropriations.

Appropriate Appropriations for VA Medical Division

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter and resolution:

AMERICAN LEGION AUXILIARY, INC.,
DEPARTMENT OF MASSACHUSETTS,
Boston, Mass., April 5, 1950.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LANE: At the meeting of the Department Executive Committee held April 1 at the Parker House, Boston, it was unanimously voted to adopt the enclosed resolutions and to forward a copy to each of our Senators and Representatives.

I know your interest in the veterans who have served our Nation in time of peril and I trust that you will consider favorably the legislation which is now under discussion.

I shall appreciate hearing from you at your convenience on either or both of the resolutions enclosed.

Cordially yours,

ADELAIDE L. FITZGERALD,
Secretary-Treasurer.

Resolution 1

Whereas the Hoover Commission created under Public Law 162 expended $2,000,000 of the taxpayer's money in preparing their report for reorganization of various Federal departments; and

Whereas this report recommended that five Federal agencies of the Government take over the work of the Veterans' Administration which now handles all veterans' affairs and which was recommended by President Hoover in 1929 for both efficiency and economy: Therefore, be it

Resolved, That the department executive committee of the American Legion Auxiliary, Department of Massachusetts, Inc., endorse the action of the American Legion in opposing those recommendations of the Hoover Report insofar as they affect veterans; and be it further

Resolved, That we advise the Massachusetts Senators and Congressmen of our interest in economy in Government, but that we believe economy and efficiency can be best achieved through the handling of all veterans' affairs under the one branch known as the Veterans' Administration.

Resolution 2

Whereas the Administrator of the Veterans' Administration has ordered a cut of over 7,500 personnel in the Veterans' Administration, many of whom are in the Medical Division who are caring for the men and women who served during both World Wars; and

Whereas this cut in personnel was required because of the failure to provide the necessary funds as recommended by the Veterans' Administrator in his supplementary appropriation request last October: Therefore, be it

Resolved, That the department executive committee of the American Legion Auxiliary, Department of Massachusetts, Inc., notify the Senators and Congressmen of Massachusetts that we believe immediate action should be taken to provide the necessary appropriation to cover present needs.

Peanuts

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. MILLER of California. Mr. Speaker, I find myself in agreement with that inimitable columnist, George Dixon, that peanuts are no longer "peanuts." Peanuts are now dollar conscious.

Mr. Dixon and I approach the goober problem from different directions.

Peanuts, to me, are an important food—a source of protein as every mother has learned. Their food value is high. A good case could be made for peanut butter—a convenient and ready item of diet for children.

Alas, peanut butter—as all mothers in the medium to lower income brackets know—has been priced out of the market.

Peanut butter has been priced out of the market because an artificial demand has been created for other peanut products in the nonedible field made possible because we have supported peanuts at too high a level.

Peanut growers, peanut speculators and peanut brokers have made many a quick dollar. They have made it because Uncle Sam has kept his good right arm around them in the form of high subsidy prices thus assisting in the creation of an artificial shortage.

I think the peanut group are as "nuts" as their product. They had the chance to build a steady, ever expanding market for peanut butter—a market that would have consumed more and more of the crop each year, a dependable market that would have returned them good profits. They tossed all that away for a "quickie" profit in peanut oil.

They ignored a firm market in which they had no other comparable competing item to enter a field already overcrowded with sesame, tung, palm, flax, fish, coconut and other sources of fatty oil.

Oh, well, when support prices are curtailed—and they will be—the peanut growers may return to the days when peanuts again mean small change.

Here is George Dixon's little chitchat:

WASHINGTON SCENE

PEANUTS ARE NOT "PEANUTS" NOW

(By George Dixon)

WASHINGTON, March 27.—I don't know whether you have given this the thought it merits, but Baldy Brannan, the eroded noggin of agriculture, is knocking the very foundations from under our American language.

The Secretary of Agriculture has made a grim mockery of many of our most cherished expressions. To sing "Potatoes are cheaper—tomatoes are cheaper—now's the time to fall in love," would elicit only hollow laughter these days, and you would probably be strung from the nearest tree if you said, "And that ain't hay," to a stock raiser.

But the expression Brannan has made the biggest bum out of is: "That's peanuts."

"That's peanuts," we used to say, with a blithe snap of the fingers. We meant it didn't amount to a hill of beans. What am I saying? A hill of beans runs into money.

"That's peanuts." If it's an expression you're in the habit of using, I think I can cure you of it.

Peanuts are costing you a fortune, and I'm not handing you any spinach.

I couldn't afford to hand you any spinach anyway. It's too expensive.

"That's peanuts." The Government today is purchasing more than a quarter of all the peanuts grown in this country, under the support program. Uncle Sam, using your hard-earned dough, my little pets, bought $62,864,000 worth of peanuts last year.

The total peanut crop brought $225,000,000 to the growers. But even that represents only a fraction of the peanut money, according to men who know their onions.

Under the support program, beloved of the rutabaga economist, the Department of Agriculture bought 367,000,000 pounds of shelled peanuts last year, and 74,000,000 pounds of unshelled. It looks to buy even more this year.

"That's peanuts." Peanuts represent a fabulous amount of money. That $225,000,000 we mentioned a moment ago represents only payments to growers. But think how this pyramids through middlemen, jobbers, and so forth, down to the white-coated fellow at the ball park who sells you a bag with eighteen or so peanuts for 10 cents.

"That's peanuts?" Nuts.

"That's peanuts" is a billion-dollar business.

Imports of Foreign Fish Products

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks, I include a letter addressed to me by the Deep Sea Fishermen's Union of the Pacific calling my attention to the injurious effects of imports of foreign fish products upon domestic fisheries industry. Lowered tariffs upon imports of foreign products produced with low-paid labor can ultimately destroy many American industries unless some quota is placed upon those imports.

The letter follows:

DEEP SEA FISHERMEN'S UNION
OF THE PACIFIC,
March 31, 1950.

Hon. THOR TOLLEFSON,
House Committee on Merchant Marine and Fisheries,
Washington, D. C.

DEAR SIR: On behalf of the Deep Sea Fishermen's Union of Seattle, we are writing you in connection with proposed hearings in your committee relating to regulations of quotas on the import of fish liver oils into the United States.

As you are no doubt aware, our State Department has issued a directive removing all quotas on oils containing vitamin A. This has resulted in a large import of Japanese oils into the United States, resulting in a tremendous drop in the price of soupfin shark livers, and dogfish livers, the source of such oils. This has resulted in a great hardship on the fishing industry in the Northwest.

Our union has some 2,000 men who are employed on fishing vessels out of Seattle and Northwest points. The principal product of these vessels during the winter months are shark, dogfish, and other bottom fish from which the livers are obtained and processed for the vitamin A oil content. As all crew members share in the catch, the price received has a direct relation to the earnings of the men on these vessels. Up to the time that these quotas were removed, $8 to $12 per pound was paid for soupfin shark livers of high vitamin A potency. Today, as a result primarily of foreign imports, the price is around $2.50 to $3 per pound. Fishing in the small boats in the open sea is an extremely arduous and hazardous occupation. The price of $8 to $12 per pound for the soupfin shark livers is only a fair compensation for this work, by the present day standards. In addition, there is a great risk of loss and damage to equipment in fishing for shark, and such risks will not be undertaken by the owners of the vessels unless the price received for the product is commensurate with the risk involved.

Not only is there a direct risk on the vessel in fishing in North Pacific waters during the winter months, but there is a particularly great risk on the equipment and nets used in shark fishing. Shark nets have an initial cost of $6,000 to $10,000 for their construction, their combined sections are frequently as much as 18,000 feet in length. Sudden storms and normal ocean hazards will frequently cause their loss or destruction. With such a high mortality on equipment, insurance rates thereon are prohibitive.

In 1946 there were about 100 vessels employed in shark fishing during the winter months. Each vessel employed an average of seven men. Today with the price approximately $2.50 to $3 per pound by reason of the imports of Japanese oils, there are only about 20 or 25 vessels engaged in such operation. The price of dogfish liver has been so depressed by these imports that today not one single boat in the Puget Sound area is engaged in fishing for dogfish, against a normal operation of 75 or 80 boats working in the winter months for this product. This has resulted in a substantial unemployment among our members.

The figures as to the increase of liver oil imports are published by the United States Bureau of Customs. According to the customs records, there has been a substantial increase in the imports of various liver oils, principally from Japan and South Africa. In 1947 over 1,159,000 pounds of such oils were imported for a declared value of $4,291,000. In 1948, 3,743,000 pounds of shark liver oil was imported with a declared value of $6,429,000, and the first 11 months of 1949, 3,296,000 pounds of shark liver oils were imported with a declared value of $2,996,000. No shark liver oils were imported in 1947. In addition to the shark liver oil many millions of pounds of other oils were imported, their sources being cod livers, dogfish, etc. The price has now dropped to about $2.50 per pound for high potency shark livers caught by United States vessels and crews.

On the other hand since 1946 there has been a very sharp increase in the cost of equipment and gear both for the vessels and the men employed on the vessels. As the price received for the catch has dropped, fishing expectations are no longer profitable for ships and crews, and the vessels remain tied up in the ports.

We can readily understand the desire of the State Department to assist other countries to get on their feet by encouraging export of their products and sale in the United States. However, such imports of foreign products should not be permitted if their results would be to reduce the standard of living of American workmen and result in

widespread unemployment. It is, of course, impossible for American workmen to compete with foreign standards of living. When prices are further depressed by devalued currency their impact on American workmen who produce the same products result in great hardships to these workmen.

We feel that the problem of foreign aid can be met without placing the greatest burden on the particular group of American workmen affected by the import of cheap foreign products supported and subsidized by American dollars. This problem can be met by establishing reasonable quotas on the imports of fish liver oils. We feel that a customs duty should be placed upon this product which is realistic and bears some relation to the problems of protecting American products from such competition.

We urge that this committee give full consideration to this problem not only with relation to the specific items involved, to wit, fish liver oils, but with relation to all fish products. Not only are the members of our union affected but there are many thousands of men in allied unions who have a direct interest in this problem. We feel sure you will give your sincere consideration in view of the direct relationship to the welfare of our own members and the commercial fishermen. We shall, of course, follow your progress in this problem with deep interest.

Respectfully submitted.

H. GROTLE, *Secretary.*

The Political Parade

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include in the Appendix of the RECORD an article by George Rothwell Brown appearing in the New York Evening Journal April 5, 1950:

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, April 5.—Secretary Acheson's statement that he didn't think he had ever met Owen Lattimore, immediate target of the McCarthy charges, is in itself a remarkable revelation of the slipshod methods by which our State Department is being conducted.

The Secretary of State obviously is either mistaken about his acquaintance with Lattimore or he is guilty of the grossest negligence in not getting acquainted with a man who is already engaged, for the United Nations, in secret work under President Truman's point 4 program—before that program has even been approved by Congress.

There is an obscurity about the presence of Mr. Lattimore in Afghanistan, as an agent of the United Nations, on a mission to pick out some key economic projects for that country, which might provide the basis of long-term assistance under the point 4 plan, which the Senate Foreign Relations Committee should probe with complete thoroughness.

Senator MCCARTHY tore quite a hole in the curtain of secrecy enveloping the machinations of the State Department, in its secret schemes to extend the New Deal "squanderbund" to the international scene, when his allegations suddenly had the effect of revealing the presence of Mr. Lattimore in the heart of Asia.

Lattimore was there, the State Department insisted, not as a representative of the State Department.

Acheson followed with his disavowal of even knowing Lattimore.

Yet at this very time Acheson was appearing before Congress urging speedy approval of a measure that would commit the United States to an initial expenditure of $45,000,000 as a starter for the point 4 program.

Mr. Acheson made this appearance before Congress not as the representative of the United Nations but as the spokesman for the State Department.

Yet we know, as a result of Senator MCCARTHY's revelations, that already the United Nations had taken over point 4.

The same day Senator CONNALLY, of Texas, chairman of the Foreign Relations Committee, was disclosing in some pretty blunt language that he had already determined in his own mind that the United Nations would have to be eliminated from participation in the point 4 program.

This outburst by the Texan occurred at a committee hearing, in the presence of Acheson, on the morning of March 30.

MCCARTHY's disclosure, on the authority of the Library of Congress, that Lattimore was in Afghanistan, cooking up a point 4 operation for the United Nations, was made to the Senate in the late afternoon of the same day.

Obviously CONNALLY's suspicions had been previously aroused. He described the United Nations as a "chiseling spending agency"—which it has been from the day it was launched at San Francisco in 1945.

"It seems to me," said CONNALLY, an administration Democrat, "that about all we would do would be to furnish the money and have them mess it up. It also looks like a plan to create a lot of new jobs and have us pay for them."

Willard L. Thorp, Assistant Secretary of State, testified that UN already had done much work on point 4, and had several projects ready.

So here we have Mr. Acheson asking for a huge appropriation for the State Department which was to be spent by the United Nations.

And here we have, already as busy as a bee in Afghanistan, getting ready to blow in a wad of American tax money, Mr. Owen Lattimore, a gentleman with whom Mr. Acheson was unacquainted.

If that's the way the State Department is being run, the quicker it is reorganized from top to bottom the better.

Union in Western Europe

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, since the announcement of the so-called Truman doctrine in Greece in 1947 a considerable number of the Members of the Congress have actively sponsored the movement for European union.

It will be recalled that Senator FULBRIGHT, of Arkansas, and I joined in introducing a United States of Europe resolution.

Since then the need for unification has been universally recognized.

A forceful editorial on the subject was recently written by Mr. M. F. Everett, of Catholic Action of the South.

I am pleased to include the editorial in the RECORD.

SEEING THINGS—UNION IN WESTERN EUROPE

(By M. F. Everett)

There was a weak spot in the fence, and I knew it. But I put off repairing it. So one day a hog found it and pushed through. The whole herd immediately got out. I had to round them up and repair the fence. Then, because they had learned they could get out once and tried it over and over again, I had to do a lot more work on the fence than if I had fixed it in the first place.

Most of us act as I did when a farm boy. We know that "an ounce of prevention is worth a pound of cure," but we still don't get busy until we are forced to do so or until long experience has convinced us that the ounce of prevention is the wiser course.

I was thinking of this as I conned news reports of various moves toward union in western Europe. There is serious need for economic and political, or at least ideological, unity among these countries. The Old World set-up has been shattered, and they are being forced to act together or be blotted out, one by one, behind the iron curtain. A number of moves have been made toward union, but whether the peoples as a whole realize the need sufficiently to forget old animosities and work together remains to be seen.

Dr. Austin J. App, a professor at LaSalle college, Philadelphia, and, if I remember correctly, an active worker in the Catholic Association for International Peace, asserted in a recent address that America will soon either permit a strong Christian Germany or see a strong communistic Europe. He said that the present United States-British-French policy of trying to make Germany democratic but to keep her weak in military force, industry, and commerce is calculated to soften up what is left of Germany for a strong Bolshevism. He fears that, as in Hungary and other Red satellite nations, Germany and other free European nations will be betrayed to communism, with the liquidation of Christian leaders, Bishops, priests, scholars, and all the most decent people.

Konrad Adenauer, German Chancellor, boldly offered to France this month a complete union of the two countries as a means of settling all differences over the Saar and other problems and to lay a cornerstone for a United States of Europe. But France fears Germany with a terror born of frequent conquest, and this fear is not allayed by the fact that western Germany is becoming more Catholic and Christian as expellees from territory taken over by Poland settle there.

Winston Churchill offered France a similar union in the recent war. But England has been ruled for several years by a labor party that is interested in setting up a socialistic state. France does not know how far England will go now in cooperating to achieve political and economic unity in western Europe. Its doubt is strong enough that President Auriol of France made a plea for British cooperation the basis for a recent talk before the British Parliament, a most unusual move.

He told the Parliament that the former Anglo-French military alliance was not enough to counter present dangers. The two countries should cooperate in all spheres and both should cooperate on the same basis with all of western Europe. "Why wait for disaster?" he asked. "It is we, the English and the French, whom a new war would once again place in the forefront of peril."

These incidents dramatize the need for unity. They also show that leaders are aware of the desperate necessity for joint action. Other signs are favorable. The discussions over military supplies in the Atlantic pact, the consultative assembly at Strasbourg, the economic unions of several nations in Benelux and Fritilux, the Franco-Italian parleys for economic union—these show that western Europe has gone further on the road to unity in the past 2 years than in the previous past 2 centuries. We hope the various moves coalesce into a successful union while there is still time.

The Coast Guard Reserve Program

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks, I am including an editorial appearing in the Seattle Times on April 3, 1950, dealing with a subject which should have the attention of Members of Congress. The Coast Guard Reserve program should have our best consideration. The editorial follows:

ENTITLED TO THE SAME AS OTHER RESERVISTS

In Seattle there is disappointment that Congress again has made no provision for the training program of the United States Coast Guard Volunteer Reserve. The House Appropriations Committee has slashed some $20,000,000 from the Coast Guard's 1951 budget, including more than $13,000,000 for construction and improvements, $2,000,000 for operation expenses, and $4,000,000 for the Reserve program.

The committee, perhaps wisely, declined to increase the size of the Coast Guard's air arm, though we in this region are familiar with the work that branch of the Coast Guard performs in rescuing survivors of ship and plane disasters. The committee said it is in sympathy with the arguments favoring a training program for the Coast Guard Reserve, but feels that the Treasury is in such condition that it cannot sanction the initiation of new programs.

The Coast Guard has asked for $4,100,000 to provide training for 1,900 officers and 6,000 enlisted men of the Coast Guard Volunteer Reserve. That organization exists only with volunteer status. The Reserve units of the Army, Air Force, Navy, and Marine Corps all are entitled at least to a minimum of yearly training, to keep prepared for a call to duty, but the volunteer reservists of the Coast Guard enjoy no such advantages. The lack would leave the harbors and waterways of the United States and its possessions without any "force in being" trained to be called into immediate action in an emergency.

During World War II, the Coast Guard supervised the safe handling of no less than 12,000,000,000 pounds of explosives at ports of this State alone. It is from the Reserves that the Coast Guard must draw the personnel to perform such expert services in an emergency.

This is the third year that Congress has denied funds for the Coast Guard Reserve training program. It is a shortsighted policy. Seattle Coast Guard volunteer reservists are justified in their determination to fight to have the relatively small appropriation for their organization restored.

British Ask: "When Does the Roman Circus Close in the United States?"

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by William H. Stringer, chief, London News Bureau, which appeared in the Christian Science Monitor of April 5, 1950:

BRITISH ASK: "WHEN DOES THE ROMAN CIRCUS CLOSE IN THE UNITED STATES?"

(By William H. Stringer)

LONDON.—Several times in the past week friends in the British Government or the press have asked me anxiously whether a reaction of sanity had set in yet in Washington.

Frankly, the British and a good many other Europeans are worried and dumbfounded at the Roman circus of Senator JOSEPH R. MCCARTHY in Washington and at the incredible collaboration of some Republican Senators and some of the American press.

Dumbfounded, yes, and disheartened. Because to them it has looked as though the United States Government, on which the west places vast reliance for leadership and strength in the struggle to counter Russian expansionism, was coming apart at the seams. American prestige abroad has been dangerously debased at a serious moment in postwar history.

ACHESON SUPPORTED IN BRITAIN

Maybe the United States is big enough not to care what other nations or peoples think about it. And maybe not. Maybe you don't care whether foreigners think well of your Secretary of State. But you may as well know that Dean Acheson, now under a barrage of denunciation from Senators MCCARTHY, WHERRY, and BRIDGES, is regarded in Britain as an individual of the highest talents and statesmanship. People over here think you should be thanking your lucky stars that you have found a man of such integrity, intellect, and unswerving purpose to succeed Gen. George C. Marshall.

The Times of London, for instance, declares: "When Mr. Acheson was chosen to succeed Mr. Marshall, the choice was felt to be singularly happy and likely not only to shed luster on the administration but also to provide international leadership of a high order."

EMPHASIS PUT ON RESOLUTE ACTION

One might say cynically: Yes, of course, Mr. Acheson favors Marshall aid, so why shouldn't Europe support him? But for you to come to that conclusion is, to use Winston Churchill's recent phrase, falling below the level of events. It is failing to see that the world is in a truly tough spot right now. And that the situation has to be met, not by ousting a couple of fellow travelers from some Washington bureau—if such can be found—but by resolute action along the whole perimeter of the West's physical and political ramparts.

"Quarrels between Republicans and Democrats are, of course, for Americans alone to determine," says the responsible London Economist. "But so long as the rest of the free world depends for its existence upon American wisdom and strength, it has a right to express its horror at the lengths to which partisan levity is being carried in Washington. It is not by such leadership that freedom will be saved."

Of course, the British Government itself has not been vigorously enunciating foreign policy lately. And when Mr. Churchill has raised problems of deep urgency in the House of Commons he has been more than once criticized by Government spokesmen as being irresponsible or mischievous. But British hesitancy to take bold steps stems partially from American indecision—the kind of indecision that is prolonged when responsible officials must spend half of their time preparing replies and defenses against vicious attacks.

NO ROMAN FORUMS FOR BRITAIN

Over here when there is suspicion of misconduct in office, the immediate impulse is to set up a commission of able men of great integrity to investigate, but not a Roman forum with klieg-light publicity. Maybe there is another difference, too, in that the British—and I mean those who really are awake to the Communist menace—never seem to get so all-fired excited over communism as some Americans do.

After all, Russian communism is not some dreadful contagion which cannot be halted. It is a shrewd despotism which can be beaten to a standstill by resolute action—the very kind of action which Mr. Acheson has been proposing in his recent California speeches.

There is wide awareness, even from this distance, that the main purpose of the attack on the State Department is political. And, personally, I would be willing to bet the same crowd is peddling the attack which sought, unsuccessfully, to find a diabolical plot in the Pearl Harbor disaster—the same slick radio commentators expounding the daily grist of charges and the same behind-the-scenes operators.

Britons are not being self-righteous when they comment that such unsubstantiated charges as have been made in the United States Senate would not get very far in Britain. Few members of Parliament would dare use their parliamentary immunity to make such guilt-by-association accusations.

And why? Because the British public, with its strong sense of fair play, would almost certainly ostracize such behavior from public life. Maybe it's high time for the American public, with its equally well-publicized sense of fair play, to come to the rescue of Mr. Acheson.

Galveston Engineer District

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. THOMPSON. Mr. Speaker, for many years, my home town of Galveston, has been the Texas district headquarters of the United States Army engineers. More recently, a good deal of flood-control work has developed in the interior of the State. A few months ago, in the course of a continuing Nation-wide study of the engineers' activities, it was reported to the Chief of Engineers that economy of money and effort could be attained by moving the administrative offices concerned with flood control to a point located closer to the geographic center of those activities.

For a time, it was considered that the entire district headquarters including

not only flood-control work in the interior, but rivers and harbors development and maintenance adjacent to the coast, should be moved inland and away from Galveston.

Further studies indicated that it would not be economically justifiable to remove the rivers and harbors headquarters away from its theater of operation on the coast. Therefore it was concluded that a new district should be established in the interior, and that personnel pertinent to inland flood control should be removed from Galveston to that office.

A move of this kind is something that no Member of Congress could like. However, the Corps of Engineers, with the utmost consideration for me and respect for the fight I had made in behalf of Galveston, kept me fully informed as to the course of their surveys and when the decision was finally made to remove a part of my people, I was left without any factual data on which to base an argument.

Subsequently public and civic officials of Galveston appeared before General Pick in person. Last Monday there was a further conference between the division engineer and the Galveston people held in that city. The outcome is set forth in an article from the Galveston News of April 4, which follows.

I wish to invite especial attention to the final reaction of the Galveston civic leaders. Their acceptance of the move was no easier for them than it was for me, but they did accept it as being best for the greatest number and as an economy move which, as they expressed it, might well "become contagious in other Federal operations":

GALVESTON ENGINEER DISTRICT WILL REMAIN ONE OF LARGEST

Galveston district of the United States Corps of Engineers will remain one of the largest in the country, both in money appropriated to its projects and in actual area, Col. Louis W. Prentiss, division engineer at Dallas, informed officers of the chamber of commerce Monday.

He told the officers at a conference here over the split of the Galveston district, that this district will grow in activity in the future as big drainage projects are begun.

Under the split of the local office, a district office will be opened in Fort Worth to supervise flood-control work. The Galveston district will remain in charge of river and harbor work, Colonel Prentiss explained.

Among the future projects for the local office as explained by the division engineer are downstream locks and dams on rivers flowing into the Gulf.

After the conference David C. Leavell, president of the chamber of commerce, said, "On the basis of the figures and other data submitted by Colonel Prentiss, the action is justified from an economy angle as well as from that of securing increased efficiency in the flood-control program."

Colonel Prentiss told the local officials that with eight large dams and reservoir projects under construction in north Texas, it is impossible for the district engineer and his assistants to cover all the territory and still do an effective job with river and harbor work.

With the division of the district, the personnel in Galveston can concentrate on the Texas Gulf coast which is the biggest river and harbor engineer district in the United States.

"Nine important harbors are located in the local district," Colonel Prentiss added.

A survey was begun in September of last year as to the advisability of splitting the district, Prentiss explained. A long and careful study of all angles of the proposed division was made before any definite decision was reached, he said.

In explaining the personnel situation, Prentiss said 328 employees in the Galveston office will remain here.

Besides these, 14 persons from the Houston real-estate office of engineers will be transferred to Galveston. This will make a total of 342 persons remaining in the local office, Prentiss added.

In addition to the transfer of 200 employees to the new Fort Worth office, 66 local employees will be relieved from duty, the division engineer said.

HOUSTON OFFICE CLOSED

The Houston real-estate office will be closed under this division plan with the transfer of 90 employees from that office to Fort Worth, Prentiss added.

Personnel transfers will begin the week of April 17 and will move in relays over a 3-month period, he explained.

Removal of fixtures and equipment from the local office will begin April 14, Colonel Prentiss said.

Present plans call for the completion of all moving, both of personnel and equipment by July, he said.

PLEASED BY ECONOMY

Leavell in continuing his comment after the conference, said:

"While we are unhappy over losing any members of the Galveston district office, still we are pleased to see that an honest effort is being made by a Federal service to achieve efficiency at a lower cost.

"It is to be hoped that such a program of thinking becomes contagious in other Federal operations, and that it reaches clear up to Washington, including the President."

"Our position in the Galveston-Fort Worth matter has always been of keeping the present district intact unless real money could be saved in the action, and we now have a feeling that such a saving can be made."

NO OBSTRUCTIONISTS

The chamber of commerce president continued his comments by saying, "We positively would not want to obstruct a program of saving the taxpayers' money."

Those attending the conference, in addition to Prentiss and Leavell, were Dr. D. B. Calvin, chamber of commerce first vice president; Alvin Kelso, second vice president; A. J. Peterson, treasurer; E. S. Holliday, general manager; and Lt Col. Ellsworth I. Davis, Galveston district engineer.

These officers of the chamber of commerce will report their findings of the conference to their board of directors Friday morning.

Praise for Representative Phil J. Welch

EXTENSION OF REMARKS
OF
HON. CLARE MAGEE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. MAGEE. Mr. Speaker, on yesterday I caused to be inserted in the CONGRESSIONAL RECORD a speech made by Hon. PHIL J. WELCH which was made in St. Joseph, Mo., at the celebration which commemorated the ninetieth anniversary of the beginning of the Pony Express. The speech showed much preparation and thought. It was filled with historical data, as well as being timely and interesting. The St. Joseph News-Press is one of our finest daily publications in Missouri. The day following Mr. WELCH's address this publication wrote an editorial commending the Representative of Missouri's Third Congressional District.

Under leave to extend my remarks, the same is herewith inserted:

A SPEECH TO PRESERVE

Congressman PHIL J. WELCH added a laurel to his crown today. To accommodate citizens who were to be disappointed because of the sudden illness of Lt. Gov. James T. Blair, scheduled Pony Express speaker, the Congressman filled in today at the celebration of the ninetieth anniversary of the start of the Pony Express.

It was 3 p. m. yesterday when Congressman WELCH was told the lieutenant governor could not be here. Could he speak? He could.

The Pony Express speech of Congressman WELCH is reproduced in its entirety. It is given because we believe it is an important contribution to the archives in what is probably St. Joseph's most illustrious—certainly its most romantic—historic episode.

A native of St. Joseph, PHIL J. WELCH as a boy loved the Pony Express heritage that is ours. As mayor he often stood on the stone parapet of the civic center. There he gazed at that re-creation in bronze of the first rider.

What more natural than in Washington, with the Library of Congress available, he spent many nights poring over tomes on this St. Joseph to Sacramento early day means of transportation.

We regret the inability of the lieutenant governor to be present, but his illness was a blessing in disguise, for the St. Joseph Historical Society now has for its records a speech that well deserves to be preserved for posterity.

Congratulations to the Junior Chamber of Commerce for its initiative and ingenuity in thinking of PHIL WELCH. Some pinch hitter.

Shall the People's Congress Be Ignored?

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a statement by me entitled, "Shall the People's Congress Be Ignored?"

The statement is as follows:

By an unholy alliance between the New Deal Party and certain labor leaders, the Wagner Act became law.

What happened? We had an immediate outburst of industrial strife. Strikes and violence became rampant. Law and order were set aside, except where the new monopoly itself established its own brand of police power. It ignored the local police power and the regularly constituted law-enforcement agencies. Instead, in labor cases, it became the police power, the prosecutor, and the court, able to carry out its own will.

Under the Wagner Act, the National Labor Relations Board itself investigated complaints of abuses by management. It left labor entirely free from investigation or prosecution. The same Board also tried the

case and rendered judgment against management. It was, therefore, investigator, prosecutor, and court. Its decisions followed the Russian pattern of the one-party system, using the court to enforce purposes and policies of the party in power. Its decisions were one-sided. Its fundamental purpose was to weaken and destroy the opposition. It worked just as the Supreme Court of the United States would work if it investigated and prosecuted and then rendered its decision according to party prejudice or purpose, on the evidence it chose to present to itself.

As a result the people's Congress rose up in its might, and passed the Taft-Hartley Act in 1947. Under it, the National Labor Relations Board was to be truly a court of impartial men, to be selected by the President and confirmed by the Senate, to decide fairly disputes between employers and employees. The court was no longer permitted to investigate and prosecute. Those functions and powers were specifically lodged in an independent general counsel. His relation to the Board was somewhat like that of the United States Attorney General's to the United States courts.

Under this procedure law and order have been more nearly restored. Strikes and violence have been greatly reduced, in spite of the President's deliberate and continuous attempts to sabotage the law. He first tried to prevent passage of the bill. Then he vetoed it. Then he promised to repeal it. Defeated in all this by the votes of both parties in Congress, he still threatens to "rip the Taft-Hartley Act out of the statute books."

CONDONING BREACHES OF THE PEACE

Prior to the Taft-Hartley Act, the Board was as arbitrary and unreasonable in the encouragement of violence in strikes, in picketing, and boycotting, as the worst advocates of class war. There were cases, in fact, of active participation of Board employees in the attempted use of force and intimidation. It became a scandalous fact that the Board and its staff were recruited from intellectuals who had written for or represented labor unions, of the parties in the disputes. This same Board was continued under the Taft-Hartley Act, with the addition of two new Board members.

Even today, with the separation of functions which the new law provides, the slant of the Board is already indicated by such decisions as the Horne Manufacturing Co. case (83-NLRB-1177), in the testimony before the Senate. A striker threw a hammer through the car window of a nonstriker going to work. The company refused to reemploy the striker. The Board ordered the employer to take him back, saying "We find that the striker's conduct, although objectionable, was not so extreme as to render him unfit for further service, and to justify his exclusion from the reinstatement order."

In the Kelco Company case (79-NLRB-759) the United States Circuit Court for the Fourth Circuit refused to enforce a Board order to reinstate five strikers who, the Board admitted, had engaged in "brutal violence and intimidation of a serious character, ganging up on a nonstriking employee and chasing him home in one case, knocking down an employee and beating him publicly in another."

Here is a case where the local court had issued an injunction in order to restore order and peace, through the machinery of local government, which is the responsible center of enforcement of law and order, yet the National Labor Relations Board, sitting in Washington, set aside the enforcement of the peace by the local authorities, and superseded them by invoking a Federal law which condones branches of the peace by certain classes in society.

In the third case, the Kansas Milling Co., a striker was found guilty of deliberately ramming and damaging the car of a nonstriker, and fined $50 by a local court. The Board granted him reinstatement and back pay.

No matter what provocation labor union members might have met with in the past, from extra-legal activities of employers of the old type, it is no advantage to labor for either the Board or the courts to tolerate violence. The workers of this country cannot gain by setting up defiance of the peace in their turn, or seeking to be made the kind of privileged group or estate that the dictators set up to fool the workers of Europe. It is more important to workers to be sure the laws are enforced, and that they have all the protection of the police power, than it is to the employers themselves.

These acts of the Board show that it is still of the same mind as under the Wagner Act, that it is committed, at the present time, with the New Deal's approval, to violate the specific language of the Taft-Hartley Act, which says that it is an unfair labor practice for a union or any of its agents to restrain or coerce employees in the right, guaranteed by the act, to join or not join a union.

In the light of our experience with the National Labor Relations Board from its inception in 1935 down to the present hour, we dare not expose our country to a Board which not only refuses to investigate and prosecute violators on both sides, but is incapable of being a judicial body, so long as it is also investigator and prosecutor.

Executive dictatorial orders lead to the kind of police power that is exempt from judicial control for a special class or group which polices itself and enforces its own arbitrary law. Congress has relied on the police power that is subject to orderly, impartial, judicial review. That alone can lead to equal justice for all.

CHALLENGE TO THE INDEPENDENCE OF THE LEGISLATIVE POWER

The people of the United States face squarely the question whether they want the law to be made by their elected Representatives or by Presidential usurpation of legislative power. Congress has three times affirmed the Taft-Hartley law—first in its original passage, then in its passage over the veto of the President, and then in their refusal in 1949 to adopt a substitute.

The Board is at present operating in a political climate of opinion which blithely assumes that the Taft-Hartley Act is going to be rescinded and the Wagner Act reinstated after the next election when the President will have a Congress subservient to his will. Such a travesty of "law enforcement" is a total violation of the Constitution which gives to the Congress the legislative power and does not permit nor imply in any way that the Executive can remake or reshape the law to suit its own purposes.

The President's false representation to the people that his plan No. 12 for the elimination of the general counsel under the National Labor Relations Act, is in keeping with the recommendations in the Hoover report, has been roundly exposed by a telegram read in the hearings of the Senate yesterday, from the former President himself. He said that the Commission never even considered the matter and certainly never made any such recommendations. The Hoover report did what President Truman should do, strictly avoid all pretense of solving by Executive order problems which belong to the legislative responsibilities of the Congress.

Mr. Speaker, I want to call your attention to the fact that originally the Congress granted the reorganization power to the President of the United States as an administrative power to clarify and strengthen the innumerable functions of the administrative agencies, and never with the thought that the President would use that power to legislate in violation of the express will of the Congress. At that time the Congress granted to him the right to support reorganization measures as a step to simple efficiency. This plan will go into effect within 60 days, unless a constitutional majority, which in the House means 218 Members present and voting, has acted adversely on his recommendation. Gentlemen, this is a test not of your views with respect to labor legislation, but of whether or not any Member of Congress is going to betray the constitutional power of this Congress of the United States. This is a nonpartisan, constitutional issue which requires a prompt and overwhelming rejection of the President's position, not by 218 Members, but by every Member of the House of Representatives who is true to his oath of office.

If the President wins in his contention, he will set up an arbitrary, personal police court that will literally become the most powerful court in our whole Government. He will have a life-or-death authority over all business. He will have a personal arm of government that can be bent entirely to his will. From his decisions there will be no appeal. This is in truth a step to the police state in all of its evil manifestations—even in America with all its traditions and its history of constitutional law.

If Congress wins in this contest it will assert that there shall be no police power except the power that is subject to impartial judicial review. The law shall be no personal law, no administrative order, no dictator's decree.

A Young American Speaks Out on Foreign Policy, Peace, and War

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. DOYLE. Mr. Speaker, I take pleasure in presenting herewith for your attention a communication received by me from one of the younger generation of Americans. He is a very successful young man in his own right and it is with his express permission, in response to my inquiry, that I have the privilege of sharing its important text with you. I am also forwarding the same to our State Department.

Certainly it is true that only by an exchange of considered opinions can there be enduring progress in a democracy.

I would welcome receiving any comments from you, my colleagues, about Tom Shields' communication to me.

The communication follows:

LONG BEACH, CALIF., *February 18, 1950.*

Congressman CLYDE DOYLE,

House Office Building, Washington, D. C.

DEAR CLYDE: I want to pass along a few ideas about world peace for your consideration and comment. You may be ahead of me on these items as I realize that "a safe and sound America in a world of peace"

has been a very real objective of yours for years.

Our program for peace, as I understand it, might be considered under two points—

1. To make the United States and western democracies strong;

2. To promote international understanding and good will.

Point 1 avoids the mistakes of prewar pacifism and disarmament, which programs proved so ineffectual. And we have certainly learned that any form of appeasement and any evidence of weakness would be fatal. It is to be hoped that the present Congress will not make any unwarranted cuts in defense or foreign aid appropriations. In some respects present expenditures for these programs may be inadequate.

But point 1 above, necessary as it is, cannot succeed alone. It is essentially negative. The more positive aspect of our foreign policy, point 2 above, is equally important. It seems to me that it could be strengthened further by various positive steps toward better understanding with peoples behind the iron curtain.

One of our foremost problems is to sell our friendship and peaceful intentions to the peoples of Communist-dominated countries. Events of recent years have shown that, absolute as a dictatorship may be, it cannot afford to disregard entirely the opinions of its citizens. Hence the stupendous propaganda and espionage efforts. Hence also the fanatical desire to isolate its people from all factual knowledge of the Western World. It is doubtful that the members of the Politburo can be changed by anything short of rebellion and of popular demand for international friendship on the part of their peoples which would be too overwhelming to be purged.

Admittedly this is a big order. But also admittedly other courses of action are not completely successful. Time may be running short. It would seem that this approach has enough merit to justify its use in conjunction with our other policies. I am convinced that it could be conducted in such a way as to be thoroughly consistent with our point 1 of adequate strength.

Now as to ways and means. If this approach is worth trying at all, it is worth our best efforts. President Truman might appoint a commission including businessmen, labor leaders, advertising executives, clergymen, educators, newsmen, and representatives of Congress and the State Department—top caliber men all of them. The commission members might be put through a few seminars in Washington to brief them on the problem and significant background information. They might then be asked to work on the problem and bring in recommendations as soon as possible. The same results could be secured in a more quiet, informal manner if that seemed preferable.

This aspect of our foreign policy has been discussed recently by a few Government officials and private citizens. It seems to have many facets worthy of consideration, a few of which are—

1. Expand the Voice of America, and seek to open all other possible avenues of information and influence.

2. Make an offer to iron-curtain countries of certain consumer goods, including food, on condition that the recipients are told of the source of the commodities. If the offer is not acepted, publicize the facts to the people of those countries.

3. Attempt to have the Christian churches within Communist-dominated countries convey our friendly intentions to the people.

4. Investigate all feasible methods of sending leaflets, soap, and American trinkets of various kinds to these peoples.

5. Encourage Americans with friends and relatives in these countries to correspond with them regularly and pass along information which they might otherwise miss.

6. Utilize services and contacts of political refugees and exiles from iron-curtain countries where feasible.

7. Have representatives of American labor unions work with cooperative European labor union members to undermine Communist influence within European trade-unionism.

8. Propose exchange arrangements for students, professors, and clergymen.

9. Have our Central Intelligence Agency on the alert for any underground movements which we could help, and for anti-American trends which we might counteract.

The cost of such a program would be comparatively small and the potential return on the investment would be high, so I hope we would be willing to give it every dollar that could be effectively used.

A particularly significant feature of such a program is that it would give us an opportunity to prove just how Christian we are as a nation, and whether we believe in the brotherhood of man as we profess to do. Fine as the Marshall plan is, it involves giving to our friends—this program would mean giving to those who are at least potentially our enemies. While we would be doing it because it would contribute to our own survival, it would nonetheless contribute to the eventual well-being of millions of people now in the rankest type of servitude.

It may be that because we as Christians have failed to practice the Sermon on the Mount for the advantage of those less fortunate than we, we are now to be forced to do so for our own survival.

The Kremlin is peddling a diabolical product—communism—with an all-out campaign of intensive and extensive propaganda, subversion, falsification, and hate. I believe that American ingenuity can sell an infinitely superior product—democracy—with an equally vigorous program of information, counter-subversion, truth, and good will.

I would like to see a program similar to the one discussed above developed and carried forward as though our very lives depended upon it. They may.

Sincerely,

THOMAS K. SHIELDS.

Aesop's Fable and McCarthy

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following editorial, Aesop's Fable and McCARTHY, from the Milwaukee Journal, dated April 4, 1950:

AESOP'S FABLE AND McCARTHY

A great many Americans have been saying that Senator McCARTHY is playing directly into the hands of the Communists by the way he has carried on his current Red hunt.

The Nation's leading newspapers, Republican and Democrat, have been pointing this out for several weeks. So have columnists and radio commentators. President Truman touched this note last week when he said that McCARTHY is "the Kremlin's greatest asset" in this country.

Senator HENRY CABOT LODGE, of Massachusetts, Republican member of the committee investigating the McCarthy charges, joined the chorus this week. Pointing out that not one of McCARTHY's charges had been proved, he explained that a charge made in this shotgun manner, and investigated openly by Congress, "often besmirches the character of innocent persons, weakens the position of the United States before the world, and fails to find the really dangerous individuals."

Congressman RICHARD M. NIXON, of California, the member of the House Un-American Activities Committee who is given credit for digging out the Alger Hiss case, criticized the McCarthy system on a television program Sunday night. He said, in effect, that smearing the innocent for political purposes is no way to expose the guilty. Walter Reuther, the labor leader, in another such program, declared that McCARTHY's charges should have been given to the FBI or other authorities and not spread publicly. He said McCARTHY did exactly what Stalin "would want him to do."

Probably the best explanation of the damage that Senator McCARTHY is doing was given in Milwaukee last week by Father John F. Cronin, S. S. Father Cronin is assistant director of the social action committee of the National Catholic Welfare Committee. He has studied communism in this country for 10 years and is considered one of the Nation's authorities on Communist infestation and infiltration.

Father Cronin said that Senator McCARTHY had made charges that he couldn't prove, that he had not evaluated his information properly, that he had been badly briefed, and that it was unfortunate he had gone to such extremes.

Referring to the most sensational of McCARTHY's charges—the one that there are 57 card-carrying Communists in the State Department—Father Cronin declared that his investigation had shown that there is not one known Communist Party member in that Department.

The McCarthy technique is remindful of that of the shepherd's boy in Aesop's fables. This lad cried out "Wolf, wolf" erroneously several times, and fooled the villagers. When the wolf finally did appear, and the boy cried out, the villagers thought he was merely deceiving them again and nobody came to help him.

People are beginning to put McCARTHY's shoutings in the "Wolf, wolf" class. This is a situation made to order for Stalin's stooges. For years they have used the red-herring cry as a shield when attention was directed their way. Now they may have a new shield. Anyone who points out a real Communist, and may have proof to back his charges, may be accused of applying the McCarthy smirch—another name for a witch hunt or a phony smear campaign.

It is this that worries men like Father Cronin, the President, Senator Lodge, Representative Nixon, and others who know the Communists and all their tricks. If McCARTHY falls on his face in this campaign, as now seems so likely, it is going to be harder and harder to dig out the Communists wherever they are embedded.

World Health Day

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. BIEMILLER. Mr. Speaker, tomorrow is World Health Day. It marks

the second anniversary of the functioning of the World Health Organization, that remarkably successful specialized agency of the United Nations. It is also a day of dedication to the improvement of the health of people everywhere.

With permission to extend my remarks in the RECORD, I include the following statements by Federal Security Administrator Oscar W. Ewing and Dr. Leonard A. Scheele, Surgeon General of the United States Public Health Service:

STATEMENT BY FEDERAL SECURITY ADMINISTRATOR OSCAR R. EWING

In this year's observance of World Health Day people everywhere can look to international teamwork for real progress in improving human health and welfare.

When I was in Europe recently, nothing impressed me more than the increasing emphasis on cooperation among many nations in attacking these common problems. In country after country I found a growing confidence that by working together we can control and wipe out preventable diseases.

This confidence is based on experience. At the headquarters of the World Health Organization, in Geneva, Switzerland, I heard heartening reports of what has been accomplished for health on a broad international front. To take only one example, I learned in Italy that malaria, responsible for more than half a million deaths in 1945, has now been practically eradicated. In Sardinia a similar program has met with sensational success. Such concerted attacks upon diseases are paying real dividends, not only in human life but in opening new possibilities for economic development.

The United States faces a great obligation and a great opportunity for leadership in health and welfare. The experience of the Federal Security Agency in dealing here at home with problems of health, education, and social security is being drawn upon more and more frequently in the international relations of the United States. During the past year the Agency's Office of International Relations has worked closely with the State Department, with many of the United Nations agencies, and with other organizations. From every part of the Federal Security Agency—the Public Health Service, the Office of Education, the Social Security Administration, including the Children's Bureau, and others—we are contributing technical assistance to this international effort.

One of the most important of these activities is the planning of the "bold new program" set forth by the President. This includes projects for public health and sanitation, looking especially toward the control of such diseases as malaria, which interfere with economic development in many parts of the world.

As the constitution of the World Health Organization affirms, the health of all peoples is fundamental to the attainment of peace and security. The Federal Security Agency is proud to help in this world-wide partnership dedicated to health and welfare. It welcomes this opportunity to join in observing World Health Day and in pledging its continuing concern for health as one of the foundations of democracy.

STATEMENT BY DR. LEONARD A. SCHEELE, SURGEON GENERAL, UNITED STATES PUBLIC HEALTH SERVICE, FEDERAL SECURITY AGENCY

As we pass the halfway mark in the twentieth century we in America can be proud of our progress in public health. In the past 50 years we have made important gains in building a healthier Nation. We have learned that scientific research can produce new knowledge and better methods of improving health. We have increased our efforts to advance medical science and to apply it wisely. We have expanded our health services and hospitals. As individuals seeking health we have learned to use our services more frequently and more efficiently than our forefathers.

We have also learned that if our desire for peace is to triumph, we must help all peace-loving peoples to conquer misery and disease. The world's health is everybody's business. In the underdeveloped parts of the world there are vast areas where the average man does not live beyond his twenties, where at least one person in every family will be ill at all times, and where poverty holds the benefits of medical science from those who need it most.

As we begin the second half of the century, therefore, we look forward to new world health action. The World Health Organization may well be proud of the vigorous international program for better health which it already has under way. We hope that this program can be further expanded under the President's proposal for cooperative technical assistance programs to aid the peoples of the world's underdeveloped areas.

With all the peace-loving nations of the world working together we can at last begin to bridge the gap between the people of these poverty-stricken but naturally rich areas and their more fortunate fellowmen. Certainly the project is potentially one of the most beneficial that the world has ever seen.

It is with these objectives in mind that the United States joins with the other nations of the world in the observance of World Health Day at the beginning of the second half of the century.

If a Law Is Needed

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Independence (Iowa) Bulletin-Journal urging favorable action on my bill to prohibit Supreme Court Justices from acting as character witnesses in criminal trials in the Federal courts:

IF A LAW IS NEEDED

From a number of angles, there is much to be said for the bill introduced by Representative KEATING, of New York, to bar any member of the United States Supreme Court from appearing as character witness in a lower court.

The measure, of course, was prompted by the testimony given by Justices Frankfurter and Reed in the case of Alger Hiss.

The case quite likely will end in an appeal to the Supreme Court. These two members by their activity in the trial will be automatically barred from passing on the case. That means a depleted bench.

For another thing, it isn't very becoming of a member of the highest tribunal to go traipsing around the country using the prestige of his position to help a friend.

Personal taste should dictate this decision. But in cases where it doesn't, there should be protection by law.

China's "People's Democracy" Makes a Mockery of Democratic Freedom and Slaves of the People

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article on conditions in Shanghai under the Communists who, according to leftist propaganda, were liberating China from its allegedly feudal war lords in order to bring in utopia. This report is from the CAT Bulletin, the little paper put out monthly by the officials and employees, American and Chinese, of Civil Air Transport, the air line established and operated in Asia by Gen. Claire Chennault and a group of Americans and Chinese.

The article follows:

CHINA'S "PEOPLE'S DEMOCRACY" MAKES A MOCKERY OF DEMOCRATIC FREEDOM AND SLAVES OF THE PEOPLE

The October 17 issue of Life carries an exclusive report on Communist Shanghai. In it Correspondent Robert Doyle gives a graphic picture of the creeping economic paralysis spreading over the once great port city of China. He left on the steamship *General Gordon* in late September.

Since the *Gordon*, several ships have arrived in Hongkong with passengers from Shanghai. Most of these evacuees agree that within the few weeks since the Life story was written, conditions have become much worse, particularly for foreigners who wish to do business in the city. Instead of trying to ease the economic coma into which the city has fallen by encouraging foreign trade, present policies of the powerful Military Control Commission are moving in the opposite direction.

It is explained that the main weapon of the Military Control Commission in its fight to destroy foreign interests is the labor union. However, these unions are not organizations in the accepted sense of the word but are completely under the control of the MCC. They are told when to strike, whom to strike, and how much to strike for. Workers have no voice in union policy but serve as pawns in the hands of mysterious minions of the Communist Party under the MCC.

The case of a certain American business firm in Shanghai is cited as an instance of this abuse of power and authority. A man appeared one morning in the office of the manager of the American firm and asked to be taken on as an employee. The manager replied that, under present conditions, he was laying off men, not hiring them. The stranger insisted that he be employed but was again refused. He then left. The next morning he turned up in the factory of the American firm armed with a pistol and proceeded to beat up the Chinese factory foreman. The American manager was then accused of having refused employment to the stranger and, at the insistence of the labor union, was haled before a "people's court." No news has been received on the outcome of this trial.

Employees of foreign firms who were dismissed years ago for one reason or another are returning to the office or factory of firms which once employed them, demanding back

pay and reinstatement. Employers realize this is not the doing of the workers, but that they are merely carrying out orders from above. The case is cited by one recent arrival of a man who a year ago had been working for a certain firm and had been caught and convicted on a petty thieving charge. After the Reds took over, this individual was released from jail. In October, with the backing of the labor union, he approached his old firm demanding back pay, bonus, and reinstatement.

Under terroristic policies such as these it is said that numerous small firms are approaching bankruptcy and going out of business. No matter how hard they strive, businessmen are constantly in hot water with the labor unions. Larger firms are under the same political pressures but, backed by their home offices and bigger capital investments, will be able to hold out longer providing outright confiscation of property is not resorted to.

A representative of one of the larger foreign firms in Shanghai has openly announced to the Communist authorities that if they enforce present tax policies and continue to obstruct production through the labor union, he cannot stay in business longer than a few more months. He has candidly asked them what their pleasure is.

Recent passengers from Shanghai hold out little hope for any improvement but expect that the situation will deteriorate further. One of the inexplicable features which the businessman faces is the fact that even when he decides he can no longer continue in business, he is not permitted to leave. This refusal on the part of the Communists to allow businessmen and factory owners to sell out or leave Shanghai has aroused a deep sense of uncertainty and many are now fearful for their lives.

In this connection it is realiably reported that there are 223 foreigners in Shanghai who probably will not be allowed to leave the city but will be held as hostages against any possible economic measures which might not be favorable to the labor unions.

More startling than this is the report which insists that before the year is out, Russian commissars will take over the top police jobs and political sections of the city government. If this should materialize it is feared that present policies will become more terroristic than ever. Even now under Mayor Chen Yi's administration people no longer can trust their own servants. Private letters are being opened, files examined and pilfered by domestics who obviously are acting on orders from above.

The daily movements of prominent businessmen are being watched and reported on by secret operatives of the police. Individual dossiers are being compiled and no one is certain when he will be called up for questioning, accused of being an agent for a foreign power or sabotaging the "people's livelihood."

The pattern of terrorism now becoming vogue in Shanghai has strong resemblances to other countries under the Soviet Russian yoke. What they will become, if and when Russian functionaries actually take over the police department in Shanghai, is anyone's guess. The point has already been reached when few people wish to discuss politics and even a word or two exchanged is done with a look over the shoulder.

It is reported that living costs have risen 5 times since the Communists moved into Shanghai. A car license often costs as much as US$50 per month. Public utilities are beginning to break down, and electric power shortages have developed without explanation. People in the larger apartment buildings often find they have no elevator service and must walk up.

The feeling of never knowing what to expect next has discouraged new business and enterprise. Instead, most everyone seems to be waiting—waiting for the next turn of the screw. Who will be the next victim to be haled into court on trumped-up charges, or barricaded in his office by MCC-dominated labor unions? Who will be the next man to be beaten for some minor dispute with a stevedore or ricksha coolie? Every possible excuse is being used to intimidate and terrorize the upper and middle classes among the Chinese and foreigners in general. It is said that even among the poorer people of Shanghai, Gen. Chiang Kai-shek has never been so popular as he is now. They see in Chiang the only possible savior from their present torment.

A popular dream or vision which is being repeated and claimed by many Chinese revolves around the number 3. Some people who report this dream say they see three people, or three candles, or three Buddhas in a room. In one corner the candle (or Buddha) represents Mao Tze-tung, in another corner Chiang Kai-shek, but in the third corner a mysterious stranger sits whom no one can quite identify. Word of mouth report has this third stranger representing a new figure in Chinese politics who will oust the Communists and bring back an orderly and decent regime to China. Those who describe this dream explain that it reflects a deep-seated desire for a miracle to happen which would destroy communism.

Much is heard about the mammoth parades which are being staged in liberated cities. In Shanghai it is said that these parades, far from being spontaneous or voluntary, are organized from the top by the Communists with great attention to detail and propaganda effects. Every shop has to furnish one man and every school must turn out its pupils for the demonstration or suffer a penalty. Prominent Chinese businessmen, obviously feeling like idiots have been observed in these parades, wearing false mustaches and poor clothing to look like lao pohsing and coolies.

One foreign businessman who recently arrived from Shanghai definitely believes it will be impossible for any foreigner, other than Communist, to do business with Red China where his business has anything to do with Chinese labor. There is no assurance, he states, that conditions will remain favorable one week to the next regardless of permissions granted by the authorities.

Communist planners have been placed in charge of economic policies over which they have no knowledge or experience. Without realizing, or perhaps without wishing to realize, they are killing the goose that lays the golden eggs in Shanghai and have made an economic shambles of this once great center of trade and commerce.

Well-Merited Legislation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Allentown (Pa.) Evening Chronicle endorsing legislation to prevent Federal officials, including Members of Congress, from profiting through their own wrongdoing, by receiving pension benefits after they have demonstrated faithlessness to their trust:

WELL-MERITED LEGISLATION

The scheduled introduction today of a bill by Congressman KEATING, of New York, to cut off pension annuities for any Federal employee convicted of a felony, committed in connection with his Government service, brings to three the number of House proposals which would withhold retirement benefits from Congressmen jailed for serious crimes.

Actuated by the May and Thomas convictions, the bills have obvious merit, and it is to be hoped that one will be made into law during the present session.

Former Representative May, Kentucky Democrat, is drawing retirement benefits while serving an 8-month to 2-year term on a bribery conviction in connection with wartime Government contracts. Former Representative Thomas, New Jersey Republican, now serving a jail sentence for accepting salary kick-backs from an employee on his congressional pay roll, will be eligible for retirement benefits when he reaches the age of 62.

These men violated their oath of office as well as the criminal code and should reasonably be subject to deprivation of the right to receive bounty from a Government whose laws they have flouted, besides having disgraced their high office.

Such a law as that proposed would unquestionably serve as a sizable deterrent to any others on the public pay roll of similarly stunted moral stature.

Constitutional, Economic, and Political Relations Between the United States and Puerto Rico

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. LYNCH. Mr. Speaker, on March 25, the Honorable ANTONIO FERNÓS-ISERN, Resident Commissioner of Puerto Rico, delivered an interesting and educational address before the International Club of Fordham University. Being myself a graduate of Fordham University, class of 1915, and having recently returned from a visit to Puerto Rico, this address by Dr. FERNÓS caught my pointed attention.

Since this body is responsible for passing on many legislative matters which affect Puerto Rico, and more especially because there are pending before the Congress two bills, H. R. 7674 and S. 3336, which provide for the organization of a constitutional government for Puerto Rico, I believe every Member should read this address.

This being Pan-American Day, it is worthy of the notice of all countries and communities of Spanish heritage that Puerto Rico, itself a community of American citizens of Spanish-American origin, is marching rapidly along the road of democracy toward more and more self-government.

The United States has consistently and willingly recognized the aspirations of Puerto Rico's people for greater and greater equality, thus according Puerto Rico a respected and dignified station within the United States system.

The address follows:

CONSTITUTIONAL, ECONOMIC, AND POLITICAL RELATIONS BETWEEN THE UNITED STATES AND PUERTO RICO

Constitutional, economic, and political relations between the United States and Puerto Rico began with the Treaty of Paris, which was signed the tenth day of December 1898. Puerto Rico, up to that time, had been a province in the Spanish Kingdom, with a provincial government and full representation in the Spanish Parliament. Since 1897 it had attained the status of a dominion, while still retaining parliamentary representation in Madrid. The Treaty of Paris re-established peace between the United States and the Kingdom of Spain, which had engaged during that year in what is known as the Spanish-American War. Under the terms of the treaty, Spain relinquished sovereignty over Cuba, which had been the cause of the war, and ceded to the United States the island of Puerto Rico and other islands then under Spanish sovereignty—the island of Guam and the Philippines.

Under article VIII of the treaty, Spain ceded in Puerto Rico, together with sovereignty, all immovable property which, under law, belonged to the public domain, and, as such, to the Crown of Spain. It was stated, however, in the second paragraph of the same article, that this stipulation did not impair property or rights which by law belonged to the peaceful possession of property of all kinds, of the province, or of municipalities, public or private establishments, ecclesiastical or civic bodies, or any other associations having legal capacity to acquire and possess property in the renounced or ceded territories, or of private individuals, of whatsoever nationality such individuals might be.

In accordance with article IX, the civil rights and political status of the native inhabitants of the territories ceded to the United States were to be determined by Congress.

Under Article X, the inhabitants of the territories over which Spain relinquished her sovereignty were declared to be secured in the free exercise of their religion.

The status of Puerto Rico within the United States political system stems from this treaty, and is determined by Congress, subject to the terms of the treaty and obviously to applicable provisions of the Constitution of the United States. It is plain that Puerto Rico, in itself, was not ceded as property. The Crown and its government ceded what it had in Puerto Rico: paramount political authority, sovereignty, and, in addition, Crown property. Moreover, it was plain that the United States was not making war against the people of Puerto Rico. General Miles, upon landing at Ponce, issued the following proclamation:

"To the Inhabitants of Puerto Rico:

"In the prosecution of the war against the Kingdom of Spain by the people of the United States in the cause of liberty, justice, and humanity, its military forces have come to occupy the island of Puerto Rico. They come bearing the banner of freedom, inspired by a noble purpose to seek the enemies of our country and yours, and to destroy or capture all who are in armed resistance. They bring you the fostering arm of a nation of free people, whose greatest power is in justice and humanity to all those living within its fold. Hence, the first effect of this occupation will be the immediate release of your former political relations, and it is hoped a cheerful acceptance of the Government of the United States. The chief object of the American military forces will be to overthrow the armed authority of Spain and to give to the people of your beautiful island the largest measure of liberty consistent with this military occupation. We have not come to make war upon the people of a country that for centuries has been oppressed, but, on the contrary, to bring you protection, not only to yourselves but to your property, to promote your prosperity, and to bestow upon you the immunities and blessings of the liberal institutions of our Government. It is not our purpose to interfere with any existing laws and customs that are wholesome and beneficial to your people so long as they conform to the rules of military administration, of order and justice. This is not a war of devastation, but one to give to all within the control of its military and naval forces the advantages and blessings of enlightened civilization.

"NELSON A. MILES,
"Major General,
"Commanding, United States Army."

After ratification of the treaty, on the 11th day of April 1899, Puerto Rico was placed under military government. On August 15, 1899, General Davis, the military governor, issued a circular or general order in which it was explained to the people of Puerto Rico, the general features of the policy he was pursuing (and intended to pursue) touching the affairs of government in the island. From this circular letter, I quote:

"Under the American Constitution, the whole theory of Government is based on the principle that the people, themselves, are to make and enforce their own laws. As Congress has as yet taken no measures or action respecting Puerto Rico, the supreme government is, under the Constitution, vested in the President of the United States, as Commander in Chief of the Army and Navy. He (the President) has designated a general officer to represent him and to perform the functions of civil government. Several important orders have been issued of great import. Among those relating to superior administration and the judiciary are:

"1. The announcement by General Brooks on October 18, 1898, that the laws of the land, not in conflict with the Constitution of the United States, would be enforced.

"2. * * *

"3. Continuation of the council of secretaries as constituted October 18, 1898—order by General Brooks. (This referred to the council of secretaries or cabinet as established under the self-government constitution granted by Spain in 1897.)

"5. Dissolution of the council of secretaries by General Henry. (Thus, it was through a general order issued by former Military Governor Henry that the self-government constitution of Puerto Rico, granted by Spain, was suspended.)

"6. Appointment of heads of departments in the civil government by General Henry.

"The effect of the orders issued and changes resulting from these orders tend directly toward harmonizing the existing system and that to come with territorial autonomy, if such might be enacted by Congress. * * * The Governor would have a legislature, senate, and house of representatives, to regulate his actions, to make laws for the people, and to control expenditures. * * *

"It results from the foregoing that the necessity ceases for retaining the separate departments which have been presided over by able officers collectively called the cabinet; and it follows that the department organization should cease to exist, and announcement to the effect is now made."

Following this general order, General Davis established a secretary for civil affairs and entrusted all former departments to Army officers.

With the enactment of the first organic act and the inauguration of civil government, Puerto Rico ceased to be under the War Department. Nine years later Puerto Rico was again placed under the War Department, although civil government was continued. From 1909 to 1934, Puerto Rican affairs, at the Washington end, were in the charge of the Bureau of Insular Affairs in the War Department. From 1934 to the present time, they have been under the Department of the Interior.

Under the first Organic Act of Puerto Rico, the inhabitants of Puerto Rico, formerly defined as Spaniards, were to be deemed to be "citizens of Puerto Rico" and as such "entitled to the protection of the United States." They, together with citizens of the United States residing in Puerto Rico, were collectively organized into a body politic to be known as the people of Puerto Rico with powers of government as stated in the organic act and with power to sue and be sued. Later it was interpreted by the Supreme Court that Puerto Rico was appurtenant to, but did not form a part of, the United States. It has been held also by the Supreme Court in the case of *Balzac* v. *The People of Puerto Rico* (1922) that the conferring of United States citizenship upon the people of Puerto Rico did not incorporate Puerto Rico into the United States. To this day, Puerto Rico remains an unincorporated territory, subject to the sovereignty and protection of the United States. Such sovereignty takes the place of that of the Spanish King and his government, as formerly exercised under the Spanish Constitution and so ceded to the United States.

Under the 1900 act, it was provided that the same tariffs, customs, and duties should be levied, collected, and paid upon all articles imported into Puerto Rico from ports other than those of the United States which were required by law to be collected upon articles imported into the United States from foreign countries. And it was also provided that in no event should any duties be collected after the 1st day of March 1902 on merchandise and articles going into Puerto Rico from the United States or coming into the United States from Puerto Rico. Under these two provisions of the first organic act which are still in effect there was established what amounts to a customs union between the United States and Puerto Rico. Other provisions made it an economic and political union as well. For instance:

Section 2 provided for the retirement of the Puerto Rican coins then in circulation and the substituting of the coins of the United States.

Section 14 stated: "The statutory laws of the United States not locally inapplicable, except as hereinbefore or hereinafter otherwise provided, shall have the same force and effect in Puerto Rico as in the United States." These provisions were continued or reenacted by the 1917 Organic Act.

Within this framework of economic and political affiliation, a local government was to be established. The structure of government was spelled out in the 1900 act. It was a disappointment to Puerto Rico.

It was liberalized under the 1917 act. It has been gradually democraticized through subsequent amendments to the organic act. But to begin with, the government created in 1900 was composed of a governor, six heads of departments, and a supreme court, all to be appointed by the President of the United States. There was also a legislature composed of two houses, the upper to be appointed by the President of the United States, the house of delegates to be elected by the people. The six heads of departments were to be ex officio members of the executive council which was the upper

house. The five additional members without portfolio were Puerto Ricans. The governor appointed all officials in the district courts with the advice and consent of the executive council.

The 1917 act substituted the executive council with an elective senate and provided that four of the six department heads were to be appointed by the governor with the advice and consent of the senate. However, the attorney general and the commissioner of education were still appointed by the President of the United States.

In 1947, a great step forward, in the direction of full local self-government, took place. The organic act was so amended so that the governor appoints all heads of departments. The governor, himself, is elected by the people. The supreme court judges and the auditor of the island, however, are still appointed by the President.

The fundamental provisions regarding the application of Federal laws and regarding economic relationships were not changed.

It should be noted that in accordance with section 12 of the first organic act and section 6 of the 1917 act, all expenses incurred on account of the government of Puerto Rico for salaries of officials and the conduct of their offices and departments, and all expenses and obligations contracted for the internal improvement, or development of the island, are paid by the treasurer of Puerto Rico out of the revenue in his custody. The United States Government pays only for Federal establishments and services.

Federal tax laws do not apply to Puerto Rico. All taxes paid in Puerto Rico are covered into the insular treasury. Therefore, Puerto Rico, participating in Federal Government matters only through its Resident Commissioner, is not burdened with taxation without representation.

The President may exempt Puerto Rico from Federal laws which, because of local conditions, he finds inapplicable, provided they have not been made specifically applicable by the Congress.

Since 1900, Puerto Rico has elected a Resident Commissioner to the United States. Upon presentation to the Department of State of a certificate of election from the Governor of Puerto Rico, he is entitled to official recognition as such Commissioner by all departments of the Government of the United States. In 1904, the House of Representatives voted to extend all privileges of congressional membership to the Resident Commissioner of Puerto Rico. As a result, the Commissioner has ever since had a dual capacity—that of a Commissioner before all executive departments of the Government (especially before the Department of the Interior in charge of insular matters) and that of a Delegate in Congress. A Delegate is a Congressman without a vote.

Under section 11 of the organic act, the President is authorized to place all matters pertaining to the Government of Puerto Rico within the jurisdiction of an executive department of the Federal Government to be designated by him. The Department of the Interior has been so designated.

Under the Elective Governor Act of 1947, the rights, privileges and immunities of citizens of the United States are to be respected in Puerto Rico to the same extent as though Puerto Rico were a State of the Union and subject to the provisions of paragraph 1 of section 2 of article IV of the Constitution of the United States.

As aforesaid, tariff duties in Puerto Rico must be the same as in the United States. But, since it is the policy of Congress not to tax Puerto Rico, collections from customs are covered into the Treasury of Puerto Rico for use by the Government of Puerto Rico. As a matter of fact, the officials in charge of the customs are paid out of the revenues collected by them. They are not on the pay roll of the United States.

Puerto Rico makes its own internal revenue laws. However, it is provided by the organic act that merchandise shipped from the mainland to Puerto Rico shall not be discriminated against and shall be subject to equal internal revenue laws as domestic merchandise consumed in Puerto Rico. Merchandise shipped from Puerto Rico to the mainland is not subject to United States internal revenue laws, but it is subject to a tax equal to that imposed upon the like domestic articles in the United States. Collections under this tax are also covered into the Treasury of Puerto Rico.

This provision has led to a great deal of confusion. It is generally stated that moneys collected under United States internal revenue laws on Puerto Rican merchandise shipped to the mainland are paid back to Puerto Rico. As a matter of fact, such collections never find their way into the United States Treasury. They are collected in Puerto Rico. They are covered into the Treasury of Puerto Rico. They are collected under the law of 1900, not under United States internal revenue laws. By establishing the provision, Congress reconciled: (1) The principle of no taxation without representation, with (2) free trade, and (3) the necessary imposition of an equal tax burden on merchandise selling at either market, regardless of origin.

What is the present political status of Puerto Rico? To say that it is unincorporated territory is to put the question in the negative. It is not incorporated territory. But to say what it isn't is not to say what it is. Perhaps the best way to express it, is to say that the island of Puerto Rico is a dependency of the United States. It has a treaty status, akin to a protectorate, as a result of congressional determination. The United States exercises paramount political authority over Puerto Rico. The people of Puerto Rico constitute a body politic. They form a community of citizens with such rights and privileges as have been recognized by the Congress. They are United States citizens. They have the fundamental rights and privileges of United States citizens. But they are United States citizens living outside the United States, in a Territory under the sovereignty of the United States. Because of the democratic structure of the government that Congress has given them, because of the rights and privileges the Puerto Rican people exercise and practice, they live in a manner comparable to that of the inhabitants of any State. However, the relationships between the island and the Federal Government are not the same as those between the Federal Government and a State. In the United States political system, the status of a State is determined by the Constitution of the United States; the status of Puerto Rico, on the other hand, follows congressional determinations, implementing a treaty. Paramount political authority over Puerto Rico rests with the United States, subject to the terms of the treaty and applicable provisions of the Constitution of the United States.

On March 13, 1950, I introduced H. R. 7674, It is a bill calling for the organization of a constitutional government by the people of Puerto Rico, within such terms as provided by said act. It begins with the statement that the Congress of the United States, by a series of enactments, has progressively recognized the right of self-government of the people of Puerto Rico. It points out that under the terms of these congressional enactments, an increasingly large measure of self-government has been achieved and that, fully recognizing the principle of government by consent, this act is now adopted in the nature of a compact, so that the people of Puerto Rico under its terms, may organize a government pursuant to the constitution of their own adoption.

The people of Puerto Rico, under the bill, are free to express their acceptance of the act if they see fit. Having accepted its terms, they may proceed, within them, to adopt a constitution in accordance with procedures to be prescribed by the laws of Puerto Rico. The constitution, once adopted, would be transmitted to the President of the United States. If the President finds that the Puerto Rican Constitution conforms with the applicable provisions of the act and with applicable provisions of the Constitution of the United States he is authorized to transmit the constitution to the Congress. The Congress might approve or disapprove the constitution the Puerto Rican people may have agreed upon. If Congress should adjourn without having acted during the session when it was transmitted, the constitution would be considered to have the approval of Congress.

The Puerto Rican Constitution would create a government republican in form and would include a bill of rights. Upon its becoming effective, such sections of the present Organic Act as create the local government in Puerto Rico would be superseded by the Constitution of Puerto Rico, and, therefore, repealed. On the other hand, such sections of the organic act as are not thus repealed would be continued. They would thereafter be known as the Puerto Rican Federal Relations Act, which would continue present economic relations and the application of Federal laws as heretofore. The section establishing the fact that the Government of Puerto Rico would be maintained by local taxes would also be continued. Puerto Ricans, of course, would continue to be citizens of the United States. The paramount political authority of the United States under the treaty, and in accordance with the United States Constitution, would continue undisturbed.

This act, calling for a local constitution for Puerto Rico, would have the effect of elevating such provisions of law as create the present political and economic relationships between Puerto Rico and the United States to the nature of a compact between a community of United States citizens and their Federal Government, very much in the way the old Northwest Ordinance created the first territorial government and relationships between the Federal Government and the inhabitants of the Territories. The people of Puerto Rico would have accepted such relationships of their own free will and would proceed to organize their local Government within the terms of such relationships as so accepted. The rights and privileges which the people of Puerto Rico would exercise in the organization of their Government would stem not from a law of Congress, but from a constitution which they, themselves, would have shaped, framed, and agreed upon. This is basic in the American philosophy of government.

Again, they would have consented to the terms of relationship with the United States, as established by Congress, and therefore to the application of the Federal Relations Act, much as a new State accepts the terms of an enabling act for its admission into the Union. A new form of federation would have been created. The inhabitants of Puerto Rico, unincorporated territory, would organize themselves politically in accordance with what would be comparable with a State constitution within a federative structure similar to, but not the same as, that created by the United States Constitution, for member States of the Union.

The Federal Relations Act would take the place of such provisions of the Constitution of the United States as establish the relationship between a State and the Federal Government, which do not apply in the case of Puerto Rico. Fundamental provisions of the Constitution of the United States would apply equally in both cases. From the status

of a dependency and protectorate, or, as it is worse called at present, a possession, Puerto Rico would ascend to the position of a federated commonwealth, albeit not federated on the same basis as a State.

The two fundamental differences between the status of Puerto Rico and that of a State, both stemming out of the fact that Puerto Rico is not incorporated, would be (1) that Puerto Rico would not be equally represented in Congress nor would it participate in national elections; (2) that Puerto Rico, although included within the customs and economic union, would not be subject to Federal taxation.

Although we would thus escape taxation without representation, it could be held that there would continue the situation of legislation without representation. To a certain extent, this is true. With a few exceptions, Federal laws would apply to Puerto Rico, in most instances equally as in the States, despite the fact that the people of Puerto Rico are not equally represented in Congress as are the people of the States. But it could not be claimed that Puerto Rico is not represented at all in Congress. The Resident Commissioner is a Member of the House of Representatives. He serves in committees. He introduces bills, and he may engage in debate.

On the other hand, the President is authorized to declare inapplicable to Puerto Rico, at the request of the Government of Puerto Rico, any Federal law not specifically made applicable to Puerto Rico by Congress, which he may deem inapplicable by reason of local conditions. Some laws, such as internal revenue laws, are declared inapplicable by the organic act itself. Thus, the area of legislation without representation is not as broad or significant as it might at first appear. To this area of application of Federal laws, Puerto Rico would have consented on accepting the act.

Puerto Rico has developed an economy based on such relationships with the United States as have existed for 50 years. To separate itself from the United States, to organize itself as an independent republic, would mean pulling the rug out from under our feet. It would mean the collapse of the economy of Puerto Rico. To attain statehood and to bear the burden of Federal taxation would deprive Puerto Rico of all means of maintaining its State government. It would mean the quick collapse of that State government and a severe reduction in available resources for much-needed development.

The two solutions for the problem of Puerto Rico is status which for 50 years has been the theme for academic discussion in Puerto Rico, are both unsuited to present circumstances of Puerto Rico. To insist on either, exclusively and for anything but the possibility of either in the indeterminate future, in view of the unsurmountable obstacles which either one would meet now, would simply mean the indefinite postponement of Puerto Rico's democratic development.

With H. R. 7674, we have found a new approach—an approach which allows for the democratic development of Puerto Rico within its present relationships, simultaneously with Puerto Rico's advancement to a higher level within the Union and assured economic stability and progress.

Moreover, such a proposition would be consistent with the declaration entered into by the United States upon its ratification of the Charter of the United Nations. I quote from the Charter:

"Members of the United Nations which have or assume responsibilities for the administration of territories whose people have not yet attained a full measure of self-government, recognize the principle that the interests of the inhabitants of these territories are paramount, and accept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, and, to this end: (a) * * * (b) to develop self-government, to take due account of the political aspirations of its peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory, and its peoples and their varying stages of advancement."

H. R. 7674 is the answer to such a challenge in the case of Puerto Rico, under present circumstances. In their development from a colonial status to full political maturity within a monarchial system, such as the British Empire, or as it was with Spain, self-government without separation may be attained by former colonies when they ascend to dominion status on the basis of a common loyalty to the person of the king. Within a republican system, such as that of the United States, self-governing peoples may not maintain union among themselves through the symbol of a common loyalty to the person of a king. There are no kings in our Republic. But there is citizenship, our common United States citizenship. And there are other things: our common loyalty to our citizenship; our common devotion to our republican institutions and principles, under the Federal Constitution; our common devotion to the security of this great federation, of which we are all a part; our obedience to laws enacted by our freely chosen representatives or freely accepted by the people at the time they accept their terms of relationship.

Thus, under H. R. 7674, our present political and economic relations are continued and reaffirmed while government by consent, both at home and at the Federal level, is attained. In that way, we may occupy a dignified station within the Union, in a manner suitable to our circumstances. Thus, we shall continue to be united in common loyalty to our institutions, to our citizenship, and to our Christian way of life, under our local constitution and our Federal Constitution.

Investigation of the Coal Industry

EXTENSION OF REMARKS

OF

HON. ANDREW JACOBS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. JACOBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the magazine America:

INVESTIGATE COAL

Recent reports from Washington indicate that Congress is losing its enthusiasm for an investigation of the coal industry. Having worked themselves up to a high pitch of excitement during the coal strike, the legislators appear to be suffering the inevitable reaction. With the miners back on the job and operations again normal, they welcome the repose that nature decrees after conflict and crisis. The solons are the more disposed to postpone serious endeavor because both the United Mine Workers and the coal operators have made known their opposition to any investigation of their sick industry. In fact, the operators deny with great vehemence that the industry is sick at all. (A decade ago, before the war brought artificial prosperity to the coal fields, they whistled a different tune.)

We trust that the Congress will not be turned aside from its plain duty either by its own indolence or by the opposition of self-interested men who deserve small consideration. Though there is peace of sorts in the industry, the law of supply and demand continues to operate to its undoing. On a 5-day schedule, the miners can produce weekly 3,500,000 more tons of coal than the country can consume. At that rate, stock piles depleted during the strike will be rebuilt within 6 months. Then what?

Are we destined to undergo again the old cycle of cutthroat competition, bankruptcies, and mounting unemployment? The Federal Power Commission reports that 13,000,000 homes and factories are now using natural and mixed gas and that the number is constantly growing. The conversion of the railroads—traditionally one of the largest users of coal—from steam to Diesel engines is in full swing and will not be reversed. The economic plight of the coal industry is certain to become much worse before there is any sign of improvement. If Congress remembers that our reserves of oil and natural gas are limited, that coal remains our most abundant source of power, it will not delay an investigation which has great significance for our future security.

What the So-Called Kerr Natural-Gas Bill Does to the Consumers

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to place in the Appendix of the CONGRESSIONAL RECORD for the use of my colleagues and the reading public the following enlightening and timely article sent to me by the Honorable Charles Rhyne, executive secretary and general counsel of the National Institute of Municipal Law Offices, 730 Jackson Place NW., Washington, D. C.

It presents succintly the views of the municipalities of the Nation in regard to the so-called Kerr natural-gas bill and the baneful results which may be expected to follow the permitting of same to be enacted as a part of the law of the land.

The article follows:

A VETO OF THE KERR BILL PLEASE, MR. PRESIDENT

I want to talk about the Kerr bill which passed this House 176 to 174 last Friday night.

In opening my discussion of this important matter I would first like to get clearly before the House an identification of the parties to the issue which you just decided. On one side we have the natural gas producers of an estimated 86 percent of the natural gas in the United States. All of these natural-gas producers (since they do not own pipe lines) are exempted by this bill from the power conferred upon the Federal Power Commission by the Natural Gas Act of 1938 to set aside unreasonable rates charged consumers of natural gas. The great oil companies of the Nation, like Standard Oil, Phillips Petroleum et al., are the chief beneficiaries of this bill because it is estimated that around 35 of the large

companies control nearly 70 percent of the natural gas which will be exempted from all control by this bill.

On the other side of the issue here involved the only clearly identified party is the consumer or user of natural gas. It is estimated that some 50,000,000 consumers will soon have the benefits of this very wonderful product—and there can be no doubt but what natural gas is the cleanest, best fuel available for the purposes to which it is adapted. The opposition of the consumers to the Kerr bill, outside Congress, was voiced chiefly by city officials. These city officials have no possible personal benefit to gain by opposing the Kerr bill—except that their voters may possibly give them a stronger support in their next election because of their opposition to the unjust enrichment of natural-gas producers at the expense of these consumer-user-voters.

HOW CITIES GOT INTO THIS FIGHT

From very ancient times cities have been looked upon as the proper party to protect their residents against matters which affect the whole number of these residents. This has been especially true in the case of utilities and businesses affected with a public interest. Early examples are found in the instances of city regulation of the rates charged by ferries. Private persons would construct ferries across rivers, all roads would lead to them and then when the people were entirely dependent upon the ferry the owner thereof would start raising his price. They would often charge unreasonable rates and charge different rates to different persons. Cities stepped in to regulate these ferry rates and prevent such practices by fixing reasonable rates, yet rates which assured the ferry operator of a fair return on his investment. The courts sustained cities in their regulation of the reasonableness of rates of ferries and their regulation prohibiting discrimination.

From the very beginning of local government in the United States the cities have fulfilled this traditional role as protectors of the people against unreasonable charges of businesses affected with a public interest. The Supreme Court of the United States has repeatedly recognized that cities are the "proper persons" to perform this function. In the case of *In Re Englehard*, 231 U. S. 646, the Supreme Court of the United States in 1914 stated that the city of Louisville "was the proper party" in a telephone rate case "as representative of all interested," and in fact held that the city should be the exclusive representative of all subscribers in a case involving a contest over telephone rates, so that an individual could not intervene for the purpose of representing other subscribers.

In the case of *O'Connell* v. *Pacific Gas & Light Company* (19 Fed. (2d) 460) the Court again holding that the city was the exclusive representative of consumers in rate litigation, said, in part, "The appellant (consumer) is represented in the litigation by the city and county of San Francisco, as are all other consumers of gas whose rights are involved. * * *"

In the case of *Wright* v. *Central Kentucky Natural Gas Company* (297 U. S. 537) the Supreme Court of the United States held that all consumers were represented by the city of Louisville in settling certain rate litigation, the Court holding:

"In making the rate settlement as well as in making the original franchise contract, the consumers are represented by the city."

The cases are legion to the same effect both in the Supreme Court of the United States and other jurisdictions. The law and the practice is certainly well established that cities are the legal and normal representatives of their residents in utility matters.

CITIES WERE AMONG THE CHIEF SPONSORS OF THE NATURAL GAS ACT OF 1938

The Natural Gas Act of 1938 was a direct result of the lack of jurisdiction in State utility commissions to control unreasonable rates charged for natural gas shipped in interstate commerce. Chief advocates of the bill were former Mayors Miller of Louisville, Ky., Smith of Detroit, Mich., Scully of Pittsburgh, Hoan of Milwaukee, and Burton (present Associate Justice of the Supreme Court of the United States) of Cleveland. Ohio cities, including Cleveland, Dayton, Akron, and Columbus, were then among the first cities to file petitions before the Federal Power Commission to reduce unreasonable rates for gas shipped to them in interstate commerce. Missouri, Michigan, and other cities filed similar petitions at about the same time. More than 100 cities have appeared in rate litigation of various kinds before the Federal Power Commission since 1938 and the rate reductions to consumers in those cities exceed $50,000,000 per year. The Kerr bill would of course scuttle the power of the Federal Power Commission to make such reductions and would assure gas producers of a return of much of this $50,000,000, even though the pipe-line companies are also involved and those pipe-line companies are not affected by this bill.

City officials are the best informed public officials in the country on natural gas and the facts of the Kerr bill because they have worked in this field over a long period of time and their experts are fully informed upon all the technical ramifications of this extremely technical subject. Is it any wonder that these cities would like to retain in the Federal Power Commission the jurisdiction conferred to prevent unreasonable prices for natural gas rather than leave the fixing of prices to the gas producers themselves?

HOW CITIES HAVE OPPOSED THE KERR BILL

City attorneys are the city officials who have appeared for cities in utility rate regulation cases. Most of the experts of cities on utility maters are either the city attorney or one of his assistants. In the larger cities of the Nation, their law departments usually contain several attorneys who have devoted their lives to utility litigation as representatives of users and consumers within the municipalities. These people are experts and are in a position to evaluate the effect of all proposals of utilities and they have spent years in representing cities on such proposals. Utility regulation is so technical that most city officials are not informed as to this subject and they naturally rely upon these experts who are informed by experience and training in this field. It was these attorneys who represented cities in securing the rate reductions under the Natural Gas Act and it is these attorneys who have represented and who are representing cities in connection with the tremendous expansion through new pipe lines of the use of natural gas all over the United States.

It cannot justly be said that these attorneys are prejudiced except in the public interest, and they are certainly most sincere when they advise city officials that the Kerr bill is not in the public interest because it would increase natural-gas rates tremendously. I therefore believe that the motives of these city officials are above reproach and that you, Mr. President, should listen most carefully to the advice they give.

At the hearings on the Moore-Rizley bill and on the Kerr bill cities were represented chiefly by Miss Anne X. Alpern, city solicitor of Pittsburgh, Pa., David A. Proctor, city counselor of Kansas City, Mo., and Jerome M. Joffee, special utilities and legislative counsel of the city of Kansas City, Mo. These people are among the best informed in the United States on natural gas and its problems, and you will find their testimony set forth in full in the hearings most interesting and helpful in your consideration of this bill.

WILL THE KERR BILL INCREASE THE PRICE OF NATURAL GAS?

My attention has been called to a letter signed by Emby Kaye of Tulsa, Okla., which appears on page 10 of the March 16, 1950, edition of the Washington Post. In that letter Mr. Kaye quite correctly points out that the Federal Power Commission has never exercised its right to control the price at which gas in the field is sold. He also points out that while the price of natural gas has formerly been 3 to 4 cents per thousand cubic feet, it has recently risen to 10 cents and I might add I am informed that in some instances it has gone up to 13 cents and above and will go even higher under escalator clauses contained in nearly every contract for the sale of natural gas. (Under the usual escalator clause the producer will automatically get the highest new price paid any producer in this area. The effect of this is obvious.)

These price increases described by Mr. Kaye have come since World War II, and after pipelines have been run into California, New York, and throughout the South, West, and Midwest, with cities changing over from manfactured gas to natural gas at an expense of millions of dollars to consumers. All of this tremendous expansion came about because of the price of natural gas has been low in the past.

The producers of natural gas who are under Federal Power Commission jurisdiction, according to reliable public records at the Federal Power Commission, are practically guaranteed at least 6 percent and many of them have made much more than 20 percent on their investment under the present law which the Kerr bill emasculates. That natural-gas producers are making a lot of money and anxious to sell their gas is evidenced by the tremendous increase in applications to serve new cities just referred to. There is no lack of gas available to serve these cities, but now that these cities have either secured or will soon secure natural gas, it is quite obvious that the producers, through the Kerr bill, want to raise the price by getting out from under control of the price they will charge. This action is inequitable, to say the least, and just as in the case of the ferry operator referred to above, these natural-gas producers have city natural-gas users at their mercy. The only hope for the consumer is some over-all national control of natural-gas prices as local and State control cannot be effective under our Federal Constitution.

The users can only buy gas from the pipelines, who have in turn purchased it from the natural gas producers. They cannot go down to the corner filling station or any other place and buy natural gas. It must come through the pipelines, and must come from the only people who have it—the people who would be exempted from control by the Kerr bill.

It has not been necessary in the past for the Federal Power Commission to exercise the jurisdiction it has had under the Natural Gas Act to cut down on the prices charged by those now classified for propaganda purposes as "independent" gas producers under the Kerr bill, because, as Mr. Kaye pointed out in his letter, the price up until recent months has been most reasonable, and it is only now that the demand has been tremendously increased that the price has doubled and tripled.

The Federal Power Commission has moved in to investigate the doubling of the price of natural gas by Phillips Petroleum Co. to the city of Detroit, and to certain Wisconsin cities, including Milwaukee and Madison. This Phillips case will be the first test of the Commission's jurisdiction to roll back

to a reasonable level the charges made by the so-called "independent" Phillips Co.—one of the largest producers of natural gas in the United States. Since this case is still pending and will not be heard until May 1, 1950, it seems that at least, Mr. President, you should veto the Kerr bill so as to delay action until we find out just what the Commission will and can do in the Phillips case. Perhaps we will need to strengthen the Commission's jurisdiction when that case is over. If you sign the Kerr bill, of course, the Phillips case is ended. Was that one of the big reasons for the tremendous hurry on this bill?

NATURAL GAS IS A COMMODITY AFFECTED WITH A PUBLIC INTEREST AND SUBJECT TO PUBLIC CONTROL

I do not think it can be successfully argued that regulation of the price of natural gas is the regulation of a business which is not "affected with a public interest." The Kansas Public Utility Commission has stepped in to fix minimum prices of natural gas at 8 cents recently on the theory that the price is affected with a public interest and subject to public control. I do not think anyone will question the legal conclusion that since natural gas producers enjoy a monopoly under public protection in that they have an assured market and a guaranteed reasonable rate of return it is a business affected with a public interest. No one can, without a certificate from the Federal Power Commission step into a particular city and sell natural gas. If it were not for the privilege flowing from this monopoly certificate granted by the Federal Government these producers would not be in the unique position they enjoy. There are not several natural-gas mains laid in one city with each pleading with the householder "Please buy from me." There is only one line serving each user and that company has a monopoly for that service. The user must buy from him or do without natural gas.

A natural-gas company will thus know that all of the natural gas it can produce will come to Washington or New York or whatever market the pipe-line company to which it sells serves. There can be no competition in Washington or New York between natural-gas producers, because only one pipe-line company and only one local utility company is available to a particular user. Certainly, as already stated, on the local distribution level, the consumer cannot pick and choose between utilities to serve him natural gas. So the natural-gas producers have a monopoly and an assured market.

To try to camouflage the issue before you, Mr. President, by referring to natural gas as "local production" and terming the jurisdiction to roll back unreasonable prices as an "interference with local business" is to torture words out of their natural meaning and circumstances where they have no application. The natural-gas producers, therefore, unlike the usual private businessman has an obligation to the consumer who must use his product growing out of this monopoly and assured market, and perhaps you on the other hand have an obligation to prevent the consumer from getting natural gas too cheaply at the expense of the producer, while at the same time carrying out your obligation to prevent the producer from charging too high a price to the consumer. The only way this balancing of interests of the producer and consumer can be brought about is through the exercise of our lawmaking jurisdiction under the Federal Constitution as we have done under the Natural Gas Act of 1938 which I have already referred to. There must be some impartial public body to resolve in a fair manner the conflicting interest between users and producers and that must be a Federal agency because of the Nation-wide operations in this field. If you withdraw the protecting cloak of Federal regulation to prevent unreasonable natural-gas prices, consumers are defenseless. Surely such a result cannot be allowed in good conscience. And there is no ducking this issue, Mr. President. Regardless of how many Democrats and how many Republicans voted for or against this bill, that is past now and the entire responsibility is yours. It is to you that the consumers of the Nation now look for protection. You either protect them or you let them down. There is no middle course, as everyone knows the bill cannot be passed over your veto.

THE TAX LOOPHOLE AND THE KERR BILL

Recently you recommended that the loophole in the income-tax law whereby oil millionaires are exempted from income taxes be plugged. In your message you demonstrated, for example, how these oil millionaires escape nearly all taxes on the millions they are now making. In fact, it is obvious that the only way one can become a millionaire in the United States today is through the ownership of oil and gas wells through this tax loophole.

My attention has been called to a report filed by one of the smaller gas-producing companies which gives its gross earnings, income taxes, and net income, as follows:

	Gross income	Income taxes	Net income
1949	$14,930,150	$6,949	$1,218,627
1948	12,538,058	29,053	1,366,464
1947	8,095,635	15,000	344,903
1946	6,206,101	200	106,298
1945	7,029,622	406,500	1,113,051

It seems to me that the people of the United States are already giving such a tremendous subsidy to oil and gas producers through the income-tax loophole that they should not be asked to contribute a further subsidy in the form of the estimated $200,000,000 to $500,000,000 per year which the Kerr bill would cost.

There can be argument about the amount of the increase, as it is based upon a guess by experts about how much the increase will be in the wholesale rate. As Mr. Kaye pointed out above, the wholesale rate has increased from 3 and 4 cents to more than 10 cents since the war, and it seems reasonable that the increase from the Kerr bill, brought about by the removal of all possible control of the wholesale rate paid to 86 percent of the producers will be at least 5 cents per thousand cubic feet. It is certainly arguable that the increase will be double 5 cents or even higher. At 5 cents the increase would amount to the $200,000,000 per year, and the higher increases would amount to increases accordingly.

I have already pointed out that oil and gas companies are making what many businesses would consider an excessive rate of return on their investment now. They have a guaranteed market and cannot possibly lose any money because when they drill a dry hole the expense of that is taken off of their all-too-low income tax as a business loss. It would seem to me to be a good idea that this Kerr bill be discussed at the time we consider the elimination of the tax loophole now enjoyed by these gas and oil companies. A veto would enable that joint consideration.

There simply must be a limit to the subsidy which a particular industry receives—especially an industry which is based upon nature's bounty which was put here for the benefit of all the people rather than the enrichment of a few.

I therefore most earnestly suggest that the Kerr bill should be vetoed as it is unjustified, unjust, and unreasonable in the extreme. I do not think that these oil and gas producers who have led cities on by the hope of receiving this wonderful commodity for a reasonable price should be allowed now to change their story, escape all possible regulation now that they have city users at their mercy and charge whatever prices the traffic will bear. I urge you to make a careful survey of the reaction of the users, or soon to be users, of natural gas to this bill. You will certainly hear from those users in the future if you sign this bill. Oil and gas producers are receiving more than fair treatment under the Natural Gas Act of 1938 and consumers are entitled to the same consideration—we have millions of consumers and only a very, very few gas companies. I do not mean to suggest that the millions should profit at the expense of the few. Each should be assured of fair treatment by the only device known to our constitutional system of government under the law, that is, the right to reasonable rates determined after notice and hearing by an impartial public agency such as we now have under the Natural Gas Act of 1938.

Please, Mr. President, I know that you have always thought of the little defenseless consumer, rather than the special interests back of the Kerr bill. You were elected by these little people. You are their man—not the man the oil millionaires would have elected. Your veto of the Kerr bill, I think, will tell these little people that you are still their man.

Employment for Older People

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I should like to offer some additional economic and statistical data to support the resolution I introduced on February 15, 1950, House Resolution 473, in which I asked that a select committee be created by this body to study the problems of the aging.

Employment for older people is one of the fundamental problems of aging. Continuance on a job gives the older person status or recognition among his fellows, provides financial security for him—or her—and his wife, enables him to maintain his home and preserve his health for a longer period of time, gives him something to do and opportunity to be with other people. From society's point of view, the employed older person is an economic asset, is a producer of goods or services needed by society, and is a more contented individual.

The question of employment for older people is complex. It is receiving a good deal of attention at the present time. Recognition of the problem is bringing about a reversal of the opinion that older workers should retire at an arbitrary age such as 60 or 65. There are, however, many problems to be solved before the trend in employment of older persons begins to rise.

One of these problems is the attitude, opinion, or superstition that older workers are less satisfactory than younger ones. The New York State Joint Legislative Committee has made thoroughgoing studies and lists five reasons why

employers refuse to hire older workers. These are:

1. A widespread belief among employers, but denied by many authorities, that workmen's compensation rates go up when the elderly are employed.

2. A widespread belief, denied by authoritative studies, that older workers are subject to higher accident rates and endanger other workers.

3. A widespread belief, unsupported as yet by facts, that the public prefers younger workers for jobs requiring public contacts, such as waitresses, clerks, office workers, salesmen, etc.

4. A widespread belief, repudiated by surveys made by our committee, that the elderly cannot produce as profitably as younger workers. Our committee found that when employers studied the matter three out of four agreed that elderly workers produce as much as younger workers, that they are absent less than younger workers.

5. A widespread belief that it is unprofitable to invest in the training of an older worker. Since the man of 65 has over a decade more of life today, it behooves industry to reexamine this belief.

All in all, our committee insists that many of these notions that militate against the hiring of older workers have no basis in fact, others are based on grossly exaggerated situations, and all could be combated successfully by progressive personnel measures.

Compulsory retirement based on chronological age rather than functional age—ability to do the job—is one of the most vicious factors in the life of older workers. Since there is coming to be a tendency to stigmatize organizations that have compulsory retirement programs, it is difficult to get reliable information about policies. Quasi-scientific surveys, conducted by managerial groups, have shown low proportions of firms with such requirements. A more rigorous survey by the New York State Committee showed, however, that 60 percent of all firms with a pension plan and 30 percent of all other firms had a mandatory "get-out" rule based on chronological age. About 80 percent of the firms with retirement policies set the age at 65. The National Industrial Conference Board studied 200 firms and found 65-year retirement policies in effect in 62 percent of them.

Perhaps even more vicious is the reluctance to hire older persons who become unemployed or who wish to change jobs. Discrimination often begins at 35 years of age. This low upper-age limit is said to be particularly widespread in California at the present time.

One way of measuring the effects of age discrimination is to study the distribution of unemployed who, at any one time, have exhausted their 26 weeks of unemployment compensation benefits. During a typical month in one employment office area, only 9 percent of those who had exhausted their benefits were under 45 years of age. Ninety-one percent were 45 or more and 54 percent were 65. The older worker has a very hard time getting back.

Unemployment insurance data show in general that—

(a) Older persons stay unemployed longer than younger persons.

(b) The "exhaustion rate" of unemployment insurance benefits increases as the age group rises.

(c) There is a sharp rise in the exhaustion rate for men 55 or over as compared with younger men.

(d) There is a marked increase in the unemployment period of women 35 and over as compared with younger women.

Yet the New York State committee was forced to conclude as follows:

Our committee is convinced that the rampant prejudice which bars many of our elderly workers from employment is sending many of our oldtimers to their graves before their time. We are permitting the rust of valuable skills and the loss of valuable judgment and advice. And we are removing from our productive forces some of our most brilliant and capable men and women.

The committee found—

In the survey conducted by our staff, 39 percent of the firms responding admitted they had formal age barriers, and that these obstacles to employment of the elderly ran from as low as 35 years of age to a high of 75 years of age. Public utilities, banks, and metal concerns ranked prominent among those having formal age barriers. The bulk of the companies with age barriers were large business firms. It is interesting, in this connection, to note that it was the public utilities that first adopted pension systems in this country and today virtually all public utilities have retirement programs.

Anthony Monaco, 49, was arrested on June 25, 1943, for holding up the Guttenberg Bank & Trust Co., in New Jersey. When captured, he said, "I was disgusted with everything. I could not get a job because employers do not want men who are over 40." Fortunately, most of our citizens are law abiding and will not resort to crime, but the menace that age barriers can be lies not only in the loss of production, not only in the human tragedies produced, but also in the threat to the stability of our society.

The widespread reluctance to employ older people exists despite evidence that it is an unreasonable reluctance or based on a foolish superstition. The late Edsel Ford said, during World War II:

As long as a man has judgment and ability to drive an automobile, he has the judgment and ability to operate an industrial machine. It may be true that older men are not so fast nor so strong as those in the 20–30 group, but this is more than offset by their experience, their cooler, more mature thinking, and their accuracy.

Industry must make up its mind now that it is going to emphasize the employment of those persons in the 40-and-upward group, or else the younger people will have to support their elders and themselves. That merely will aggravate the situation, for it will mean that persons will be marrying later in life and be in their middle years before the period of accumulation occurs.

Economically, it is more sound to keep able-bodied men and women earning incomes and buying goods than to place arbitrary age barriers and permit them to lapse, beyond these barriers, into senility and inaction, which is not only unfortunate but economically costly. As a matter of fact, men grow old not so much by the passage of time as by the shadow of hopelessness, the conviction of uselessness. Those who look forward to tomorrow's constructive activity have no time to grow feeble. Courage is not a matter of age or physical condition.

The Institute of Industrial Medicine at New York University-Bellevue Medical Center interviewed a number of business executives and came up with the conclusion that—

Almost invariably it was found that the worker 45 or older had a definite advantage over the younger worker in conscientiousness, actual ability, and attendance.

The eminent student of the problems of the aging, Dr. Edward J. Stieglitz, has said:

The changes which come (with age) are not all decline. I think there's a general opinion that it's all downhill. Speed of reaction does diminish, but endurance increases in certain capacities. It is not without significance that the records for all the sprints are held by youngsters, but the marathon records are held by men 38 to 45 and have been for many years. Endurance of a certain type, for the long, slow grind, the continuous type of labor situation increases. As speed declines skill is increased with practice, and as strength declines judgment increases. The mental changes are not all decline either. There is some depreciation in the ability to learn but it is extraordinarily less than the average individual assumes.

An outstanding industrial executive, Dr. Theodore G. Klumpp, points out that—

Our society has been quite illogical and inconsistent in its attitude toward the older worker. On the one hand it is apparent that we have no objection to electing and appointing older individuals to positions of the greatest responsibility in government, business, and the professions. And yet on the other hand, as far as the rank and file of workers is concerned, we have no objection to the imposition of blind, and unselective compulsory retirement rules which automatically eliminate those in the ranks who have reached the same age regardless of their fitness, ability, and contribution to the group for which they labor.

Senator Desmond—New York State—says that—

Even if some of the objections raised by industry to the employment of older workers are valid, the oldsters offer compensatory advantages over the younger employees. They have more experience which eliminates waste motions; they are less inclined toward outside distractions; they have greater conscientiousness arising from longer service and more mature attitudes.

The following are excerpts from the findings and recommendations of the New York State Joint Legislative Committee on Problems of the Aging—Legislative Document No. 32, 1949:

NEVER TOO OLD TO WORK

THE PLIGHT OF OUR ELDERLY

Many of our elderly are barred from employment by age barriers which bear no relation to ability. Others, beneficiaries of industry's billion-dollar-a-year pension systems, find themselves emotionally unfit or unprepared for retirement and as a result decay mentally and physically at a rapid rate.

Our hospitals lack adequate facilities for the chronically ill. Our nursing homes, which range from ill-kept boarding houses to admirably staffed and maintained domiciles, are unsupervised. Private homes for the elderly have huge waiting lists, but often the oldster cannot wait; he needs a home now. Many of our public housing projects bar older couples and single oldsters.

Old-age-assistance spending rises steadily but is far from adequate in providing a decent level of living to our unfortunate oldsters. Our old-age-insurance program still reaches only a small proportion of our senior

citizens. And our country has not yet made up its mind whether it wishes to continue our dual insurance-assistance program of financial aid to the elderly or substitute a single pension system.

Our mental hospitals are jammed with senile oldsters who in many instances do not need the high-cost care of prison-like institutions but only the occasional supervision of a nurse or housekeeper. Our communities provide practically no facilities where the emotionally distressed senior citizen can obtain psychiatric help which might prevent his being institutionalized (p. 5).

* * * * *

The significance of such population trends was indicated in our first report. Social scientists foresaw an increase in the political influence of the elderly, the development of new types of consumer goods aimed at the old-age market, the redesigning of homes, and other changes.

The strength of pro-pension movements was high lighted by the fact that whereas in 1940, persons 50 and over comprised 32 percent of our voting population, in 1960 this age group will constitute 42 percent of the voters (p. 8).

* * * * *

Successful retirement is one of the most difficult achievements of a lifetime. Retirement, improperly handled, can shorten your life, turn you into a nervous wreck or unexpectedly thrust you on relief rolls. Yet few of our 26,000,000 Americans who are 45 to 64 years old are prepared for the hazards of retirement. The myth that retirement from useful activity is desirable must be exploded.

State Health Commissioner Herman E. Hilleboe has emphasized that the provision of pensions is all very well, but nothing is done to lessen the psychological shock and fear that comes when one is, so to say, thrown on the economic scrap heap. Geriatricians are virtually unanimous that premature retirement while still vigorous can be a major disease. Our own committee believes that no healthy man should retire until he is fit not only economically but also emotionally to retire.

America must learn a new concept of retirement. If this retirement period is not to become one of pain and disease, it must be one of useful activity, if not of useful hobbies then of continuation of work, perhaps on a more moderate level, perhaps involving part-time employment.

Industry would be wise to review its retirement policies now, so that they can be considered in an atmosphere of quiet cooperation rather than wait until later when sharp disputes may arise around this issue.

In "birthdays don't count," we cited the views of various authorities on this problem. The consensus was that retirement, poorly executed, can become a major disease and cause death, just as certainly as can cancer, and that—

1. There is no chronological age that should predetermine retirement.

2. You should retire only when you can afford to, have to, or want to, due to inability to continue, and then be certain you don't merely vegetate, but retire to some worthwhile activity (p. 15).

* * * * *

Our committee urges that the Federal Social Security Administration utilize its vast facilities not only for the payment of insurance checks to our aging population, but to educate the recipients in their health needs, and the need for keeping active and useful in retirement. In other words, our committee believes the Social Security Administration has a tremendous opportunity to serve not merely as a retirement-check mailing medium, but also as a channel for distribution of needed health literature (p. 22).

Frontiers in World Health

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. BIEMILLER. Mr. Speaker, I am sure that you and the gentlemen of this House are all aware of the significance of World Health Day which is being celebrated this week on April 7. There is no other one thing more important to the economic development and to the encouragement of democracy in all the peace-loving nations of the world than freedom from disease and disability. Sick men cannot work, and therefore cannot contribute to their country's economic betterment. Sick men are unhappy men, and therefore are the most susceptible to the hyprocritical promises of better conditions under totalitarian regimes. It is not only humanitarian to do everything in our power to help better the health of the peoples of the world, it is an intrinsic weapon we can use in our battle to protect and extend democracy to all corners of the globe.

Much has already been done to combat disease throughout the world. The United States has played a leading part in this successful fight. But there is still much more to do, much more that can be done, by working with and strengthening existing organizations, by helping individual countries directly, and by carrying out President Truman's magnificent proposal—his point 4 program—to share our own knowledge and techniques with the less privileged areas of the world.

Dr. Leonard Scheele, the surgeon general of the United States Public Health Service, recently made an address ably presenting the public-health problems that confront us, the encouraging counterattacks that have already been made against disease, and the tasks that lie ahead in advancing the frontiers in world health.

Under unanimous consent, Mr. Speaker, I include this address in the Appendix of the RECORD:

FRONTIERS IN WORLD HEALTH

(Address by Dr. Leonard A. Scheele, Surgeon General, Public Health Service, Federal Security Agency, February 23, 1950, at the Round Table Club, New Orleans, La.)

Tonight I want to talk to you about the aggressive world counterattack against disease, which I believe is one of the most encouraging recent developments on the international scene.

This counterattack is urgently needed. Today at least two-thirds of the people of the world live in areas in which they are the daily prey of preventable disease. Last year, for example, at least one and one-half billion people of the world's total population of two and two-thirds billion were afflicted with illness. These ill people—notably concentrated in Asia, Africa, and Latin America—are in desperate need of more adequate health services.

Millions of them die needlessly each year. Hundreds of millions have their energies sapped by debilitating diseases which make it impossible for them to better their way of life.

Disease, moreover, is on the march. In Africa, for example, where close to 4,500,000 square miles are already rendered relatively uninhabitable by sleeping sickness, additional areas are now threatened.

FIGHT INFECTIOUS DISEASES EVERYWHERE

The health problems of the people of the economically underdeveloped areas are the common concern of the United States and the other nations of the world. Our interest is not only humanitarian. The United States, for example, has an immediate direct concern in the attack on infectious diseases at their source. Since the beginning of this century it has been increasingly recognized that the only long-range defense against the spread of disease across national boundaries is the eradication of epidemic diseases on a global basis.

We are also urgently interested in aiding the people of the underdeveloped areas to meet their health problems because improvement in their health will spur their economic development.

The people in these regions have been stirred recently by a powerful desire for a better life. If we leave them unable to fulfill their reasonable aspirations, their poverty and ill-health make them fertile for any ideology—however false—which holds out to them the promise of a fuller life.

ECONOMIC INEQUALITIES ARE DANGEROUS

Democratic ideals cannot survive in a world in which the present dangerous economic inequalities are continued and further accentuated. In terms of nations, we have learned that there is considerable truth in the old saying that the rich get richer and the poor get poorer. Back in 1939—before we had embarked on the tremendous war-induced program of industrial expansion—our per capita income was $554. In that period the average citizen of one of the less-developed countries earned about $40 a year. By 1947, however, the per capita income of the United States had more than doubled, reaching the figure of $1,400, while the lot of the people of the underdeveloped areas had not improved, and in many cases had actually declined.

Thus, the glaring inequalities in the world division of the essentials of life have become progressively more apparent in the past decade. There is little doubt that one of the fundamental objectives of communism is to seize upon the misery of people of the underdeveloped areas to create suspicion and distrust of the more-favored nations.

Technical assistance to the people of the underdeveloped areas in health and other fields offers a unique opportunity to counteract what Prime Minister Nehru, of India, has called the "apathy of despair." By offering these people a tangible hope for the future we shall be giving the world an on-the-spot demonstration of democracy in action and the creative power of a free-enterprise economy.

Today it is axiomatic that economic development and public health go hand in hand. The economic development of the large areas whose population is constantly afflicted with endemic diseases is impossible without broad-scale action in the medical field. The existence of disease and disease-carrying pests has, in fact, made it impossible to open up valuable resources in many regions. It has been demonstrated that an effective public-health program will benefit all phases of a nation's life. The elimination of an endemic disease has in some cases, for example, enabled farmers to double their food production.

GREAT ADVANCES IN PUBLIC HEALTH

Fortunately, modern science has made available the means to control and conquer some of the most stubborn diseases that plague mankind. In well-developed areas, such as the United States, this half century's great progress in preventing communicable

diseases is well known. However, the application of much of this new medical knowledge is still limited to the better developed areas. The lack of modern water and sewerage systems, for instance, is largely responsible for the existing high rates of typhoid fever, dysenteries, cholera, hookworm, and other diseases in wide areas. The use of even rudimentary sanitary methods in water supply and waste disposal can substantially control these diseases as crucial health problems.

Other diseases, such as malaria, the venereal diseases, and tuberculosis, are also highly vulnerable to planned attack. World health experts have concluded, for example, that if an effective campaign were waged against malaria in all of the malarious areas concurrently, human malaria would totally disappear in a few years.

Each year malaria is being dramatically conquered in one area after another through the use of the new insecticides, such as DDT. Nevertheless, the disease still causes hundreds of millions of preventable cases and millions of needless deaths. In India, close to two million deaths have been recorded as caused by malaria in 1 year, and the problem is equally grave in many other countries.

MALARIA CONTROL VITALLY IMPORTANT

The World Health Organization has given malaria control a high priority because the serious loss in working efficiency among malaria-ridden populations contributes greatly to the desperate shortage of food in many areas. Today, with the population of the world increasing at a rate estimated at 25 millions a year—greater than ever before—and the world food shortage becoming more critical, the urgency of malaria control as an economic measure alone is evident.

Striking examples of the economic advancement which is made possible by successful campaigns against malaria, cholera, typhus, and other diseases are afforded by recent attacks on these health problems.

Until recently, for example, Greece had been one of the most heavily infested malaria areas in the world. In 1946 UNRRA introduced the modern method of malaria control and began a campaign which has since been carried on by the United States Public Health Service personnel in the ECA mission to Greece in cooperation with the Greek Government. Principal reliance has been placed in residual spraying of homes and stables, although DDT spraying from planes has also been conducted in a few malaria areas.

SIGNIFICANT ECONOMIC ADVANCES

Today we are able to see the results. Whereas in 1942 there were at least 2,000,000 cases of malaria in Greece, in 1949 the incidence of the disease had been reduced below 50,000, and the greater part of the country is now free of malaria and no longer needs spraying. It is reliably estimated that from thirty to sixty million man-workdays a year have been saved by the operation. This would be equivalent to adding several hundred thousand workers to the nation's productive force—without the addition of more mouths to feed.

Similar results have been achieved by the campaigns against malaria in Brazil, Egypt, the Philippines, Haiti, and other areas.

In 1930 the deadly Anopheles gambaie mosquito, the world's most efficient malaria vector, was introduced into Brazil from its home in the African tropical belt. The disease spread from Natal and brought death and crippling illness to a 12,000-mile area in an epidemic which reached its peak in 1939 when 114,000 persons were treated for the disease. A 2-year campaign by the Brazilian Government, conducted with the assistance of the Rockefeller Foundation, brought the disease under control and made possible the resumption of the economic development of the region.

EGYPT CONQUERS MALARIA

In 1942, this same mosquito started another invasion, this time northward through the Nile Valley, pushing its attack to within 200 miles of Cairo and causing the worst epidemic in Egypt's history. In some areas as many as 90 percent of the people were ill at one time. Health authorities estimated that about 135,000 people died from malaria in that region in 1942 and 1943.

Commencing in 1944, the Egyptian Government with the advice of only four American malaria experts, had by February 1945, completely eradicated the gambiae mosquito in the infested areas and it has not since reappeared.

Some indication of the economic loss caused by the disease is given by the fact that one Egyptian plantation alone suffered a monetary loss in 2 years of about $600,000—representing among other things the loss of one-half the wheat crop and one-third the sugar crop.

CHOLERA AND TYPHUS FOUGHT

Equally effective campaigns have been conducted against such diseases as cholera and typhus. In 1947, for example, the economic life of lower Egypt was disorganized as the result of the rapid spread of cholera which suddenly appeared in that area. The World Health Organization was called on for help. Vaccines were flown in immediately from New York, then from many other areas and cholera experts were dispatched from various countries. Despite the violence of the outbreak, the disease was brought under control in less than 2 months.

Hookworm is a disease which also seriously interferes with the economic life of many areas. The Institute of Inter-American Affairs has assisted in a cooperative campaign against this disease in one area of Peru which has resulted in the reduction in the number of school children infected with the parasite from 59 to 38 percent.

The great work done in the Southern States of the United States in the sharp reduction of hookworm must also be recognized as contributing greatly to the economic potential of the people.

I have cited these instances of successful control programs against various diseases to illustrate the fact that we have the scientific knowledge and techniques at hand to embark on a broad program of technical assistance in the health field for the people of the underdeveloped areas.

POINT 4 PROGRAM IMPORTANT

President Truman vividly summarized the possibilities inherent in our American know-how in the fields of health, agriculture, and industry when he proposed his now world-famous point 4 program of technical assistance to underdeveloped areas. "For the first time in history," the President said, "humanity possesses the knowledge and skill to relieve the sufferings of these people."

The various inter-American health programs in which the United States has played a leading role have developed tested procedures and practical methods for meeting health problems on a cooperative basis.

The United States Public Health Service has cooperated closely for a number of years with the Pan American Sanitary Bureau, now also serving as the regional office for WHO in the Western Hemisphere. Under the programs sponsored by the Bureau, United States experts have been detailed on scores of assignments to other American republics and hundreds of Latin Americans have been given training in this country. These activities over the past 40 years have aided materially in strengthening and expanding national health services in Latin America.

Through these multilateral programs we have developed the practical procedures which will undoubtedly constitute a basic guide for the proposed health projects under point 4. In that sense, therefore, point 4 is not a new concept in the health field. However, point 4 is both bold and new in the sense that for the first time all world agencies will be directed toward a common end in a coordinated effort to raise the health and living standards of the underdeveloped areas of the world.

WORLD HEALTH PROGRAM IMPORTANT

We are now entering the second half of the twentieth century. The first half of this century has been one of the most eventful periods of man's history. On the debit side of the ledger it has been a period of disastrous wars that have threatened the very fabric of our existence. But it has also been a period of the most amazing scientific progress. We have probably added more to our scientific knowledge in the past 50 years than in any previous 200-year period. And the pace of our conquest of the fundamental secrets of nature and life at an ever-accelerating pace.

We have it within our power to use this knowledge for the creation of a stable and healthy world. We also have the potential power to destroy not only our civilization but all mankind. The world today is in the process of making the choice.

In this critical period we need to start a chain reaction which will create rather than destroy. I believe that in the proposal of expanded technical assistance to help all the world's people better their lives, we have the ingredients necessary to inspire such a creative chain reaction.

As a matter of fact, I venture to predict that when future historians assess the events of our time they shall recognize the beginning of the world program of health betterment which we are now witnessing as one of the most dynamic and far-reaching actions of our era.

Our Help in Ages Past

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Olean (N. Y.) Times-Herald:

OUR HELP IN AGES PAST

Following President Truman's announcement that this country will manufacture the superpowerful hydrogen bomb, correspondents in the National Capital queried various legislators as to their reactions.

And all of them—with one exception—expressed views on the matter that came from military or political standpoints, or both.

The one exception was Representative KENNETH B. KEATING, of Rochester, N. Y., who expressed the conviction that, with such a weapon in the hands of mortals, the only hope for the salvation of the world would be through prayer.

"The President's decision emphasizes the imperative need for men and women of good will the world over to unite in a vast peace crusade before it is too late," declared the Congressman.

"Only on our knees, each praying to the one God according to the dictates of his own faith, can we hope to save the world from a fate too horrible to contemplate."

He is right, of course.

But he doesn't mean that we should discard the means—every possible means—of national protection.

Representative KEATING knows as well as anyone else that if it were possible for men and women of good will all over the world to unite in a vast peace crusade the tension under which the human race now is laboring would be lifted almost overnight.

The trouble is, of course, that the people who exist under ruthless dictatorships are not able to unite with those of other nations in such a crusade.

Their rulers, who will adopt every method—including wholesale murder—to maintain their power, will cut off all means of outside communication, and will delude them that the very people who are desirous of peace and who are the champions of a democratic regime of freedom for the individual are conniving to make war upon them and enslave them.

The Russian people, the rank and file of the people, want peace just as ardently as do those of any other country.

But the "menace" of "imperialist America" continually is being drilled into their consciousness. They have come to look upon this country as a natural and relentless enemy; and the little group of conscienceless men in Moscow, to further their own ambitions and strengthen their grip of power, will see to it that such an attitude is maintained.

Before there can be world peace, the Russian people must see the light.

How that will come about must remain to be seen, but miracles have happened before, and miracles will happen again.

In the meantime, we who believe in the dignity of man and sanctity of individual freedom, may well remember the observation of Representative KEATING, that "only on our knees, each praying to the one God according to the dictates of his own faith, can we hope to save the world from a fate too horrible to contemplate."

Congressional Greetings to Young America

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. O'HARA of Illinois. Mr. Speaker, in the district of Illinois which I have the honor to represent is located the Harvard School for Boys. It is a private school of high standing in a community noted for its educational institutions. This week a delegation of young men from this school are visting Washington and as they sit in the galleries above us, watching perhaps for the first time the functioning of our democracy in this greatest legislative body in the world, I know that my colleagues would wish to join with me in an expression of welcome. We are happy that they are with us and especially at this time when a great and a historic debate is being staged in this Chamber which has been the theater of action of so many of the immortals of American history. The debate to which they are listening, I might say to these young men from the Harvard School for Boys in the Second District of Illinois, is historic in that the bill under discussion is the omnibus appropriation bill and this is the first time in the history of the Congress that all the appropriations of the Federal money for the many necessary purposes of our Government, upon which the stability of the entire world rests, are covered in one bill instead of a number of bills as was the custom during the years. Combining all the appropriations in one bill, and providing for all the expenditures of the richest and most powerful country in all recorded history, it is, of course, the largest appropriation bill ever considered in any legislative body. We are glad to have the young men from the Harvard School for Boys with us at this time and to pause for the moment in the very serious business before us to give them a word of welcome.

The young men are William Aronson, Robert Daskal, James Droege, Leon Fein, Joel Goldberg, Peter Handler, Andrew Karzas, Allan Kulp, Edward Lang, James Leven, James Lindsay, Robert Propp, Lester Senechalle, Michael Vick, and Stebbins Younger.

Their chaperone is Miss Yvonne Marie Arnold.

Unpartisan—Not Bipartisan

EXTENSION OF REMARKS
OF
HON. LOWELL STOCKMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. STOCKMAN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial by David Lawrence which appeared in the United States News and World Report of April 7, 1950. It is well known that our so-called bipartisan foreign policy has never been truly bipartisan. Although it has been generally supported by the Republicans, it has long been my feeling that both major parties should also have a share in initiating major policy decisions. The article by Mr. Lawrence offers constructive thinking with respect to bipartisan policy, and I commend it to the attention of the Members of Congress. It is as follows:

UNPARTISAN—NOT BIPARTISAN

(By David Lawrence)

The term "bipartisan" has been loosely used in recent months to describe procedures that actually have never been followed.

The general impression is that Republicans and Democrats sit down together in the Department of State regularly, discuss all the available facts and then decide jointly on a major policy. This has never been true.

Day-by-day decisions on policies of a far-reaching nature are made only by the Secretary of State and his assistants. Members of either party in Congress rarely learn about the inside of these matters.

Sometimes Republicans are invited by the administration to participate as members of international conferences abroad. This is done to win minority votes in Congress on a few measures on which commitments have already been made and which require ratification or the appropriation of funds.

The making of foreign policy in a large sense, however, is an executive function. Strictly speaking, under our Constitution, there is and can be no such thing as a bipartisan foreign policy. The people must be able to hold a President or his party in Congress accountable at the polls for failure to adopt constructive policies that can lead to peace in the world or for bungling policies that can lead to a world war. There must be no place for the bipartisan alibi which seeks to anesthetize political opposition or shift the blame for mistakes made.

It is one of the weaknesses of our system and one of the strong points of the parliamentary system that the power to make foreign policy is concentrated solely in the Executive in this country, as contrasted with England and the various British commonwealths where foreign policy is made by the legislative leadership which wields the executive power but can be checked instantly by the people in elections that can be ordered at any time.

In America, no matter how many outside consultants or Republican Members of Congress are taken along on trips to international conferences or are occasionally invited to the office of the Secretary of State for discussion, policy making remains the responsibility of the majority party. This was made clear by Senator TAFT, Republican, of Ohio, in an interview appearing in our March 31 issue, when he said:

"I don't think the minority can initiate or control foreign policy. But you can, of course, criticize this or that policy. We can't reverse a foreign policy, for it's in the hands of the President of the United States. We can't shape foreign policy at all. All we can do is to act as an effective brake on some of these bad tendencies. And, of course, individuals may express individual views of what they would do."

The minority party, therefore, must remain free to criticize the international as well as national policies of an administration. To hold otherwise is to advocate a conformity and oneness of view which is contrary to the basic philosophy of our republican form of government.

The specious argument is often made nevertheless that, since a nation must present a united front as against other powers, it gives an impression of division if criticism is voiced in Congress or elsewhere. This confuses discussion with action. Freedom of debate should be encouraged so that when a substantial majority—composed of both Republicans and Democrats—finally votes for a given policy, it is revealed as a free choice and not an imposed will.

What is needed, of course, is a foreign policy developed as a result of an unpartisan approach. This means that not only Republicans must refrain from asserting views merely for the sake of partisanship but that Democrats, too—including the President in this instance—must refrain from seeking political credit at the polls for measures made possible by Republican votes in Congress.

It is important also that Democrats should not, as a smokescreen to cloud free discussion, cry out that critics of the administration's policies are giving aid and comfort to Russia. It is, of course, illogical for the Republicans to characterize as Communists those officials in the Department of State who blundered in forsaking the Nationalists as the Communists rose to power in China. But it is equally illogical for President Truman or anyone else in the administration to declare that efforts by the Republicans to crusade against Communist influence inside our Government are of aid to the Kremlin. There is far more aid and comfort for Stalin when he sees in America the beginnings of a vindication of his doctrine of one-party totalitarianism—as witnessed in the attempts being made currently to denounce criticism as unpatriotic—than when he reads that the minority in Congress is concerning itself with measures to rid our Government of Communist sympathizers.

Let us recognize that, while both parties cannot participate in the formulation of international policy, the two parties can, by freedom of debate and an unpartisan examination of the issues, create the public opinion needed to reject an unwise, or to support a wise, policy in international affairs.

The Yalta Conference

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following book review of Roosevelt and the Russians, the report by Edward R. Stettinius of his observations as Secretary of State. The review is from the New Leader and was written by Felix Wittmer, an anti-Nazi German persecuted by Hitler and now teaching at Montclair (N. J.) Teachers College. Since most of our troubles today stem from the incredible mistakes of judgment and violations of principle made at the Yalta Conference, it is important to our future that we better understand our past:

THE YALTA CONFERENCE

(Roosevelt and the Russians, by Edward R. Stettinius, edited by Walter Johnson. Reviewed by Felix Wittmer)

This book offers ample evidence that Stalin and Molotov, at the Yalta Conference, were determined to obtain 10 main objectives:

1. Weaken Germany through dismemberment so thoroughly that she could never be turned into a bulwark against communism.

2. Have the west agree to the most crushing amount of German reparations possible.

3. Push Poland much farther west than seemed reasonable to Churchill and Roosevelt.

4. Replace basically the Polish Government in exile by the Soviet-sponsored so-called Lublin government.

5. Obtain spheres of influence in the Balkans.

6. Prevent setting up of definte machinery for free elections in the east European countries.

7. Postpone participation in the war with Japan to the last moment, but make certain to get into the fracas.

8. Act as if the Soviet Union needed to be coaxed into far-eastern military operations and, through such deception, strike a bargain.

9. Make efficiency of future United Nations Organization, as an instrument to prevent war, illusory.

10. Put every bit of western concessions down in clear terms, but leave any point of disagreement vague and wide open.

Even though Mr. Stettinius attempts to whitewash our tragic failure at Yalta, his book proves that Stalin and Molotov have scored on every one of the 10 principal issues. Yet, Mr. Stettinius—to the delight and everlasting gratitude of the Politburo and the Pravda boys—assures us (p. 6) that "the Soviet Union made more concessions to the United States and Great Britain than were made to the Soviet Union by either the United States or Great Britain." Let us look at the facts and data, as conceded by the former Secretary of State himself.

Point 1: We readily agreed with the Russians on German zones for we did not dare adopt the long Soviet view of the final conflict between proletarian Communist world revolution and the parliamentarian-imperialist-capitalist-bourgeois-etc. nations. We banned from our mind even the shadow of the thought that the total weakening of Germany might turn out to be a political triumph of Stalinoid world revolution.

Point 2: No matter how hard we tried to convince the Russian negotiators that reparations perpetuate chaotic conditions, we agreed to have the sum of $20,000,000,000 for German reparations mentioned in the—supposedly secret—protocol, as a basis for discussion.

Point 3: Without the consent of the Polish Government in London, we agreed to the cession of eastern Poland to Russia. Our hope that we might at least save the city of Lwow for Poland was frustrated. Since the Russians wanted Poland's western frontiers far nearer to Berlin than seemed good to us, it was decided that the final delimitation of the western frontier of Poland should thereafter await the peace conference.

Point 4: When Russia would not even listen to any discussion about recognizing the widely representative Polish Government-in-Exile as the basis of Poland's future government, we capitulated. All talk about changing the term "enlargement" of the Lublin Government into "reorganization" is so much piffle. Ingenuously, Mr. Stettinius explains, "As a result of this military situation, it was not a question of what Great Britain and the United States would permit Russia to do in Poland, but what the two countries could persuade the Soviet Union to accept" (p. 301). In other words, in the friendly cooperative atmosphere of Yalta, which the author vaunts, we yielded to force.

Point 5: The actual though not nominal division of the Balkans into spheres of influence, which led to Soviet absorption of Rumania, Hungary, and Bulgaria, was arranged by Mr. Churchill with Roosevelt's approval of "a 3-months' trial." That after a few months' operation of the Communist secret police our game would be lost, is not mentioned in the ex-Secretary's book. The author does admit that President Roosevelt acted "without consulting the State Department" (p. 12).

Throughout the book it becomes manifest that in intricate matters, often misnamed "purely military," President Roosevelt, either alone, or through Harry Hopkins, negotiated directly with Stalin, without informing the State Department, i. e., Secretary Stettinius. The author urbanely calls that the "faulty liaison between the White House and the Department of State."

Point 6: While earlier drafts of the paragraphs on Poland emphasize the "responsibility" of our western ministers in regard to free elections, the final draft of the Protocol is sufficiently watered down merely to refer to "ambassadors by whose reports the respective governments will be kept informed about the situation in Poland." Whatever was worked out concerning Yugoslavia was clothed in the form of a recommendation only.

Points 7 and 8: It has apparently never entered the mind of Mr. Stettinius that in the light of 2,200 years of Chinese history, the basic realities of Leninism-Stalinism, and the most elementary information on ideological warfare, we should have done everything in our power to prevent the Soviet Union from participating in the war against Japan. From every bit of evidence, the author is still today unacquainted with these primary matters. Thus, he tells us that "President Roosevelt and the War Department had assigned Harriman the task of discovering (sic!) what was necessary to bring Russia into the far eastern war."

Although in more than 2,000 years of history China again and again was conquered by those who possessed themselves of the northern provinces of the nation, we gave the Soviet Union a hold on Port Arthur and the Manchurian railroads, and threw in the strategically important Kurile Islands for good measure. Although any far-eastern expert who is not politically color blind could know as early as 1927 that the Chinese Communist leaders were trained, financed, and controlled by Moscow, we opened the door to world revolution.

It is of course true, as we know from Henry L. Stimson and McGeorge Bundy (On Active Service in Peace and War) that our military authorities, even as late as July, 1945, urged Russian military cooperation against Japan. However, to subordinate long-term political requirements to military operations indicates absence of statesmanship. There is no evidence that anyone in the State Department warned our President against the coming far-eastern disaster. Mr. Roosevelt listened to the generals, Harry Hopkins, and his inner voice; Mr. Stettinius practiced rigorous silence.

Point 9: To have the United Nations veto excluded from procedural discussions was no fundamental gain on our part. Essentially, the veto power, in concerns of economic and military sanctions, is the blatant expression of the cleavage between the Communist world and ours. No attempt was made on either side to bring about enforcement guaranties of peace. The United Nations Organization was outlined as a facade, just as Mr. Stettinius served as a facade for the President.

Point 10: Whenever the Russian negotiators could not have their way, Molotov, according to the author, "could not go any further." Thus, Poland's western frontier was not determined. Everyone of our wishes regarding Iran was shelved. Vital matters concerning Yugoslavia, Italy, Bulgaria, and Austria were left to "future consideration."

What did we gain in what Mr. Stettinius euphemistically named a "compromise"? Was it really such a great concession on the part of the Soviet Union to permit France a seat on the Allied Control Commission of Germany? Was it any political victory of ours to have only 3 instead of 16 Soviet Russian republics represented in the General Assembly? Had not primary security already been lost through the establishment of the veto power?

Yet, Mr. Stettinius goes on record agreeing with his superior that "the Soviet Union had decided to take its place in the United Nations family as a good citizen." (Reporting to Getulio Vargas, p. 307.) Like the equally well-meaning and personally pleasant nonexpert James F. Byrnes he put his trust in unity through compromise. He might have done well to recall (or learn about) Plekhanov who once said that "Lenin desires unity as a man desires unity with a piece of bread: he swallows it." Stalin does not admit a single instance where he would deviate from the gospel truth of Lenin strategy and tactics.

In the humble opinion of this reviewer, only the appendix of Roosevelt and the Russians is of any positive value: it contains the otherwise unavailable official documents of the Yalta Conference. The book itself—some 330 pages—offers 300 pages of dreary, semi-official description of surface matters, and 30 pages of faulty, shallow, naive, and incredible apologia.

Carefully, the author has avoided any probing of the preponderant and basal issues. He has regaled us with a pageant of externals, such as the custom-built elevator of the Sacred Cow, Stalin's large black Packard limousine, Churchill's freshly-lit 8-inch cigar, and a Russian dinner consisting of 8 courses and 45 toasts.

Mexican Oil Policy

EXTENSION OF REMARKS
OF

HON. CHARLES A. WOLVERTON
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. WOLVERTON. Mr. Speaker, it has been apparent to me for a long time that the State Department is not in favor of a loan to Mexico to improve or expand its facilities for developing its oil reserves. This is difficult to understand in view of the mutual benefits that would result to both Mexico and the United States. It is particularly difficult to understand our State Department policy in this matter in view of the generally recognized interest of President Truman which, on more than one occasion, has seemed to indicate his favorable attitude.

The Committee on Interstate and Foreign Commerce of the House at the present time is conducting a series of hearings on the question of a petroleum policy for the United States. Yesterday it had the privilege of hearing testimony given by Willard Thorp, Assistant Secretary of State. During his testimony it was developed that our State Department had submitted to the Government of Mexico an aide-memoire on the subject of a possible loan to Mexico by our Government and that it contained two or more conditions or suggestions to be met or at least considered preliminary to any favorable action by our Government. It further appeared that these suggestions had been very displeasing to the Mexican Government and as a result all negotiations had been discontinued. The questions and answers during the examination of Mr. Thorp were very illuminating and at times approached what may be termed as "double talk."

Without going into all of these matters at this time I am including in my remarks the following portion of the record of the hearing which gives in a summary way an analysis of the situation:

Mr. WOLVERTON. We have made loans right along to Britain that we never expect to get paid back, or we have made advances to them.

What I want to know, and the time is getting short—what I am getting at is this, this committee started its investigation of the fuel problem in 1947 when there was a very distinct shortage in this country. We had before us the leading representatives of large companies. The question was, Where can we get oil? There was not a single witness out of the number who appeared who made any reference whatsoever to Mexico as a possible source of supply. Of course, the Near East was mentioned, and Venezuela was mentioned, but never Mexico. Without any previous thought on the subject it seemed to me significant, and I merely asked the question, What about Mexico as a source of supply? Well, there was a degree of consternation when I wanted to consider Mexico.

That led me to make some study of the subject, and I have read very considerable upon it, and I came to the conclusion that there was a very definite policy on the part of some companies, and which I regret seemed to have been carried out by the State Department, so that obstacles were thrown in the way of developing the oil resources of Mexico.

This undoubtedly grew out of the expropriation in 1938, but whatever may have been the cause, they insisted that there was a lack of desire to consider Mexico as a possible source of supply.

From that time to this there has been an ever-accumulating amount of evidence, so far as I have been able to observe, of effort on the part of the State Department to stop any real consideration of Mexico as a source of supply.

Now, I will tell you why I thought that the State Department should have been more interested in it than it was. There are two reasons. First, at that time, the economic stability of Mexico was not as stable as some would have liked to have seen it. The peso was dropping in value, and oil was an asset that they could have utilized to advantage. The other was the military consideration, having in mind that in the case of emergency, as you have stated in your statement today, we would not have sufficient oil in the United States, and would have to get it from the outside, and there was no place where we could get it with greater assurance than from Mexico, because with the use of pipe lines the tanker situation could be eliminated. Furthermore, if tankers were used, they could operate across the Atlantic from one side of Mexico, and they could operate across the Pacific on the other side, so that it had a very strategic military value.

It seems to me from an economic and from a military standpoint that favorable consideration should be given to a country which makes application for a loan, not a gift, but a loan where any businessman would be willing to recognize its value.

Mexico has paid its other loans that it got either from private or public sources, and there is no doubt in anybody's mind, as far as I have heard, and no one has raised the question that this would not be paid back.

Now, it comes down to the point where application was made to our committee, after our visit to Mexico, by the Cromwell firm, through an appointment made by Mr. Allen Dulles, not John Dulles, who is his brother—in fact they are both in the same firm.

Mr. HARRIS. You are speaking of John Foster Dulles?

Mr. WOLVERTON. Yes, that is his full name. Instead of Mr. Allen Dulles appearing he sent Mr. Miller, who is now Secretary or Assistant Secretary in charge of Latin-American Affairs in the State Department. He wanted us to put in our report the very same suggestion that now appears in the aide-memoire. We refused to do it, thinking we were not a collection agency.

It then appears that after our committee refused to do it application was made to the State Department. That would be in the spring of 1949.

Now, from that time to this there has been nothing done except that after Mr. Miller had presented the claim, or Cromwell & Sullivan had presented the claim, to the State Department, he was appointed Assistant Secretary on the 28th of May, and on the 28th of June he was confirmed, and within 10 days after his confirmation this aide-memoire went to Mexico, with that claim in it that attention should be given to a large claim.

Subsequently to that, as you must be aware, or, if not, I hope that you will refresh your mind upon it, you will find that the Mexican Government objected to the conditions or suggestions, whichever you wish to term them, that had been laid down in the aide memoire, and that closed negotiations.

It then became the subject matter of a conference that the President held with newspapermen, and the question was asked time and again, have negotiations ceased? The President at all times indicated his interest in the matter, and I have all of those news reports before me right here if your mind needs refreshing. He indicated his interest in the loan to Mexico, and said negotiations would be carried on.

Now, here we are in April of 1950. Eight months have elapsed since the President said that the negotiations would be inaugurated or reestablished, and nothing more has been done than was done at this time a year ago before Mr. Miller went into the Department. Now, are negotiations going on or are they not? If they are going on, is the President aware of the fact that in the aide memoire some conditions particularly were laid down that were offensive to the Mexican Government; one, a suggestion about basic policy, which I think you will find in their answer, meant a change of their laws, and another, a reference to this blackjack method of settlement of claims in a matter that had no relationship to it whatever.

What I would like to know is this. You say that conferences were held, three of them, by the Secretary of State and the President. You think two of them were before the aide memoire and one must have been subsequent. Under those circumstances, it might be inferred that the Sabalo matter was spoken of to the President. I wish you would refresh your mind on that, as to whether the President ever saw the aide-memoire.

I think I can discern from the statements that have been made by the President on his visit to Mexico, which improved our relationship considerably—as well as the visit of the President of Mexico to this country—and from the interest that the President has displayed in this matter, something that has led me to the conclusion—and if I am wrong, I am glad to be corrected and to know what the situation really is—but I am of the opinion that, notwithstanding the President's interest in this matter, the State Department has been sabotaging his effort all the way along. We are just spending time running around on this matter. The chairman of this committee, Mr. CROSSER, made innumerable visits to the State Department and to the White House, and yet nothing has been done, notwithstanding what seemed to be favorable opinions that were expressed. I am just unable to understand anything other than that the State Department is using double talk.

I am interested in this from the standpoint of having a friendly neighbor to the south, as we have one to the north. We are spending billions of dollars abroad; and I have supported those programs. We are spending that money to head off communism and collapse of governments on the other side. If we can do it abroad, I cannot see why it is not far more important to do it on this side of the water, in connection with a country that is a neighbor of ours, so that we may have friendly neighbors on the north and on the south of us. I do not believe the matter has had the serious consideration that its importance entitles it to have.

Now, I have a hundred more questions I would like to ask. May I inquire whether Mr. Thorp, after he has refreshed his mind on some of these matters, will be back or not? What I am trying to get is this: What is the policy of the State Department with reference to oil? Is it to advance one? Is it to thrust down another? Is it to help here and to refuse to help elsewhere? Are we playing favorites in this game? I see now that Argentina is coming into the picture, and there is this situation that you have referred to about the British, and so on.

It seems that we are considering everybody except our nearest neighbor. I think it is time that we began to think of the Western Hemispere as well as any other hemisphere in this world of ours, from the standpoint of any emergency that might happen.

May I say, before I finish, that I would recommend as reading to the State Department the speeches and the statements that

were made by President Roosevelt dealing with petroleum in Mexico. I would suggest particularly that you read the book published under the title "Shirt Sleeve Diplomat, Josephus Daniels, Ambassador to Mexico, 1933–42." It is one of the finest expositions of what, in my opinion, should be the good-neighbor policy, that I have read. I wish the State Department would make itself familiar with the viewpoint of that great Ambassador from this country.

There is another book, a very small one, called Mexican Oil: A Symbol of Recent Trends in International Relations, written by Harlow S. Pearson, Ph. D., which refers to the background, and so forth, of the settlement that was made on the expropriation claims for damages, and see what our Secretary of State had to say in that connection about the rights of Mexico, and so forth.

It seems to me that it would be good reading, and it would be helpful reading, in formulating a good-neighbor policy which, it seems to me, we are in a good way to wreck if we continue on the course we are now pursuing. And if you run out of reading, I can give you the names of a few more books.

Mr. HESELTON. I might suggest that we read the gentleman's [Mr. WOLVERTON] speech.

Mr. HARRIS. Gentlemen, I promised Mr. Thorp that we would adjourn this meeting shortly after 12 o'clock, because he had a funeral that he had to attend. Of course, our good friend and distinguished colleague, for whom we have the greatest admiration, has taken about 20 minutes with his remarks without having given the witness an opportunity to answer. I realize that the gentleman has questions that he wants the witness to answer, but it is obvious that we will have to conclude the hearings for today. I know there are other members of the committee who have some questions in their mind that they want to ask in connection with your statement here today.

Mr. WOLVERTON. Mr. Chairman, I apologize for having taken so much time. I certainly appreciate the opportunity that you gave me in making a lengthy statement, without asking questions; it was with the idea of giving the witness some inkling of what was in my mind, and of giving him the opportunity to be prepared when he returns as a witness.

The thing I am interested in is this: Is the President of the United States familiar with the aide-memoire? You have said he was. I would like to hear somebody in a position to say that. I have my doubts.

Mr. HARRIS. In all fairness to the witness before us, he had advised that so far as he knows, the President has been kept advised of these matters in connection with the Mexican Government. Perhaps the question, in all fairness to the witness, should be directed to another source. Nevertheless, these matters are of great importance in maintaining a consistent policy of our Government on international business, wherever it takes place, in connection with our own national security and making available ample supplies of petroleum to help improve the economic condition of our country. These questions are of tremendous importance to the members of the committee, and we realize that they involve fundamental policies on which there might be divergencies of opinion.

I assume that Mr. Thorp will be glad to return at some convenient time.

Mr. WOLVERTON. I would not want the chairman to think that my only interest is Mexico. I have made a study of this from the standpoint of Venezuela and some of these other countries as well, including far-eastern countries. Mexico is not the only country in which I am interested.

Mr. HARRIS. Everyone knows of the interest that the gentleman from New Jersey has in the subject of petroleum, and in the economic stability of our friendly neighbors and other nations of the world, as well as our own economic stability. We know of the great amount of work the gentleman has done on this problem as it affects our own relationships with Mexico and other nations of the world. I think the committee and the Congress and the country are very fortunate in having a man with the ability and experience of our distinguished colleague here on this committee. At the same time, and with all due deference, there is the question of the State Department carrying on this matter in the usual way, taking into consideration the relationship of this country with other countries, having in mind our own free-enterprise system and the opportunity of our own capital to expand, wherever it might be helpful to us. This is a broad, serious policy question, and one that deserves every possible consideration.

Mr. THORP. Mr. Chairman, may I say just two sentences to complete the record on one point?

Mr. HARRIS. Very well.

Mr. THORP. Namely, that when Mr. Miller was appointed Assistant Secretary in the State Department, he immediately disqualified himself from all matters relating to the Mexican petroleum situation; and he has not participated in any way in those matters since he came into the State Department.

Mr. WOLVERTON. Did he participate in the State Department discussions before he went into the Department?

Mr. THORP. No, sir.

Mr. WOLVERTON. Who did on behalf of Cromwell & Sullivan?

Mr. THORP. As far as I am concerned, I only recall seeing Mr. Dulles.

Mr. WOLVERTON. Allen Dulles?

Mr. THORP. Allen Dulles.

Mr. HARRIS. It may be that after the memorandum on this particular claim is presented, which you have stated you would present, the matter will be cleared up. Thank you very much, Mr. Thorp. The committee now stands adjourned subject to the call of the Chair.

(Whereupon, the subcommittee adjourned, subject to the call of the Chair.)

Centennial of Clinton, Mass.

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include two excerpts from the Clinton (Mass.) Daily Item containing the remarks, in part, of the Honorable Paul A. Dever, Governor, and the Honorable Charles F. (Jeff) Sullivan, Lieutenant Governor of the Commonwealth of Massachusetts, at the centennial banquet of my home town of Clinton on March 14.

The excerpts follow:

"The city of Cambridge is famous for many things. In education particularly has this great city achieved noteworthy and world-wide repute," said Congressman PHILIP J. PHILBIN, toastmaster, in introducing Gov. Paul A. Dever.

"But Cambridge is also famous as the city of governors. The most recent of these leading citizens of University City honors us with his presence tonight. He has many warm friends here. He comes as the esteemed chief executive of our beloved Commonwealth.

"His career eloquently symbolizes the opportunity the Nation affords to those possessed of the will and capacity to forge ahead despite the handicaps which humble beginnings so frequently impose.

"Endowed with great ability, vigorous and energetic, outstanding before the bar, seasoned legislator in the general court, former distinguished Attorney-General of the Commonwealth, uncompromising advocate of the cause of labor, able and humane, his record is one of brilliant achievement and service.

"I am happy, honored, and proud to present to respond to the toast, 'Clinton and our Commonwealth,' our great Governor—the Hon. Paul A. Dever."

Gov. Paul A. Dever, responding to the toast, "Massachusetts," said:

"There is one thing of which I am reasonably certain, tonight. I am about to extend a greeting to the town of Clinton to which I feel sure she will never be able to reciprocate in kind. A one hundredth birthday is truly an occasion to observe. I congratulate Clinton, and I extend to her the sincere greetings of the Commonwealth.

"Tonight, I feel that I am among friends, and it is a pleasant feeling. Clinton has been very kind to me. Even during those times when fate did not lend its smile to my political aspirations, the people of Clinton stood by me—and what is better evidence of a real friend?

"So it is needless for me to say I enjoy being with you, tonight. I will always enjoy being with you.

"Last year, with the help of people like you, I was honored with the highest privilege obtainable by a citizen of this Commonwealth. I became your Governor; and as such I became charged with the solemn responsibility of managing your affairs in our State government."

PROMOTING THE COMMON GOOD

"I have worked hard since that time to warrant the confidence you were so kind to impose in me. Goaded by the desire to reward that confidence with good works, I have taken into consideration the probable effects of my program on the people as a whole. It has been my sincere desire to make fairness my guiding principle, and the public welfare my goal. Within the powers which Providence has allowed me, I have exerted my every energy to put into action those principles of government which are inherent in my philosophy, a philosophy which dictates that government must not be stagnant, but must rather through affirmative action promote the common good.

"In these days of conflicting thought, when the very fiber of our democratic existence is being put to a most crucial test, it is imperative that we adjust our mode of government to the conditions which surround us. The strength of democracy lies in its flexibility. We are no longer a country with a wide frontier to take up the slack of limited opportunity. The frontier vanished in 1890. Our new frontier must of necessity be found in the legislative chambers of our Federal, State, and local governments. It is their responsibility to mold into its proper form the pattern of society which will offer to all our citizens the equality of opportunity which is so commendable an objective of American democracy.

"To strive toward that objective has been my constant aim. * * *"

* * * * *

"Our acomplishments during the past year have been many. They are doubly significant when we consider the forces which have worked against them. There are those in our society to whom Congress is odious.

"The status quo is to them an idol to be worshiped, for under it they are able to continue their grabbing ways and realize their selfish ambitions. To them personal gain

transcends governmental obligations. To them a twisted mind, or a hungry belly, or a substandard home is something to be tolerated but not to be remedied.

"In their narrowness they lose sight of their own welfare and feed those forces which would harass and subdue us. Blinded by ignorance and poisoned by an unconscious urge to degrade, they sow the seeds of discontent. They are the disciples of discord, who would stifle our initiative, not knowing that by their actions they are furthering the cause of our enemies abroad."

WE MUST NOT REST

"These inimical forces, whose greatest fault is their own gullibility, do not rest. If we are to combat them successfully, we must not rest either.

"We must remain constantly alert so that through lack of sedulity we shall not play into those hands which are eager to destroy the way of life so dear to all of us.

"As Governor of this great Commonwealth I give you my pledge that my tenure of office will witness no let-up in this battle against reaction. We cannot afford to relinquish that fight. I am determined that we will not.

"Once again, my heartiest congratulations to the town of Clinton on its one hundredth anniversary. May you continue to prosper for centuries to come."

* * * * *

"The history of Clinton is like a miniature history of the United States. Although if we are to measure a town's age by her corporate existence, she is only a century old, actually the story of Clinton's ingenuity and love of freedom is centuries older. History records that nearly three centuries ago white men were tilling her soil and engaging her valuable waterpower. The sagacious and enterprising John Prescott, realizing that she offered no broad meadows to invite the husbandmen, was among the first to see in Clinton's physiognomy her potentialities as a manufacturing town and established the Prescott Mills.

"His was not the first in a long list of manufacturing enterprises which led to the eventual separation of Clinton in 1850 from the agricultural community of Lancaster, of which, as Clintonville, she had been a part. As a manufacturing center she grew until she listed among her manufactures the variety of commodities so indicative of her versatility and so characteristic of her history.

"Her loyalty to principle stands unchallenged over the centuries. When the rallying cry, 'Taxation without representation is tyranny,' rang through the land, the forebears of Clinton were among the first to organize to answer the call to arms.

"According to the Honorable Henry S. Nourse, whose comments on Clinton are considered to bear the weight of authenticity, 'When the political champions of slavery treasonably sought to break up the Federal Union, nowhere did the spirit of patriotism, so fervent everywhere in Massachusetts, flame forth sooner, or with more genuine fire, than in Clinton.'

"In the two great world struggles, the later of which we have only recently concluded, the town of Clinton contributed its share to the armies of young men who have risked their lives in the successful prosecution of those blood-spending conflicts.

"To those phases of her history Clinton can surely point with justifiable pride. She has been a model of both patriotism and progress. I feel honored to have been able to include among my most admired personal friends one of her most renowned citizens, one who gave to the governorship of our Commonwealth and the Senate of the United States the wealth of energy and accomplishment which stand as a lasting tribute to the town from which he sprang. I refer, of course, to one of your greatest sons, the late Senator David I. Walsh."

* * * * *

"The heart of the Commonwealth, the great city of Worcester has given us many splendid public men. None of these has excelled the next speaker in his steady advance from the ranks to an exalted position in the government of our beloved Commonwealth," said Congressman PHILIP J. PHILBIN, toastmaster, in introducing Lt. Gov. Charles F. (Jeff) Sullivan, of Worcester.

"Former mayor of his native city, experienced legislator, zealous champion of any cause he espouses, able and distinguished in the affairs of state, I am pleased indeed to present to respond to the toast, Tribute to Our Neighbors, the genial, friendly and capable lieutenant governor of the Commonwealth, his honor the Honorable Charles F. (Jeff) Sullivan, of Worcester."

Lt. Gov. Charles F. (Jeff) Sullivan, of Worcester, responding to the toast, "Tribute to Our Neighbors," said:

"Mr. Toastmaster, Governor Dever, reverend clergy, and honored citizens, friends, and neighbors, it is with a great deal of pleasure that I respond to the gracious toast of our able and eloquent toastmaster, Congressman PHIL PHILBIN. It is with pride that I see my home city of Worcester called 'neighbor and friend' to such a splendid community as is Clinton. It is with pleasure that I think of myself not only as a son of Worcester, but almost as a man of dual allegiance to Clinton as well as Worcester. Indeed this is so because so many of my friends and relatives who call Clinton their home have entertained me that Clinton is a second home. Any man would be glad to call Clinton his home.

"Consider for a brief moment its proud history. The early settlers of Clinton came from many different races: Irish, German, Italian, Polish, Scotch, and English. They worked long and hard. They were honest, industrious, and religious. Their children truly typify the melting pot of America. They inherited their parents' sturdy characteristics as was easily seen when the depression of the thirties closed the major mills in the town. The people of Clinton showed their inherited fighting qualities. They organized and with determination brought new industries into the town, so that today Clinton is one of the outstanding, prosperous towns of our Commonwealth.

"These same early ancestors of present-day Clintonites would indeed be proud of the outstanding men that Clinton has sent into the world. Merely reciting their names is enough to bring to the mind of every person here the extraordinary leadership of the late Congressman Kenney, of New Jersey; ex-Congressman Joseph E. Casey; Presidential Secretary Matt Connelly; our capable and conscientious toastmaster, Congressman Phil Philbin; and the late Senator David I. Walsh and many others who have served with distinction in both houses of the Massachusetts Legislature.

"Clinton's outstanding citizens have not been solely in public service. The large number of clergymen it has sent into the world to spread the word of God is an eternal tribute to the deeply religious nature of Clinton's citizens. The outstanding members of the judiciary who call Clinton their home bear eloquent testimony of the high regard and deep esteem that all residents of Clinton have for the American concept of law and order—Judge O'Toole, Judge Kittredge, and Judge Jaquith, of district court; Judge O'Malley, of Springfield District Court; and Judge Buttrick, of Massachusetts Superior Court.

"I could go on indefinitely reciting the leading figures in all walks of life who come from Clinton, but the names of all are as well known to you as they are to me.

"It is no mere chance that a community of the size of Clinton has made such a large contribution to the progress of Massachusetts. It is rather the result of a careful, conscientious citizenry who have, down through many generations, established, improved, and enlarged their public institutions, particularly the school systems, both public and parochial. It is to the credit of the high standards of the schools that Clinton has developed so many leaders in all fields, and the schools in turn are the product of the ambitious, hard-working, and religious fathers and mothers of this splendid community.

"Truly Clinton typifies all that we strive for in our American way of life. It is because she is such a splendid example of our American community that I close as I opened my brief response to our toastmaster, Congressman PHIL PHILBIN, by reaffirming how proud I am, and what pleasure I take in saying to him, that Clinton and Clinton's citizens say a most gracious and sincere thank you for such a moving and eloquent toast to them."

Harvard Law Professor Raises Strong Objection to Mundt-Nixon Bill—Old Laws Viewed Sufficient to Hold Communists Down

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Zechariah Chafee, Jr., Langdell professor at Harvard University Law School, which appeared in the Christian Science Monitor of April 5, 1950:

HARVARD LAW PROFESSOR RAISES STRONG OBJECTION TO MUNDT-NIXON BILL—OLD LAWS VIEWED SUFFICIENT TO HOLD COMMUNISTS DOWN

(By Zechariah Chafee, Jr., Langdell professor at Harvard University Law School)

I am one of the large number of old-fashioned Americans, trying to do their own job as well as they can, who care a good deal about our Bill of Rights and about maintaining American traditions of freedom and tolerance. We like the kind of country in which we grew up, and we want it to stay that kind of country for our children and our grandchildren.

Because we detest totalitarianism, we are greatly disturbed by proposals, such as the Mundt-Nixon bill, to copy any of the methods which totalitarian nations use for keeping a tight control over the thoughts and expressions of individuals, over their political activities when they do not meet the approval of officials, and over the exchange of views among individuals in publications and meetings.

My main objection to this bill is that I see very little evidence to support the recital that the world Communist movement presents "a clear and present danger * * * to the existence of free American institutions." Let me begin by reviewing the acts of Congress which now protect our Government and institutions from attacks through violence or other unlawful action.

First, a statute enacted in 1861 (U. S. C., new title 18, sec. 2384) punishes conspiracy "to overthrow, put down, or to destroy by force the Government of the United States, * * * or to oppose by force the

authority thereof, or by force to prevent, hinder, or delay the execution of any law of the United States."

EFFECTIVE STATUTES

This was considered adequate to protect the Government when the Confederate Army was within 100 miles of Washington. In 1867 it was supplemented by another statute punishing conspiracy to commit any offense against the Government with any overt act, no force being required (U. S. C., new title 18, sec. 371).

These two statutes kept us safe from any serious consequences of internal disaffection in time of peace for three-quarters of a century. Without any sedition act, we came through the panic of 1873, the panic of 1893, the panic of 1907, and the great depression of 1929–33. The absence of any prosecutions against revolutionists under either of these laws demonstrates that the sky has been clear of forcible revolution for a good many years.

Still, in 1940 Congress wanted more than the old conspiracy statutes. So it created two new types of criminal offenses in the Alien Registration Act.

To begin with, it made the Espionage Act of 1917 applicable in time of peace, so as to punish anybody who advocated insubordination, disloyalty, and so forth, in the armed forces. (U. S. C., new title 18, sec. 2387.) This measure was urged as essential to protect the Army and Navy from Communist organizations.

Yet the only reported case under it was the abortive prosecution of about 30 Fascists and anti-Semites in Washington in 1944. The fact that there is no reported case under this statute against a Communist proves one of two things.

QUERY POSED

Either Communist activities to demoralize the armed forces never have amounted to much, in which event there seems to be no need for more legislation for the same purpose; or else the 1940 statute has been very successful in putting a stop to such Communist activities, and if so why do we have to have a new law to safeguard soldiers and sailors?

The other part of the 1940 statute, commonly distinguished as the Smith Act (new title 18, sec. 2385), makes it a serious crime to advocate the overthrow of any government in the United States by force, or to be an organizer or a member of any group of persons which advocates such overthrow.

This is the first Federal peacetime sedition law since the ill-fated Sedition Act of 1798. It goes very far toward reaching anybody who belongs to what the new bills define as a "Communist political organization."

If there were really a clear and present danger in this country from world-wide communism, anybody would naturally expect that this Smith Act would have been invoked again and again during recent years. On the contrary we find just three prosecutions. The first was several years ago, *Dunne v. United States* (138 Fed. 2d. 137 (1943)).

OUTLAW LABOR UNION

Although there was a good deal of wild talk by the men who were convicted in this case, their organization amounted to little more than a small outlaw labor union and being Trotskyites, they were about as far removed as possible from the Communist dictatorship of the Soviet Union, which is described in the pending bill as the fountainhead of danger to our own country.

The second was the abortive Washington prosecution of Fascists, already mentioned. Surely Stalin's influences over American citizens could not have created an overwhelming peril to our Nation when the Smith Act lay dormant for 8 years before any of Stalin's admirers were thought worth prosecuting.

At last, 11 leaders of the Communist Party of America were indicted. They were convicted last autumn in New York City. The Government's case at this trial enables us to get a pretty good idea whether these 11 men and their organization have put our country in deadly danger.

NO ALARM SEEN

Nobody was the least bit scared. Nor did I see alarm expressed by a single editorial or a single letter to the editor of a newspaper. It was about the least exciting news of the day.

Consequently, I see no need for supplementing the drastic penalties of the Smith Act by another and much more sweeping sedition law.

Some have argued that Communist spies make this bill necessary. Yet the Criminal Code already contains comprehensive legislation against espionage (new title 17, secs. 701–797).

If the present statutes against spying are thought to be defective, the proper remedy lies in amending those statutes so as to aim directly at spies, and not in roaming all over the lot against thousands of people, most of whom would never dream of being spies.

Finally, in connection with the registration provisions in this bill, it is important that we now have two statutes requiring registration in particularly serious situations.

Anybody who acts as the agent of a foreign government must register (except diplomats, consuls, etc.) and any organization subject to foreign control must register if it is engaged in political activity or if it aims to control, seize, or overthrow the Government of the United States by force. (22 U. S. Code, secs. 233–233g; new title 18, sec. 2386.)

Anybody within these two statutes who fails to register before acting incurs severe criminal penalties. Now, if the Communist Party of America or any other group in this country really satisfied definition of a "Communist political organization" (sec. 3 (3) in H. R. 7595), then there is no need of a new law to make it register.

It can be compelled to do so any day under the existing statutes just mentioned. The fact that these two statutes have not been enforced against the Communist Party or its leaders indicates that all the talk in section 2 of the bill about American Communists creating a clear and present danger of a totalitarian dictatorship in the United States is like the reports of Mark Twain's death—grossly exaggerated.

SURVEY SUMMED UP

To sum up in two sentences this survey of the present United States Code:

If American Communists and fellow-travelers are as dangerous as the supporters of this bill make out, then there is enough legislation already with teeth in it to take care of these people; so no new law is needed.

If, on the contrary, existing statutes are not violated by what these people are saying or doing, then they can't be very dangerous; so no new law is needed.

I fully recognize that the Communist Party in Czechoslovakia was a danger to the freedom of Czechoslovakia, and the same is probably true of Italy and some other countries.

It does not follow that the inclusion of less than one-twentieth of 1 percent of our population in a Communist Party here is a real danger to our institutions and our freedom under the very different conditions in this country.

We have a very strong Government equipped with existing legislation and efficient Federal police. Our Government does not need any such novel bill as this in order to deal effectively with any actual conspiracy against its existence or any actual effort toward violent revolution.

Where inside this country are the facts which justify the establishment of unheard-of regulatory machinery, the expenditure of large sums of money in its operation, and the severe punishment of American citizens because somebody or other has not filled out a piece of paper?

It is now nearly 30 years since my work as a student of freedom of speech led me to pay considerable attention to the activities of Communists in this country.

Although they are as detestable as ever, it is my considered opinion that they are far less dangerous today than they were in 1919–20, soon after the Russian revolution.

The spiritual health of the Nation is far better than in 1919. We have a much greater immunity to revolutionary radicalism.

Sometimes I wonder whether the supporters of measures like this bill have been worrying so much about Communists that they have forgotten what freedom-loving Americans are like.

The only possibility of communistic control of this country, leaving out the chance of foreign conquest, would come, I believe, from the destruction of this confidence which the great mass of our citizens now have in their own future and that of their children's future.

FURTHER OBJECTION

Imagine a prolonged period of enormous unemployment; the dollar buying what a dime buys now, and perhaps worth a nickel next week, who knows; ever-mounting taxes; the national revenue heavily mortgaged for decades by unwise commitments to groups of the aged at the expense of active men and women and their children; voters hating and despising the men they themselves have put in office because they had nobody better to choose from.

The safeguard against communism and any other sort of disloyalty is to keep on working hard to make this a better country to live in.

A further objection to the pending bill is that, while it purports to be necessary to preserve "free American institutions," it gravely impairs some of the most precious of those institutions—freedom of speech and press and assembly, which our ancestors put at the very head of our Bill of Rights.

Without bothering you with an extensive discussion of the meaning of those freedoms, I merely point out that the American tradition of freedom of speech and press and assembly is that words as such shall not be punished or restricted, however objectionable the ideas they express.

Peaceable language should be left alone by law, for the proper remedy for it is peaceable language on the other side. An especially strong claim to immunity is possessed by speeches and publications concerning political issues and candidates for office, because they are an essential part of the process of self-government.

The only words which may properly be made unlawful are either (1) immediately injurious, like libel and obscenity; or (2) closely connected with commonly recognized wrongful acts, e. g., an incitement to murder or to desert from the armed forces.

The present bill is not limited to the two exceptional situations just mentioned. Let me run through it rapidly to bring out this point.

Section 4 punishes any person who agrees with another to perform any act which would substantially contribute to the establishment in the United States of a totalitarian dictatorship.

There is no requirement of the use of force or other unlawful methods at any time. The act may be wholly peaceable. It may be one of the commonest political activities, like nominating a candidate for office who is pledged to the specified policy.

Section 6 keeps a man within this country because of his association with men of specified political views, with no consideration

of his own unfitness to travel abroad and with no reference to any unlawful act. The denial of a passport may amount to a severe penalty on a person with bona fide reasons for going abroad.

All the registration provisions relating to a Communist political organization restrict normal political processes without regard to any unlawful act.

NEXT OBJECTION

The registration provisions for Communist-front organizations have no relation to any unlawful act, but are imposed because of the expression and exchange of opinions.

My next objection is drawn from the past experience of the Nation. This is not the first time when fears of the infiltration of revolutionary radicalism from Europe has led earnest men to demand drastic laws against speeches and publications.

A hundred and fifty years ago patriots, terrified of the French Revolution, got your predecessors to enact the Sedition Act of 1798. It is commonly regarded as one of the greatest follies in our history. Happily it expired in 2 years by its own terms.

Again, after the First World War, Congress was repeatedly urged to pass a new peacetime sedition law.

Revolutionary groups were much more vocal than now. Violent acts occurred, like a bomb exploded near the house of the Attorney General. Still Congress refused to do anything, and nobody now regrets that refusal.

The years that followed proved that the law which eminent men said was indispensable to save the country was not needed at all. The names of the men who supported the bills of 1798 and 1919–20 have long ago slipped into oblivion, but we remember Jefferson, Holmes, Hughes, and Al Smith for their courageous insistence that we must trust open discussion to bring us safely through.

That courage, we are now told by proponents of a bill like this, is out of date. The United States never had to face Stalin before. But in 1798–1801 it had to face the French Revolution and Napoleon. And in 1919–20 it had to face Lenin. His army was not so big as Stalin's, but he was a far abler master of revolutionary tactics.

The lawyers who drafted the Sedition Act of 1798 and the judges who enforced that law were firmly convinced that they were stamping out a foreign menace fully as dangerous as the foreign menace which confronts us today.

Indeed, they used much the same arguments as those urged for these bills now, with France the villain instead of Russia and Switzerland replacing Czechoslovakia as the victim, to forecast the fate of our own Republic if we do not save ourselves by passing a sedition law.

We are going through such a settling-down process today. It is particularly difficult for all sorts of causes—the magnitude of the devastation, the delay in the peace treaties, the diverse character of the victorious nations, the unprecedented formation of a world-wide permanent union, and so on.

We have plenty of real worries, and it is quite natural that they should be reflected in some false worries as well. All the more reason for keeping our heads.

I have read a good many regrets that particular sedition laws were passed. Never, given the lapse of 2 or 3 years, have I known anybody to regret that a sedition law was rejected.

The principles which Jefferson used to allay apprehensions in his time are equally valid in our time. Meet unlawful action with action; proceed against real spies and real plotters as he prosecuted Aaron Burr and approved the dismissal of Genet. Meet objectionable ideas from abroad by living up to our own ideas—give increased drawing power to our great traditions of democracy and freedom.

FINAL POINT

My final point is very important. Its enactment would disastrously impair our influence over other freedom-loving peoples.

If we leave aside military considerations, the best way to combat the spread of communism in western Europe and elsewhere is to give increased drawing power to the great traditions of democracy and freedom.

These war-torn countries want more than weapons, more than food and machinery. They are eager for ideals to strengthen the spirit and make life worth living. Communism, we are told, operates like a religion; it is presented as the vision of a better world.

Yet, Jefferson and Lincoln had a great vision. During the nineteenth century it possessed the appeal of a religion to bring millions to our shores.

In order to hearten the discouraged peoples of the twentieth century, we must keep that vision bright—not, this time, to attract them to America but to enable them to build their lives in their own homes, so that the freedom which Jefferson and Lincoln did so much to give us will be a reality in many parts of the world.

MORE THAN WORDS

More than words is needed. Unless our acts show that we believe in our democratic ideals, we lessen the chance of winning wavering men to democracy.

In my experience with foreigners in the United Nations, I have been constantly impressed by the way our prevailing adherence to the ideals of our Bill of Rights helps to close up the ranks of freedom-loving countries in opposition to undesirable measures.

On the other hand, I have seen how much harm is done whenever we conspicuously depart from our professed basic principles. It lays us open to damaging charges of hypocrisy and pretense which are hard to meet.

There is no doubt that such attacks based on concrete facts do impress men from many countries whose support we need, and sometimes they are thus pried apart from the United States delegation on critical votes.

Now, freedom of information is one of the big issues in the United Nations at the present time. A treaty of great value to facilitate the work of foreign correspondents, which was originally projected by our State Department, has been put in final form by the General Assembly.

Over and above this, freedom of speech and press is an American ideal which means a very great deal to the citizens of countries where censorship and every sort of gross suppression have prevailed in recent years.

So the way we maintain freedom of speech and press or the way we depart from it is bound to have tremendous effect, for good or bad, upon delegates from countries like Holland, Norway, India, and Australia.

GREAT HARM FORESEEN

Consequently, if we enact a new sedition law like this bill, it will do us great harm among our natural friends in the United Nations. They know well how much suppression is made possible by the vague definitions in this bill.

We just can't defend such a sedition law against the bitter attacks of our opponents, and still less against the distrust of our friends. Our professions of love for open discussion will ring hollow in their ears.

And matters will be much worse when enforcement starts, with numerous inquisitions by the Subversive Activities Control Board, mail opened, nonregistrants prosecuted, lists gone through with a fine-toothed comb, and all the rest of it.

Frenchmen, Belgians, Dutchmen, Norwegians, Danes have had years of experience with that sort of thing under totalitarian occupations and it leaves a stench in their nostrils.

The way for us to spread abroad freedom of speech is to live up to it ourselves. The rejection of this bill will be a telling demonstration that we are governed by the principles of Thomas Jefferson.

Economy (?) at Expense of South Jersey Veterans

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. WOLVERTON. Mr. Speaker, a situation has arisen in south Jersey that adversely affects the veterans of that area. On the basis of lack of funds, the Veterans' Administration has closed the Camden office that heretofore has given medical and dental service to veterans.

As usual, when departments of Government squander or, through inefficient administration, are faced with a deficiency of funds, they close down facilities on the basis that Congress has not provided sufficient funds. Thus, in this case the Veterans' Administration, in a release issued March 10, 1950, announced "that State-wide cuts in personnel would be made within the next month in order to meet current budgetary restrictions." The release continues "that in order to maintain top medical services in other clinics throughout the State it would be necessary to discontinue the limited medical facilities at the Camden VA office. To do otherwise would result in the reduction of the other clinics to a limited basis of operations."

The truth of the matter is that Congress allowed and approved the full amount asked by the Veterans' Administration for medical treatment. The Appropriations Committee of the House, in its report, stated:

> The reductions in this item arise principally from reduced needs in all programs other than medical and hospital care which are provided for in full as proposed in the estimates. The total cost of the medical program is $566,666,400. The committee has not reduced this sum by one penny and directs the Administrator not to reduce it.

General Gray has been before both the House and the Senate committees twice since this bill was considered, once in the last session and once early in this session. No mention was made of the fact that they were short of money or that they would be obliged to discharge employees connected with and needed in hospitals and medical services.

There should be economy in the Veterans' Administration and in all other Federal departments, but it should be true economy brought about by eliminating needless employees who serve little or no purpose.

It is not economy and not the desire of Congress to curtail or disrupt the medical services provided for veterans.

I am of the opinion that the order to close the Camden office was issued without any careful study or survey. The fact that all of the counties of south Jersey are left without any of the facilities previously afforded by the Camden office is evidence of an absolute disregard of the best interests of the veterans resident in this large area. It means that all the veterans of this area must now travel to the Trenton office if they wish the same services previously provided by the Camden office, or carry on correspondence, with all the red tape and delay incident thereto, in order to get authorization for local medical service through private doctors. It is unjustified and unfair to require some veterans in this area to travel as much as 125 miles to visit the Trenton office.

At a recent meeting of representative veterans from the south Jersey counties strong resentment was expressed for the action taken by the Veterans' Administration in closing the Camden office. A resolution was passed demanding that the order be repealed. Widespread opposition has developed throughout south Jersey upon the part of others than veteran organizations, as is evidenced by the strong editorial appearing in the Courier-Post newspapers, Camden, N. J., in the issue of April 5, 1950, and which I herewith include as a part of my remarks:

VA ECONOMY AT EXPENSE OF SOUTH JERSEY VETS

South Jersey has long been accustomed to being treated as a stepchild in State affairs, even if it has never been happy about it and is growing more insistent on equal recognition of its rights.

But it certainly will not look with complacency on the Federal Government also treating it as an orphan.

And that is exactly what veterans and their organizations think Washington has done by eliminating Veterans' Administration medical and dental clinics in Camden, while retaining all others upstate, of which the nearest are in Trenton.

Hence last week's mass protest rally here, a few hours after shut-down of the VA offices on orders from the National Capital.

Joseph O'Hearn, VA manager at Newark, and Dr. Salvatore Rainino, chief medical officer at Newark, asserted that the Camden closing was necessitated by economy orders.

But Congressman WOLVERTON, addressing the protest rally, discounted the economy motive and pointed out that National Administrator Carl Gray had made no reply to his suggestion that if VA is in dire straits for funds, it should present a deficiency appropriation request to Congress, and that a favorable congressional reaction would be almost certain.

"I admit there is a drive for economy," WOLVERTON said, "but Congress has never been moved to economize at the expense of the veterans. The excuse of a budgetary necessity cannot be laid at the door of Congress, since Administrator Gray never has come before us and intimated the necessity of more funds to keep these clinics open."

Over and above the question of economy, however, is the question why, if the VA was forced to retrench in this State, it had to do so solely at the expense of south Jersey, closing down the only clinics in this end of the State and forcing our veterans to travel to Trenton for the service to which they are entitled.

It is true that the Camden office is not the only one in which retrenchment is taking place. Fourteen employees are being laid off here, 4 at Trenton, 13 at Union City, and 33 at Newark.

But the Camden clinics are the only ones being closed completely.

And while Camden is closed and the clinics at Trenton now must handle a vastly increased load as a result, north Jersey will continue to be served by two offices as close together as Newark and Union City. The lack of geographical balance and the injustice to south Jersey vets ought to be obvious.

At the close of last week's protest meeting, a committee of south Jersey veterans' organization officials was named by Albert J. Gifford, VFW county commander, who presided at this meeting. This committee will go to Washington and, with WOLVERTON cooperating, will protest against the Camden closing.

The VA has bungled in closing the Camden clinics without examining the situation more thoroughly. It will be bungling even more badly if it does not give the protest committee a sympathetic hearing and reverse a move that may mean a trifling economy—but an economy effected at the expense of south Jersey veterans.

I call upon General Gray, as Veterans' Administrator, to make a personal study of the situation, repeal the order that has been made, and, if necessary apply to the Appropriations Committee for a deficiency appropriation that will enable the Camden office to be reopened. The thousands of veterans residing in south Jersey are entitled to this consideration.

Flexible Depreciation Would Aid Small Business and the National Economy

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include a statement made by Ralph A. Fletcher, vice president of the Smaller Business Association of New England, at a meeting, here in Washington, on March 27, between representatives of the association and the members of the New England congressional delegation.

Mr. Fletcher is a consulting engineer and manufacturer of long experience and proven ability. He gave a lucid and impressive explanation, to the group, of the manner in which the small-business man is handicapped by the present operation of our depreciation tax regulations. He pointed out it is manifestly unjust to expect the small-business man to contest Treasury Department decisions by appeal to the courts since they have neither the money nor the legal assistance possessed by the large corporations.

Mr. Fletcher's plea for the adoption of his flexible depreciation recommendations is worthy of serious consideration and the complete text follows:

Mr. Chairman, honorable congressional delegation, ladies and gentlemen, as vice president and chairman of the membership committee of the Smaller Business Association of New England it is an honor and a privilege for me to present on behalf of our association a brief discussion of the need of small business for flexible depreciation.

I must preface my remarks with a statement that I am an engineer by training, a quarryman and manufacturer by experience. I am not an attorney, accountant, nor a tax expert. I can only present this problem as it appears to the fellow who is earnestly and sincerely trying to produce more and more goods under constantly improved working conditions with lowering costs and prices, and endeavoring to increase wages and stabilize employment.

I believe this to be a fair statement of some of the objectives of the smaller producer, and it goes without saying that to the extent he is able to achieve these ends he expects some reward beyond that of a task well done.

FIRST, WHAT IS DEPRECIATION TAXWISE?

Under Internal Revenue Code, section 23, deductions from gross income, we find the following:

"In computing net income there shall be allowed as deductions:

"(1) Depreciation: A reasonable allowance for the exhaustion, wear and tear (including a reasonable allowance for obsolescence) (1) of property used in the trade or business, or (2) of property held for the production of income."

This seems to be a simple, clear, and straightforward statement. However, bulletin F (revised January 1942) of the United States Treasury Department, Bureau of Internal Revenue, contains over 90 pages of printed matter on the subject, but cautions taxpayers against relying solely on information contained therein.

This creates a situation which may be all right for big business equipped as it is with staffs of highly paid attorneys and expert accountants, many of whom have been trained in the Government services. They can and do negotiate with the Treasury regarding depreciation allowances on more or less even terms. On the contrary, the small-business man is not, and in the nature of things, never can be equipped to do more than accept whatever depreciation allowances the Bureau of Internal Revenue may grant him, whether or not he feels them to be reasonable and just.

His only recourse now, in the final analysis, is an appeal to the courts and he has neither the time, nor the money for this. The Treasury understands this just as well as the small-business man and so a most difficult situation is created for him. Flexible depreciation would cure this inequity.

SECOND, WHAT IS FLEXIBLE DEPRECIATION

If the word "reasonable" is deleted from the law as stated above and if the words "as determined by the taxpayer" are inserted, so that the law would then read as follows:

"In computing net income there shall be allowed as deductions:

"(1) Depreciation: An allowance, as determined by the taxpayer, for the exhaustion, wear, and tear (including an allowance for obsolescence) (1) of property used in the trade or business, or (2) of property held for the production of income."

And flexible depreciation rates would result.

WHY DOES SMALL BUSINESS NEED FLEXIBLE DEPRECIATION RATES?

Let us assume a hypothetical case to illustrate a common condition.

Imagine, if you will, a small manufacturing concern: It probably had a hard time through the great depression, but weathered it; a rough time again during the war, but with the help of the Smaller War Plants Corporation managed to convert to war production and make a nice contribution to the national defense. In the postwar period it realizes that its equipment and methods have become obsolete, but it is caught in a

working capital shortage due to higher general price levels.

At this stage, its employees who also know the equipment is worn out and obsolete and not worth repairing become dissatisfied with the situation. They think the old man has lost his grip, gone by, etc. Finally they send a delegation in to see him with a proposition. They have it all figured out. If he'll get them some decent tools to work with, and better the working conditions, which they figure can be done for about $10,000, they, in time, will guarantee to produce enough more than currently to pay for it all in 1 year and they think that the new stuff should be good for about 10 years. Let us say that their recommendations involve some special heat-treating equipment, precision controls, and air-conditioning emb lying techniques developed during the late war years, which are matters of general knowledge now, but which do require special engineering for adaptation to each industrial application and have little, if any, resale or market value.

To the employees this looks like a pretty good proposition and they sort of think that after the stuff is paid for that there should be something in the way of a division of the spoils—perhaps a raise or a bonus for them. A better product and a somewhat lower price for the customers, an increased market demand, more sales, steadier work, and perhaps a job for a son or brother who is coming along in school and whom they would like to get placed.

We believe this is the way things should be and that under flexible depreciation the proposition could be put over, but let's see just how it is now, and what a tough and disagreeable job our small-business man has ahead of him to try to explain to a group of practical, sensible workingmen why he can't get the money to go ahead with it even though he agrees wholeheartedly with their idea.

First, let us consider the number of times which the new equipment must earn its cost in order to provide enough dollars to repay the money borrowed or invested for its purchase.

Under the present tax system this could be from twice to three or more times the initial cost, depending on the type of ownership and the amount of other income.

If our recommendation for flexible depreciation is adopted it would only be necessary to earn the amount of the cost one time, in order to repay the investment regardless of the type of ownership or amount of other income.

Now, let us see what possible sources there are for the needed capital and what chance there is of getting it under the present tax system, and the conditions which would exist if flexible depreciation were adopted.

SOURCES AND AVAILABILITY OF CAPITAL

Under present tax system	*Under flexible depreciation*
1. Own capital (past savings): Not available now.	Would tend to become available out of future earnings.
2. Current or anticipated earnings: Insufficient now after taxes.	Definitely available if estimated gain is correct.
3. Venture or risk capital. Not available now.	Would tend to become more available.
4. Borrowed capital:	
(a) Long term: Not available.	(a) Not needed.
(b) Short term: Not safe to use for such purposes.	(b) Would probably be available and safe to use.
(c) Installment purchase: Availability subject to marketability and quite restricted now.	(c) Use would probably be considerably broadened.
Conclusion: Not available.	Available.

What this all amounts to is that the taxpayer and his employees would only have to earn the cost of the equipment once, in order to have the use of this income-producing improvement. However, he still must pay local property taxes on it during its life, and income taxes on the revenue that it produces so long as it is used. Also, if sold at any future time the entire proceeds would be subject to capital gains, taxes, and, in the case of an individual taxpayer's death, to estate taxes.

The taxpayer gets 100 percent depreciation under the present system providing he lives long enough. What we propose is that he should get 100 percent depreciation at the time he considers most advantageous to his business. The result is the same, he only gets it once, but the timing is different and he get it when he can use it.

There can be no question but that the tools of production should be as readily obtainable as possible for the greatest good since it is only from production that we get goods and services.

That we have in recent years instituted a system of taxation which operates to prevent the acquisition of these tools has been a matter of increasing concern to many thinking people.

Short of actual conquest, it is hard to see how an enemy could devise a better method for hamstringing productivity, discouraging enterprise and removing incentives for growth and improvement, than the tax straitjacket we have imposed upon the small producer here in the United States of America. It does not operate overnight, but is like a lingering deadly disease, a cancerous consumption causing a wasting away of health in the economic structure of our country.

In closing, I wish to thank you on behalf of our association for this opportunity to present to you our need for flexible depreciation as one of the ways by which you can help small business to increase production and employment to grow and prosper and become a strong and healthy segment of our national economy.

Reversing Red Propaganda

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. SADOWSKI. Mr. Speaker, for a long time it has been the contention of the liberals in Congress that the way to overcome Communist propaganda is not by torpedoing the Bill of Rights—nor by the passage of sedition laws, which was tried once in the early history of our country during a period of great hysteria and subsequently repealed when the Nation regained its sanity. We have opposed the Mundt, Nixon, Ferguson, Hobbs, and Smith bills, because they all aim directly or indirectly to shackle or manacle the Bill of Rights and those great privileges that are enjoyed only by the American people. In winning the fight for these rights, Thomas Jefferson and James Madison warned the citizens to be eternally vigilant against those people who would in devious ways try to destroy these rights.

The proper way to beat communism and communistic propaganda is to show to the people of the world that our system is better. The constructive arguments on our side are overwhelming. We must look hysterically foolish to the people of the world when we brandish the atomic and hydrogen bombs and make wild accusations of communism against teachers, professors, scientists, writers, and public officials.

By taking the side of the common people, the downtrodden, the landless, the jobless, and the hungry, as we have just recently done in Greece; by showing and proving the advantages of a free democratic economy, as against that of totalitarian; is the proper way to fight Communist propaganda.

The following article which appeared in the Christian Science Monitor and written by Neal Stanford, gives an illustration of the proper way to fight Communist propaganda:

REVERSING RED PROPAGANDA

(By Neal Stanford)

WASHINGTON.—There are signs that the American Government is slowly learning the difficult—and dangerous—art of counterpropaganda.

For a long time Uncle Sam seemed satisfied to stand on his record, ignoring the verbal tomatoes and rotten eggs thrown at him by the Kremlin's propaganda machine.

But as the Communist attacks on American policy have increased and their distortions of the American way of life become more vicious, the State Department sometimes has gingerly faced the need of answering these misrepresentations.

It has learned to its surprise—and dismay—that not inconsiderable bits of Moscow's anti-American propaganda, which floods not only Russia but Europe, Asia, and other parts of the world, in time tend to be accepted by peoples with no first-hand knowledge of America, where they get no contrary explanation of the United States.

One of the latest efforts to meet Soviet propaganda relates to the Kremlin's sudden intensive campaign to make its own people as well as others (particularly in Europe and Asia) believe that living conditions and costs in the U. S. S. R. are utopian compared to the situation in the United States—where inflation, unemployment, strikes, military costs are pictured as reducing America to near-chaos.

Last February, the Kremlin announced with great fanfare that it was revaluing the ruble—whereas the capitalist world was devaluing its currencies; that it was cutting the prices of consumer goods, whereas in capitalist states—the United States, for example—living costs were rising steadily and sharply.

For a month, the Kremlin has played this theme fortissimo on its government-run information organs, working 24 hours a day to sell it to the Russians, the Poles, the Hungarians, the Czechs, the Bulgarians, the Rumanians, the Arabs, Indians, Frenchmen, Italians.

The American rejoinder has now come in the form of a note to the Soviet Government—a note ostensibly directed at getting the Kremlin to let the American Embassy in Moscow continue to buy rubles at the special "diplomatic" rate of 12½ cents instead of the new rate of 25 cents a ruble.

But the request was embroidered with plenty of counterpropaganda material the

Department is now sending over its Voice of America to those parts of the world which have been blanketed with Moscow's version of Soviet bliss versus American chaos.

This Soviet anti-American propaganda has taken two directions: that with announced price cuts the Soviet worker or Moscovite is much better off than his American or Washington counterpart; that living costs are constantly rising in the United States to the detriment of the United States worker.

As for the first charge, Washington notified the Soviet foreign office and is now broadcasting all over the world that:

Even at the new "official" rate for the ruble of four to the dollar (which is a "purely fictitious" rate since the ruble is not an internationally traded currency) food is considerably cheaper in Washington than in Moscow. White bread costs 11.8 cents a pound here but 63.6 cents in Moscow; butter, 69 cents a pound here to between $3.90 and $5.01 a pound in the Soviet capital; granulated sugar, 10 cents a pound here to $1.30 a pound there; potatoes, 3.6 cents a pound here to 14 cents a pound there; vegetable oil, 64.5 cents a quart here to $8.76 a quart there; dressed chicken, 42 cents a pound here to $2.24 a pound in Moscow, etc.

It is further explained that there can be no comparison between Moscow and Washington costs for black bread—a Russian's basic food—because nothing like it is eaten here; but that a Russian pays about a quarter for a pound of this black bread—a price which, incidentally, is just twice what it was 3 years ago. The mere recitation of these comparative figures of Russian and American prices pulls the rug out completely from Moscow's propagandists.

The second point the Soviet propagandists have been trying to make is that the buying power of the United States dollar is steadily declining. To this the American note answers with this counterpropaganda now being directed all over the world:

An index of the cost of living in the United States prepared by the United Nations—not the United States—shows that the cost of living here is the same now as 2 years ago.

The American counterpropaganda does not ask its listeners to believe what the UN is saying as contrasted to what Moscow claims—it only points out the discrepancy. The thought is that nothing will so undermine what respect or attention is given Soviet broadcasts as just comparing them with studies of UN agencies and other recognized authorities.

Compliance With Robinson-Patman Act Urged—Food Brokers' President Cautions Against Misuse of the Act

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. PATMAN. Mr. Speaker, Mr. Watson Rogers, president of the National Food Brokers Association, recently addressed a meeting of association members in Los Angeles. Mr. Rogers pointed out the protection which the Robinson-Patman Act extends to the buyer and urged sales tactics which would not in any way weaken the act by creating ill-will for it. In effect, Mr. Rogers stated that buyers sometimes get the wrong impression from suppliers who indicate to the buyers that they would like to do something for you, but the act forbids it.

This—

Mr. Rogers said—

is the wrong approach. Instead, the buyer should be shown how dangerous it would be to him if any preferential prices were granted. He should be advised of the fact that there would not be any limit to the spread of such discrimination, very quickly placing him under great disadvantage. Actually, the act is of the greatest importance to the great majority of buyers, protecting them from unfair price discrimination.

The report of Mr. Rogers' remarks as they appeared in the Journal of Commerce, March 27, follows in full:

PATMAN ACT HELD AN AID TO BUYER—ROGERS CAUTIONS TRADE ON WEAKENING STATUTE—CITES SALES PROBLEM

LOS ANGELES, March 26.—Some of the strongest supporters of the Robinson-Patman Act are unconsciously creating ill will for the act by giving some buyers the wrong impression, Watson Rogers, president of the National Food Brokers Association, told a meeting of food brokers here at the week end. Speaking before a luncheon gathering of the Los Angeles Food Brokers Club, he said that the guilty parties included food brokers' and manufacturers' own sales staffs.

"What such sales people do is to take the easy way out. They use the Robinson-Patman Act as an excuse for not trying to secure special price discriminations from the manufacturers. 'I would like to do it for you,' they say, 'but the act forbids it.' They give the wholesale buyer the impression that if not for the act he would get such discriminations, when actually that is not the case. Instead, the buyer should be shown how dangerous it would be to him if any preferential prices were granted. He should be advised of the fact that there would not be any limit to the spread of such discrimination, very quickly placing him at a great disadvantage," the speaker declared. "Actually, the act is of the greatest importance to the great majority of buyers, protecting them from unfair price discrimination."

CITES MARKETING CHANGE

Turning to a discussion of the constantly changing pattern of wholesale food distribution, Mr. Rogers told the Los Angeles food brokers that their market was typical of most areas experiencing this evolutionary adjustment. "Back in the old days the manufacturer could expect the wholesalers' salesmen to get almost 100 percent distribution for him. With the great change that has taken place in food distribution, that is not possible any more in many markets.

"Further, most wholesalers are operating a streamlined business and have eliminated a number of activities. This means that the manufacturer must himself see to the handling of some of the functions previously done for him by the wholesaler. This is true whether he sells through the food broker or his own sales force."

NEW FUNCTIONS ADDED

"As a result, the manufacturer who sells through food brokers frequently puts pressure on the brokers to perform a lot of these functions. Where the latter is the case it puts an added expense burden on the food broker. Many manufacturers have realized this and are making adjustments accordingly."

The fact that sales expenses are greatly on the increase is one of the reasons why many manufacturers who did not formerly use food brokers are turning to them now, Mr. Rogers said. "Today the manufacturer needs aggressive on-the-spot selling in the market at all times to maintain a program of balanced distribution. Although vanity makes us want to feel that the food broker's ability is the only reason for this change to food brokers, we must admit that an equally strong reason is their realization that their own sales organization is a terrific overhead expense. They can best beat this overhead by using food brokers."

Leadership for Peace—An Intimate Message From Washington

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include the following article by Josephine Ripley that appeared in the Christian Science Monitor:

LEADERSHIP FOR PEACE—AN INTIMATE MESSAGE FROM WASHINGTON

(By Josephine Ripley)

WASHINGTON.—Americans are always writing to their Congressmen, but when more than 6,500 recently set off a landslide of mail applauding the McMahon peace plan, it was news.

It was news because it indicated the troubled thoughts of thousands of American citizens over present world conditions, and the eagerness with which they are ready to grasp at any ray of hope for a new approach to peace.

The Soviet press chose to interpret this as an indication that the American people want their leaders to come to terms with the Russians. But it was not a plea for appeasement. It was not a suggestion of peace without honor, or peace at any price.

What Americans want, from their letters, is a strong, aggressive leadership. They want to know that the United States is doing something more to insure peace than building bigger bombs than the other fellow.

What they need is to know what is going on—on all fronts—in the cold war; what the status of American foreign policy is, and all about it.

They can get it piecemeal, here and there in the newspapers, from public statements of various officials. But they need to have it put together in a concise, frank statement from the one they naturally look to in such a crisis—the President.

They haven't had such an explanation. Instead, they have been reading day after day, of the grim potentialities of the hydrogen bomb. First, the warning of Professor Einstein that explosion of an H-bomb might mean "general annihilation." Then the cheerful little contribution of the atomic scientist, Dr. Urey, that "there will be no place to hide." Not to be outdone, four atomic scientists combined in a dark prediction to end all dark predictions—that an H-bomb could pack enough radioactive dynamite to wipe out the world's entire population.

On top of this came word that top secret atomic information had been leaking to Russia by way of German-born Klaus Fuchs, who had been working with the British atomic scientists.

It is not surprising that thousands of Americans burst into spontaneous applause over the proposal of Senator MCMAHON, chairman of the Joint Atomic Energy Committee,

for another approach to agreement with Russia. It was the first plan for peace by other means than bigger bomb-making to be put forward after the President's terse announcement that the United States would go ahead with H-bomb development.

Senator MCMAHON's plan does not call for any backtracking with Russia. What it proposes is a 5-year $50,000,000,000 "global Marshall plan" to include Russia and its satellites.

But to qualify for this largess, Russia would have to accept an effective program for international control of atomic energy and an agreement * * * enforced through inspection, that two-thirds of * * * present spending upon armaments be devoted toward constructive ends.

Now Senator MCMAHON has followed up this bold step with another, calling for an Atlantic council parley to plan atomic peace, and challenging Russia to be host to a Town Meeting of the World to discuss this plan.

He has offered these proposals as examples of the bold steps which the Soviet atomic explosion, the shadow of the hydrogen bomb, and the pyramiding arms race should persuade us to consider.

This is the kind of action—even if it proves futile—that Americans were waiting for. It is the kind of gesture which they can understand, even if they don't comprehend all the fine points of foreign policy. It is the kind of leadership they want.

They have said as much:

"We need the leadership of people like you."

"We believe this country must take the lead, and at once, in developing a constructive, aggressive program for peace."

"We are cheered by your proposal that the United States should assume leadership for peace through economic means."

These writers were not crying peace, peace where there is no peace. Rather, they echoed a plea for leadership, for strong, spiritual, statesmanlike leadership in this grim crisis in world affairs, the kind of leadership which the President himself is usually expected to provide.

Power, Not Vacillation, Will Earn Freedom and Respect for America

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

POWER, NOT VACILLATION, WILL EARN FREEDOM AND RESPECT FOR AMERICA

(By Edgar Ansel Mowrer)

Now that its plebiscite has demonstrated the total enslavement of the Soviet peoples, the Kremlin is peddling the hint that it would be willing to talk peace with the United States.

This is not surprising. The Soviet Union has conquered China. During the time needed for digestion, it would like to quiet its opponents. This is exactly the tactics followed successfully by Adolf Hitler during the 1930's when after each successive grab he announced that it was definitely the last.

That is why Stalin is hinting at a new meeting with Americans at which he could expect some new concession—perhaps Indochina or control of Germany or recognition of the Chinese Communists by Washington—as the price of peace.

Surprising is the number of faint-hearted or soft-headed Americans who seem eager to fall into so visible a trap. The mere repetition by Soviet speakers that "communism and capitalism can coexist" starts them cooing about a "return to the spirit of Yalta."

Too bad that they did not look further into these Soviet pronouncements. Communist leaders have always maintained that the two regimes could continue to coexist peacefully provided that the Communist area grows and the free area shrinks. In his electoral speech of March 10, Vyacheslav Molotov repeated this hoary come-on.

SOVIET LACKS CONFIDENCE

But the Deputy Chairman of the U. S. S. R. Council of Ministers also explained why the Soviet Union wants peace at the present moment. Mr. Molotov told his hearers that capitalism is declining. In the capitalist countries, according to him, the number of unemployed and semiemployed has reached almost 45,000,000 people. He then proceeded to let the cat out of the bag.

"Under such circumstances," he said textually, "it becomes understandable that the Soviet Union and the people's democracies [the satellite governments] are in favor of a peaceful competition between the socialist and the capitalist systems at a time when in the camp of imperialism [meaning us] a spirit of gloomy imperialism and warlike adventures is reigning. Each of these efforts under conditions of peace serves the consolidation of the position of such states as the Soviet Union and the people's democracies, which cannot be said of the capitalist states."

In other words, the Soviet Union is frightened. The Russians want time for economic consolidation of their conquests. Therefore they are talking of some new compromise where Stalin can obtain a new extension of Soviet power or communism as the price of peace.

The Russian plan is—as I said—just part of the Soviet game. What the American people have to decide is whether we are going to fall for this sort of soft soaping or whether we are going to understand that no matter what they say, all Communists aim at the total destruction of the United States.

FAINT HEART NE'ER WON

Once we accept this, we shall cease listening either to the siren voices from Moscow or to those faint-hearted and soft-headed Americans who would do almost anything to end the cold war.

Our real job is not to strengthen Soviet Communist economies by providing otherwise unobtainable supplies but to weaken it by withholding those supplies. It is not to recognize the Chinese Communists as the Government of China. It is to make clear to Moscow and to Secretary General Trygve Lie of the UN that so long as one nationalist Chinese anywhere is fighting communism, we shall continue to recognize that fighting Chinese as the Chinese Government. It is to inform the Russians and their trained satellite seals that if they walk out of any more UN bodies, we shall urge those bodies to continue the current business without them. It is to inform the impertinent little men of Sofia and Budapest who are arresting and imprisoning United States citizens on invented charges of espionage that one day the United States of America will make them pay for such outrages. It is to follow Senator BRIEN MCMAHON, of Connecticut and step up the Voice of America 10 times so that it can reach the Russian people despite the 200 radio stations that the frightened Bolsheviks are now using to jam our messages. It is to encourage every form of anticommunism in Russia itself—to urge the Ukrainians to secede (which they have a right to do according to the Soviet Constitution). It is to urge the captive Azerbaijani of Russia to join the freer Azerbaijani of Iran. It is to bolster Marshal Tito of Yugoslavia and bring about the overthrow of the tottering tyranny of Enver Hoxja in Albania. It is not merely to help Bao Dai in Indochina but to make sure that Communist Ho Chi-minh cannot win.

PEACE BY THE SWORD

In short, it is to understand that the free peoples of the world do not respect the United States because of our kind hearts but because of our power. They will come to our side when they see that we can and will protect them—and not before, and when they believe that further armed expansion by the Soviet Union means war.

Does all this preclude any sincere move for peace by the United States?

Certainly not. This is the only basis upon which we can hope to obtain peace. Speaking in Tashkent on March 11, Soviet Minister Lazar Kaganovitch said to his voting sheep:

"The U. S. S. R. is mighty and we will not permit anyone to shove his imperialist snout into our Soviet kitchen garden."

Once we have created a free kitchen garden of our own in which no Soviet agent can successfully shove his snout, the Kremlin may be ready to talk international understanding on a reciprocal basis. Not before.

The Unknown General

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. JACKSON of Washington. Mr. Speaker, the United States Air Force was struck a severe and damaging blow by the recent passing of Gen. Muir S. Fairchild. This great man was a most respected figure in national-defense circles and his loss will be keenly felt.

The people of the State of Washington particularly mourn the passing of General Fairchild. We recognize the outstanding service he so unstintingly gave to the Nation, but more poignantly we feel in our hearts the loss of a native son. The general was born in Bellingham, Wash., September 2, 1894, and began his distinguished career as an enlisted man in our State guard. The Nation has lost a great servant, Washington an eminent citizen of its State.

Although the Members of this House are familiar with General Fairchild's contribution since coming to Washington, and although some few Members have enjoyed his brilliant and thorough presentations before committee hearings, many are perhaps unfamiliar with his earlier activities. Therefore, I include in the RECORD the article by that noted columnist, Peter Edson, from the Washington News of March 21, 1950:

THE UNKNOWN GENERAL

(By Peter Edson)

He was an Air Force general whom few people knew. When wires carried the news that Gen. Muir S. Fairchild had died of a heart seizure, even many officers and men in the Air Force may have had to knit their

brows and ask, "Who?" For here was no strutting, be-medaled, publicity-seeking martinet.

He was a four-star general—the No. 2 man in the Air Force. He was buried today in a simple grave at Arlington National Cemetery, with full military honors. All the big brass came out to do him honor, for he was a general's general. But such was his passion for anonymity that he was practically unknown, outside of his own small circle.

Arnold, Spaatz, Doolittle, Kenney, Vandenberg and the others won the battles and the headlines. General Fairchild had been assigned to stay home—a Pentagon general who stayed home and worked on plans.

If, suddenly, tomorrow, the United States should be attacked by an air raid that dropped an A-bomb, there would be an instant retaliation. It would be aimed at immobilizing the enemy until the United States and its allies could mobilize for counterattack. The plans are all made and this general nature of their content is common knowledge.

If these plans worked, one of the men to whom top credit should go would be General Fairchild. For the past 2 years that has been his job. He has been general administrator of the Air Force. It has been his responsibility to see that plans came to life.

Because he was such an excellent planner, General Fairchild had been picked for this job 2 years ago. He had been jumped from a two-star to a four-star general, over the heads of many another who had been his senior. But that was only one of the many surprises in the career of this unknown general.

He was an old man, the way Air Force generals go. He was 55. What's more, he was not a West Pointer. He came up the hard way. He enlisted as a private in 1917, and he came up through the Washington State National Guard.

In World War I he was a bomber pilot attached to the French Air Force and he flew on a number of missions over the Rhine. He stayed in the Army after the war and got the usual run of assignments. He was a test pilot for a time, and he flew one of the old bombers on the Pan American good-will flight of 1926. He went to a lot of service schools, including the War College, but when World War II broke, he was only a lieutenant colonel.

They grabbed him quick, though, promoted him to brigadier general and put him in the War Plans Division at Air Force headquarters. He was one of three officers on the Joint Strategic Survey Committee. He sweated out most of the war there, with an Army general and a Navy admiral, constantly reviewing, constantly planning.

They hung a Legion of Merit and a Distinguished Service Medal on General Fairchild when the war was over, but he still wasn't famous. Then in 1946 he came up with an idea that will make him long remembered in the Air Force. It was a plan for the Air University.

General Fairchild had never graduated from college himself. The First World War had broken off his own formal education, and he never went back to finish. It was not the least surprising of this unknown general's achievements, therefore, that he should become best known as an educator. He was more celebrated in the educational world than in the military.

They told him to go ahead with his air-university idea and put him in command of it. His headquarters were at Maxwell Field, Ala., but his campus was scattered all over the South. He pulled together the Air War College, the Air Command and Staff School, the Air Tactical School, and the School of Aviation Medicine. He worked out a plan whereby every Air Force officer now gets an educational rejuvenation every 7 years or oftener.

Again—One-Way Street

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. HAND. Mr. Speaker, a phase of the foreign-assistance program which has always given me especial concern is that we provide aid in general measure, and many other benefits, without getting much consideration for it.

The article appearing in the Philadelphia Inquirer on March 28, 1950, and written by the well-known columnist, Ivan H. Peterman, illuminates this problem, and should be called to the attention of the House. The article follows:

UNITED STATES EXPENDS AID WITHOUT GUARANTIES

(By Ivan H. Peterman)

Senator VANDENBERG's call for unpartisan handling of the cold war's problems could become a cornerstone in some sort of breakwater against the economic erosion of America, through continuing foreign-aid grants. Sooner or later a substitute must be evolved for giving away the Nation's substance in return for rented security.

For "rented" seems to be the word, judging from recurring Red disturbances. Under the present loose system of distribution, Marshall-plan billions are buying no guaranteed loyalties anywhere; any or all of the participating countries can suddenly vote in a Communist parliament, or permit infiltration, to create another Czech-style coup.

It is almost 2 years since an exasperated member of the United States Foreign Service expressed serious misgivings on our give-away policies in Europe and the Middle East. We were driving to a Big Three ministers' meeting in Paris, sharing a diplomatic car to a press briefing.

"I've never believed in handing over money, goods, or anything substantial without it being a two-way bargain," the party said. "I've been too long in this Service not to know that most people prefer it that way. They don't respect outright donations. They like to think it's a deal, whether it really is or not. Call it mass psychology, pride, or face, but it's there. It exists today as it did centuries ago, too. Ours is a sucker's game, and in the end we may be despised for it."

This week Congress is debating the new ECA appropriations, hoping to whittle the sum under the Senate committee's recommended $2,950,000,000 and still remain adequate to the tasks in Europe. Since April of 1948 the United States has spread close to ten billions around Europe, reestablishing it economically. France in that time has received almost as much as the present plan calls for.

Yet France just lately has gone through a series of unpleasant Communist disorders, involving port riots, transport and utility strikes, and disgraceful rowbottoms in the Chamber of Deputies itself. For a time the Government seemed to verge on collapse. All in spite of 2 years unstinted aid, with a concentrated program of education and orientation to democratic principles, with special emphasis upon French workers and peasants through the efforts of American labor leaders.

Italy also is having some of the nastiest civil disorder. Six weeks ago in Milan, I was astonished at the prevalence of Communist propaganda plastered over that huge city. There were 10 Red posters to 1 for our side. In southern Italy armed Reds were able to take a whole town, San Severo.

What is lacking in the Marshall plan that such conditions still prevail? It is no wonder some authorities think the plan has failed. With this any visitor to Europe must disagree, but he will also admit our united western front should be tighter.

One of the answers, as any unpartisan board will soon discover, is the lack of important conditions attached to ECA grants. We have assumed too much, and have underestimated the come-back qualities of communism. This could be a first study of any nonpolitical group wishing to appraise Marshall-plan results.

Had the United States insisted that Italy's land reform program be pushed, Commies would not have ready-made fields to exploit. Increasing the Italian police force doesn't offset the effect of 2,000,000 unemployed in a nation's 18,000,000 working populace. Nor is it encouraging to know that many Italians work two jobs to piece out a living, because wages are so miserable.

The Reds would still be there, of course, were all things beyond reproach. This also seems due for readjustment. So long as armed thugs masquerade as politicians, Europe—and Asia and Africa too—remain bad security risks. When you lay out billions expressly for peace promotion, it seems peculiar to have permitted your enemy within to continue his tricks and his threats.

Granting we want none of the police state tyrannies, but there might be a happy medium. A guaranty that at least prevents Red rioters from ranging loose with weapons as if they, not American taxpayers, had been badly done by.

But we have asked for no such guaranties. One wonders if, as with lend-lease to Russia, we even bothered to get receipts.

Year of Decision

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. SHAFER. Mr. Speaker, this is a year in which the traditional American concept of freedom is facing challenge from many directions. Under leave to extend my remarks, I include the following radio address by Col. Rudolph Habermann, of Battle Creek which deals with the subject "Economy and taxes":

Good evening. You and I, as American citizens, have some inalienable rights which are expressed in our Constitution.

One of these, contained in the thirteenth amendment, states that we shall not be reduced to slavery or involuntary servitude, except as punishment for crime.

I am sure you cherish that right, as I do; that you would rise up against any tyrant who threatened to enslave you.

Perhaps you feel quite secure in that freedom. If you do, it may startle you to learn that you have 14 months of servitude to your Federal Government hanging over you, in the form of the national debt.

By spending more than it has collected—and it is still doing it—the Government has run up a debt of $258,000,000,000. Now, that may not sound alarming. You may regard the Federal debt as an impersonal, complicated set of figures which has very little meaning to your way of life. So look at it this way: Our total national income in America amounts to $221,000,000,000 a year.

In other words, all the money that you and every other person and every company earns in 14 months would be required to pay the Federal debt. Your part of that debt is 14 months of your productive effort—14 months of work.

You may think you will escape the 14 months of servitude already charged up against you. Probably you will escape most of it. But your children and their children will inherit that part of your debt which you do not pay. They will have to work to help square accounts.

In this fiscal year the Government expects to go another $5,000,000,000 in the red. That means an additional $5,000,000,000 piled on the debt. In terms of labor on the part of taxpayers, figured at the $221,000,000,000 annual income rate, it means that 8 more days are being added to the 14 months of servitude to which our Federal Government has committed us. So at the end of this fiscal year you will owe 14 months and 8 days of your labor.

That is what the Federal debt means to you. It has a direct bearing on your freedom, and your children's freedom.

Apply that same line of thought to taxes and you will find that you are actually working 1 day out of every 5 to pay your Federal taxes. That is what it amounts to—20 percent of your earnings go to support the Federal Government. If you work a 5-day week, 50 weeks of the year, you are working for the Government 50 days a year. That is servitude you cannot escape.

A billion dollars is easy to say but hard to comprehend. Measured in human effort it means this: If 1,000 men had been employed at $10 a day in the year 1676—100 years before the signing of the Declaration of Independence—and had labored every day from then on, Sundays included, it would take them up to this year—1950—to earn a billion dollars. A thousand men laboring for 274 years at $10 a day.

Well, what's to be done about it? What can be done?

Several things.

The basic issue is the question of higher taxes or deeper debt against reductions in spending.

Congress has tried to tackle the problem but gets blocked out of the play by the weight and confusion of the whole host of Government bureaus and agencies, each scrambling for more authority and funds with never a thought of whether there's enough money to go around.

So the pressure on Uncle Sam's pocketbook—your pocketbook—builds up and up, and you wonder why it doesn't collapse completely.

Now I'll grant you that there are some very essential services of government that cannot be cut.

The most notable thing about a Federal department is the urge to spend money. Somebody else's money! The first symptom is a request for more funds than are needed. Then the strategy is to swarm all over Congress in support of these padded requests. Congressmen try to cut them down, but they can never accurately know just how much is real and how much is padding. And since there's no logical pattern to the Federal budget, it becomes a matter of first authorizing the spending and then waking up to face the hang-over of where to get the money. And that's where you come in again with your taxes.

The only logical answer to this dilemma is for Congress to revamp its appropriations machinery.

First, all requests for money should be in a single package, so that Congress can know the relation of the grand total to the amount of money actually on hand.

Congress has already taken the first step to correct this. There's no reason why all spending bills shouldn't be consolidated into one and examined in the light of probable income. Let your Representatives and Senators know you're behind this very sensible move toward economy.

But that's not the only method of saving some of your money. Let's see some of the others.

Do you think it's necessary to have more than 2,000,000 people working for the Government? Two million civilians, I mean. I'm not speaking of our armed forces at all here. I'm talking of the increase in civilian Government workers from 900,000 in 1939 to a little more than 2,000,000 today.

The Hoover Commission doesn't think they're all needed. That's the Commission, you know, headed by former President Hoover, which made a 2-year investigation of the entire Federal Government structure. It found incredible examples of waste, inefficiency, duplication of effort, and a complete lack of understanding of even the most elementary rules of sound business.

For instance, the general practice is for all supervisors to get more and more people working under them. If you are in the Government, that's the way to get yourself a raise. It doesn't matter what you are doing or what these people who work for you do. All that's necessary to get a raise is to get some friend in the personnel office to assign more people under your direction. That does it, and you can see where that leads to. If it works today, it will work again next year. So you just keep at it. No wonder there isn't office space in Washington to house all the people on Uncle Sam's pay roll.

Most of us have some contact with the Veterans' Administration, keeping up GI insurance, and the like. Well, did you know that the average work load for a Veterans' Administration employee is 450 insurance policies as compared with more than 1,700 for an employee of a private company? It takes about 90 days for the Veterans' Administration to handle a claim as compared with about 15 days for a private insurance company. That's four times as much work in one-sixth the time. How do you like that for efficiency?

That is just an inkling of what goes on. The Hoover Commission found literally hundreds of situations just as alarming in all the other bureaus.

I cannot urge you too strongly to acquaint yourself with these Hoover reports. There are several important bills now under consideration, and if they are enacted it can mean a saving of untold dollars—your tax dollars. It's a multi-million-dollar opportunity you just can't afford to pass up.

Now let's look at the other side of the picture and see what the Congress itself can do.

They work for you, too, you know. And you have every right—in fact a duty—to inquire into the ways they serve you.

Every Congressman has his own district to worry about. He wants to see it prosper, and he wants to do all he can for the people he is elected to represent.

That's fine, and we believe in that basic principle of representative government. It is the best system yet devised by man for handling his affairs of government.

Yet, with his responsibility to his own particular constituents, each Member of Congress has a broader duty to the whole Nation, and that is what I want to talk about now.

Let's assume that in your district there is a chance to put up a big Federal dam or power project that will automatically bring money and employment into the area and keep it there as long as the project continues. It sounds wonderful. It seems good for the community. It seems good for local business. It looks like the type of thing to give your civic pride a real boost.

And since it looks good to you, it appeals to your Congressman. So he sets out to get the project approved for the home folks. Now that's a very laudable thing, but we only ask that he do one thing more, and that you people and the people in each of the 435 local election districts in the country do that one thing more with him. Ask yourself honestly and carefully—is it good for the whole country? Does the whole country not have a stake in what we do here, just as we have a stake in what the rest of the people do? Will we help ourselves at the expense of others? Is there no other way to get this particular thing done? Must it be done by Government? What's its effect going to be on the over-all picture?

That is a tough assignment, I know. But you can see what it means if every Member of Congress, under prodding from the folks at home in trying to get some kind of a federally financed project, thought only of his own district. You would soon have every community competing with every other community to find out who gets the most Federal money and who can spend it fastest.

You couldn't coin money fast enough to keep pouring it around that way. And it's the same money as all the other Government money. Your tax money.

So there you have what may be the toughest assignment of all. You, I, all of us—our Congressmen included—must face up to this issue squarely. We must decide whether we are going to close our eyes to the Nation's welfare and bury ourselves in the selfishness of our own immediate local gain.

You can see it takes a lot of fortitude to do what you know to be right in a case like this one. The temptation is strong. Yet we ask our Congressman to exercise that same degree of fortitude in facing up to problems of great national and international significance. The least we can do is support him and tell him we're behind him in this one great effort to cooperate personally, actively, locally, in the wise use of Federal money—again, your own tax money.

Next, there's a point very closely tied in with the responsibility of every Congressman to subordinate purely local interests to national considerations. I'm thinking of the great tendency of organized groups, farmers, teachers, workers, businessmen, and their associations to pressure Congress for more and greater bounties, subsidies, and hand-outs of all kinds.

Each individual, and every group, and each segment of our population must do a little soul-searching when faced with the temptation to reach in and grab. Tough as it sounds and difficult as it is to do, we must face the issue squarely. If it isn't good for the country, it isn't good for us.

And now I'll add one more point that goes to the very heart of the whole problem. It's a point of trouble which, if properly attended to, could do more than any other single factor toward reversing the present trend and help correct the current tendency to spend ourselves into national bankruptcy.

Now that Federal expenditures are higher than ever, the persistent planners contend that taxes must be kept as high as possible. They argue that new and greater spending is in and of itself a good thing. They are trying desperately to get Congress to accept that view.

They never seriously ask themselves the significance of that type of thinking. They say simply spend, spend, spend. They ignore the relation of spending to the simple proposition that there must first be money—your tax money.

How much simpler and how much more sensible would it be to take a good, long look around to see how much we have available, and then decide how it can be spent to the best advantage of all of us.

It all boils down to that. There's no sense in tossing around a lot of very high-sounding technical words and trying to confuse the issue so no one can understand it. That's

the tactic of those who can't face the simple facts of life on this question. They're afraid to reduce it to its bare essentials. They're afraid to tell the truth.

Yet, you know only too well that you can't run your own home without examining what you need in the light of what you have to spend on it. You do the same with your business. A good, efficient government must follow the same course.

So why not your Government?

It is your Government, but it won't remain your Government forever unless you take an active part in its affairs.

We cannot afford to let it get away from us, but that's exactly what we're doing when we ignore the question of money—the very heart of Government operations. Radio station WBCK or the Battle Creek Chamber of Commerce will gladly give you a brochure at no cost on economy and taxes so that you may be well posted.

With an election coming up, those who oppose this reckless spending and the complete disregard for our own ability to support it, will be damned as "reactionaries" and accused of having some kind of "special interest."

Well, it is high time to react. It is high time to show your special interest. It is time to react to your own interests, the special interest of 150,000,000 Americans, and the only hope of the world—the soundness, the stability, and the continuation of these United States as a solvent going concern.

New England Smaller Business Association's Program of Action

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. DONOHUE. Mr. Speaker, on Monday, March 27, a very timely and mutually valuable conference took place, here in the Capitol, between the Members of the New England congressional delegation and representatives of the Smaller Business Association of New England.

At this meeting, Mr. Russell Maintain, chairman of the association's public relations committee gave an excellent summarized presentation of the group's general objectives and operations. The program of action was outlined as follows:

PROGRAM OF ACTION

I. GENERAL OBJECTIVES

To speak for small business in New England.

To inform small business of its importance in the preservation of our free-enterprise system.

To preserve free private competitive incentive enterprise.

II. SPEAKERS' BUREAU

Speakers' clinics have been enlarged to include many individual businessmen who are not active as officers or directors of the association.

Meets periodically to discuss association viewpoints, policies and procedures, objectives (e. g., association is not an "anti" group), and to enable speakers to discuss and develop their talks and receive constructive criticism.

To provide speakers for service clubs, veterans' groups, radio programs, civic affairs, fraternity meetings, business panels, schools, churches, colleges, and other associations.

May send several speakers a year to the same organizations to talk on various subjects.

Over 100 addresses during the year.

III. NEWSPAPER AND MAGAZINE PUBLICITY

Handled through Newsome & Co.

Produces approximately 1,000 column inches of small business and association news per week.

Releases go out at least weekly to 106 daily newspapers and 314 weekly newspapers; also wire services Associated Press, United Press, and International News Service.

IV. RADIO PROGRAM

One-half hour Sundays over Columbia outlet in New England, WEEI in Boston.

Estimated audience over half a million.

Round-table discussions by not only small-business men themselves but also by authorities on labor, education, politics, world affairs, and other subjects of importance to small business.

Includes also each week a 5-minute news summary on important events of the week pertaining to small business.

V. MONTHLY BULLETIN OF SMALL BUSINESS

Summarizes association activities and plans and other matters of importance.

Goes to all members as well as to men of importance in government, education, associations, business, and clergy.

Emphasizes and expresses free enterprise economic facts of life.

VI. REGIONAL MEETINGS

Held periodically in principal community centers throughout New England.

Aim is to hold one meeting yearly in each congressional district.

Meetings in April will be held in Keene, N. H., and Portland, Maine, under direction of William J. Jamieson, executive secretary.

RUSS MAINTAIN,
Chairman.

Our Freedom of Religion Threatened

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. GWINN. Under leave to extend my remarks in the RECORD, I include the following report to my constituents.

IS RELIGIOUS FREEDOM POSSIBLE IF ECONOMIC FREEDOM IS LOST?

Many Christians believe we can advocate compulsion in our economic life, and still keep our freedom in the religious realm. But how long will religious freedom last if we go Socialist?

Perhaps you doubt that leaders of Christian religious groups advocate the use of force. If so, you should study closely the literature on social and economic action published by some of our church bodies. They openly reject economic freedom as anti-Christian. Adam Smith, who led the Western World to the full enjoyment of economic freedom, is placed in the same category with Karl Marx, who sired the brutal force called socialism, that is, communism.

Whatever the members of our denominational groups may think, their spokesmen often publish statements that are masterpieces of Socialist dialectics. They say, "There can be no Christian sanction for one-sided support of either economic individualism or economic collectivism." This is the pose of neutrality, but it is neutrality as between the robber and his victim. They would destroy every economic gain that has made the people of this country freer and more kindly than the people of any other country. They argue for a middle way, a clever trap which must bring forth the answer, "socialism."

Many of our clergymen, like many of our teachers, have been drawn into support of socialism because they believed, without careful analysis, that it would benefit the wage-workers and the poor. For generations, the advocates of socialism have been living in a dream world, surrounded by subjective feelings that they were warmer, kinder, more generous, than other men. That dream lasted while the world was prosperous and peaceful, and governments could not interfere with those who were trying to better themselves. The dream now has to face a cold reality—where the Socialist dreamers were able to get possession or control, and remake the world by force; their new world soon became one great concentration camp. The poor were poorer, the downtrodden were more cruelly trodden upon; the classes were more fiercely at war with each other. The ruling group could keep its privileges only by setting up a police state. The people worked at what and wherever they were told, at whatever wages and in whatever value of money was fixed by the state.

Suppose our Socialist ministers are successful in their efforts to use our churches as transmission belts for state control of income and wages. What will happen to our churches? If political leaders in government own or control all the income of the people, how long will our churches remain free? What will happen to men in the pulpit who dare to challenge the decisions of the political managers of our wordly goods? People will still be able to think as they like, of course, but what religious actions will they be allowed to take? What financial support will they be able to give to church education, or press, or church building? How long can church and state remain really separate?

We know that men lost their religious freedom in Germany and in Russia when the government took or controlled their economic resources. But we think America is different. Is it?

He who controls our economic well-being controls every aspect of our life. Men dependent on government for their subsistence are no longer free in anything. They are slaves, and like slaves, they must obey. In a planned economy, the church must be planned too.

As the state takes a larger and larger share of our production, it plays a larger and larger part in our lives, until it manages all of our lives. When it can tell people what kind of potatoes they may eat and how much they must pay, it will soon tell the preacher what he may say, and how much he can be paid.

Freedom is indivisible. Without freedom to keep and use the products we

create, we cannot insist on freedom of speech or of action. Without freedom of speech and of action, there is no freedom. We cannot serve two masters—force and freedom. Force does not compromise. Those who believe in religious freedom have no choice but to demand economic freedom.

Freedom is Christian. It is the rule of conscience, not of force. A free economy is a Christian economy, the only possible Christian economy.

Remember Father Cronin?

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. SHAFER. Mr. Speaker, it is interesting to study Washington and to see how long it takes for many people of the country to become aware of what is happening within their Government.

More than 3 years ago, a nationally known Catholic priest, Father John F. Cronin, a member of the National Catholic Welfare Conference, issued a blast against the Communists and fellow travelers in the Department of State. The charge was promptly and most vehemently denied by the high officials of the Department. Newspapers from one end of the country to the other carried editorials ridiculing the Catholic father.

Since that date the Republicans came into power in Congress for a brief 2 years. In that short time the Congress uncovered enough evidence to prove that Father Cronin knew of what he had charged. Alger Hiss has been convicted as a traitor, Judith Coplon has been caught and convicted, and many other employees of the State Department have been permitted to resign while under investigation as security risks.

Recently, Senator McCARTHY, Republican, of Wisconsin, has made similar charges. Again, certain newspapers whose editors apparently do not know what is happening in the Nation's Capital, take the accuser to task. But, it would be a good bet that within a year or so they will learn that additional security risks have been allowed to resign.

Critics of Senator McCARTHY ask, where are the spies and weak security risks that he talks about?

The reply might well be, why did all of those fellow travelers and security risks resign while under investigation before? If they were filled with sweetness and light and loyalty, why did they run for the cover of private life as soon as they were threatened with investigation?

It would be well for critics of Senator McCARTHY to bear in mind, when his charges are being debated, that the Department of State was just as vehement in its denials of Father Cronin's charges, 3 years ago, as it has been in its denials of the Senator's charges.

Resolution of the New York State Legislature

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted by the New York State Legislature with respect to the unemployment-insurance taxes levied on pay rolls for a specific purpose and used, to a large extent, for purposes entirely different. The memorializing resolution points out that the Federal Government has collected $150,000,000 more than it has returned to New York State for administration of the unemployment-insurance program, thus seriously endangering the State program. This unjustified diversion of funds from all the States amounts now to a billion dollars.

This practice of using funds collected for one specific purpose for other programs of the Government should stop. It finds a parallel in the Government's use of social-security funds. Such practices in private business would land the perpetrators in serious trouble. No amount of juggling of the figures can disguise the fact that this money was collected in the State of New York, belongs to the State, and should be made available for immediate use.

The resolution follows:

Concurrent Resolution 209

Concurrent resolution of the senate and assembly proposing that the Congress of the United States be memorialized respecting the earmarking of funds collected under the Federal Unemployment Tax Act to each State to be used in the administration of the unemployment insurance law

Whereas under existing law, the several States of the Union bear the responsibility for the administration of the unemployment insurance and employment service programs; and

Whereas the Federal Government levies a pay-roll tax of three-tenths of 1 percent on employers of eight or more persons to pay the administrative cost of such programs by the States; and

Whereas each State has no control over the amount it receives for the administration of such program and must accept whatever amount is allowed to it by the Federal Government; and

Whereas since the inception of unemployment insurance and employment service program, the Federal Government has collected from the employers of this State for the administration of this program $150,000,000 more than has been returned to the State for this purpose, and the amounts so returned to the State of New York have been consistently and grossly inadequate; and

Whereas it was never intended that the Federal Government should divert the proceeds of this tax for its own general purposes, which it has done to the extent of $1,000,000,000; and

Whereas the continued inadequacy of operating moneys and personnel makes the detection of improper and fraudulent benefits claims exceedingly difficult and impedes efforts to cope with tax evasions; and

Whereas the failure to make adequate moneys available for efficient administration, to the extent that it weakens control over disbursements from the unemployment insurance fund, jeopardizes the effectiveness and stability of the entire program and brings it into disrepute: Now, therefore, be it

Resolved (*if the senate concur*), That the Congress of the United States be and hereby is respectfully memorialized to enact legislation which will—

1. Earmark the taxes collected under the Federal Unemployment Tax Act to assure adequate funds for administration by each State of the unemployment insurance and employment service program.

2. Transfer any excess over the amounts allocated by the Federal administrative agencies to the States for use in the unemployment insurance and employment service program with full responsibility resting on each State for the proper use thereof free from Federal control;

3. Make reasonable provisions assuring all States equitable participation in such allotment; and be it further

Resolved (*if the senate concur*), That copies of this resolution be transmitted to the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States, the chairman of the Committee on Ways and Means of the House of Representatives, the chairman of the Committee on Appropriations of the House of Representatives, the chairman of the Finance Committee of the Senate of the United States, the chairman of the Committee on Appropriations of the Senate of the United States, and each Member of the Congress duly elected from the State of New York.

By order of the assembly:

ANSLEY B. BORKOWSKI,
Clerk.

In senate, March 20, 1950. Concurred in without amendment.

By order of the senate:

WILLIAM S. KING,
Secretary.

Cardinal Mooney on School Aid

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following article from the Detroit News of April 2, 1950, by Edward Cardinal Mooney, archbishop of Detroit:

MOONEY TELLS CATHOLIC STAND ON SCHOOL AID

It seems to me that, to keep the record straight, some observations are pertinent in the aftermath of the protracted discussions on proposed bills for Federal aid to education.

The general intent of these bills is entirely commendable in view of the low standards of education that prevail in many parts of the country and in view of the legitimate interest of the Federal Government in the attainment of fairly equal educational opportunities for all United States citizens. The questions they raise will never be solved by incrimination and recrimination but only by clear thinking and calm, frank discussion.

In the religious controversy which the question of Federal aid to education has unfortunately aroused, assertions or implications have been repeatedly made which

hinder rather than help calm and clear discussion.

DOES NOT AGREE

As one who is deeply interested in the welfare of 125,000 pupils in Catholic schools in southeastern Michigan, I cannot agree with the assertion that the point at issue in the present apparent stalemate on Federal-aid bills under consideration—the provision of welfare services for all American children in schools they legally attend—has anything to do with the American doctrine of separation of church and state.

I do not say that all Americans are agreed on what is the American doctrine of separation of church and state. That doctrine can be defined only on the basis of the first amendment to the Constitution: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof."

There has been, especially in more recent years, sharp controversy about the exact meaning of the first amendment. It was only in 1947 that the Supreme Court gave a comprehensive definition of the establishment of religion clause in that amendment, interpreting it to prohibit all aid to religion or religious institutions—even when no discrimination is involved.

WIDELY CHALLENGED

That definition has been widely challenged on the grounds of logic, history, and accepted norms of legal interpretation. That challenge was voiced by the Journal of the American Bar Association and by eminent authorities in constitutional law.

It was taken up by a group of prominent non-Catholic religious leaders, and made their own by the Catholic bishops of the United States in their annual statement of November 21, 1948—in which they attributed this novel definition to the influence of secularist theories of public education and law. That definition stands now as a practical norm of procedure though it is by no means irreversible, as the history of the Supreme Court shows.

But this controversy on the first amendment, which is real and of far-reaching import, has nothing to do with the point at issue in the pending bills on Federal aid to education.

For the very first ruling handed down by the Supreme Court under its ominously extensive and utterly secularist definition of the American doctrine of separation of church and state explicitly upheld the legality of giving tax-supported welfare services—and in so many words, bus transportation—to the children of parochial as well as of public schools.

That patent fact ought to remove the issue of separation of church and state from the present discussion on Federal aid to education which centers precisely on the point of making the Federal-aid bill help to provide welfare services to all American school children.

TAX FUNDS QUESTIONED

Those who are interested in the health and safety of parochial school children cannot agree with the assertion that "State or Federal funds derived from taxes on the public for the benefit of school children should in principle be expended only through public schools."

We would agree if they said that these funds should be expended only through schools that serve a public purpose. For parochial and private schools which are recognized by law as fulfilling the requirements of compulsory school attendance do serve a public purpose and the people who exercise their constitutional right of educating their children in recognized church-related schools are part of the public who pay the taxes.

We do not agree with the assertion—or the implication—that legislators, or anybody else, may legitimately resent the interest of church groups in the way those legislators vote on questions that affect members of church groups as citizens. These same legislators do not seem to resent the interest of business groups in the way they vote, or of labor groups, or race groups, or secularist-minded groups like the National Educational Association.

CALLS ON LEGISLATORS

Why, by implication, should members of church groups be disqualified as citizens in the defense of their natural and legal rights, when the exercise or suppression of those rights is to be decided by vote? Certainly we do not want to see church lines and political lines run parallel in the United States. The one sure way to prevent that is for legislators to see that those lines are not drawn parallel in the legislation they propose.

It is sound Americanism to hold that what is good for religion—with no discrimination in favor of or against any church group in comparison with others—is good for responsible citizenship; and no American who cherishes his religion as a personal and a civic asset can, in good conscience, fail to make the only means he has at his disposal—his vote and his voice—count in the determination of American policy.

That is the stand which our Catholic principles support, as applied to church and society in the conditions that obtain in our country, and I hope that the Catholics of this diocese will maintain that stand in never-failing good will and fairness to their fellow citizens.

Tax Adjustments Are Vitally Needed by Small Business

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. DONOHUE. Mr. Speaker, at a meeting between representatives of the Smaller Business Association of New England and the Members of Congress from the New England area, on March 27, 1950, Mr. Charles W. Proctor, an outstanding attorney from my home city of Worcester, Mass., outlined an excellent analysis of the vital need for equitable tax adjustments in order for small business and private enterprise to survive in this country.

Mr. Proctor's very able presentation merits serious study and attention. I earnestly hope that every Member of this House will take the time to read his recommendations on this important subject:

NEED OF SMALL BUSINESS FOR TAX ADJUSTMENTS

Ladies and gentlemen of the Senate and Congress of the United States from New England, I am here as a representative of the Smaller Business Association of New England. My name is Charles W. Proctor. I am a Worcester lawyer, a former law-school teacher, and am chairman of the association's committee on taxation. This association comprises about 1,000 members, all of whom are employers; no one is eligible to join the association who employs over 50 people, although a few memberships have been renewed where the number of employees has slightly exceeded that amount. Roughly speaking, its membership employs 35,000 to 40,000 persons.

I want at the outset, if I can, to tell you what that means in regard to the status of most of the members.

When a man has first incorporated his business, his own personality and his own success are projected into corporate form, but it still is essentially a one-man enterprise, and rarely, if at all, do more than two or three men share in the establishment or the early stages of the running and conducting a business such as these.

That means that whether the business is mirrored in corporate form or otherwise, from its very nature it must grow to a size where it can support executive assistants and technical experts and others at the executive level, if it is to prosper, or even if it is to continue after the personal incapacity, death, or failure of its originators.

If we go back to early economic history this was the picture of all American business, and it was not until assistance was awarded, by tariffs on imports, by special grants to railroads, and other methods, that growth was stimulated, and we arrived at the point where we saw business multiply in our manufacturing and commerce in the hands of a self-perpetuating group, into which admittance was easy for a new man showing proper qualifications, and thence resulted in the dollar sustaining the social welfare of the entire world.

Most of us are old enough now to remember the man who started his own business and made it thrive. I have in my mind recollection of the origin of the Norton Co., of Worcester, a concern now selling its products all over the world and employing 8,000 to 12,000 persons. In its origin, it was started in a back yard by two instructors at Worcester Polytechnic Institute who had to continue teaching to support it, until they brought it along to its present, or nearly its present, high state of efficiency. Both of them died millionaires many times over.

Not so today. My clients do not expect any return to Government assistance or Government nursing, but are only asking to be relieved from Government amputation of their profits, that might properly be used to build up and make grow something for the future benefit of all mankind.

Speaking more specifically about House bill 4431, this is a bill to exempt corporations from paying taxes on the first $25,000 of their income while still in the hands of the corporate entity. If, as would be expected, it was paid out in dividends, the dividends would still be taxed. If it was distributed in unreasonably high salaries, the salaries would still be taxed, and if, as is our desire to make possible, it was returned to the corporation for the purpose of enlarging, developing, buying new machinery and other processes in business growth, the taxation might be delayed a little, but the net profits in the forms of taxation would, we think, be beneficial because the larger your tax base the more money can be collected, even on a smaller rate of taxation.

At the present time the businessman who has progressed no further than my clients, is sadly handicapped to finance capital expenditures as it is beyond his power to have the income to purchase them. The banks do not want him, except on terms of very short loans, and if he goes to the private lender for a long-term loan, the charges of interest that he must pay make it almost impossible for him to do business at all advantageously. He wants the privilege of answering his own capital needs by his own economy. Today he does not have it.

Most of you know what the first $25,000 on corporate income is taxed; that is 15 percent on the first $5,000; 17 percent on the next $15,000; 19 percent on the next $5,000; and on the next $25,000 he is taxed 31 percent, a higher tax than he pays in any other bracket

and apparently with the thought in mind of reaching back to the original $25,000, and leveling it off to a point where the total income tax of the smaller fellow will approximate the 24 percent demanded from the great incomes of corporate wealth.

No corporation is going to last indefinitely. The places of those of Nation-wide importance must be taken by the growing up of business and industry that is now in its infancy, and unless they are allowed to use their own money for development, that growth becomes stunted, and in many instances impossible, and in many more results in its actually dying out.

Forty-eight percent of the people employed in the United States are now employed by smaller businesses. The throwing of 5, 10, or 15 men out of employment by the failure of a small-business man is hardly noticeable. However, 98 percent of the businessmen in the country qualify as small-business men, and the failure of this 98 percent would provoke a major panic. The failure of any appreciable number thereof would destroy our economic security. I am not a raven croaking about hard times, but we need only to look across the water to see that our economy at the moment is bolstered up by the needs of Europe and Asia. When the time comes that they have returned to normal, unless the inhibitions now placed on the small-business men are removed to some extent at least, his growth will inevitably become stunted and in all probability will cease, and the free competition that has made our country great will be stifled, and we will become a country of cartels, where the business is firmly held in the hands of a few families, a condition toward which we are moving more rapidly than we realize. It is later than you think.

The question is often asked, "Assuming we remove this income from taxation, what have we to take its place?"

We believe that we have plenty to take its place, in the passage of H. R. 5064, or similar legislation. When Congress enacted the Internal Revenue Code, it, out of its wisdom, and we think properly, exempted charitable, educational, and religious institutions and cooperatives from liability to the income tax.

We do not quarrel at all from exempting from taxation of income derived by charitable, religious, and educational institutions from the conduct of their proper activities, and the plowing back of that income into the continuance and the extension of such work. We do object most vigorously to paying so large a tax to support the share that these corporations should pay when they invade the field of private business and are acting in competition with the ordinary business activities of the community. For example, Yale University recently purchased two of our largest buildings in the city of Worcester. The first building and the land on which it rests has an assessment of $70,000; and the second building and the land on which it rests has an assessment of $540,500. If we regarded the assessment value as the fair market value, which it is not, and the income therefrom as 5 percent, which is about fair, we would have a withdrawal from taxation of $30,525 a year on these two buildings alone. The chances are that these buildings are worth much nearer $1,000,000 taken together than the assessed value, and if that is true, it is safe to say that $50,000 a year net income is received from them, and is not taxed at all.

This illustration might be multiplied many times, and you have heard so much about it that I will not enlarge on it, except to say that every man who is familiar with real estate in his own community can point out at least a few illustrations of it nearly everywhere in the country, and it is not confined to real estate, but charitable corporations so-called are engaged in manufacturing, merchandising, and every business under the sun, which they never intended to enter at the time of their inception, but have encroached upon from the time the Internal Revenue Code made it attractive to them to engage in this form of enterprise.

In Massachusetts, property has been dealt with, we think wisely by providing an exemption for personal property as follows:

"Personal property of literary, benevolent, charitable, and scientific institutions and of temperance societies incorporated in the Commonwealth, the real estate owned and occupied by them or their officers for the purposes for which they are incorporated, and the real estate purchased by them with the purpose of removal thereto, shall be exempt from taxation."

Again, "Houses of religious worship owned by, or held in trust for the use of, any religious organization, and the pews and furniture, and, to an amount not exceeding $5,000 for each parsonage, parsonage so owned or held; but such exemption shall not, except as herein provided, extend to any portion of any such house of religious worship appropriated for purposes other than religious worship or instruction."

If a similar provision is made in the Internal Revenue Code and if cooperatives, which are really business corporations, are taxed as other corporations, we believe the loss of income derived from the tax on the first $25,000 of corporate profits will be more than compensated.

We also believe that the taxation of freight charges has imposed a tremendous burden on small industry without any corresponding benefit to the Government.

The Supreme Court of the United States and the Federal Trade Commission have held in no uncertain terms, that it is the duty of the manufacturer to use all its customers alike, and that under the Federal Trade Commission Act, this means that he must charge his customers the same amount of money for his product, and that the test is not what each pays, but the net amount the seller receives from each, and if the product is transported from the manufacturer to the buyer, the cost of transportation must either be paid by the buyer, or must be billed to the buyer after the manufacturer has paid it. (See *Federal Trade Commission* v. *Cement Institute* (333 U. S. p. 683)).

This means that there must be no leveling of prices in different parts of the country. Also we have seen horizontal freight increases allowed by the Interstate Commerce Commission from about 1914 to the present time. In heavy industry particularly, and in all industries to some extent the freight charges of the raw material to the manufacturer and freight charges of the finished product to the customer are becoming more and more an important part of charges to the customer, and with these increases the market of the manufacturer is becoming more and more circumscribed, and he can no longer meet competition from a manufacturer who is located more closely to either the place where the raw material is produced or to the place where the product is sold. In New England this fact is becoming more and more acute, and as the New England manufacturer can ship only to the west and southwest, freight rates alone are resulting in the curtailment of production as the local market is already well supplied, and additional cost for the purpose of taxation on the transportation means an additional cost of bookkeeping in small items to the shipper or customer as well as an additional cost in the freight bill itself.

We believe that if competition is to be kept alive our industries must be given a chance to compete and that this unnecessary and pernicious restriction on their orbit of obtaining raw materials and their outlets for sale should in justice and equity be removed.

Thank you.

You'd Discharge an Administration as Foolish as Your Government

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. JENISON. Mr. Speaker, now that the staggering one-package appropriation bill is before the House for debate, it would be helpful if every Member of Congress would read an editorial published recently in the Danville, Ill., Commercial-News, the largest newspaper in the Twenty-third Congressional District. The Commercial-News is one of the Gannett group of newspapers, all of them outstanding in their devotion to community service and the public welfare. In recent weeks they have performed a great public service in organizing what has come to be called the legion of obstinate men and women, dedicated to the task of halting the steadily mounting burden of Government expenditures.

Under leave granted to extend my remarks in the CONGRESSIONAL RECORD, I include the text of the Commercial-News editorial, as follows:

YOU'D DISCHARGE AN ADMINISTRATION AS FOOLISH AS YOUR GOVERNMENT

If you had so much money you had to have somebody handle it for you, and he ran through your pile, keeping you in debt and taking on more new long-range obligations, what would you do?

Well, you'd fire him if you found it out before it was too late.

Don't be surprised, you are such a person.

Whatever you do for a living and however much you earn, the Government handles one-fourth of your money. It takes a certain amount in withholding and income tax. The rest is collected from you by your grocer, butcher, and anyone else with whom you do business.

The Federal Government is running through it like an administrator who ought to be fired. It is keeping you in debt. The wage-earner of every average-size family owes $8,000 of it. It is increasing at a national rate of $5,500,000,000 a year.

And it is trying with all the wiles of artful propaganda to commit you to new long-range obligations of, Senator MCCLELLAN says, another $25,000,000,000 a year.

Isn't it time to be as obstinate with government as you would be with an administrator who handled it all?

Some people profess to think that what they spend is their money and what the Government spends is some other kind of money—the Government's.

But the Government has no money. All it can have is what it takes from you. It spends exactly the same kind of money that you do. And what it spends, you don't.

Whatever the combined efforts of everybody produce—industry, agriculture, business and labor—is all there is. That's the only place wealth can come from. And that's where Government has to go to get what it wants.

A year ago President Truman in his budget message told Congress:

"In a period of high prosperity it is not sound public policy for Government to operate at a deficit. A Government surplus at this time is vitally important."

But this year somebody—and another mammoth deficit—got to him. The spender's argument that he repeated goes something like this:

If American industry keeps on growing at the rate it has grown and no more by the year 2000 we'll have a trillion dollar national income and what would these debts in mere billions be then? So what are we afraid of?

Because this is the most if-studded fantasy ever dreamed up.

American industry has grown because it was free to plow back its earnings, and Americans were free to accumulate enough capital to start new businesses. Government spending has cut these freedoms to the bone.

That's only one if. The others are if we can achieve peace and sustain it, if we have no depression, if we don't have to support large areas of the world indefinitely, if, if, if.

Or conversely, if the national debt continues to grow at its present rate it will be $535,000,000,000 by the year 2000—more than $16,000 for every wage earner of an average-size family.

And what would the dollar be worth then? Well, it came down to 59 cents in running up the first $256,000,000,000 of the debt.

At that rate it would be lucky to be worth a dime by the year 2000.

The fact is that what Mr. Truman argued a year ago is the eternal truth today. With the highest rate of national income, the highest level of taxes, the burden of the largest debt, the most serious threat to our democracy, it is high time to balance the budget and return to sound financial footings.

Famine in China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of March 26, 1950:

FAMINE IN CHINA

There seems little doubt now that famine in China this year will be catastrophic. There is reason to believe, on the basis of fragmentary reports, that the situation will be more critical than at any other time in a half century. What the people of the United States should do and how they should go about doing it, will be questions of the gravest import that will have to be answered shortly. It is necessary, therefore, that our thinking be clear and our courses of action sound and straightforward.

The people of the United States have no quarrel with the people of China. They have been, and are, our good friends to the extent that their rulers will allow. Every humane instinct urges that we do what we can to alleviate their misery. That misery is very little of their own choosing. The Communist conquest of China is a relatively small factor in the causes of famine, although it has undoubtedly contributed. Recruiting of farmers and continuing shipments of foodstuffs to the Soviet Union certainly do not help the situation.

But the individual Chinese who will suffer hunger and die of starvation have had very little to do with the Communist conquest. We cannot make ourselves deaf to their appeal merely because we are at odds with the Government that has put itself into power over them. We should like to help, if we can.

The actions of the Communist Government, however, have cut us off from the normal channels of access to the people. Those actions have likewise made us mistrustful of the motives and methods of the Government itself. We cannot, therefore, simply give famine relief aid to the Chinese Communist Government with any confidence that it will reach the persons whom we desire to help. We certainly do not want to start feeding the Chinese Communist Army. And, by the same token, we do not want to put into the hands of that army and its political overlords a weapon that will be used for military and political purposes.

Unhappily, our previous experiences with aid to peoples in the Soviet-dominated sphere have taught us what to expect. We have no assurance that our help will extend to the points where it is needed, and we have reason to believe that any materials we supply will be relabeled and used for propaganda purposes and their origin concealed or falisfied. We wish, in a spirit of entire friendliness, to help feed the Chinese, but we certainly have a right to expect that this friendliness be made known to them and not distorted to our own permanent disadvantage.

This situation suggests its own solution. We can give famine relief in China, provided the Chinese Communist Government agrees that it be administered and distributed by Americans on the ground. They could be nonmilitary Americans—teachers, doctors, missionaries, and businessmen who could be called into that service. They could be persons whose basic attachment to the Chinese people was well established. Their function would be to see that food got to persons who really needed it and that they knew from whose hands the food came. If the Chinese Communist Government is really devoted to the welfare of the people it will readily accept such a proposal.

Clyde Doyle, Representative in Congress from the Eighteenth District of California, Reports to the People

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. DOYLE. Mr. Speaker, at all times the people who elect us in our respective congressional districts, should be kept as fully informed as possible, as to what we as their representatives in Congress are doing on the job. But the Eighteenth District of California, in Los Angeles County, which I have now represented for nearly 4 years, as I am serving my second term, is about 3,000 miles from Washington, D. C. Relatively few of these people ever travel here. And the cost of travel to me personally, by plane, to my congressional district, is at least $325, round trip, from Washington, D. C.

Another primary election comes in my native State of California on June 6, 1950. Cross filing is in vogue there. I receive many requests for information about my work here. Constituents write and ask about the work and duties and services of a Representative in Congress. They want to know. That is good for America. Only an informed democracy will endure. Also, those who are not in office, but want to be elected, naturally, are not in any position to know what the actual facts are, or what has been done by a Member of Congress during his term. Neither can the news channels, 3,000 miles away, be expected to publish the full text of a report of a Member of Congress. So, the only practical way to let the people really know is to make adequate report and see that as many as possible thus have opportunity to know the facts and truth.

Mr. Speaker, I have abiding faith and confidence in the sound judgment and patriotism of the people of the Eighteenth District and of all America, if and when they are in possession of the material facts.

The record shows that Members of this great Congress, in both political parties, for many years have regularly printed, at their own expense, and have forwarded to their constituents a report of their work. I am now doing so at my personal expense. I also made such report during my first term of 2 years as a Member of this great House of Representatives. In that report, amongst other things, I then said, and I now repeat:

Only an informed democracy can act intelligently, and only an intelligently acting democracy will endure.

I trust the following facts will help the people of the Eighteenth District, all of whom I have had the honor to represent for nearly 4 years in this Congress, to be much better informed about the work, labor, and services of their Congressman. Also, to be better informed about the functioning of Congress itself. Manifestly, time and space both limit me in these remarks and report:

To the voters of the Eighteenth Congressional District, California, I respectfully state:

1. Your Representative's offices at Washington, D. C., have been open daily, excepting Sunday and legal holidays, from 8:30 a. m. until at least 5:30 p. m., excepting a very few Saturday afternoons. Frequently it is open as late at 7:30 p. m., and sometimes later. I have four capable secretaries, two of whom are residents of Long Beach.

My district office in the post-office building in my home city of Long Beach has also been open regular hours daily, and I have also had a field secretary in the Eighteenth District in order to more promptly and adequately meet the service needs of the district. My wife has also worked right along with me at Washington, but is not on the Government pay roll.

2. Heavy daily mail received. It averages 75 to 150 first-class letters daily, all of which I have and do read. I have had this habit ever since I was first elected. I also try to personally answer every first-class letter.

I receive from 25 to 50 second- and third-class pieces of mail daily; from 10 to 25 newspapers and periodicals daily; from 8 to 30 printed reports, resolutions, petitions, circular letters, foreign periodicals, departmental announcements, etc.

3. I am a member of important Armed Services Committee. Upon the Eighty-first Congress opening, I was promptly elected a member of the House Armed Services Committee. Hon. Carl Vinson, Democrat, of Georgia, is the distinguished chairman of the committee. During my first term in Congress I was a member of the important Rivers and Harbors Committee. So I have had a great privilege in my committee

work. In my first term I was a subcommittee member on Invalid Pensions, Patents, Claims, Erosion, etc. In this Eighty-first Congress my subcommittees are: Military Reserve Components, Radar Fence, Wind Tunnels, Armories, Central Intelligence, Military Establishment, Reports to Congress, etc.

4. I am a member of the House Select Committee on Lobbying Activities. I am one of seven Members only, of all the House of Representatives, to be appointed to the Select Lobbying Committee. Congress first gave us $40,000 for our committee staff, investigators, and hearings. We have already had several public hearings and will have more. One of our duties will be to recommend ways and means, by which the Federal Lobbying Act should be amended and altered. In my first term in Congress I helped enact this Lobbying Act. I am now further studying its operations, as a member of this committee, which has such important Nationwide attention and interest. It is here regarded as an honor and responsibility to be chosen 1 of 7 members out of 435, to serve upon this committee. Witnesses of national reputation have already testified before us. It is a fact-finding policy committee.

5. I am a member of the special subcommittee on Military Hospitals. I was named as one of six members of the entire Armed Services Committee membership, both Democrats and Republicans, to make a bi-partisan field survey and report. This subcommittee made inspections and held public hearings in 10 of the congressional districts, where military hospitals are located. Some were represented in Congress by Republicans and some were represented by Democrats. Congress does not play "party politics" with the health or suffering of veterans or military dependents. This subcommittee, was authorized by the unanimous approval of the Armed Services Committee; both Democrats and Republicans. We were directed to travel by plane to Michigan, California, Texas, Florida, Georgia, Pennsylvania, and Massachusetts and have public hearings and make on-the-spot studies and gather pertinent facts for Congress to consider in the realm of military hospitals. I was honored by being asked to preside as chairman at the hearings at Long Beach and Oceanside, Calif.

6. I keep daily diary on floor of Congress. As in my first term, I have again kept a brief but interesting and important diary of unusual and significant events on the floor of the House. I make record of valuable data you do not find in the CONGRESSIONAL RECORD. Majority Leader MCCORMACK and Speaker SAM RAYBURN and others on both sides of the political aisle have commended me for it. They say it is the only one of its sort in existence. It takes work, of course. But it is valuable work.

7. I have appeared before several congressional committees. Each congressional committee acts essentially as a jury in a civil court. It hears testimony; receives documentary evidence; interrogates witnesses; makes findings and recommendations; files both majority and minority reports if there are both. Some of the appearances I have made before committees are as follows:

Ways and Means: To argue for removal of certain war-time excise taxes; as on transportation, telegrams, and so forth.

Appropriations: To argue for the Whittier Narrows Dam. Four million dollars were secured and is now actually available for this important flood protection to the Eighteenth District, which I represent.

Post Office and Civil Service: To argue for certain increases in pay to post-office clerks and for benefits to post-office clerks who were in the military services, H. R. 87; and also for the post-office supervisory positions bill, H. R. 4678, etc.

Judiciary: Tidelands oil bill. It was stipulated before the committee, that the testimony previously given in the other session of Congress should be considered as having been given again. So none of the California Congressmen were asked to, or did orally testify before the House committee of this Eighty-first Congress. But the Doyle bill, H. R. 1212, supporting the claims of the city of Long Beach and the State of California, was filed by me on January 10, 1949, only 7 days after this Eighty-first Congress convened.

Also, I personally interviewed the members of the subcommittee and the full Judiciary Committee, and furnished them photographs and charts promptly furnished me by the Long Beach Harbor Department and the city attorney's office. The judiciary subcommittee unanimously approved the theory of the bill approved by Long Beach city attorney and the attorney general of California. I have done all, and more than I have been asked to do by the city or the State. I also filed the first bill for the city and State in my first term in Congress and the California bill only had 11 votes against it in the House. The facts reveal that I, during my first term in Congress, discovered and forthwith reported to the city and State the jeopardy to its tidelands. I have continued to work diligently for both the city and State in this my second term in Congress. I have received a written commendation from the attorney general of California for my work for this bill.

I also personally appeared and argued before a judiciary subcommittee for the issuance of a national charter by Congress to the American Blue Star Mothers, Inc.; and also for a national charter for the Army and Navy Union.

Labor and Education Subcommittee: To invite the subcommittee studying the effect of Federal installations in school districts of the Nation, on the local public-school attendance and maintenance costs, etc., to come to Long Beach and hold one of its few public hearings. It did so. It also honored Long Beach by making the Wilton Hotel its headquarters at my request and invitation. At my invitation an appropriate and very fine public dinner was held in honor of this subcommittee of Congress at the Lafayette Hotel, Long Beach, Calif., through the splendid cooperation of school and other groups of interested citizens.

8. I have debated and spoken in Congress. I have either spoken or participated in debate, or extended my remarks in the CONGRESSIONAL RECORD more than 90 times. They can be easily found in the CONGRESSIONAL RECORD at your public library, high school, chamber of commerce, college library, where I have had the CONGRESSIONAL RECORD forwarded, so the most people could have access to it.

9. I have filed bills to help. A Congressman cannot always file a bill, for all the many objects he is asked to by well-meaning constituents. The legislative counsel is necessarily consulted first. Not all needs of constituents can be met by merely filing a bill. But it has been my pleasure to file and start through the complicated processes of department, subcommittee, committee, House, Senate subcommittee, Senate committee, Senate, President, more than 40 bills. They cover a wide variety of subjects. Some of the public bills I have filed are as follows:

H. R. 1212: To protect California tidelands for State ownership and control.

H. R. 1828: To incorporate Army and Navy Union.

House Joint Resolution 107: Adjudication of claims of waters of the Colorado River in the Supreme Court.

H. R. 2171: Slum clearance.

H. R. 2172: To amend the act to reclassify the salaries of postal employees, and to establish uniform procedures for computing compensation, etc.

H. R. 2173: Incorporate Blue Star Mothers.

H. R. 2292: Retired pay for Fleet Reserve and Fleet Marine Corps Reserve of World Wars I and II.

House Joint Resolution 155: For relief of farmers in storm-stricken areas.

H. R. 2542: Extension of veterans' benefits to disabled retired enlisted personnel of Army, Navy, Marine Corps, and Coast Guard, without impairment of benefit rights earned for service prior to World War II.

H. R. 2543: Repeal tax on transportation of persons and property.

H. R. 2544: Amend veterans' regulations to provide increased rates of compensation for certain veterans with specific service-incurred disabilities.

H. R. 2545: Reclassify assistant postmasters and other supervisory positions in postal field service.

H. R. 2644: Promotion of veterans of World War II in the field service of Post Office Department.

H. R. 2676: Authorize demonstration plants to produce potable water from sea water, etc., to increase national water resources.

H. R. 2939: Federal aid to education.

H. R. 3276: Exempt persons who served in wartime merchant marine from induction into armed services under Selective Service Act of 1948.

H. R. 4296: Give effect to the convention between the United States and Mexico for the scientific investigation of tuna.

House Concurrent Resolution 92: To strengthen and support the United Nations.

H. R. 5228: Give effect to the convention between the United States and Costa Rica for the establishment of an Inter-American Tropical Tuna Commission.

House Joint Resolution 277: Establish a National Children's Day.

H. R. 5758: Return to California copies of original documents and maps (Spanish-Mexican land-grant papers) deposited in National Archives.

H. R. 5786: Provide automobiles for veteran amputees.

H. R. 6058: Improve procedure relating to determination and priority of combat connection of disabilities, injuries or diseases.

H. R. 7097: Extension of pensions to widows and children of deceased World War II veterans to equal pensions extended to widows and children of World War I deceased veterans.

H. R. 7495: Terminate war excise tax on theater tickets, amusements, and recreation.

I have filed more than 10 bills for the benefit and relief of individuals who make claim against the Government as a result of injuries to person or to property or other losses or damage or detriment suffered by said individuals without their being at fault.

I want to report that, even though the law has to be necessarily strict—sometimes it seems supertechnical—even Uncle Sam has a heart. Remember the incident in March 1944, when two lovely girls were shot to death by a crazy soldier in uniform at Riverside Army base? Admittedly, he was not on duty when he killed them. Admittedly their behavior had been as perfect ladies. But, both had fond parents who had a right to expect that of their lovely daughters. So, one of my bills for the relief of the parents of these girls has been approved by the Budget for about $6,700 in one case and about $6,400 in the other.

But the ways of a private bill in Congress are long. Many times it takes attention in more than one session of Congress to obtain the relief asked for. Many times no relief can be had.

The Doyle resolution, House Joint Resolution 277, to establish a National Children's Day, is an illustration of opportunity for a Congressman to file a bill in a worthy cause. This arose from the activities of the people of Lynwood and South Gate, through their Kiwanis Club at Lynwood and the leadership of Rev. James Roberts, of Lynwood. The International Kiwanis Convention last

year approved Doyle, House Joint Resolution 277. Other Nation-wide and State-wide groups have approved it. Also, at least 20 other Members of the House have already filed exactly the same bill at my request. The Children's Bureau of the Federal Security Agency is interested in the subject matter, too. A subcommittee now has it before it.

10. I have had personal conferences with the President and Cabinet members. My duties as your Representative have made it necessary for me to have several conferences with the President of the United States, the Vice President of the United States, Department of State, Secretary of Navy, Secretary of Army, Secretary of Air Force, Surgeons General, Director of the Budget, Administrator of the Veterans' Administration, Postmaster General, Secretary of Agriculture, Attorney General of the United States, Maritime Commission, FHA, RFC, Federal Security Agency, Children's Bureau, Secretary of Labor, etc., etc.

These high officials and department administrators do not have their offices on the Hill where Congress meets. They are all either uptown or at the Pentagon Building; from 10 to 20 minutes by auto from my office. As Congress meets daily at 12 noon, we have to try to see these executive and administrative officers in between 9 a. m. and 12 noon; in addition to attending various committee meetings which occur almost daily, beginning at 9:30 or 10 a. m. and lasting until 12 noon.

11. The records show that I did all that could be done to keep the Long Beach shipyard in active status. A very, very brief account, and only a partial list of the important steps I took as your Congressman in this connection are as follows:

A. Within a few weeks after I took my seat as your Representative, I discovered that "the subsidence" or sinking condition at the navy yard had for several years previously worried the Navy very definitely—especially since the Harris engineers' report on subsidence to the Navy and the city dated 1945.

B. Had conferences with Bureau of Ships, Naval Operations, Secretary of Navy, regarding subsidence as relating to employment and operations level as a result of subsidence.

C. April 4, 1949, telegraphed official, Long Beach Chamber of Commerce, etc., as follows:

"Have just studied report of Bureau of Yards and Docks on subsidence, LB Naval Shipyard, February 1949. Please advise the earliest possible date whether or not board of harbor commissioners satisfied with present status of subsidence, studies, and survey, especially with reference to possible implications re LB Naval Shipyard availability, use and permanency. Also advise if local interests continuing employment of Stanford Survey.

"CLYDE DOYLE, *Member of Congress.*"

D. On April 21, 1949, received letter from Chief of Bureau of Ships, Washington, answering mine of prior date, which letter also said:

"In addition to this situation a problem exists which concerns the Long Beach shipyard alone. The land upon which this shipyard is built has been sinking at the rate of about a foot a year. Unless remedial action, for which funds are not now available, is taken within the near future certain areas and facilities of the yard will be unusable. Even after funds are made available and the planned bulkheads around the docks and piers are constructed there will result a decreased efficiency of operation. The planned reduced level of operations at the Long Beach Naval Shipyard takes these conditions into consideration."

And on May 12, 1949, I received further statement from the Chief of the Bureau of Ships, which letter also said:

"Last, but by no means least, the sinking phenomenon now occurring at Long Beach was given consideration. The Navy is extremely concerned with the sinkage at that yard. The fact that sinkage exists is real and cannot be ignored when the problem of work distribution is being considered. Without doubt this factor has adversely affected the employment at Long Beach, and will continue to affect the employment at that yard until the situation concerning sinkage is cleared up. Sinkage considerations do not affect the other yards."

E. I personally paid for and immediately mailed 5,000 copies of these letters to me dated April 21 and May 12; which letters included the language set forth in the above quotations.

F. Also telegraphed, telephoned, etc., Long Beach officials, community leaders, etc., warning of danger of subsidence.

G. Promptly obtained allocation of $4,500,000 to begin constructing dikes, walls, etc., to protect shipyard installations from damage or destruction by salt water resulting from subsidence condition.

H. Flew to Long Beach after Washington made arrangements for me to meet chairman of the on-the-site survey, Navy, re subsidence; I met with him in executive session; conferred with Admiral Klein and Navy engineers re subsidence.

I. Immediately met Long Beach Harbor Board, mayor, and city councilmen, and the city attorney on subsidence, etc.

J. Arranged another visit to Long Beach re subsidence at naval yard with Under Secretary of Navy Kimball; we met with harbor board and city councilmen.

K. Again traveled to Long Beach and met with harbor board and city officials re subsidence and Navy Yard Harris Report, Stanford Report, etc.

L. Obtained waiver dated September 30, 1949, by Attorney General of the United States to Navy, permitting volunteer reduction of oil production up to 30 percent by Wilmington-Long Beach area oil producers for the purpose of testing whether oil production principal cause of subsidence and immediately furnished oil producers and official Long Beach copies thereof.

M. Sent every oil producer in Wilmington oil field personally signed letter as Congressman, asking immediate cooperation in test by curtailing production because of subsidence. Harris Report on Navy had long previously advised major cause of subsidence was rate of extraction of oil.

N. Arranged personal inspection Long Beach Navy Yard by Secretary of Navy Matthews and again flew to Long Beach to be personally present.

O. Vigorously and vigilantly undertook to obtain maximum cooperation by official Long Beach and other oil producers to make test by voluntary reduction of oil production, up to 30 percent, to establish whether oil extraction was major cause of subsidence as claimed by Navy and the Harris Report dated 1945.

P. In every way cooperated with all persons or groups seeking retention of Long Beach Navy Shipyard as active yard and to obtain cooperation of city and other oil producers in testing cause of subsidence.

Q. Vigorously, continuously pressed claims of Long Beach Navy Shipyard for remaining "active status" to attention executive and administrative departments of Government, Washington, from very early date I first discovered that "subsidence" had been established and well-known as a hazard to the shipyard.

R. Helped arrange conference between Long Beach representatives and office of President of the United States at Washington, for presentation of Long Beach shipyard claims against making it reserve yard.

S. February 7, 1950, received final decision, Secretary of Navy, which, in part, said:

"Subsidence has affected vital areas of the yard. The rate of subsidence has not changed significantly within recent months and, in some important areas, the rate has accelerated somewhat.

"Due to the subsidence, dikes must be constructed around the piers, drydocks, and quay walls to protect the Government's investment for mobilization purposes. The initial construction of these dikes is to begin early in February 1950. Continued subsidence will require the extension of these dikes in later years. Despite the construction of dikes, however, subsidence may possibly continue to the point where no use could be made of the facilities in the event of mobilization, and the shipyard would have to be abandoned. * * *

"Please accept my assurance that only the necessity of irremediable circumstances has forced our reluctant decision."

T. Col. H. E. Hedger, chief engineer, Los Angeles County Flood Control District, on February 24, 1950, testified here in Washington before a congressional committee:

"The extensive subsidence which has occurred in the Long Beach Harbor area has resulted in a lowering in elevation of levees and bridges in the lower Los Angeles River channel near its outlet by as much as 4 feet and has reduced its flood carrying capacity by an estimated 25 percent. Consequently, the protection provided by the flood-control work constructed in the past by the United States Government and the Los Angeles County Flood Control District on this reach of the channel has been substantially diminished. * * * It justifies work in the amount of $1,000,000."

Thus you will see that the Honorable Secretary of the Navy, in his final decision to your Congressman, dated February 7, 1950, gave the same cause for inactivating the Long Beach Naval Shipyard as the distinguished Los Angeles flood-control engineer gave for asking $1,000,000 to correct a condition which has developed immediately adjacent to Terminal Island, on which the shipyard is located, and which condition was described as "the extensive subsidence."

U. I, personally, spent hundreds of dollars in transportation, communication, and other expenses in my effort to keep the yard in active status.

I have not been advised by any person, as to any manner in which a Congressman can keep Terminal Island from sinking. Nor have I been informed of any highly reputed or nationally known engineer who has yet signed his name to a report on subsidence declaring that the Harris Report of 1945 was wrong; or, that the Secretary of the Navy's final opinion, dated February 7, 1950, to me as your Congressman, was ill-founded.

12. I have served the Eighteenth Congressional District well. Every request for information, for service to local committees or local city officials, chambers of commerce, Red Cross, labor organizations, schools, colleges, trade organizations, veterans organizations, patriotic societies and groups, civic groups of all types, professional and business interest groups, fraternal lodges and groups, manufacturing concerns, etc., has been promptly attended to and serviced as far as I know. No person or group, has been denied my service on account of political affiliation, or, on account of race, creed or color. My privilege and honor is to represent the interests of all the people of the Eighteenth District of California, for this, my second term.

13. I have given weekly, nonpartisan, public-service radio broadcasts. At my own expense, each week for several months, through the courtesy of stations KFOX and KNOB, Long Beach, I have conducted a public service radio broadcast by "platter" from the radio room here at your Nation's Capital. The stations have not charged me one cent; but, I have personally paid the cost of the radio "platter" and air express which is about $5 for each "platter" each week.

The fact that both Long Beach radio stations informed me that they had received no complaint about anything I had said on their public service broadcasts, for the first period of 3 months and then both invited me to take another 3 months free time, gave evidence that I had not imposed upon their invitation to talk nonpartisanly.

And, because I am to continue my nonpartisan public service talks over KNOB for a few weeks yet, I list those dates here, KNOB, dial 103.1, FM station channel 276: Friday nights, May 5 and 19, 7:15 p. m.; June 2, 16 and 30, 7:15 p. m.

14. I have competitive examinations for candidates for both Academies. As in my first term as your Represenative, I have again required a civil-service competitive examination be taken by all applicants for either Annapolis or West Point. These examinations are strictly competitive and open to all qualified lads, regardless of race, creed, or color, and also regardless of the political registration of their parents, relatives, or sponsors. I also require a written statement of about 2,000 words by each applicant as to why he chooses a military career. I notify all applicants and their parents that I will not authorize any lad to take the competitive examination unless he has previously declared his intention to make the military his career. This, I believe fair to the taxpayers. I believe it not fair for a lad to get his 4 years of free schooling and then promptly resign, without giving value received to the taxpayers and to his country.

15. My attendance in Congress and committees is prompt. My attendance and work record on both my committees and in Congress will speak up that I have been on the job for you. During official absences from the floor of Congress on account of my subcommittee work, I have directed and authorized pairs as far as possible. This is the only procedure provided in Congress. There is no vote by proxy in Congress; although there is in committee. Absences on quorum calls do not affect or relate to voting, if a Member is present to vote. Many times, Members continue their executive or public hearing attendance in committee, even though the bells ring for a quorum. Sometimes a quorum call is made by some Member who, at the moment, is tempermental. Also, quorum calls are often made to filibuster for time. No bill is being voted upon as a result of a quorum call. A quorum is not a call to vote. It is not a roll call vote.

Sometimes, the quorum call is a matter of political party stalling for time; or, it may be that they do not want any vote on the particular bill or amendment thereto until the next day or so. Thus, on Tuesday, April 4, when the Special Subcommittee on Military Hospitals, of which I am a member, was at Murphy General Hospital in Massachusetts, holding public hearings and making a survey and study upon the unanimous instruction and direction of the entire Armed Services Committee of the House, the same as we had done previously at Long Beach Navy Hospital and others in Mare Island, Calif., Oceanside, Calif., Corpus Christi, Tex., Jacksonville, Fla., Augusta, Ga., etc., the New York Times' Washington special correspondent for Wednesday, April 5, in writing about the general debate on the omnibus appropriation bill said:

"It was 2:15 p. m. before debate got under way today as business of the House was slowed down by three quorum calls; all sought by Republicans and each of which took 25 minutes."

These three quorum calls happened while we were busy on official congressional assignment in Massachusetts. We did not miss actual votes. We only missed quorum calls—which had no connection with votes; there were no roll-call votes. The hospitals subcommittee had planned to hurry to Pennsylvania and Massachusetts the week before; but we remained in Washington so as not to miss any vote in connection with ECA.

This illustrates, how impossible it is for important subcommittees of Congress to promptly function without missing some quorum calls; and also, it is likewise impossible without missing a few actual votes if Congress calls them. But there is no other way provided.

When the same hospitals subcommittee left Congress for Michigan, California, Texas, Florida, Georgia, the members resultingly missed some votes; but under such circumstances, Congressmen on official subcommittee assignments, cannot be two places at once.

But, it is not here considered a neglect of congressional duties for Members of Congress to fulfill necessary official committee assignments on subcommittees; even if it results in the members of that subcommittee being personally absent when some votes are called for. Members are not absent unnecessarily.

16. I write Your Congressman Reports, a Washington newsletter. As during my first 2 years as your Representative, I have again personally written the text of my Washington newsletter, Your Congressman Reports. In it I have again endeavored to give you friends at home, glimpses and information about Washington and the Nation not likely to be had otherwise. Many folks write in and ask me to put their names on the free mailing list to receive it whenever I write it. There is no charge for it to anybody. I personally pay for its printing and send it out every 2 or 3 months. It is not a political or partisan letter.

17. I fought for California against Arizona, for Colorado River water for California. I early filed House Joint Resolution 107, the Doyle bill. It asks for adjudication in the United States Supreme Court of the legal differences between California and Arizona on the important subject of diversion of waters from the Colorado River between California and Arizona. I have worked diligently with my colleagues from California, regardless of political party, for the protection of California's share of this vital water. I have also worked with the official representatives of the State of California and of the metropolitan water district, Colorado River Association and all agencies and committees with this common objective. I have received much commendation for my activities in this regard.

18. I was bipartisanly selected by my colleagues from California on the West Coast Committee representing California, Oregon, and Washington in the matter of maritime matters and west coast shipbuilding. Also, I was named as one of the Congressmen from California, bipartisanly, to represent the interests of California and other Western States at the time of the freeze in southern California, Nevada, and other Western States, for the purpose of devising ways and means of aid, if necessary, in relief to the farmers and agriculturalists in these Western States.

19. The record clearly shows I did everything possible to keep the Long Beach naval hospital open (as a military, or as a veterans', or as a joint-use hospital), but the Congress, in which I am your Representative, is only the legislative branch of government. It does not have jurisdiction or control of the executive branch, under which the Department of the Secretary of Defense is classified. It was this Department of administrative government, which issued the order closing the Long Beach Naval Hospital and several other military hospitals in whole or in part, scattered over the States of Michigan, California, Texas, Florida, Georgia, Pennsylvania, Massachusetts, New Hampshire. Our great American Constitution, expressly provides for the separation of the executive, legislative, and judicial departments of Government. Furthermore, Members of Congress could not possibly either qualify or find time, with their legislative duties, to try to also administer the many laws which they find it necessary to enact.

Long Beach Naval Hospital was only one of several similarly included in the closing or inactivation order by the Secretary of Defense. I immediately protested on the meritorious grounds that there was not yet any showing that the order was either economical or in the best interests of national defense. Promptly, the Secretary of Defense communicated to me his claimed justification. Promptly, I refused to accept it as sufficient justification. Promptly, several of my colleagues, both Republican and Democratic Members of the House Armed Services Committee, joined me in asking for appointment of a subcommittee to investigate the effects of the closing order. The hospitals involved were in congressional districts represented about equally by Republicans and Democrats.

The House Armed Services Committee unanimously authorized appointment of the subcommittee of which I have been serving as a member and with which I came to Long Beach, where there was held public hearings at the hospital and at the Long Beach City Hall. The subcommittee had first gone to Michigan, represented by a Republican Member of Congress and then to Mare Island, Calif., another district represented by another Republican Member of Congress. It is a bipartisan committee, with equal numbers of Republicans and Democrats on it.

During our survey and public hearings, we have been excused from attendance of committees of Congress. There is no other way provided whereby congressional committees can function, excepting that they be excused from their Washington duties temporarily and gather the facts and make report back as early as practical. Within 24 hours, after the closing order was announced I conferred with the Defense Department, the Secretary of Navy, the Administrator of the Veterans' Administration; the Bureau of the Budget, the Surgeons General of the Army and the Navy.

Through the courtesy of Representative RIVERS, South Carolina, subcommittee chairman, I was named to act as presiding subcommittee chairman at the public hearings at Long Beach and at Oceanside, Calif. This subcommittee, was charged with ascertaining the facts and making findings, conclusions, and recommendations with regard to what the congressional policy should be in matters of military hospitalization. At this writing, the future use of Long Beach Navy Hospital is not fully determined by the administrative departments of the Federal Government concerned with its possible use.

I have vigorously and vigilantly opposed the closing on the following grounds, amongst others:

A. It would compel military personnel dependents who needed general hospitalization to travel too far at their own expense to make it practical for them to obtain prompt, adequate, reasonable hospitalization.

B. It would force too many military personnel dependents into private hospitals—whereas, all private hospitals in the Long Beach area are already overcrowded and the additional expense would also be prohibitive.

C. It would reduce the number of available beds for veterans in the immediate Los Angeles-Long Beach area, and there is already a shortage of such beds.

D. It would remove the general hospitalization too far away from the retired military personnel in the Long Beach area, and many hundreds of retired military personnel have admittedly purchased homes, or, are now buying homes in the Long Beach area, in order to take advantage of the Navy hospital.

E. It breaks faith with "inducements" frequently made by the enlisting officers of the

military, in representing that their dependents would have necessary hospitalization.

F. It removes many patients from the fireproof, modern portion of the Long Beach Navy hospital at Oceanside, Calif., and other hospital facilities which are not fireproof.

These are just a few of my reasons for vigorous opposition to this administrative order.

20. I have kept faith with the electors of the Eighteenth Congressional District. I am a registered Democrat. I was such at the time of my first election, and again for my second term. This fact was adequately publicized. I was a delegate to the Democratic National Convention from the State of California. I voted for the national platform of the Democratic Party at the national convention. I supported President Truman and Vice President Barkley for election and campaigned for them. The publicity for me specified that I was a registered Democrat. I then frequently stated, and I again state that I think the cross-filing system in the State of California dissipates and materially weakens the obligation of political party responsibility. My record as your representative clearly shows that I have voted to support the principles enunciated in the National Democratic Party platform. I had frequently declared that I considered the platform of a political party something to fight for after election as well as something to speak for during a political campaign.

21. I have promptly supplied every request for printed material or information about Government wherever possible. I had CONGRESSIONAL RECORDS, Government pamphlets, directories, and reports placed in public libraries, public colleges, high school libraries, etc., for people's use because I realize that many more people wanted access to the CONGRESSIONAL RECORD, Congressional Directory, and other Government pamphlets and booklets than just a few who could be supplied by mail. I had forwarded to the public libraries and public colleges and high school libraries, in some cases regularly and in other cases as often as possible, copies of this valuable reference, documents, and books. This applies to the libraries in the communities of the Eighteenth Congressional District which I represent. Also, I have had mailed direct to as many people in the Eighteenth Congressional District as I had supply for the valuable publications of the Department of Agriculture, Department of the Interior, and the Children's Bureau, the Department of State, etc., so that the maximum number of citizens could be better informed about the operations and functioning of the Federal Government.

The Congress annually appropriates money for the printing of such documents and pamphlets and booklets for experience has proven by the demand of the people of the country that they find this printed material of value and practical use to them. For instance, every Congress for more than 20 years has appropriated money for the printing of valuable booklets, commonly described as the "baby books." This applies to both the Republican and Democratic sessions of Congress.

No free seeds have been furnished to Members of Congress for distribution from the Department of Agriculture, or otherwise, since the year 1923.

Literally thousands of requests for specific governmental pamphlets, bills, reports, resolutions, and publications have been received from residents of the Eighteenth Congressional District. These have been promptly attended to and promptly complied with wherever the printed material was available. My Washington office is so organized that request for such information is promptly dispatched. I have also forwarded to high schools and colleges in the District governmental pamphlets on such subjects as the history of the flag, history of our Government, the United States Constitution, the Declaration of Independence, etc.

22. My comprehensive voting record speaks clearly of my work and votes as your Representative. The following is a list of my votes on many of the major issues of the Eighty-first Congress to the date of this report, to wit: April 5, 1950:

On the following bills relating to international affairs, I voted "aye":

S. 1209: Authorizes continuance of Marshall plan (Public Law 47).

H. R. 4830: Finances European recovery program; aid to Greece and Turkey, and relief of occupied areas (Public Law 327).

H. R. 1211: Restores and extends reciprocal trade agreements (Public Law 307).

H. R. 4567: Amends Displaced Persons Act to remove discriminatory provisions.

Senate Joint Resolution 36: Special contribution of $16,000,000 to the UN to aid DP's in Palestine War (Public Law 25).

H. R. 5895 (S. 2388): Military aid to western Europe (Public Law 329).

H. R. 5594, H. R. 5615, S. 2197: Point 4 program; technical and industrial aid to underdeveloped countries.

S. 1250. Extends Institute of Inter-American Affairs to continue cooperative health, education, agriculture, and other projects to improve living standards (Public Law 283).

S. 2093, H. R. 4708: Revises UN Participation Act to authorize appointment of Deputy United States Representative; fixes salaries of representatives and gives them ambassador status (Public Law 341).

H. R. 4406: International Claims Settlement Act. Establishes machinery within Department of State to carry out terms of settlements with former enemies. Yugoslavia, $17,000,000 (Public Law 455).

H. R. 2785: Extends for 1-year period for use of United States contribution to International Children's Emergency Fund. Makes available until June 30, 1950, $17,300,000 balance of $57,700,000 total United States contribution (Public Law 170).

H. R. 4332: Permits National and State banks in Federal Reserve System to deal in securities of the International Bank for Reconstruction and Development (Public Law 142).

Senate Joint Resolution 3: Provides for use of World War I debt payments by Finland for educational and technical instruction and training in United States for citizens of Finland (Public Law 265).

H. R. 7797: Foreign Economic Assistance (the roll-call vote in the House was—yeas 287 to nays 86).

On the following bills relating to national defense and internal security, I voted "aye":

H. R. 5632 and S. 1843: Unification of Armed Services. Defines powers of Secretary of Defense (Public Law 216).

H. R. 2216: Creates post of Under Secretary of Defense to relieve Secretary of administrative burdens (Public Law 36).

H. R. 2663: Defines authority and powers of Central Intelligence Agency and improves its administration and operation (Public Law 110).

H. R. 1437: Fixes the composition and strength of Army and Air Force.

H. R. 5007: Military pay increases. $303,000,000 (Public Law 351).

H. R. 2546: Authorizes construction of radar air-warning and control installations (Public Law 30).

H. R. 1741: Authorizes establishment of guided missile proving ground for testing rockets, etc. $75,000,000 (Public Law 60).

H. R. 3434 and S. 1267: Authorizes construction of supersonic wind tunnel (Public Law 415).

H. R. 4007 and S. 1505: Experimental submarine program (Public Law 213).

H. R. 4080 and S. 857: Establishes uniform code of military justice for all branches of the Armed Services and Coast Guard.

On the following bills relating to governmental reorganization, I voted "aye":

H. R. 2361 and S. 526: Authorizes President to reorganize Executive Departments in line with Hoover Commission Report re Welfare Department, Labor Department, Post Office Department, National Security Council, Civil Service Commission, Maritime Commission, Commerce Department, unification of Armed Services (Public Law 109).

S. 1704: Authorizes reorganization of State Department (Public Law 73).

H. R. 4754: Establishes the General Services Administration including Federal Works Agency; Bureau of Federal Supply and the Office of Contract Settlement from Treasury; War Assets Administration and Archives (Public Law 152).

H. R. 1689 and S. 498: Salary increases for Government executives (Public Law 359).

On the following bills relating to national economy, I voted "aye":

H. R. 1731: Extends rent control for 15 months from March 31, 1949 (Public Law 31).

H. R. 1660 and S. 547: Extends to September 30, 1949, the President's authority to make voluntary agreements affecting transportation, inventory control, speculative trading in commodities affecting cost of living, and for allocation of key materials in short supply (Public Law 6).

H. R. 1661: Extends to June 30, 1951, the President's authority to control exports (Public Law 11).

H. R. 3662: Authorizes $40,000,000 appropriation for sites and planning for new Federal public buildings, and $30,000,000 for modernization of existing structures (Public Law 105).

S. 2116 and H. R. 5739: Authorizes Federal aid to States and local governments for advance planning of public works (Public Law 352).

H. R. 1161: Permits national banks to become State banks.

H. R. 2734: Tightens antitrust laws to prohibit acquisitions or mergers which lessen competition or tend to create a monopoly.

On the following bill relating to national economy, I voted "no":

H. R. 2222 and S. 1008: Legalizes basing point price system when not in conflict with antitrust laws.

On the following bills relating to social security, health, and welfare, I voted "aye":

S. 1070: Housing Act; $1,000,000,000 in loans and $500,000,000 in grants to State and local authorities for slum clearance; $300,000,000 in Federal aid to farmers for construction and repair of farm dwellings; research program to stimulate home construction and cut building costs; 810,000 public housing units to be built in 6 years (Public Law 171).

House Joint Resolution 228: Authorizes expenditure of $75,000 to President's Committee on National Employ the Physically Handicapped Week (Public Law 162).

House Joint Resolution 212: Appropriates $1,500,000 emergency funds for crippled children, in addition to regular annual grants to States (Public Law 42).

H. R. 5208, S. 1407: Authorizes 10-year program for rehabilitation of Navajo-Hopi Indian Tribes. Ninety million dollars. (Vetoed October 17, 1949.)

S. 1184: Permits private industry to construct rental housing on or near military installations and authorizes insurance of $500,000,000 additional mortgages (Public Law 211).

H. R. 4846, S. 247: Establishes National Science Foundation.

H. R 3829: Continues for 1 year Federal aid for schools with war-swelled populations and for education of children on Federal reservations (Public Law 306).

Senate Joint Resolution 109: Extends for 60 days authority to insure loans for repairs, renovation and low-cost housing, and authority to insure mortgages on multiple dwelling projects; increases by $500,000,000 insurance authority under title II of National Housing Act (Public Law 278).

On the following bills relating to agriculture, I voted "aye":

H. R. 5345, S. 1971: Revises price-support system (Public Law 439).

H. R. 3699: Improves and makes more effective the Federal Land Bank system to aid farmers (Public Law 433).

H. R. 2682, S. 900: Revises charter of Commodity Credit Corporation to provide adequate crop storage facilities and for exchange of surplus commodities for strategic and critical materials (Public Law 85).

H. R. 2101, S. 913: Authorizes the Secretary of Agriculture to make production disaster loans to farmers from $44,000,000 revolving fund balance of the Regional Agriculture Credit Corporation, which was abolished (Public Law 38).

House Joint Resolution 112, House Joint Resolution 136: Emergency appropriations for relief loans to farmers whose crops were destroyed in western blizzard (Public Laws 3 and 5).

H. R. 2960: Authorizes the REA to make loans for construction of rural telephone lines (Public Law 460).

H. R. 5738, S. 1962: Provides for national marketing quota and acreage allotment for cotton production (Public Law 272).

H. R. 2514: Authorizes loans by Farmers Home Administration to homestead entrymen (Public Law 361).

House Joint Resolution 327: Appropriates $1,750,000 for control of pests and plant disease (Public Law 215).

H. R. 5856, S. 653: Increase minimum wage to 75 cents an hour (Fair Labor Standards Act of 1949) (Public Law 393).

H. R. 3191, S. 1287: Liberalizes compensation benefits to Government employees injured or killed in line of duty (Public Law 357).

H. R. 3005, S. 352: Increases travel allowance for civilian Government employees (Public Law 92).

H. R. 858: Clarifies overtime-pay provisions of Fair Labor Standards Act, and outlaws retroactive claims (Public Law 177).

H. R. 2032 (on Wood substitute, May 3, 1949, voted "nay"): Repeal of Taft-Hartley Act, on a motion to recommit the Wood substitute (H. R. 3228) voted "aye."

On the following bills relating to veterans, I voted "aye":

H. R. 4617: Liberalizes pensions to veterans, widows, and children; $67,000,000.

S. 2115: Provides automobiles for crippled veterans; $16,000,000 (Pocket vetoed, Oct. 31, 1949).

S. 266: Permits payment to veterans of retroactive benefits withheld during hospitalization (Public Law 194).

S. 811: Extends time for filing in certain cases, for pensions and compensation (Public Law 195).

H. R. 5598: Raises from 75 percent to 100 percent the rates of payment for presumed service-connected disabilities (Public Law 339).

H. R. 4692: Extends term of certain patents of persons who served in World War II.

On the following bills relating to civil rights, I voted "aye":

H. R. 4453: Establishes a permanent Fair Employment Practices Commission.

H. R. 3199, S. 97, S. 1727: Bars poll tax as qualification for voting.

H. R. 4963: Strengthens administration of justice by creating new Federal judgeships (Public Law 205).

H. Res. 298: Creates a select committee to investigate and regulate lobbying activities.

On the following bills relating to natural resources, I voted "aye":

H. R. 5472: Authorizes improvements to rivers and harbors and the construction of flood-control projects.

H. R. 165: Expands Folsom Dam project as step in development of American River Basin, Calif. (Public Law 356).

S. 790: Gives Federal approval to compact between States along Colorado River (Public Law 37).

H. R. 163: Authorizes construction of irrigation canals to serve 250,000 acres in Sacramento Valley as part of Central Valley project, Calif.

H. R. 4151: Gives Federal approval to compact between States along Arkansas River (Public Law 82).

H. R. 3615, S. 851: Encourages construction of public and private housing in Alaska by making available $15,000,000 through FHA (Public Law 52).

S. 855: Authorizes 5-year program of public works for development of Alaska. $70,000,000 (Public Law 264).

H. R. 2296: Increases Federal aid to States in cooperative programs for forest fire prevention (Public Law 392).

H. R. 1694: Limits Federal outlay for irrigation maintenance to self-liquidating projects (Public Law 335).

On the following bill relating to natural resources, I voted "no":

H. R. 1758: Clarifies the Natural Gas Act to exempt independent producers and gatherers from regulation by Federal Power Commission.

On S. 2246: Housing for moderate income families, I was paired "aye". I was absent from the floor on account of official subcommittee inspection of military hospitals.

At this date, April 6, 1950, the omnibus appropriation bill is being debated on the floor of Congress. We have already taken about 4 days for such debate and indications are that there will be further debate upon our return to Congress after the House Easter recess. This is the first time in the history of Congress that there has been an omnibus appropriation bill. The sincere effort has been to coordinate all departmental budget estimates and place them before Congress in one bill.

As I write this report to you, I have in my hands House Document No. 405, Eighty-first Congress, second session, entitled "The Budget of the United States Government for the fiscal year ending June 30, 1951." This volume consists of 1,198 printed pages of statistical tables of finances relating to this omnibus budget, with explanations thereof.

Answering the many inquiries which have come to me about the budget dollar for the year 1951. I report to you that this budget dollar comes from the following sources of income: Direct taxes on individuals, 41 cents; direct taxes on corporations, 23 cents; new taxes and borrowing, 12 cents; excise taxes, 18 cents; customs and other taxes, 6 cents. And this same budget dollar for 1951 will go, as follows: National defense, 32 cents; veterans, 15 cents; international, 11 cents; interest on debt, 13 cents; social welfare, health, security, 6 cents; other, 23 cents.

Of the $13,500,000,000 total for national defense, $4,100,000,000 will be spent for Army; $4,100,000,000 for the Navy; and $4,400,000,000 for the Air Force; $900,000,000 for various activities supporting defense, including primarily the strategic stock pile costing $650,000,000.

The expenditures for international programs in 1951 will be at least $1,300,000,000 less than the expenditures of 1950.

The 6 cents to be spent for social welfare, health, and security amounts to $2,700,000,000 and is divided as follows: Assistance to the aged, the blind, dependent children (to 2,700,000 old-age survivors insurance trust fund participants, etc.; the average public-assistance benefits for the aged are $45 a month, whereas, old-age insurance benefits are about $26 per month), $1,401,000. Railroad retirement payments to trust account (this now amounts to nearly $2,500,000,000 from which about 365,000 people will draw $350,000,000 in retirement benefits during 1951), $594,000,000. Promotion of public health (causes and cure of cancer, tuberculosis, arthritis, communicable disease, hospital construction, financial help to State and local governments) $432,000,000. Crime control and correction (FBI, narcotics control, United States district attorney offices, Federal prisons, etc.), $99,000,000. School lunch program (to about 7,000,000 American school children), $83,000,000. All others, including health, education, and welfare services to Indians and grants to States for rehabilitation of physically handicapped, etc., $105,000,000.

The 32 cents of each tax dollar spent for national defense totals 71 percent of each tax dollar and includes $6,100,000,000 for veterans; $5,600,000,000 interest on the public debt, which largely arises out of past or future war problems; and $4,700,000,000 for international relations, including $91,000,000 assistance to the Philippines, $239,000,000 for conducting foreign affairs, $81,000,000 foreign economic development, $645,000,000 for foreign military assistance.

So that only 29 percent of every tax dollar remains available for all other governmental expenses and obligations, including natural resources, agriculture, education, housing, transportation and communication, commerce and industry, labor and finance, general government, social welfare.

The 23 cents of each tax dollar to be expended includes all costs of general government, such as legislative and judicial functions, $81,000,000; weather bureau, immigration control, etc., $170,000,000; interest on refunds of receipts $100,000,000, etc.

23. The reorganization of Government plans are progressing. The commonly named Hoover Commission recommendations on organization of the executive branch of government, established by Public Law 162 as a bipartisan report, looking to more efficiency and less expense, is making real progress. The final report of the Commission was filed on June 12, 1949. More than 150 bills relating to the recommendations of the Hoover Commission were introduced during the first session of this Eighty-first Congress; it included only bills of fairly general application.

Fifteen of these bills were enacted into law. Seven passed either the House or the Senate. Nine more were reported out from committee. The new laws relating to and arising out of reports of the Hoover Commission are as follows: two as to general management; five as to personnel management; two as to the Office of General Services; two, National Security Organization; one each to Foreign Affairs, Post Office Department, Labor Department, Interior Department.

A most significant new law is the Reorganization Act of 1949, which granted the President of the United States power to resubmit reorganization plans to the Congress, which plans, however, were subject to disapproval by either House within 60 days. Six out of the seven presidential recommended reorganization plans submitted to the first session of this Eighty-first Congress were put into law and effect. It is now estimated that at least 25 percent of the actions required under these six reorganization plans put into law have been accomplished. The Citizens Committee for Reorganization of the Executive Branch of the Government estimated in early October 1949 that at that time about 20 percent of the Hoover Commission's recommendations had then been accomplished. I have voted for these reorganization plans to date, as recommended by the President of the United States, who continues to submit reorganization plans to Congress in fairly prompt and regular fashion.

24. I have rendered important personal service to hundreds of individuals upor their request. Requests for aid or assistance of many sorts come to my office daily from present and former members of the armed services; civilian employees of the Government

in connection with Government retirement, employees compensation, applications for new employment or for transfers of employment; persons requesting assistance in locating missing relatives and persons; immigration and passport problems; requests for assistance in presenting hearings on appeal in Government matters; assistance to business and industry in making contacts with appropriate governmental departments for information or opportunities to submit bids and offers for supply of materials in competitive bidding, etc., etc.

I have handled more than 500 cases of personal service to individuals who have applied for and need help in relation to their problems with Government departments. I have facilitated and obtained more than $150,000 for more than 80 applicants for Government retirement refunds, employees compensation, and other claims of the Government.

25. I have been pleased to receive calls and visits at my office of many California residents. Even though my congressional office is more than 3,000 miles away from the Eighteenth Congressional District, hardly a week has gone by but that one or more residents of the Eighteenth Congressional District have honored me by their personal call upon me and visit to their Congressman's office. On many occasions it has been the pleasure of Mrs. Doyle to show them around the Capitol and the Washington area because I find it impossible to do so when Congress is in session on account of my heavy committee and floor work. But every visitor has been most gracious and is most welcome. I cordially invite anyone from the Eighteenth District to favor me by calling upon me whenever you come to the Washington area. Mrs. Doyle and my secretaries and I will all be happy to see you. More than 750 visitors have thus honored my office during this Eighty-first Congress.

I shall visit the people of my congressional district when possible. I have not been able to return and visit my relatives at Long Beach excepting during the short congressional recess. The distance of 3,000 miles and the expense of traveling frequently makes it prohibitive. Furthermore, even in a campaign year, your Congressman feels it is his first duty to be on the job at Washington. Of course, old, experienced Members of Congress say that if you are not reelected, you can't serve your people and the district. Besides I believe it important that the voters have opportunity to see and hear candidates discuss the campaign issues of the day and pronounce their political beliefs and platforms. This is the American way. It is the best way known to man. It is the reaffirming of the democratic processes. It injects strength and virility into our American way of life. It energizes considered opinion. It activates thinking and analysis of individual, group, and national destiny.

In addition to the factual information I have given you in this report, I have endeavored to so write it that you would therefrom obtain at least some glimpse or look at some of the steps taken and problems met by your own Congressman. I pay for the printing of this report to you. It is, of course, true that Congress votes your destiny; but you, as individual Americans, vote for your respective Representative in Congress. Therefore, the voters of America shape their own destiny when they vote for Members of Congress.

I respectfully reaffirm and restate my belief and position as your Representative in Congress, to-wit: That all patriotic Americans must vigorously cooperate in vigilant endeavor for a safe and sound America in a world at peace.

I have the honor to be

Your Representative in Congress,

CLYDE DOYLE.

The Short and Long of It

EXTENSION OF REMARKS

OF

HON. LEONARD IRVING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. IRVING. Mr. Speaker, under permission to extend my remarks in the RECORD I desire to include a speech in reply to the earlier oration of the gentleman from Missouri [Mr. SHORT], that I would have delivered on the floor of the House today, April 6, had it been possible for me, at that late hour, to secure time to do so:

Mr. Speaker, I rise to say a few words to the Members of this august body. I do not pretend to have any halos shining over my head nor any wings sprouting from my shoulders, nor can I boast of any fraternity keys or pins, nor any degrees from well-known American colleges or universities, neither do I possess any from the many famous schools of Europe. Neither do I assume the pious role of a moralist that many pretend to cast themselves in and do not live up to. Therefore it was with some temerity that I sought permission to speak out of order this afternoon as did the distinguished gentleman from Missouri [Mr. SHORT]. I might say, the first time since having been a Member that I have made such a request. Although it is a continuous practice that some Members seem to indulge in. And, might I say, Mr. Speaker, that is about the only way they speak, that is, out of order, hardly do they ever have anything to say or any contribution to make relative to the business before the House at the time of their escapades into the realm of poetry, history, or other various unrelated subjects. The important matters before the House which the taxpayers are paying good money to its representatives and lawmakers to handle as expeditiously and efficiently as possible, are far from their minds. Sometimes methinks their minds are so open that each gust of wind blows clear through them. Somehow I think the spirits must move these people to make such oratorical exhibitions. Many of them have very agile minds and nimble tongues. Makes me think that if their feet and legs were as agile and nimble as their minds and tongues, they would compete nicely with the mountain goat.

Now, of course, I naturally want to refer to the vulgar and dastardly attack the gentleman from Galena, Mo., has seen fit to make upon the city of Kansas City and our great President, Harry Truman. I do not do so because I think that I have to defend Mr. Truman because it has been my observation that he does a pretty good job of defending himself. In fact, as you well know, he usually cracks out with an offensive that has his enemies on the defensive most of the time, much to their displeasure and embarrassment.

However, I think it is pretty cowardly and unprincipled to attempt, by innuendo and insinuation and deceit, to connect the President with the matter the gentleman has so cunningly referred to. Does he not remember Big Bill Thompson of Chicago, its racketeers, gangsters, and killings of a few years back? Has he forgotten the latest exposé of the activities of a nefarious Republican machine operating in Philadelphia, the birthplace of our Constitution, the corruption thereby uncovered, and headlining the newspapers? Can the gentleman remember the stench that arose from the scandals of the Republican Harding regime? Yes, I could go on for hours digging up the ghosts and bones of the past. Let us think of any major city or even a smaller one that does not have a skeleton in its city hall closet. That quite often is one of the stages of our American political life, and so the remarks that I am about to make about the city of Joplin should not be taken as critical of its present citizens or administration, because I know very little about the current situation, nor do I subscribe to the idea that any one period of a particular city's history is very different from that of any other city that has found itself at some period or other in the sooty web of circumstances. Ever in such cases has decency in our public-spirited citizens created a movement of reform so strong and backed by an aroused public opinion, as to banish these evils from their midst. Does he not remember the notorious reputation of the only large city in his district? Can he recall during the days of prohibition that it was a mecca for sinners, an oasis in the desert for those of the tri-State area of Kansas, Oklahoma, and Arkansas, where even some of the youth of the city were so contaminated that they would borrow the hearse (the sacred vehicle of the dead) to steal and haul beer and whisky for their orgies? I have a little verse which the gentleman might like to memorize as he does so often:

"With oil of tender mercy
The tide of your censure stem;
Has Joplin no scarlet sinnings
Need for itself in winning
The sweetest words the Nazarene ever spoke,
Neither do I condemn."

Does the gentleman fail to perceive the beam in his own eye and that of his city of Joplin while seeing it so plainly in others?

Now, I don't condone lawlessness, not even the feuds of the Ozarks where men take the law into their own hands and shoot each other, much as was done in the case the gentleman describes.

Some of the people the gentleman mentioned I knew not, others I was barely acquainted with, but what concerns me more is the vicious attack he has made upon the President of this great Nation, and for the purpose of correcting this low attack I would like permission to include in my remarks part of a lengthy article that appeared 1 year ago in the Kansas City Star, which gives a brief summation of Mr. Truman's virtues. That was written by one who is considered by many experts as one of the ablest and best newsmen in this country, Mr. Roy Roberts. He spent many years in Washington during the early part of his career, and therefore knows the political situation well, and was, no doubt, intimately acquainted with many Presidents and other high political figures. Mr. Roberts is of the Republican faith, I believe, and could not too well be accused of being biased or prejudiced in Mr. Truman's favor. Thereupon I base my observation that in this article his approach is impartial and honest, as good reporting should be:

"SURE OF COURSE—TRUMAN HAS CONFIDENCE IN HIMSELF AND FEELS THAT PEOPLE ARE SUPPORTING HIM—HOLDS TO HOME TRAITS—RUMORS THAT PRESIDENT HAD TAKEN ON NEW AIRS AFTER ELECTION ARE DISPELLED—LOOK TO NEXT ELECTION—BOTH MAJOR PARTIES ARE PLANNING STRATEGY FOR THE 1950 CONGRESSIONAL RACES

"(By Roy A. Roberts)

"No; there isn't a new Truman sitting in the White House now. Fundamentally he is the same old Harry of back-home days. But there is a new confidence and self-reliance now that he is President in his own right after a miraculous one-man election victory.

That assuredness stands out and it is only natural that it should.

"When the writer was back East—in New York and Washington—for the first time since the election, he sought to get a line on how the President was functioning and how Congress and folks generally were reacting to him. Whispers that he had become cocky and had a bit of swelling in the head are bosh.

"TASK IN STRIDE

"It isn't that at all. Rather, it is a feeling that he is on top of the job, can handle it, and that the people are behind him. There is more assurance in his approach to things. Yet down underneath it is my guess he reacts fundamentally in his decisions and conduct exactly as he did when he was a long-shot possibility for election, at the best.

"You sense a bit of increased dignity, possibly, and a feeling that he is going to take a place in history of some rank yet to be determined. Whatever it is, he wants it to be his own making. In a few words, this is now a Truman administration.

"Physically, the President looks great. His physician says he couldn't be in better shape. Truman went through the most grueling campaign any candidate ever made for the Presidency. He appeared tired and burned out. The two short rests at Key West under the sun brought him right back. He is trim and has a healthy color.

"STILL SHOW STRAIN

"Many of those around him, even though they have had the same rest the President had, are still worn; they haven't bounced back. But not so the President. He has the ability to sleep and relax completely, and that he does. He is still first up in the morning, and wants his walk before most have even begun to think of starting the day.

"While the Blair House is much smaller and not so formal as the White House, the Trumans are said to like it very much and are as comfortable as can be in it, while the White House awaits complete rebuilding."

In conclusion, may I say that, as a new Member who has never before and not long now lived at the expense of the taxpayers, I wish to show due deference and respect to my distinguished colleague, who has been here so long a time, and it is with hesitancy that I suggest that he remember the old saying about "He that casts the first stones," "Glass houses," "The pot calling the kettle black," etc.—a suggestion that it might be wiser and more in the public interests to shine up all the pots and kettles and keep them clean. I feel the gentleman does not want to appear as a cantankerous individual nor as a crusading moral and social reformer, as he might appear, by his castigation of the people of the State of which he claims to be so proud.

Cooperation of Volunteer Firemen Highly Commended

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. BOGGS of Delaware. Mr. Speaker, as you and the other Members of this House know, I have frequently expressed my very deep interest in the volunteer firemen of this country and my personal appreciation of their devotion to duty and unselfish sacrifices on behalf of others.

In the Eightieth Congress and in the present one I have introduced legislation on behalf of volunteer fire companies, and, Mr. Speaker, I would like to urge again at this point that early and favorable consideration be given to H. R. 1822, which has been referred to the House Committee on Ways and Means and which provides that contributions to volunteer fire companies shall be deductible by the donors for income-tax purposes.

I have before me at this time, Mr. Speaker, an article from the April 5, 1950, issue of the Wilmington (Del.) Morning News. This article was written by my good friend, Mr. William P. Frank, the very able columnist of the Morning News, who is better known throughout Delaware as Bill Frank.

In this column Mr. Frank has written eloquently concerning the importance of volunteer fire companies and stressing their splendid cooperation with the professional paid fire companies. The cooperation which exists between professional and volunteer fire companies and the high regard and real respect which each group has for the other has too frequently been overlooked. Bill Frank has effectively directed attention to this spirit of mutual cooperation and respect which is of such vital importance to the lives and property of those who live in adjoining urban and rural areas.

Mr. Speaker, it is a real pleasure for me to include as a part of my remarks the splendid article by Mr. Frank, which follows:

FRANKLY SPEAKING

(By Bill Frank)

Operations: Volunteer fire fighting cooperation.

My thoughts this morning are about the volunteer firemen of New Castle County districts who responded to the general alarm in Wilmington on Sunday.

As a resident of a rural area north of Wilmington, I experience a great pride in the contribution the men of the rural districts made to Wilmington.

I also pass along the lavish praise from Fire Chief Morgan, of Wilmington, to the scores of volunteers who dashed away from their homes on that very springlike afternoon—some of them returning home well past midnight, some not until 4 or 5 o'clock Monday morning—and not a few of them drenched to the skin, tired, begrimed with smoke and soot.

And all in the interest of their neighbors in Wilmington.

Actually, at this moment, I feel like getting up and making a speech about rural firemen and their contributions to better living.

And I certainly hope that someone keeps this story in mind when the general assembly meets again and a bill is presented for ample support for volunteer fire companies.

But getting back to Sunday's story—

There seems to be a prearranged agreement between Wilmington and the rural fire companies about what is to be done when and if a general alarm is struck.

As the third alarm is sounded, the telephone operator in the police and fire department begins calling all rural fire companies.

They immediately respond with at least one piece of rolling apparatus and as many men as can be summoned.

Also, according to a prearranged plan, each rural fire company is to go to a certain fire station in Wilmington, there to stand ready in the event another fire of any magnitude develops in any other part of the city.

The plan gets more and more detailed based on any contingency—such as a fire breaking out in a rural area, or another major fire within the city.

Chief Morgan keeps in close touch with the entire situation throughout this very critical period.

Nothing is left to chance and nothing is taken for granted.

So on Sunday afternoon, when the third alarm was sounded, rural fire companies in the immediate vicinity were called.

I hope I haven't omitted any, but as far as I can check there were Claymont, Talleyville, Five Points, Wilmington Manor, Hockessin, Elsmere, Holloway Terrace, Brandywine Hundred, Minquadale, and Newport.

And then there was the Second Alarmers Association of Willow Grove, Pa., that rushed down here with coffee and doughnuts for the firemen. They had heard about the fire on their radio.

Chief Morgan gives a conservative estimate that from 150 to 200 volunteers came into Wilmington—most of them assigned to the fire scene while the others took their posts in the various stations of the city.

For example, one rural fire company sent three pieces of apparatus to Wilmington with a total of 38 men.

On their way to their assigned station, the men passed as close to the fire as possible. Immediately sizing up the crisis, two of the apparatus swung into the fire area while the third kept on going to its prearranged station in another part of Wilmington.

As soon as these volunteers appear at a major fire in Wilmington, they report to the fire department official in charge. On Sunday he was Chief Morgan.

The fire official immediately assigns them to a post and the volunteers do the best they can in getting helmets (if they have left them behind) and other equipment.

They work alongside the Wilmington firemen and willingly subject themselves to the same discipline the Wilmington men are under.

Each man has a sincere admiration and respect for the other. They are both on the scene to do a job—and in the case of last Sunday, they worked together as if they had been drilled as teams for months.

But this city-rural volunteer fire company cooperation is not a one-way proposition.

There is a similar understanding in case a major fire develops in a rural town or district. The Wilmington firemen respond—and they at once put themselves at the service of the chief in charge of fighting a rural blaze.

A friend of mine whose memory goes back a long time says that Sunday's response on the part of the rural firemen was the greatest he has ever known.

And now that the excitement has died down, we may ask ourselves, "Why? What sends a man from his home—from his personal comfort—into an area that's choked with smoke, alive with embers—into a veritable furnace?"

Cynics may say that many rural firemen are just kids at heart—anxious to see a fire.

But I for one refuse to accept that viewpoint. Fun is fun—up to a certain point. When civilians will risk their lives in a volunteer job so that someone else might have a home or so that someone's business might be saved, then it seems to me there is certainly a more lofty drive.

That's why I, as a rural resident, living in a comparatively sparsely settled village in Brandywine Hundred, feel safe because I know there are men all around the countryside ready to help me—if my home is on fire.

Program of the National Rivers and Harbors Congress—Letter From the President of the United States and Address by Hon. John L. McClellan, of Arkansas

EXTENSION OF REMARKS
OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD a letter from the President of the United States, dated March 7, 1950, to the National Rivers and Harbors Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, March 7, 1950.

To the National Rivers and Harbors Congress:

It gives me great pleasure to send greetings and congratulations to the fortieth convention of the National Rivers and Harbors Congress.

The work which you are doing has increased in importance ever since it began at the turn of this century. As our country has grown in material possessions as well as in world leadership, your organization's program has kept pace with our national needs.

The sound development of our land and water resources is a critically important factor in insuring the over-all health and strength of our country. By your work in this vital field you are making an important contribution to the strength of America and the peace of the world.

HARRY S. TRUMAN.

Mr. McCLELLAN. Mr. President, I also ask unanimous consent that immediately following the letter of the President, there be printed an address I made to the National Rivers and Harbors Congress on Friday, March 24, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REPORT OF THE PRESIDENT

(Address of Hon. JOHN L. McCLELLAN, of Arkansas, president of the National Rivers and Harbors Congress, to the fortieth convention, Friday, March 24, 1950)

Delegates to the convention, ladies and gentlemen, it now becomes my pleasure and my pleasant duty as your president to make a report, and I shall try to make it comparatively brief, concerning the activities of the Congress during the year since we last met in this room on April 8 and 9, 1949, for our thirty-ninth annual convention. During that time we have witnessed some progress toward our objectives, but, in all fairness, I cannot say that we are speeding toward the attainment of our goals. We have been laboring, and we shall have to continue our efforts, under the handicaps of constantly increasing operating costs of Government, and possibly with declining revenues, and at present at least under a deficit-spending program on the part of our Government.

Now so long as this condition exists we may expect our river resources development program to be retarded. Under these conditions it is highly improbable, if not impossible, that we can soon accelerate the speed of appropriations for construction commensurate with the needs for improvements already developed and those that are now in process and are yet to be authorized by the Congress.

At our last convention we had a number of subjects on our agenda for consideration. Those same subjects are problems for us yet to consider and I shall now enumerate some of those that I consider most important so that we may keep them in mind during our deliberations in this meeting.

(1) Report of the Hoover Commission on Organization of the Executive Branch of the Government.

If I may digress from this report, I may say, having served as a member of the Hoover Commission, I think it did a considerable amount of very valuable and constructive work. I did not agree with all of its recommendations. With some, I rather violently disagreed; but that report, insofar as it relates to this rivers and harbors development, flood-control program, according to my judgment, and I believe according to yours, is not constructive but, instead, it is devastating.

That report and the recommendations of the majority of the Commission as related to reorganizations affecting river resources development is of vital importance because in the judgment of your president, who was a member of the Commission and who filed a dissenting report to the majority's findings and recommendations, its proposals would reorganize into disorganization—in fact, would emasculate the civil functions of the Corps of Engineers and do irreparable harm to both our flood control, navigation, and rivers and harbors program and to the Nation.

(2) Federal, regional, or Valley Authority bills introduced in the Eighty-first Congress—which are still pending and which have administration support for their enactment into law.

(3) Ownership of submerged or tidelands;

(4) The necessity, if any, for adoption of a Federal power policy properly recognizing and protecting the interests, rights, and responsibilities of State governments in the field of water resources and power development;

(5) Other water and land development problems such as (a) soil conservation; (b) legislative programs, including the necessary appropriations therefor.

There were others on the agenda at the last session and others at this session of the Congress but I consider those that I have referred to as of the greater importance.

The scorecard on the two legislative proposals in the first session of the Eighty-first Congress affecting rivers and harbors and flood control is about as follows:

1. The civil functions appropriation bill (H. R. 3734) for flood control and rivers and harbors finally approved in the conference report of the two Houses and as approved by the President on October 13, 1949, contained for—

Rivers and harbors	$197,489,690
Flood control	436,930,400
Total	634,420,090

2. Omnibus rivers and harbors and flood-control bill (H. R. 5472), and this is the authorization bill, passed the House August 22, authorizing for—

Rivers and harbors	$119,539,975
Flood Control	995,000,000

This is the bill as passed by the House of Representatives.

On October 7 the Senate Public Works Committee after extended hearings on the bill reported the bill to the Senate, recommending the addition of 28 rivers and harbors projects, totaling $108,699,650, and 21 additional flood-control projects in the amount of $338,529,000. On October 17 the Senate approved all of those amendments that had been proposed by the Senate Public Works Committee, but deferred action on final passage of the bill until Congress should reconvene in January of this year.

That bill is still on the calendar of the Senate. I believe we have assurances, at least it is expected that, immediately after the passage of the pending bill, the pending business in the Senate at the present, a bill (I do not have the number of it) known as the Kerr gas bill, as soon as that is disposed of, I understand, our flood control and rivers and harbors authorization bill will be the next matter of business in the Senate, and I am very hopeful that nothing else will intervene. Action on the bill has been delayed for various reasons and we are all very hopeful that nothing will intervene to further delay the final enactment of this measure.

The bill as amended and on the Senate Calendar contains authorizations as follows:

For rivers and harbors	$228,169,625
For flood control	1,336,645,200
Grand total	1,564,814,825

The people of this Nation are apparently becoming more conscious of the need of increasing the tempo of Federal activity in this field of public improvements.

I can testify to that because I am a member of both the Public Works Committee of the Senate, that has jurisdiction over authorization bills of this character, and also a member of the Appropriations Committee where we hear testimony and vote with reference to the immediate need and, in many instances, an emergency need for various projects throughout the Nation. Last year—and the same thing is being repeated this year—there appeared before these committees, before the Appropriations Committee of the Senate, many citizens from all over the country, from practically every State in the Union, urging the Appropriations Committee of the Senate to include many projects that are not recommended by the budget but for which they are able to make a convincing case, not only of the immediate need but of their soundness with respect to economy and with respect to the necessity of them, to protect both property and human lives.

To all those who have worked unceasingly for greater development and control of our water resources, we have reason for much encouragement in our efforts. However, while the President's budget recommendations for the 1951 fiscal year are in some respects quite satisfactory, in others they are very disappointing.

The President recommended appropriations for 1951 as follows: For flood control, $556,752,000; rivers and harbors, $240,714,000; or a total of $797,466,000. Those are substantial sums and we are very appreciative and grateful to the President for having the wisdom, in the meeting of his responsibilities to this Nation in the position he occupies, having recognized this need, he has been willing, notwithstanding the fiscal conditions of our Government, to recommend an increase this year over that of last; but it must be borne in mind by all of us that this program has been tremendously retarded for, during the war years it was impossible to carry it on and practically all work of this character was suspended and, therefore, we failed in that period of time, utterly failed, by the very inability to do so, to keep pace with the increasing needs for improvement of this character.

Thus, the President, too, recognizes the growing need and urgency for completion of projects that are now in the course of construction but, in view of fiscal difficulties that have arisen which reflect an operating deficit of $5,500,000,000 for the present fiscal year 1950, and a correspondingly anticipated deficit for 1951 of five billion or more, the

President felt constrained to withhold from his budget any recommendations for appropriations to start construction of new projects that have long been authorized and the need for many of which, are actually in an emergency category.

I know we would like to have those projects constructed. I have a number in my area that are ready and badly needed, but I want to emphasize this morning that we are confronted with a condition with reference to the fiscal affairs of this Government that cannot be disregarded and, with respect to this recommendation, I commend the President for his effort in that instance, at least, to try to hold expenditures down so that we might not run such a heavy deficit. I only wish that he had gone as far in some other directions to reduce expenditures, because I believe it would have contributed to a very much closer balanced budget.

It is perfectly apparent that if this condition continues, this deficit spending, this living beyond our national income, if this continues for another 2 or 3 years, our water resources development programs will suffer greatly and could possibly be indefinitely postponed.

I say that in all seriousness, because there is a feeling in the hearts and the minds of the people of this Nation now that it is dangerous for this Government, in this critical period, to adopt what may become and can easily become a fixed policy of deficit spending.

No one is more aware of the urgent need for economy in Federal expenditures than are the officers of the National Rivers and Harbors Congress and I am sure that applies to every delegate here. Your president, as a Member of the United States Senate, is among that group of Congressman and Senators who are often publicly maligned and ridiculed and termed reactionary, because we favor sound fiscal policies on the part of the Federal Government and insist that it should operate under a balanced budget. And as I see the picture, a balanced budget is essential to the carrying on of our public-improvements program because our entire program is subjected to attack when the Federal Government operates by deficit spending. It is, therefore, imperative and in the interest of progress toward our goal that the Congress eliminate every nonessential expenditure possible from the operating cost of the Government and only make expenditures for the most needed essentials. If this is not done, river and harbor and flood-control programs will become the victims of such a policy and will be materially impeded to the extent that desirable and essential progress in this field will be harmfully if not disastrously retarded. It is still our firm conviction that it is true economy and a wise, sound business investment for the Federal Government to spend an adequate amount of public funds in developing the Nation's natural resources and in providing the means to effectively combat the floods that are constantly destroying life and property each year in the various parts of the country, and to construct river projects that enhance the economic opportunities of our people and build a stronger nation in conserved and utilized resources and in productive capacity.

It should be remembered and the people should be made conscious that all such Federal projects authorized by the Congress provide public benefits exceeding their cost. It is well known that the Corps of Army Engineers, in their capacity as consulting engineers for the Congress, definitely lean to the side of conservatism in estimating those benefits and costs and do not include many auxiliary benefits that necessarily flow from such developments which could and should properly be taken into account in arriving at cost-ratio benefits.

REGIONAL OR VALLEY AUTHORITIES

The National Rivers and Harbors Congress has repeatedly expressed its opposition to legislation creating Federal regional or valley authorities and has supported the program of the Corps of Engineers, Department of the Army; Bureau of Reclamation, Department of the Interior; and Department of Agriculture for the development of our water and land resources.

We have registered and reaffirmed our opposition to the creation of Federal regional or valley authorities either by legislative act or by Executive order.

We have urged the extension of comprehensive basin-wide research and planning similar to the Pick-Sloan plan now operating in the Missouri Basin to other major basins which present similar problems and opportunities, respecting at all times the rights and desires of each State located in such basin as they may appear.

IRRIGATION-RECLAMATION

The National Rivers and Harbors Congress has commended the Bureau of Reclamation of the Department of the Interior for the progress it has made in reclaiming the arid and semiarid land in the 17 Western States and emphasized the necessity for continued effort. There is increasing need there for additional Federal projects for irrigation to bring all cultivatable lands for which water is available into production for the increasing population of the Western States and to meet our extensive commitments abroad. Adequate funds to provide the many facilities for the varied irrigation needs must be available in consistent annual amounts to enable rapid progress to be made and we have urged that the Congress provide them.

SOIL CONSERVATION

We believe that the prevention of soil erosion as a responsibility of the Department of Agriculture and the closely related major drainage and channel improvement program now conducted by the Corps of Engineers should be accelerated as a beneficial and most important feature in the development and preservation of our natural resources. These programs must outpace the devastation and soil erosion now visiting our fertile slopes and the resulting detrimental effect on the efficiency of our commerce-laden streams. Only then can we be assured of maximum returns from the soil which helped to create this Nation.

HYDROELECTRIC POWER

In promoting the orderly development of our land and water resources the National Rivers and Harbors Congress has been steadfast in its position that hydroelectric power development at Federal dams should be economically justified and consistent with the necessity for such power. Our position is and has been that such development should be confined, however, to projects located in shortage areas and then only when feasible and as a supplement to existing private supply. Supplemental power from steam plants is questioned as being inconsistent with the "private enterprise" policy which has made our Nation the envy of the world. Unrestricted and unwarranted competition with private power facilities will continue to be opposed.

TIDELANDS

We believe the title to the submerged lands of our Nation should be vested in the States through adequate legislation designed to reserve such submerged lands and the resources therein to the respective States and their people. However, any legislation for this purpose should preserve to the United States the paramount right to continue with improvements for national defense, navigation, flood control, and allied purposes as now authorized and as may be authorized in the future.

REORGANIZATION

Since it was organized at Johns Hopkins University in October 1901, the National Rivers and Harbors Congress has never deviated from the position that development and improvement of our rivers, harbors, and water resources can best be planned and executed by the nonpolitical, experienced, conservative Corps of Engineers of the United States Army. The Congress has consistently opposed the many efforts which have been made through the years to turn these functions over to a civilian organization, whether it be called a department of public works, a public works administration, or a so-called regional or valley authority.

The latest assault upon the Corps of Army Engineers as the agency of the Congress entrusted with the responsibility and duty of making surveys, estimates, and legislative recommendations, stems from the recommendations of a majority of the Hoover Commission on Reorganization of the Executive Branch of the Government. A majority of that Commission recommended that all of the civil functions of the Corps of Engineers be transferred to the Department of the Interior. That means that the Bureau of Reclamation would become the prime surveying, investigating, recommending, constructing, and operating agency of the Congress and the Government for all river and harbor, navigation, and flood-control projects throughout this Nation. This recommendation violates the tradition and established practices of the Congress and the Federal Government which have continued for more than 125 years. It disregards and discards all wisdom gained by experience of the most competent, efficient, and constructive agency of the Federal Government. It is purely a grab for power—an attempt to concentrate in one single agency an unprecedented power, both economic and political. This is a vicious proposal. It is the dream of theorists. It is the plotting of planners. It has neither supporting data, statistics, experience, judgment, improved efficiency, economy, nor anything else of merit to recommend it.

This attempt to emasculate the Corps of Engineers and to disorganize the construction and operations of this tremendously vital public-improvement program should be defeated, and I hope you will let your representatives in Congress know that you feel that this proposal, if enacted into law, will result in tremendous harm, not only to your communities where you have a vital stake, but to this great Nation of ours, not only in the destiny of our own lives but in the destiny of civilization.

Much false propaganda is being disseminated by those who have designs upon this important service and function of the Federal Government. I believe there is definitely an organized campaign of false propaganda being disseminated among the people of this Nation in the name of so-called economy and efficiency, to transfer all of the construction functions of the Government into one single agency. We talk about concentration of power. You give to one agency the power over a tremendous part of the purse strings of this Nation and you take both economical and political risks that are not safe in any democracy.

Those of us who are dedicated to the development and conservation of our great natural water resources so that their utilization may be available for the benefit of all of our citizens must get into this fight and refute, repudiate, and counteract the false and deceptive propaganda that is now being disseminated with the premeditated and calculated intent to deceive and mislead the American people for the purpose of consolidating into one agency of Government unprecedented economic, social, and political power.

If the American people can be sufficiently informed of the dangers inherent in this proposal they will demand that such a plan and scheme be rejected.

A bill has already been introduced in the Senate (S. 2833) to carry out the recommendations of the Commission to transfer these functions to the Department of the Interior. That bill has been referred to the Senate Committee on Expenditures in the Executive Departments, of which I am chairman. I wish to give assurances to you and to the people of this Nation that I shall do all in my power to defeat that measure. I give the same assurances with reference to any reorganization plan that the President may submit to the Congress which may have the same objective.

This is not my fight alone, nor that of the Congress alone. It is not just another battle looming in the Congress. It is the fight of the people of this Nation to protect their natural resources against those who would sacrifice efficient service in the interest of the national welfare solely for the purpose of gaining control within themselves of the most vital public-improvement program within the activities of the Federal Government solely in order that there may be concentrated in them and at their disposal unprecedented and dangerous economic and political power.

Congressman PRIEST, in his remarks a while ago, referred to the total expenditures that this Government has made for all time for river and harbor works and their maintenance and for flood control. He gave you the figures with reference to these, but I give you the figures that we have spent for construction only. He included maintenance. For rivers and harbors throughout all time this Government has spent $2,245,000,000. A conservative estimate of the benefits that have flowed from those improvements to the people, economic benefits, throughout the 20 years from 1929 through 1948 is $5,478,000,000, or in that 20-year period the people of this Nation received in economic benefits $2.20 for every dollar the Federal Government has spent in construction of these projects. The same is true in flood control. For all time the Federal Government has spent $2,710,000,000 for the construction of flood-control projects. Estimated benefits, a conservative estimate of benefits, up to 1948 through the same 20-year period amount to $5,600,000,000, or for every dollar the Federal Government has expended for the construction of flood-control projects the people in return have benefited $2.07.

Bear in mind that all these projects are of comparatively new life. They will continue to exist. They will continue to provide these benefits throughout the years. That is my answer to those who charge that this program has failed, that it is inefficient, that it isn't justified. That is my answer to the enemies of this organization and every other group in this Nation who say that this work has not contributed to the building of a stronger Nation.

This does not take into account thousands upon thousands of human lives that have been saved. May I say this to you, that the enemies of this program, those who are demanding today the crucifixion of the Corps of Engineers and the turning over of all of this authority and power to another agency, are not responsible for this progress. That progress was made by people like you, who are willing to give your time, to come to meetings like this, originate programs, try to see that they are sound and get the Congress to authorize them and appropriate money for their construction.

Yes, that is the answer. Do we want to discontinue it? Are you ready to continue to fight for it? I invite you, in your deliberations here, and when you return to your respective communities, bear in mind that there are two dangers today to this internal development program. One is a policy of deficit spending on the part of the Federal Government; as evidence of that see what the House committee did to the President's budget recommended for this purpose. It made an over-all cut the other day of 4 percent on the President's budget, but singled out this program and cut it 25 percent. There is one danger to this program, one of the greatest, for this Government to continue to operate by deficit spending.

And the other is the disorganization of the efficient system that we have built up, and the transferring of these functions to less competent, less experienced hands.

Let us fight to retain this program. I have been charged with being a lobbyist for this group. Well, I am. I am going to lobby on the floor of the Senate; I am going to lobby to the people of this Nation, if by lobbying you mean standing for my convictions and fighting for a program that I believe to be constructive and that will build this Nation strong and powerful to meet the contingencies that arise in the future. Thank you. [Applause.]

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Jackson County Medical Society Weekly Bulletin, Kansas City, Mo., March 11, 1950, entitled "Keep on Calling It What It Is, Doc—It's Socialized Medicine."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEEP ON CALLING IT WHAT IT IS, DOC—IT'S SOCIALIZED MEDICINE

Recently at lunch with a lawyer friend (who gets around and rates in the upper Democrat echelons), the writer was amazed to hear him make this statement.

He explained that in his opinion the American people would never buy socialized medicine, if you doctors will only keep on calling it by its right name. In this respect, our friend agrees with the philosophy expressed by Henry Wallace a good many years ago.

Wallace is reported to have said that neither socialism nor communism will ever come to America unless it arrives under a different label. Many have retorted that Wallace ought to know, as an expert. For he has advocated many measures, somewhat pinko, under other names.

But, for the purposes of this writing, let us not get confused with any side issues. Probably nothing has stung the administration spokesmen to the core more poignantly than the just and accurate accusation that they are sponsoring the socialization of medical care in the United States.

Almost invariably, from the top-drawer mouthpiece on down to the ward heeler, they have vehemently denied this allegation. And, by the same token, it is the truth which hurts them.

Without any attempt to enter the puerile practice of bantering such as: "My dad can lick yours. No; he can't. Yes; he can. No; he can't," we insist on the right and privilege of calling an issue exactly as it is.

When the administration demands a comprehensive health-insurance plan for all our people, that identifies the proposition as a collectivist, regimentation technique. And, if all our banks, all our railroads, all our coal mines, or all our anything, is lumped into a gigantic scheme, it is then socialization, pure and simple.

We have talked with many people, as individuals and in groups, and there is something inherently frightening about the phrase "socialized medicine" which causes the average American a feeling of revulsion. They don't want any part of it. Now (reasons our opponents) if we but pretty up this basic concept, if we but sugar-coat it, and call it "national health insurance," it doesn't sound so bad.
